
The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 18725. An act to establish a Commission on the Organization of the Government of the District of Columbia and to provide for a Delegate to the House of Representatives from the District of Columbia.

The message also announced that the Senate had passed with amendments in which the concurrence of the House is requested, bills of the House of the following titles:

H.R. 16968. An act to provide for the adjustment of the Government contribution with respect to the health benefits coverage of Federal employees and annuitants, and for other purposes.

PRIVILEGES OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House:

WASHINGTON, D.C.,
August 3, 1970.

The Honorable the SPEAKER,
U.S. House of Representatives.

DEAR SIR: On July 29, 1970, I was served with a subpoena by the Assistant U.S. Attorney in Baltimore, Maryland, that was issued by the U.S. District Court for the District of Maryland. This subpoena is in connection with the case of the United States of America v. John Dowdy, et al.

This subpoena commands me to appear in said U.S. District Court for the District of Maryland on the 14th day of September 1970, and requested certain House records that are outlined in the subpoena itself.

The rules and practices of the House of Representatives dictate that no official of the House may, either voluntarily or in obedience to a subpoena duces tecum, produce such papers without the consent of the House being first obtained. It is further indicated that he may not supply copies of certain of the documents and papers requested without such consent.

The subpoena in question is presented for such action as the House in its wisdom may wish to take.

Sincerely,

W. PAT JENNINGS,
Clerk, U.S. House of Representatives.

The SPEAKER. The Clerk will report the subpena.

The Clerk read as follows:

[U.S. District Court for the District of Maryland, No. 70-0123]

UNITED STATES OF AMERICA *v.* JOHN DOWDY, ET AL.

To: Clerk, U.S. House of Representatives, Washington, D.C.

You are hereby commanded to appear in the U.S. District Court for the District of Maryland at 421 Post Office Building, Calvert and Fayette Streets, in the city of Baltimore on the 14th day of September 1970 at 9:30 o'clock a.m. to testify in the case of *United States* v. *John Dowdy, et al.*, and bring with you all original roll call records of the U.S. House of Representatives for September 22, 1965.

This subpoena is issued upon application of the United States.

JULY 20, 1970.

BARNET D. SKOLNIK,
Assistant U.S. Attorney.
STEPHEN N. SACHS,
Special Assistant U.S. Attorney.
PAUL R. SCHLITZ,
Clerk.

The Speaker laid before the House the following communication from the Clerk of the House:

WASHINGTON, D.C.,
August 11, 1970.

The Honorable SPEAKER,
U.S. House of Representatives.

DEAR SIR: On this date, the Sergeant at Arms and I were separately served with individual subpoenas by the Assistant U.S. Attorney in Baltimore, Maryland, that were issued by the U.S. District Court for the District of Maryland. These subpoenas are in connection with the case of the *United States of America* v. *John Dowdy, et al.*

These subpoenas command us to appear in said U.S. District Court for the District of Maryland on the 14th day of September 1970 and request certain House records that are outlined within the subpoenas, which are attached hereto.

The rules and practices of the House of Representatives indicate that no official of the House may, either voluntarily or in obedience to a subpoena duces tecum, produce such papers without the consent of the House being first obtained. It is further indicated that such official may not supply copies of certain of the documents and papers requested without such consent.

The subpoenas in question are presented for such action as the House in its wisdom may see fit to take.

Sincerely,

W. PAT JENNINGS,
Clerk, U.S. House of Representatives.

The SPEAKER. The Clerk will report the subpena.

The Clerk read as follows:

[U.S. District Court for the District of Maryland, No. 70-0123]

UNITED STATES OF AMERICA *v.* JOHN DOWDY, et al.

To Sergeant at Arms, U.S. Congress, Washington, D.C.

You are hereby commanded to appear in the United States District Court for the District of Maryland at 421 Post Office Building, Calvert and Fayette Streets, in the city of Baltimore on the 14th day of September 1970 at 9:30 o'clock a.m. to testify in the case of *United States* v. *John Dowdy, et al.* and bring with you copies of monthly bank statements and canceled checks pertaining to the checking account maintained by Representative John Dowdy (Sergeant at Arms checking account) during the period December 31, 1964, through August 30, 1965.

This subpoena is issued upon application of the United States.

August 6, 1970.

BARNET D. SKOLNIK,
Assistant U.S. Attorney.
STEPHEN N. SACHS,
Special Assistant U.S. Attorney.
PAUL R. SCHLITZ, *Clerk.*

[U.S. District Court for the District of Maryland, No. 70-0123]

UNITED STATES OF AMERICA *v.* JOHN DOWDY, et al.

To Clerk, U.S. House of Representatives, Washington, D.C.

You are hereby commanded to appear in the United States District Court for the District of Maryland at 421 Post Office Build-Building, Calvert and Fayette Streets, in the city of Baltimore on the 14th day of September 1970 at 9:30 o'clock a.m. to testify in the case of *United States* v. *John Dowdy, et al.* and bring with you all campaign financial reports filed by or on behalf of John Dowdy for campaign years 1966 and 1968; and any reports, of any description whatsoever, filed by or on behalf of John Dowdy, at any time, pursuant to any resolution, rule, requirement, or practice of the House of Representatives, revealing items and sources of incomes and/or net worth.

This subpoena is issued upon application of the United States.

August 6, 1970.

BARNET D. SKOLNIK,
Assistant U.S. Attorney.
STEPHEN N. SACHS,
Special Assistant U.S. Attorney.
PAUL R. SCHLITZ, *Clerk.*

The Speaker laid before the House the following communication from the Sergeant at Arms:

WASHINGTON, D.C.,
September 9, 1970.

Hon. JOHN W. MCCORMACK,
Speaker, U.S. House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: Under a letter of August 11, 1970 the Clerk advised you of a subpoena that I received from the U.S. District Court for the District of Maryland, No. 70-0123.

I have received another subpoena covering additional dates for records in this office that I am attaching hereto.

Since the change was made by the U.S. District Court, I am advising you in this matter.

Respectfully,

ZEAKE W. JOHNSON, Jr.,
Sergeant at Arms.

The SPEAKER. The Clerk will report the subpena.

The Clerk read as follows:

[U.S. District Court for the District of Maryland, No. 70-0123]

UNITED STATES OF AMERICA *v.* JOHN DOWDY, et al.

To Sergeant at Arms, U.S. Congress, Washington, D.C.

You are hereby commanded to appear in the United States District Court for the District of Maryland at Room 421, Post Office Building, Calvert and Fayette Streets, in the city of Baltimore on the 14th day of September 1970 at 9:30 o'clock a.m. to testify in the case of *United States* v. *John Dowdy, et al.* and bring with you copies of monthly bank statements, canceled checks, and deposit tickets pertaining to the checking account maintained by Representative John Dowdy (Sergeant at Arms checking account) during the period of December 31, 1964, through the present date.

This subpoena is issued upon application of the United States.

SEPTEMBER 4, 1970.

BARNET D. SKOLNIK,
Assistant U.S. Attorney.
STEPHEN N. SACHS,
Special Assistant U.S. Attorney.
PAUL R. SCHLITZ,
Clerk.

Mr. ALBERT. Mr. Speaker, I offer a privileged resolution and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1204

Whereas in the case of the United States of America against John Dowdy, et al. (Criminal Action No. 70-0123), pending in the United States District Court for the District of Maryland, subpenas duces tecum were issued by the said court and addressed to W. Pat Jennings, Clerk of the House of Representatives, directing him to appear as a witness before the said court at 9:30 antemeridian on the 14th day of September 1970, and to bring with him certain documents in the possession and under the control of the House of Representatives: Therefore be it

Resolved, That by the privileges of this House no evidence of a documentary character under the control and in the possession of the House of Representatives can, by the mandate of process of the ordinary courts of justice, be taken from such control or possession but by its permission; be it further

Resolved, That when it appears by the order of the court or of the judge thereof, or of any legal officer charged with the administration of the orders of such court or judge, that documentary evidence in the possession and under the control of the House is needful for use in any court of justice or before any judge or such legal officer, for the promotion of justice, this House will take such action thereon as will promote the ends of justice consistently with the privileges and rights of this House; be it further

Resolved, That W. Pat Jennings, Clerk of the House, or any officer or employee in his office whom he may designate, be authorized to appear at the place and before the court in the subpenas duces tecum beforementioned, but shall not take with him any papers or documents on file in his office or under his control or in possession of the House of Representatives; be it further

Resolved, That when the said court determines upon the materiality and the rele-

vancy of the papers and documents called for in the subpenas duces tecum, then the said court, through any of its officers or agents, be authorized to attend with all proper parties to the proceedings and then always at any place under the orders and control of this House, and take copies of those requested papers and documents which are in possession or control of the said Clerk; and the Clerk is authorized to supply certified copies of such documents or papers in his possession or control that the court has found to be material and relevant and which the court or other proper officer thereof shall desire, so as, however, the possession of said documents and papers by the said Clerk shall not be disturbed, or the same shall not be removed from their place of file or custody under the said Clerk; and be it further

Resolved, That as a respectful answer to the subpenas duces tecum a copy of these resolutions be submitted to the said court.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. ALBERT. Mr. Speaker, I offer a privileged resolution and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1205

Whereas in the case of the United States of America against John Dowdy, et al (Criminal Action No. 70-0123), pending in the United States District Court for the District of Maryland, subpenas duces tecum were issued by the said court and addressed to Zeake W. Johnson, Jr., Sergeant at Arms of the House of Representatives, directing him to appear as a witness before the said court at 9:30 antemeridian on the 14th day of September, 1970, and to bring with him certain documents and papers in the possession and under the control of the House of Representatives: Therefore be it

Resolved, That by the privileges of this House no evidence of a documentary character under the control and in the possession of the House of Representatives can, by the mandate of process of the ordinary courts of justice, be taken from such control or possession but by its permission; be it further

Resolved, That when it appears by the order of the court or of the judge thereof, or of any legal officer charged with the administration of the orders of such court or judge, that documentary evidence in the possession and under the control of the House is needful for use in any court of justice or before any judge or such legal officer, for the promotion of justice, this House will take such action thereon as will promote the ends of justice consistently with the privileges and rights of this House; be it further

Resolved, That Zeake W. Johnson, Jr., Sergeant at Arms of the House, or any other officer or employee in his office whom he may designate, be authorized to appear at the place and before the court in the subpenas duces tecum beforementioned, but shall not take with him any papers or documents on file in his office or under his control or in possession of the House of Representatives; be it further

Resolved, That when the said court determines upon the materiality and the relevancy of the papers and documents called for in the subpenas duces tecum, then the said court, through any of its officers or agents, be authorized to attend with all proper parties to the proceeding and then always at any place under the orders and control of this House, and take copies of said papers and documents; and the Sergeant at Arms is authorized to supply certified copies of such documents or papers in possession or control of said Sergeant at Arms that the court has found to be material and relevant and which the court or other proper officer thereof shall desire, so as, however, the possession of said documents and papers by the said Sergeant at Arms shall not be disturbed, or the same shall not be removed from their place or file or custody under the said Sergeant at Arms; and be it further

Resolved, That as a respectful answer to the subpenas duces tecum a copy of these resolutions be submitted to the said court.

The resolution was agreed to.

A motion to reconsider was laid on the table.

MARKUP SCHEDULED ON ORGANIZED CRIME AND EXPLOSIVES BILLS

(Mr. KASTENMEIER asked and was given permission to address the House for 1 minute.)

Mr. KASTENMEIER. Mr. Speaker, the continued wave of terrorist activities accentuated by recent malicious bombing in my congressional district makes it imperative that the House give antibombing legislation the highest possible priority for action.

I am delighted to advise the House that in response to my urging the chairman of the Committee on the Judiciary during the recess informed me that markup sessions are already scheduled for next Monday, Tuesday, Wednesday, and Thursday, September 14 through 17, on the Organized Crime Control Act—S. 30—and that he will propose to include in the markup the provisions of pending explosives control legislation—H.R. 16699, H.R. 17154, and H.R. 18573.

Hopefully, a meaningful and effective antiexplosives bill will be ready for a House vote before the end of the month.

A FIVE-POINT PROGRAM TO DETER INTERNATIONAL AIR PIRACY

(Mr. WOLFF asked and was given permission to address the House for 1 minute.)

Mr. WOLFF. Mr. Speaker, the circumstances surrounding the multiple hijackings by Arab terrorists makes it clear that once innocent air travelers become hostages it is most difficult to guarantee their safe return. Therefore, I believe the emphasis of our efforts must be on deterrent action to prevent hijackings.

In that connection I recommend:

First, creation of a special force of U.S. marshals who would travel as guards on all international flights of U.S. planes;

Second, installation of armor plates between cabin and cockpit of all U.S. aircraft; and the arming of all air crews on international flights;

Third, a thorough search of all passengers and baggage in international flights involving U.S. planes;

Fourth, a comprehensive inspection of all aircraft scheduled for international flights prior to the time any crew or passengers board the plane; and

Fifth, an embargo on air traffic to any country which refuses to free hijacking hostages and/or return the hijackers to the country of origin.

We must be wary of letting air piracy become a way of life and a regular tool in international relations. We must not become blase about something which so directly affects the very lives of so many people. A strong campaign of deterrence is essential and the five steps outlined above would make a major step in that direction.

PERMISSION FOR SELECT SUBCOMMITTEE ON EDUCATION TO SIT THIS AFTERNOON DURING GENERAL DEBATE

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent that the Select Subcommittee on Education be permitted to sit this afternoon during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

INTERNATIONAL ACTION TO CURB SKYJACKING

(Mr. ADDABBO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ADDABBO. Mr. Speaker, the fanatical and uncivilized acts of the Palestinian guerrillas has shocked the entire world and brought about a more universal understanding of the nature of the threat to Israel's existence as a free nation. The immediate concern is the safety of the passengers being held hostage and we must rely on behind the scene diplomatic efforts to secure their safe release.

The increasing number of skyjackings is another problem however and a long-range solution can only be found through bold and outspoken leadership at the international level. I had sponsored last year legislation, House Concurrent Resolution 340, expressing the sense of the Congress that the President should take all appropriate steps to reach an international agreement to assure extradition of any person accused of skyjacking without the safety of fleeing to a nation such as Syria which does not extradite skyjackers. There will be less temptation for those inclined to risk the lives of aircraft passengers and crew.

There has been little evidence of determined efforts by our Government in pressing for adoption of such an international agreement. For that reason I have renewed my request to the chairman of the House Committee on Foreign Affairs to schedule public hearings on the legislation which I have cosponsored. I am taking this step in the hope that congressional action will induce the President to take a stronger position and exercise leadership in calling for international action to curb skyjacking.

CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 289]

Alexander	Edwards, Ala.	Morton
Anderson, Calif.	Edwards, La.	Murphy, N.Y.
Anderson, Ill.	Esch	Ottinger
Anderson, Tenn.	Fallon	Pelly
Ashley	Feighan	Pepper
Aspinall	Findley	Powell
Baring	Flynt	Price, Tex.
Beall, Md.	Fountain	Pryor, Ark.
Berry	Fraser	Purcell
Blackburn	Frey	Quie
Blatnik	Friedel	Rees
Brock	Fulton, Tenn.	Reid, N.Y.
Broomfield	Gallagher	Riegle
Buchanan	Giaimo	Rivers
Burke, Fla.	Gilbert	Rogers, Colo.
Burleson, Tex.	Goldwater	Roudebush
Burton, Utah	Gubser	Rousselot
Bush	Hagan	St Germain
Button	Hall	Scherle
Cabell	Hanna	Scheuer
Carey	Hansen, Wash.	Schneebeli
Casey	Hays	Sebelius
Chappell	Hébert	Sisk
Chisholm	Hicks	Skubitz
Clancy	Hogan	Snyder
Clark	Jones, Ala.	Stephens
Clay	Jones, Tenn.	Stokes
Conyers	Keith	Stubblefield
Corman	Kuykendall	Talcott
Coughlin	Landgrebe	Thompson, Ga.
Cowger	Landrum	Tunney
Cramer	Long, La.	Van Deerlin
Culver	Lowenstein	Watson
Daddario	Lujan	Weicker
Davis, Ga.	McCarthy	Whalen
Dawson	McCulloch	White
Delaney	Macdonald, Mass.	Wiggins
Dent	Melcher	Wilson, Bob
Diggs	Meskill	Wilson, Charles H.
Dowdy	Miller, Calif.	Wold
Eckhardt	Minshall	Wyatt
	Monagan	Yatron

The SPEAKER. On this rollcall 304 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

CONGRATULATIONS TO PRESIDENT NIXON

(Mr. TIERNAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TIERNAN. Mr. Speaker, it has been a long time since I have been able to stand here and congratulate President Nixon on any actions he may have taken concerning education.

But I stand here today to strongly congratulate him for finally releasing all of the funds which the Congress appropriated for loans to college students. This will allow thousands of additional students to attend college this fall and it will allow countless others to breathe easier in the knowledge that they will receive continued assistance. Here is a program that enables students to get aid that they must later repay so that future students may also benefit. It is not a giveaway or a handout. Rather, it is in the great American tradition. We are loaning money to students to allow them to help themselves.

While the President has taken an encouraging step, more must be done. It concerns me tremendously that we in the Congress are having to pull Mr. Nixon along when it comes to the field of education. Mr. Nixon vetoed this same appropriation bill back on August 11, reasoning, I would imagine, that it is more important to build the SST than it is to educate our young people. The Congress wisely overrode this veto.

The President then stated that he would withhold $66.1 million from the $243 appropriation. Many of us here in the Congress pleaded with him to release these funds. Finally, yesterday he agreed to go along with our request.

Mr. Speaker, I urge the President to show the people of this country that he really does believe education is high on his list of priorities and to show that he does realize that we are trying to educate the leaders of tomorrow.

EMERGENCY COMMUNITY FACILITIES ACT OF 1970

Mr. MATSUNAGA. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1178 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1178

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 17795) to amend title VII of the Housing and Urban Development Act of 1965. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Banking and Currency, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from Hawaii (Mr. MATSUNAGA) is recognized for 1 hour.

Mr. MATSUNAGA. Mr. Speaker, I yield 30 minutes to the gentleman from Nebraska (Mr. MARTIN) pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1178 provides for consideration of H.R. 17795, which, as reported by the Committee on Banking and Currency, would increase and extend the authorization for grants to municipalities and other entities of local government throughout the Nation for the consideration of certain vital and urgently needed public facilities.

The resolution provides an open rule with 1 hour of general debate. It also provides that after the Committee of the Whole has risen and reported the bill to the House with such amendments as may have been adopted under the 5-minute rule, the previous question shall be considered as having been ordered on the bill and amendments thereto to final passage without intervening motion, except one motion to recommit.

Mr. Speaker, H.R. 17795 is designed to bring relief to many municipalities which today are unable to finance construction of urgently needed water and sewer facilities due to the shortage of funds for long-term borrowing. The proposed legislation would help to meet the immediate needs for such facilities to provide the basic safeguards for the health and well-being of our citizens and to check widespread pollution of our irreplaceable water resources.

The critical nature of the existing situation is statistically shown by the reported number of grant applications for water and sewer facilities which have been rejected by the Department of Housing and Urban Development since 1966 due to the lack of funds. Every State of the Union has had some of its local government grant applications for water and sewer assistance go unfunded—from a modest three for the State of Idaho to a high of 426 for New York State. Even my own State of Hawaii has had a total of 19 rejected applications for water and sewer grants. These rejected applications from throughout the country amount to a total of $2.5 billion.

H.R. 17795 would reenact the authorization for basic water and sewer facilities assistance provided for in title VII of the Housing and Urban Development Act of 1965, and would provide an additional $1 billion authorization. The time within which a community may qualify for a grant would be extended for 1 year—to October 1, 1971—and a total authorization of $1.35 billion would be available through fiscal year 1972, pending final congressional action on the fiscal year 1971 appropriations.

Mr. Speaker, an incidental but important benefit that would flow from the enactment of H.R. 17795 is the immediate boost it would give to the depressed construction industry. The essential facilities which would be provided under this legislation would lead to expanded housing construction and stem the Nation's rising rate of unemployment.

Mr. Speaker, I urge the adoption of House Resolution 1178 in order that the bill may be considered.

Mr. MARTIN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, as the gentleman from Hawaii has explained House Resolution 1178 provides for an open rule with 1 hour of debate on H.R. 17795, the Community Facilities Act of 1970.

This piece of legislation, Mr. Speaker, authorizes $1 billion to be spent, as an amendment to the Housing Act, for sewer and water grants to communities throughout the United States.

Consideration of this legislation today is not realistic, Mr. Speaker. I want to call the attention of the Members to the fact that in the housing appropriation bill recently considered by the House an amendment was offered on the floor by the gentleman from Georgia (Mr. STEPHENS) to increase the appropriation in that bill from the budget figure of $150 million to $500 million. That amendment was carried on the floor of the House by a vote of 73 to 63 on a teller vote. Subsequently President Nixon vetoed the appropriation bill for housing, and one of the main reasons as given by the President was the fact that his budget figures had been exceeded, par-

ticularly in the area of grants to communities for sewer and water projects. The House sustained the President's veto.

The Committee on Appropriations is currently working on a new appropriation bill.

At the present time there are total authorizations of $500 million for these programs. This piece of legislation, Mr. Speaker, would add $1 billion to the $500 million that we already have authorized. The President vetoed the housing bill because it was over his budget, and this House sustained the President's veto. So here we have the Committee on Banking and Currency coming in with a piece of legislation that in my judgment has very, very little chance of ever seeing the light of day as far as appropriations of additional funds are concerned. This is fiscal irresponsibility to even be considering this $1 billion authorization in view of the present circumstances.

We had a deficit this past fiscal year of $2.9 billion, and a further deficit is anticipated at the present time for the current fiscal year.

It has been charged, and stated by the administration, that the Congress is the one that is going wild on the appropriation of funds and authorizing of funds over and above the President's budget. If the House considers this bill favorably today it adds credence to the arguments of the President, and of the administration, that the Congress is irresponsible in the matter of spending money. These funds have to come from the taxpayers. The taxpayers are mighty well fed up with the spending that is going on here in Washington, and in the Congress of the United States.

This debate this afternoon on this legislation, in view of what happened on the housing appropriation bill, is an idle gesture and an exercise in futility.

I hope, Mr. Speaker, that this legislation is resoundingly rejected by the House this afternoon.

Mr. MATSUNAGA. Mr. Speaker, will the gentleman yield?

Mr. MARTIN. I will be happy to yield to the gentleman from Hawaii.

Mr. MATSUNAGA. Mr. Speaker, I thank the gentleman for yielding.

I would ask the gentleman if it is a fact that he is not opposed to the granting of the rule itself?

Mr. MARTIN. No; I do not oppose the granting of the rule. I am opposed to the legislation, and I expect to vote against it on final passage.

Mr. MATSUNAGA. Mr. Speaker, I thank the gentleman for yielding.

Mr. BARRETT. Mr. Speaker, will the gentleman yield?

Mr. MARTIN. I yield to the gentleman from Pennsylvania.

Mr. BARRETT. Mr. Speaker, the gentleman I am sure is not against this bill that would provide good, clear water, and good environment, and that will prevent people from taking contaminated water out of wells.

What we have appropriated in the last bill will not do the job that lies before us. We have presently 4,300 applications waiting for consideration. We need $4 billion, not $1 billion.

I hope that the gentleman will give consideration to the health and welfare of these people in small towns and communities, which is where this money will go.

Mr. MARTIN. In answer to the gentleman's remarks, I would simply state that you have to spend money in accordance with your revenue. Sometimes you have to go without. You and I have to do it and every family in the United States sometimes has to go without things that we would like to have simply because we do not have enough money to purchase them. I think that is the case in this instance—we do not have the money to add $1 billion to this program at the present time.

Mr. Speaker, I yield back the balance of my time.

Mr. MATSUNAGA. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. PATMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 17795) to amend title VII of the Housing and Urban Development Act of 1965.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 17795, with Mr. BROOKS in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. PATMAN).

Mr. PATMAN. Mr. Chairman, I yield myself such time as I may use.

Mr. Chairman, millions of words have been written and recited during this Congress about the Nation's critical housing shortage and the Nation's staggering problem of pollution control. Congress has unanimously agreed that these problems can and must be eliminated. But Congress and the Nation cannot begin to approach solutions to these crises without enactment of the legislation that is before your committee.

H.R. 17795, the Emergency Community Facilities Act of 1970, would authorize an additional appropriation of $1 billion for water and sewer facility grants to communities under title VII of the Housing Act of 1965. Enactment of the bill and appropriation of funds already authorized, in addition to appropriation of the new authorization, would make a total of $1.3 billion available in sewer and water facility grant money through fiscal year 1972.

The need for passage of the Emergency Community Facilities Act of 1970 was repeatedly exemplified by testimony from expert witnesses during hearings which disclosed that there are—

Hundreds of thousands of families living in communities across the Nation where water is obtained from wells which are either in danger of being polluted or are actually being poisoned because there are no sewer facilities whatsoever;

Communities where some wells which have gone dry are now being used as septic tanks, with the result that sewage seeps into the area water table and pollutes the wells which remain in use;

Inadequate, antiquated sewer facilities in towns where sewage breaks out and runs into culverts carrying community water system pipes;

Cities where the streets are turned into rivers every time there is a heavy rain because storm sewer system facilities are completely inadequate. Resulting property losses have mounted into the hundreds of millions of dollars; and

Communities where disease has broken out because of such conditions and people have not only been made ill but, in some instances, have died.

Mr. Chairman, the local government officials who testified before the Banking and Currency Committee on this bill emphasized over and over that one of the most pressing problems facing the Nation's communities is the need for adequate water and sewer facilities. Moreover, in addition to the examples just given, they traced this unmet need to the civil unrest which has exploded in riots in some of our cities during the past 3 years. I will cite just one example:

The communities of Nellyville and Turpin Hill, which border the Augusta, Ga., city line, have no sewer facilities and water is supplied from contaminated wells. Both the city of Augusta and Richmond County have been endeavoring for some time to extend sewer and water service to these towns but could not justify the expense without Federal assistance of the kind that would be provided by this act.

After long delay, because such funds were not available, money was finally authorized to begin construction of facilities. Augusta's share of the authorization was not approved until last May and came at a time when disturbances there had reached a peak. Many of the people arrested during the riot in Augusta are residents of Nellyville and Turpin Hill who blamed the city for failing to provide the facilities they so desperately need.

That need was frequently expressed for more than a year and a half by groups of angry citizens meeting with Augusta's mayor and city council. The fact that the mayor had been trying to obtain necessary funding during much of this time and had made several trips to Washington to plead for money, held little meaning for these people. They were not concerned with the Federal Government. They held the city directly and solely responsible for intolerable living conditions.

In summing up the cause of the riot, Mayor Millard Beckum said:

> This was no athletic contest. That riot was a damned expensive price to pay for the lack of service.

This is no isolated case. Its elements comprise appalling implications for our society. Delay in meeting such fundamental needs is interpreted as lack of concern by local government and the result is deep erosion of the faith and trust

which are essential to the existence of democracy. The failure of government to answer the needs of the people can be measured by the number and intensity of riots, burning, looting, of injury and loss of life.

Mr. Chairman, I have cited these examples in an effort to illustrate the great need to provide an additional $1 billion for water and sewer facility grants which this bill would authorize through title VII of the Housing and Urban Development Act of 1965.

A study conducted by the Joint Economic Committee in 1966, the year after title VII was enacted, concluded that expenditures by local government totaling $3.5 billion a year would be required during the following 10 years to meet sewer and water facility needs throughout the Nation. This forecast turned out to be totally unrealistic in light of the national housing goals established 2 years later and because inflationary conditions since 1968 have raised construction costs at least 25 percent. New estimates place the annual investment required to meet water and sewer facility needs at $5.2 billion.

A large part of that investment must come from the Federal Government through title VII. Local governments simply do not have the tax resources to shoulder the entire burden of this and many of the other services they must provide for their residents.

Insisting that our cities and towns can get along on their own or insisting that the trickle of Federal aid presently available to them for water and sewer facilities is adequate is to abandon our housing goals, make home ownership impossible for all but the wealthy and completely reject the idea of cleaning up our polluted streams, rivers, and lakes.

Lake Orion, a community in Michigan, is a good case in point. It has been ordered by the State health department to end pollution of a nearby stream. Compliance with the order means the construction of facilities that will, on the average, cost each household in the town $5,250 in additional taxes over the life of the bonds that must be issued to raise the necessary capital. Local officials look on this demand as being virtually confiscatory but there is no other way to meet the State's order.

Multiply this situation by several hundred thousand and it is possible to begin to appreciate the overwhelming task that now confronts communities throughout the Nation.

Mr. Chairman, a moment ago I mentioned that a minimum $5.2 billion a year is needed to finance needed water and sewage facilities throughout the country. Let me compare that with the amount of money that has been made available for sewer and water grants under title VII since the program went into operation in 1966.

Grants totaling $514.6 million have been made for 1,151 projects. That is an average of $128 million a year, or less than 3 percent of the total required annual expenditure. The comparison takes on pathetic irony when it is recognized that title VII is designed to provide grants amounting to 50 percent and more of the total cost of the individual project. An authorization of $1 billion for the program is a more realistic approach to the need, but it must be admitted that even this amount of aid will be inadequate.

Another indication of the absolute necessity to increase the number and dollar amount of water and sewer facility grants is the fact that since the program began the Department of Housing and Urban Development has rejected grant applications for a total of $2.5 billion. As a result, urgently needed projects costing a total of at least $5.5 billion were never undertaken.

The volume of applications has so outweighed the amount of available funds that HUD regional offices are even discouraging communities from making applications at all. In essence this amounts to telling the people of the Nation that Congress recognized the need for water and sewer facility grants and established a program to provide them but failed to make enough money available to lift the program above the level of tokenism.

Mr. Chairman, the crushing weight of inflation and the prevailing tight-money, high-interest-rate policy being applied to the Nation's economy add still more urgency to need for the Emergency Community Facilities Act of 1970. Water and sewer facility investments cannot be delayed until more favorable conditions exist in the bond market. These expenditures simply have to be made when they are needed regardless of whether interest rates are high or low. The fact that interest rates have been at historically high levels increases the need of local governments for the kind of financial help provided under title VII and multiplies the reasons for approval of this legislation.

While we are on the subject of the economy, it should be stressed that an appropriation of $1 billion for sewer and water facility grants will have a substantial employment impact. We are all aware that unemployment is hovering around 5 percent, the highest level in 10 years, but what is not generally recognized is that unemployment in the construction industry has climbed to a depression era level of nearly 12 percent—more than twice the national average.

The Bureau of Labor Statistics has estimated that 100 jobs a year are created for each $1 million invested in public facilities—40 onsite jobs and 60 jobs in industries providing materials and services. The $1 billion authorized by H.R. 17795 translates into 100,000 onsite construction, manufacturing, and service jobs. But the entire impact of the legislation goes beyond this when the multiplier effect on the economy is considered. Studies conducted by the Joint Economic Committee and others have developed data showing that the impact of this kind of investment doubles its beneficial effect on the economy as the income it provides changes hands and is spent. As a result, the total employment impact of this authorization is not confined to construction, materials, and required services. It is double that amount and will provide 200,000 new job opportunities.

Mr. Chairman, in closing I would like to quote from a statement made by Howard Atherton, president of the Georgia Municipal Association who represented the National League of Cities at the hearings held on the Emergency Community Facilities Act of 1970:

> If the Government as a whole cannot provide for the people of this nation the most elementary service of proper waste disposal, then what claim can it make to the confidence of the citizenry? The effect is to cast serious doubt concerning the creditability of Government and its programs. It undoubtedly puzzles the citizens of Nellyville, Georgia how a nation that can land a man on the moon exposes its children to the hazards of standing sewage.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. PATMAN. I yield to the distinguished Speaker of the House.

Mr. McCORMACK. Am I correct in my understanding that practically all, if not all, the mayors and the Governors throughout the whole country are deeply interested in this legislation, and they are both Republican and Democratic mayors and Governors who have an intense interest in this legislation?

Mr. PATMAN. Yes; the gentleman is certainly correct in his statement. In this country we have 81,299 mayors who are interested in the program, and I doubt that you would find even 1 percent of them against this bill.

Mr. McCORMACK. That was my understanding, and I wanted to have the gentleman's answer to my inquiry made a part of the record.

Mr. PATMAN. That is correct.

Mr. McCORMACK. This is a very important bill.

Mr. PATMAN. It is a step in solving our pollution problem.

Mr. McCORMACK. Of course it is.

Mr. PATMAN. It is an element in the fight against pollution and is for the health of the people.

Mr. McCORMACK. And those having direct responsibility politically on the State and the city level and on other local levels are overwhelmingly, without regard to political party, in favor of the bill.

Mr. PATMAN. And it is very necessary, I will say to the distinguished Speaker of the House, that we have a strong vote in favor of the bill. It would be wonderful if the vote for the bill were unanimous, because it would let the people know that we consider this high-priority legislation, and that we feel it is very necessary. It should be on the urgent list, the "must" list. We must do something about our water and sewer situation. It is too important for us to ignore it. I do not see how any Member could really vote against it.

In this bill we are fighting not only for the health of the people but also pollution and we are fighting for environmental quality.

We are fighting for environmental quality. How can we be for environmental quality and be against a bill of

this type, in which we are attempting to appropriate only about one-quarter or one-fifth of the amount of money actually needed to solve this problem?

Mr. GROSS. Mr. Chairman will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, I thank the gentleman for yielding.

Is it my understanding that Report No. 91–1263 is the report accompanying this bill?

Mr. PATMAN. Yes, the gentleman is correct.

Mr. GROSS. If so, where are the departmental reports?

Mr. PATMAN. I can assure the gentleman he would not find any departmental agency against it in the report.

Mr. GROSS. I would like to see it in print. Usually a report contains some evidence of what the Bureau of the Budget and other departments and agencies think of the proposal. This report is bereft of a single word.

Mr. PATMAN. That is often done but not required.

Mr. REUSS. Mr. Chairman, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Wisconsin.

Mr. REUSS. Mr. Chairman, is it not a fact, I ask the gentleman from Texas, the chairman of the committee, that on page 25 of the hearings, which are in the possession of the Members today, is the statement made by the Honorable Samuel C. Jackson, Assistant Secretary for Metropolitan Planning and Development, Department of Housing and Urban Development? Is that not a fact?

Mr. PATMAN. Yes; that is correct.

Mr. GROSS. If the gentleman will yield further, of course, hearings are not required either.

Mr. PATMAN. I do not think one could get a bill on the floor without hearings.

Mr. GROSS. The gentleman has a bill, accompanied by a report that is totally inadequate.

Mr. PATMAN. We think it is adequate for the bill, and certainly there is enough in here to indicate that the bill is in the public interest and should be adopted.

Mr. Chairman, I reserve the balance of my time.

The CHAIRMAN. The gentleman from Texas consumed 10 minutes.

The Chair recognizes the gentleman from New Jersey (Mr. WIDNALL).

Mr. WIDNALL. Mr. Chairman, this bill is on a subject that I think should have the No. 1 priority in this country. We have just marched up and down with respect to sewer and water funds when considering the Independent Offices bill. There were $350 million in appropriations contained in the bill which the President vetoed and the veto was sustained in the House of Representatives. I opposed the action of the administration at the time when I voted to override the veto. I did so because basically I feel as I have stated this has the No. 1 priority of all of the programs we have in the United States.

We talk today, and day after day, and day after day, about pollution. We say we are going to try to do all the things to cure air pollution, and water pollution, and all kinds of pollution in the United States, to assure the environmental health and the safety of our people. We cannot do anything anywhere in this country unless we have healthy American people. And they depend first and basically on water. They depend secondly on sanitary and adequate waste disposal. It is just foolish to talk about other programs as really having priority without this.

What has more priority than a drink of uncontaminated clean water? What good does it do to insure any retirement programs or to give more money for education or for cleaning up the ghettos, and so forth if we do not have clean water? What good does it do if we cannot provide the vital, necessary things that go with living?

I have differed for a number of years both with the Johnson administration and now with the Nixon administration as to the lack of priority afforded this program. I was a cosponsor of the original program. Further I have supported the enlargement and amplification of the program ever since it has been in being. To me it is of No. 1 importance, and it has been downgraded constantly in favor of other programs not immediately concerned with the health of the American people.

We have had no testimony from any community anywhere in the United States against this. It has wide acceptance. The communities of the United States want the program.

It is a program which requires participation of municipalities, because the funds are matching funds, 50 percent by the Federal Government and 50 percent by the local municipality.

I found, on investigation a couple of years ago, that there was a more than $4 billion backlog of applications for funds under this program. Efforts were made at that time to overlook the need to discourage the applications, to send them to other departments and back and forth.

HUD has, through both administrations, the Johnson and Nixon administrations, discouraged further applications, saying there is no money for them. There was money at the time, however, for nonworking programs.

It was of extreme importance that the $350 million in additional appropriations be enacted into law this year. But that is water over the dam. Why should we have another billion dollars of authorization, when we cannot get the $350 million through the Appropriations Committee and the House to cover the existing authorizations?

I believe there is no real understanding of the problem, of the nature of the problem and the urgency of the problem. The fact is that one cannot overnight go in to clean up our water. But you can and should start the Boy Scouts and Girl Scouts, God bless them, and members of the committees, to go out and clean up a brook personally, and do other similar things. They can have all kinds of publicity. They can make us think we are making great progress on pollution while we continue to actively pollute our water and to encourage active pollution by our failure to meet the growing needs and the urgent needs which presently exist.

I certainly believe we should pass this bill, and that we should support use of the unused authorization. We should give additional time for the appropriations committee to use up that authorization. Also, we should make available the additional billion dollars to cover applications that are there and can be substantiated as needed and which will really be approved.

To me this is a bill which is very valid, very critical, and should have the support of al Members of the House regardless of party.

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from Pennsylvania (Mr. BARRETT).

Mr. BARRETT. Mr. Chairman, I rise in enthusiastic support of H.R. 17795, the Emergency Community Facilities Act of 1970. This bill provides for an additional authorization of $1 billion and reenacts the balance of the authorization for basic water and sewer facilities provided for in title VII of the Housing and Urban Development Act of 1965. The bill would also extend for 1 year until October 1, 1971, the time within which a community may qualify for a basic water and sewer facilities grant, even though its program for an areawide system though under preparation has not been completed.

We all know that many of our communities are unable to finance the construction of urgently needed public facilities and that there is an immediate need for such facilities to provide the basic safeguards for the health and well-being of our citizens. I believe that this bill is another step toward making our environment more livable by checking the widespread water pollution problem and providing better means for waste disposal systems. The harmful inflation which this country is suffering from and the tight-money, high-interest-rate policy being applied to the economy by President Nixon add to the urgent need for the Emergency Community Facilities Act of 1970. Water and sewer facilities cannot be delayed by local communities until more favorable conditions exist in the bond market. These expenditures have to be made regardless of whether interest rates are high or low. Another important aspect that must be stressed regarding this bill is that an appropriation of the full $1 billion being authorized for this program will have a substantial employment impact. The unemployment rate is presently at 5.1 percent and will probably go higher in the next few months. What is not generally known is that unemployment in the construction industry has climbed to nearly 12 percent, twice the national average. The Bureau of Labor Statistics has estimated that 100 jobs a year are created for each $1 million invested in public facilities, 40 onsite jobs and 60 jobs in industries providing materials and services. The $1 billion authorized in this bill translates into 100,000 onsite construction, manufactur-

ing, and service jobs. The impact of this kind of investment doubles its beneficial effect on the economy as the income it provides changes hands and is spent.

At the present time, there are on application with the Department of Housing and Urban Development 4,300 applications for water and sewer grants, representing $2.5 billion in grant requests. Since grants under this program are 50 percent Federal grants and 50 percent local contribution, total project costs pending in applications add up to approximately $5½ billion. This program has turned out to be probably the most popular program administered by the Department of Housing and Urban Development. It is a program which essentially benefits our smaller communities.

I have enthusiastically endorsed the water and sewer grant program since it was enacted in 1965. Although the program does not directly benefit my city of Philadelphia, it does provide much needed Federal assistance to our medium-size and smaller cities. Local government officials have stated that one of their most pressing problems is the need for adequate water and sewer facilities. A number of witnesses before our committee stated that the unmet need for water and sewer facilities caused civil unrest in some cities during the past 3 years. How can we expect people to be satisfied with life when no sewer facilities or water is supplied to them or the water that is being supplied comes from contaminated wells. Recent estimates that were made regarding expenditures by local governments to meet sewer and water facility needs throughout the country for the next 10 years totaled almost $5.2 billion. A large part of that figure must come from the Federal Government through title VII of the 1965 Housing Act.

We all know that local governments do not have tax resources to bear this entire burden. Up until now, Federal assistance for water and sewer facilities has only amounted to $514.6 million for 1,151 projects through the country. These figures represent all the funds that have been made available over the past 5 years. This is an average of $128 million a year or less than 3 percent of the total required annual expenditure. The authorization in this bill is a realistic approach to the need but it must be admitted that even this amount will be inadequate.

As I mentioned earlier regarding the figures of pending applications, the volume of these applications has so outweighed the amount of available funds that HUD regional offices are discouraging communities from making any applications at all. What this means to the people of our country is that Congress recognizes the need for water and sewer facilities grants, but has failed to make the money available.

Mr. Chairman, I urge the adoption of this bill.

Mr. WIDNALL. I thank the gentleman. I now yield to the gentleman from California (Mr. DON H. CLAUSEN).

Mr. DON H. CLAUSEN. Mr. Chairman, I want to associate myself also with the remarks of the gentleman from New Jersey (Mr. WIDNALL).

I think his statement is one of the most objective and articulate, on the question of water and sewage community facility requirements, presented during the course of this debate.

I have long supported this type of program that helps smaller communities, with a very limited financial capability, to develop badly needed water and sewage systems in order to avoid health problems to resolve pollution problems and to permit these areas to move toward enhancing their environment and their economic opportunities.

Further, it tends to tie in with the "reverse migration—rural revitalization and diversification" concept that I have been attempting to advance for a number of years.

Mr. WIDNALL. Mr. Chairman, I now yield to the gentleman from Maryland (Mr. GUDE).

Mr. GUDE. Mr. Chairman, I thank the gentleman for yielding.

I would like to associate myself with and greatly commend the gentleman from New Jersey (Mr. WIDNALL), the ranking minority member of the Committee on Banking and Currency, for his leadership in support of this bill and his very forthright statement. Even if we are unable to use all of the funds that would be authorized in this act, at the very least, we should give its passage strong support as a measure of the urgency to clean up the municipal waste problem of the Nation. We must press forward with all diligence with both research and implementation of the plans for the treatment plants needed to clean up the water of our Nation.

Mr. WIDNALL. I thank the gentleman for his remarks.

I now yield to the gentleman from New Jersey (Mr. PATTEN).

Mr. PATTEN. I thank the gentleman for yielding.

I want to compliment the gentleman on his remarks and be associated with him. Your county, Bergen, had one of the greatest growths in America after World War II. You saw a lot of building there, with the population doubling. My county has tripled in population since World War II. We will increase another 200,000 people in 10 years. We have raised the standards for sewer and water. Our people cannot build as they did in 1947 and 1948 with cesspools. We cannot build any more with wells in the backyard as half of the people did after World War II. We need this bill more than anything, just as you have stated. We cannot proceed with building homes any more until our municipalities provide the public water, sewers, and sewage disposal plants that are necessary. I hope that your words will be heard by the Members of this House and that this bill will pass by a large vote. This is what our section needs more than anything else in my judgment. Our greatest need is housing, and the builders cannot get approval because the water supply and sewers are not built.

Mr. WIDNALL. I thank the gentleman.

Mr. DENNIS. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman.

Mr. DENNIS. I am sure that the objectives of this bill are everything that the gentleman says. I just want to ask one question. In view of the veto which was sustained of the $350 million appropriation, does the gentleman think there is really any realistic chance that an additional $1 billion will actually be appropriated at this time?

Mr. WIDNALL. Very honestly I do not think that the extra $1 billion will be appropriate at this time but I think it is very well to get it on the record as something available. It is also something that is urgent. We should have the additional authorization there so that we can bring the pressures necessary to get that appropriation. We all know that you cannot develop a program and get moneys allocated to it until we bring realistically into the hands of our Government and those administering the programs the urgent need. This bill is an expression of urgent need because of the fact that there are so many hundreds of millions of dollars in pending applications and applications that will be there almost overnight in order to take care of this situation.

Mr. DENNIS. Mr. Chairman, will the gentleman yield for one further question?

Mr. WIDNALL. I yield to the gentleman.

Mr. DENNIS. Mr. Chairman, it would follow then that if there is no actual appropriation at this time then the construction, and so on, which the gentlemen have referred to here can hardly proceed without actual appropriation of money; is that not true?

Mr. WIDNALL. That is true. It is also true that while the $350 million that was vetoed is necessary, I think this bill is needed in order to provide the further assurance of obtaining the funds to take care of the $350 million in pending authorization. I do not think there is any question about the fact that Congress has to show what it actually feels about this. I am a little bit sick and tired of placing everything on a Bureau of the Budget basis. We have some very, very urgent requirements for our country. I know that inflation presses. I voted for some of the bills trying to cut the budget in order to restore more fiscal responsibility to the Congress and to the Government. I am willing to do it again, to increase my efforts in this area. However, I just fervently believe in this program, and have great faith in it. I think it can do more than any other program to attack at the grass roots the problem of the health of the people of America.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, I thank the gentleman for yielding.

The gentleman is supporting a bill that would provide for an expenditure of $1 billion. I do not know where it is proposed to get the money. Is the gentleman from New Jersey suggesting a tax increase?

Mr. WIDNALL. May I suggest this to the gentleman from Iowa: that we are going to be faced, I believe, with a tax

increase if we are going to do the things that are being called for now, and if we are to meet some of the problems caused by the big deficit in Government. It is an increasing deficit and needs to be eliminated.

Mr. GROSS. Does not the gentleman think that a tax increase ought to come before the authorization of a billion dollars, for this or any other purpose, under the fiscal situation that exists? I am opposed to the bill and therefore I would not support a tax increase to provide the funds, but the spenders ought to provide the revenue.

Mr. WIDNALL. I think the recommendation for it should come from the administration.

Mr. WIDNALL. Mr. Chairman, I have one request for time.

I would like to know what the situation on the other side of the aisle is.

Mr. PATMAN. Mr. Chairman, I suggest that the gentleman from New Jersey use the time, because I do not know of but one other who seeks time.

Mr. WIDNALL. Mr. Chairman, I yield 5 minutes to the gentleman from Ohio (Mr. WYLIE).

Mr. WYLIE. Mr. Chairman, I rise in opposition to this bill.

Mr. Chairman, Congress is back in session, and the stock market is down. This bill represents one of the reasons why, in my opinion. I think it is ludicrous; it makes a mockery of the whole budget authorization-appropriation process. I do not think Congress is getting the message.

The people in my district think that inflation is the No. 1 problem facing the Nation today, and I feel the same way.

It is my belief that the continuing erosion of the national economy because of inflation has become the most critical of our Nation's problems, and that in fact until the inflationary trend is halted the solution of other pressing problems could not adequately be solved.

There are many domestic problems that are demanding solution today, such as in the field of sewerage, in the fields of education, welfare, health, housing, transportation, manpower development and training, urban rehabilitation, and other matters in the transition from a wartime to a peacetime economy.

But the solution of these problems takes mountainous sums of money, even in an unheated economy, and, in times of inflation, these sums spiral upward to staggering levels. The factor of inflation causes the solution of these problems to cost more money and requires increases in the appropriations and increases inflation further, thus creating an unending vicious cycle.

I wrote some dissenting views in the report accompanying this bill which I call to your attention.

The House has already appropriated $500 million for sewage treatment facilities under section 702 of the Housing and Urban Development Act of 1965. This is $350 million above the budget request. Now we are here today ready to authorize an additional $1 billion on top of that.

We are told that the $1 billion cannot be feasibly used. Of course, we should build additional sewers, and I am in favor of that. I suppose if we had $5 billion or even $10 billion, we could put it into sewer facilities. But I wonder whatever happened to the method of financing sewers by general obligation bonds at the local level. That is the way we finance sewer construction in the city of Columbus, Ohio.

Is the Federal Government to build all the sewers across the country? Is that what this is intended to say? It seems the Appropriations Committee has already said there is no additional $1 billion.

So I think on the basis of these reasons that this bill should be defeated today as being inflationary and as not being realistic.

Mr. PATMAN. Mr. Chairman, I yield 5 minutes to the gentleman from Wisconsin (Mr. REUSS).

Mr. REUSS. Mr. Chairman, failure to authorize this appropriation will be a clear demonstration to the entire country that this Congress is unwilling to meet an urgent, fudamental national need.

The money which this bill will provide is absolutely essential to safeguard the health of millions of people in thousands of communities across this Nation. Moreover, the national housing goals established 2 years ago by most of the people who are Members of this Congress cannot be met unless this measure is approved. Any concern that Congress may voice about pollution of our environment is nothing less than hollow statement without adoption of the Emergency Community Facilities Act of 1970.

Hearings held by the Banking and Currency Committee disclosed numerous instances where completely inadequate or nonexistent community sewer and water facilities pose an enormous threat to the health of residents. Representatives of the National Association of Counties presented the committee with the names and addresses of people who were made severely ill by disease contracted in locations where water systems had become polluted, where raw sewage was running on the ground where children walked and played, where water mains are located in ditches used to drain off sewage.

The examples cited by these officials did not begin to describe the completely inadequate conditions that prevail in community after community across the Nation.

As a matter of fact, we do not have to go far from this Chamber to find some first-hand examples. I am sure most of the Members present are familiar with news reports during recent months about delays in housing construction in the Washington area because of inadequate sewer facilities. Court and local government officials have had to tell homebuilders and homebuyers that houses cannot be constructed or, if constructed, cannot be occupied, because lack of sewer facilities creates a public menace. And this, I am afraid, is only the beginning of what is likely to become a problem of epidemic proportions.

How can the Nation possibly achieve a housing goal of 26 million new and rehabilitated dwelling units in 10 years when housing construction is held up before we even begin work to obtain a decent home and suitable living environment for all the people of the Nation?

These conditions are made even more appalling in a Nation which is unhesitatingly willing to spend billions for space explorations and millions to develop a supersonic transport plane for the benefit of the commercial airline industry. How can we possibly agree to do this when there are more than 30,000 communities without water systems and more than 40,000 without sewer systems in the country?

The failure to meet the essential need for adequate water and sewer facilities has been a national horror story for years. A 1966 joint economic committee study concluded that $20 billion would be needed for community water facilities alone during the 10-year period ending in 1975 and an additional $17.5 billion would be needed for sanitary sewer facilities during the same time. It should be noted that these projections, at the time they were made a few years ago, were described as conservative. They are even more so now.

To that projection should be added the fact that, since 1966, the Department of Housing and Urban Development has turned away applications for sewer and water facility grants totaling $2.5 billion. During this period the Department has approved grants averaging $150 million a year—a less than token effort to meet the problem.

There has been some criticism leveled at HUD in this regard. Questions have been raised about the Department's practice of actually discouraging communities from making application for grants and of holding up the release of funds for communities that have been approved. Be that as it may, the overriding problem centers on the fact that Congress and the administration have failed to provide anything approaching an adequate level of funds regardless of HUD's attitude and conduct. It is ironic to criticize HUD for failure to act when we have not provided it with the financial tools to begin doing the job. Moreover, the $1 billion authorized by this measure is going to satisfy the need. Viewed realistically, it is a slow start, but a start nevertheless.

During recent months—primarily, I think, because this is an election year—many voices have been raised to call for a cutback in all Federal spending. I would ask these people to talk with the local officials of their constituencies and ask them whether these communities can provide themselves with critically needed public facilities solely out of their own tax resources. The answer in every case would be an unequivocal "No."

Representatives of the Nation's counties and cities appearing before the Banking and Currency Committee were quick to point out that the cost of financing new sewer and water system facilities in rapidly expanding urban areas is reaching the point of pricing people out of home ownership. Examples were given

to show that the additional burden imposed on local residents to pay for the bonds required to provide funds for such facilities adds up to thousands of dollars more in taxes for each household in these communities. The result is that existing facilities are inadequate and in a rapid state of decline, and that needed new facilities are not being provided.

It is true that the inability of communities to finance public facilities has stemmed in part during the last year from the high interest-tight money conditions which are strangling the Nation's economy. City after city found itself unable to market public facility bond issues because the maximum interest rate permitted for these obligations was not competitive with the yields of other types of securities. A return to rational monetary policies that provide the climate for reasonable interest rates will help to ease the problem for State and local governments. But it will by no means solve it. The tax resources of local communities are simply inadequate to meet all of the required public services that must be provided for our urban society. The funds must come from the Federal level, and to deny this is simply to ignore the need.

Let us take the opposite course. Let us recognize that the Emergency Community Facilities Act of 1970 represents an opportunity for this Congress to begin the work of establishing national priorities for the Nation's domestic needs. In this context nothing is more basic or urgently needed than adequate water and sewer facilities. We must not—we cannot—fail to make this admission and live up to our responsibility to the people of this Nation—to the people who have elected us as their representatives.

Mr. Chairman, let us, as we wind up, ask ourselves a few questions about the measure before us.

Is there a problem with our environment, with pollution, with water, and with sewers? Everybody knows the answer to that in this, the first year of the environmental decade. Pollution is a national disgrace.

What shall it profit a community to have the best waste water treatment plant in the world if it does not have the sewer system capable of transporting the waste down to that plant without spilling those wastes all over the landscape? That is what is happening now.

What good does it do for a community to attempt to build new homes for moderate income people, if it does not have the means of bringing them a pure and healthful water supply?

The next question is: Is this $1 billion authorization needed?

Well, right on page 4 of the committee report is a statement furnished by the administration which shows that there are $5.5 billion worth of current local applications pending. Here we are asking for only a $1 billion authorization. More, that $5.5 billion does not scratch the surface because so many communities have been discouraged by the fumbling of two administrations from ever even presenting their applications.

Then it is asked—where is the money to come from? I say that the money must come from reordering our priorities.

If this administration thinks it is worth $900 million to bail out the banks in the Penn Central Railroad fiasco; if this administration thinks it is worth $1.3 billion of the taxpayers' money to build a supersonic transport plane; if this administration feels that we must spend $70 billion plus on the military in this fiscal year; then, I say that surely we can find, by reordering priorities, the wherewithal to authorize $1 billion for essential water and sewers.

It is said, finally, we are not assumed that there will be an appropriation.

Well, we heard that same sad story when we were about to appropriate an entirely inadequate $214 million last year for sewage disposal plants, and now this year I am delighted that the appropriation is almost 5 times that—close to $1 billion.

So I say that the stock market may have gone down today. I have not looked at the tape. But if this House will say this afternoon, in a resounding voice, that it wants to reorder priorities, that it wants to get away from the foolishness, and instead spend our money for the good of all the people, by authorizing $1 billion for water and sewers, then I confidently expect the stock market to go up tomorrow.

Mr. PATTEN. Mr. Chairman, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from New Jersey.

Mr. PATTEN. I thank the gentleman. Our friend from Ohio seemed to think that it was novel for the Federal Government to help construct sewers. I became mayor of my municipality in 1934. The first contract I signed was a PWA grant of 45 percent for a million-dollar sewer facility in our community.

Ten years ago the Economic Council of the Federal Government recommended that we proceed in this way. We are telling the municipalities to stop building cesspools, stop using well water, for sanitary reasons. We cannot now proceed the way we did in the past, when men would go out and, with their own muscles, build their own homes. Today we have to have architects. Today we have to meet all kinds of regulations. We have higher standards.

In my district there are people who want to build homes but who are not allowed to do so under existing laws because the municipalities do not have sewers and public water connections. This is the number 1 problem.

Inflation was mentioned. In my district there are many young couples getting married who cannot find a place to live under $190 a month, and there are old people who are having their houses sold out from them and they have no place to go. The greatest inflation is in the housing field, and the only way to cure it is to build another 2 or 3 million homes.

Mr. REUSS. I agree with the gentleman that it is essentially a question of homeownership, the homeowners of this country are going to demand clean water and a decent sanitary system. As it is now, if you have to pay for it out of local real estate taxes on the homeowner in order to save your home you are going to ruin your home by endlessly extending the local property tax. There must be help from higher levels of government, and this bill will do it.

Mr. WIDNALL. Mr. Chairman, I find there is a Member on our side who would like an allocation of time. I yield 5 minutes to the gentleman from Pennsylvania (Mr. WILLIAMS).

Mr. WILLIAMS. Mr. Chairman, I am one of the members of the Banking and Currency Committee who voted this bill out of committee. We voted this bill out of committee in June, and I can tell you that circumstances have certainly changed since then. When we voted this bill out of committee, we thought we had a balanced budget. We did not know what we know today, that our deficit for the fiscal year 1971 could easily run to $15 billion.

In addition to that, we passed the Independent Offices and HUD bill at a figure of over a half billion over the budget. For this reason I voted against that appropriation bill and I voted to sustain the President's veto. That appropriation bill contained $500 million to eliminate water pollution.

Today, we are considering adding another half billion dollars to the deficit which this Nation faces. I know from some of the comments that I have heard made here on the floor this afternoon that some people do not understand what it means to construct adequate sewage treatment plants or adequate water facilities.

I can tell you that over this country municipalities have banded together and have floated the general obligation bond issues that the gentleman from Ohio (Mr. WYLIE) mentioned. They built the interceptor lines so the pollutants are not scattered all over the countryside. They have built adequate sanitary sewage treatment plants, and they are paying for them by user charges, not by increasing the real estate tax. The user charge is a sewer rent paid on a yearly basis by families, businesses, and other users. This sewer rent is not so high that it is difficult for anyone to pay.

In addition to that, municipalities all over this country have banded together and built water treatment plants, and they are supplying the people in their municipalities with clean water. They are doing this by charging a monthly charge or a yearly charge for water. This is the way this really should be handled.

The State and local and municipal governments have just as much responsibility in the field of pollution control as the Federal Government has. This year we have the highest budget in our history, $200.8 billion, and we are facing a $15 billion deficit by overspending. I believe we should leave this matter with the Appropriations Committee, which is right now rewriting the Independent Offices and HUD bill and see what they come back with. Then let us support the appropriation bill as long as it contains a reasonable sum of money to help municipalities accomplish the job of eliminating pollution as far as sanitary sewerage and water are concerned.

Mr. WYLIE. Mr. Chairman, will the gentleman yield?

Mr. WILLIAMS. I yield to the gentleman from Ohio (Mr. WYLIE).

Mr. WYLIE. Mr. Chairman, the gentleman from New Jersey said I implied the idea of financing sewers by Federal money was novel. I did not mean to imply that, and I know the Federal Government has financed many sewer projects. The novelty of it is that, by this bill, we are suggesting the Federal Government finance all sewer projects all over the country.

The gentleman from Pennsylvania (Mr. WILLIAMS) has touched on that. In connection with the statement of the gentleman from Wisconsin, who suggests we should reorder priorities, I could not agree more with that and that we should build more sewer projects. Congress fixes priorities. However, I have decided from listening to witnesses before the Banking and Currency Committee that to reorder priorities means, "let us get more for our crowd." I say we should begin to live within our income.

Mr. WILLIAMS. I agree with the comments of the gentleman from Ohio. As far as the $1.3 billion for the SST is concerned, as soon as these planes start to sell, the Federal Government will get their money back.

As far as reordering priorities, we can have the same argument every time anything comes up. As far as the gentleman from New Jersey, my esteemed colleague, (Mr. PATTEN), is concerned, I would like to say some of the municipalities in my district, which are above moderate income, have not faced up to this problem soon enough, but now they are facing up to it and they are facing up to this responsibility which is theirs.

Also, the Federal Government now owes so much money that the annual interest payment on the money we owe will reach $30 billion by 1973. Think of the amount of good that could be accomplished by this $30 billion that will be taken from our taxpayers to pay for the fiscal irresponsibility that is Federal deficit spending.

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. WILLIAMS. I yield to the gentleman from Pennsylvania (Mr. BARRETT).

Mr. BARRETT. Mr. Chairman, I want to tell the gentleman from Pennsylvania his district and mine are contiguous, and Pennsylvania alone has 317 applications in for water and sewer grants, amounting to $185 million. The gentleman certainly wants to help these people, I am sure. We have upstate many little towns where there is contaminated water, and it is coming down and children in Delaware and Philadelphia are poisoned.

Mr. WILLIAMS. The gentleman and I both know that Pennsylvania many years ago, in the 1940's, passed the Pennsylvania Clean Streams Act. The gentleman knows that the water quality in Pennsylvania, in general, has been improved tremendously since then. I say to the gentleman that many of these municipalities which have applications in for Federal grants today should have moved much sooner, and they can perform and construct these projects if they get a 25-percent grant from the Federal Government instead of a 50-percent grant.

Mr. WIDNALL. Mr. Chairman, I yield to the gentleman from Illinois (Mr. MICHEL) such time as he may consume.

Mr. MICHEL. Mr. Chairman, I have got to take this time to say that the popular thing to do here again this afternoon is talk about the need for spending another billion dollars to help clean up the environment. The gentleman from Pennsylvania (Mr. BARRETT) a few moments ago made mention of the number of water and sewer grant applications that were submitted by the State of Pennsylvania and of course that could be said over and over again for every State in the Union.

If we at the Federal level hold out the prospect that the well will never run dry and that all one needs to do to fill a local need is file an application for Federal funding, you are going to get completely submerged with applications. This is nothing unique. We see it in every kind of federally funded program from A to Z.

It is difficult for one to take the floor of the House in opposition to a measure that has such a laudable purpose as cleaning up our rivers and streams, but someone has got to raise the question about the amount of tax dollars involved.

We have already tripled funds this year for water and sewer grants and now we are being asked to authorize another billion dollars even though it was obvious that when the House sustained the President's veto on the independent offices appropriation bill, one major concern was the $350 million which was added to the $150 million to help small towns and communities build water and sewer systems.

In reading the hearings on this measure, I find that one State alone, Georgia, is asking for $147 million more than is now available to it for water and sewer construction. If we multiply this figure times the 50 States, we come up with something over $7 billion, half of which would be expected to come from the Federal Government. These are astronomical figures we are talking about and the end is not in sight.

As members of the committee indicated in their dissenting views on this legislation, our Appropriations Committee is not about to come up with an additional $1 billion this year. And I am personally getting a little sick and tired of our blindly going along in support of these authorizing pieces of legislation at exorbitantly high figures and then being pressured by the lobbying groups for full funding of those authorized levels.

I am going to vote against this piece of legislation not because I am opposed to Federal assistance to local communities for building sewers and waste treatment plants, but simply because we are talking about too much money at this time for this particular piece of legislation, and some of us have to be giving more than simple lipservice in support of the President's all-out effort to stem the tide of inflation. This is another one of those occasions when we should say no to an additional $1 billion of spending although I have no illusions that what I say here is going to be heeded by too many Members.

Mr. WIDNALL. Mr. Chairman, I yield such time as he may consume to the gentleman from Illinois (Mr. RAILSBACK).

Mr. RAILSBACK. Mr. Chairman, I want to commend the Banking and Currency Committee for reporting out what I consider to be a major piece of legislation. The Emergency Community Facilities Act recognizes that there is an immediate need for public facilities in order to provide basic safeguards for the health and well-being of the residents of our smaller communities is a manifestation, Mr. Chairman, of the awareness of this Congress of the tremendous problems facing our rural areas.

I testified before both the House Subcommittee on Agricultural Appropriations and the Senate Subcommittee on Agricultural Appropriations about the terrible financial bind facing rural towns and areas. These local areas must have financing to assist them in their efforts to improve the environment.

This is not a specious argument. I want to call to your attention a survey made by the Farmers Home Administration in December 1969 to determine the need of the communities of 5,500 and less population for water and sewer systems in the rural areas. The survey reveals that a total of $11 trillion will be required to improve and/or provide adequate water and sewer systems in our rural areas. These costs are estimated on the basis of the 1969 dollar, however, and experience has shown that costs for such construction rise at a rate of about 10 percent a year.

Now the bill before us today, H.R. 17795, brings to the forefront the need to check widespread water pollution as well as provide an effective and practical method of combating rising unemployment. It further provides an additional $1 billion authorization for basic water and sewer facilities. And it extends for a year the time within which a community may qualify for a basic water and sewer facilities grant even though its program for an areawide system, though under preparation, has not been completed. This measure specifically deals with the title VII of the Housing and Urban Development Act of 1965 under which communities of more than 5,500 persons would be affected.

As an idea of the problem which exists in my State of Illinois, Clarence W. Klassen, chief sanitary engineer for the State of Illinois, has projected that for the next 10 years, Illinois will need $1,241,782,000 to provide and adequate water supply to its population by 1980. The 10-year needs for waste treatment amount to $2,300,000,000. And the 10-year needs for sewers is $1,800,000,000. This is a total of $5.3 billion over 10 years.

I insert data prepared from Mr. Klassen's figures, as follows:

STATE OF ILLINOIS

Total dollar projected needs for period 1970 to 1980

A. WATER SUPPLY

Source	$186,301,000
Treatment	474,326,000
Distribution	355,007,000
Miscellaneous	226,148,000
Total	1,241,782,000

Notes: Miscellaneous included mechanical pumps and other equipment. Water supply needs projected are for public systems serving 10 or more housing or building units and are based uopn a 10-percent per-year increase in construction costs (equipment, labor, et cetera).

B. WASTE TREATMENT

To enlarge and construct new treatment facilities to serve increased population and to serve property not now served or connected: Total, $2,300,000,000.

C. SEWERS

Not including the proposed shore plan for the Chicago Sanitary District, needs for sewers to collect waste are: Total, $1,800,000,000.

Total dollar projected needs to meet 1972 water quality standards

For 675 municipalities in Illinois: $350,000,000 to upgrade plants.

Localities total dollar projected needs 1970 to 1980

Water supply needs for Rock Island County:	
Source	$2,432,000
Treatment	6,188,000
Distribution	4,636,000
Miscellaneous	2,945,000
Total	16,201,000
Water supply needs for city of Peoria:	
Source	4,802,000
Treatment	12,153,000
Distribution	9,107,000
Miscellaneous	5,799,000
Total	31,861,000

Mr. PHILBIN. Mr. Chairman, this bill is truly an emergency bill. It is designed to provide funds for construction of urgently needed public facilities to safeguard the health and well-being of our citizens, to check widespread pollution, and to find an effective method to combat rising unemployment in the Nation which is increasing in many places at an alarming rate, and to provide more funds for urgently needed water and sewer facilities.

All these things are fine and in keeping with vital national goals and priorities.

But this bill is all too little to meet current needs of a most compelling nature. There are over $5 billion worth of applications pending for these major, urgent needs. But this bill provides only for $1 billion for these urgent purposes, or only about one-fifth of the number of pending applications, indeed even less, because there are other applications coming in every day.

While the bill will be helpful, it does not go nearly as far as required to meet a great many accumulated needs that must be met if we are to relieve intolerable conditions in our community life, and absorb some of the rapidly mounting unemployment that is ominously appearing in many places throughout the country.

While I commend the committee for bringing this bill to the floor, the need for a larger program is very great, and I urge that immediate consideration be given to increase the funds necessary to make an effective broadside attack upon a set of alarming national problems that must be tackled in a much broader and larger way, if we are to avoid many dangers and growing problems relating to the health, well-being and general welfare and safety of the American people.

We cannot, we must not stand by while unemployment gets higher and higher. We must act now before it is too late to bring timely relief in these crucial areas, whether they relate to urgent social problems, or the flood of cheap, foreign imports that are closing our factories.

It is the duty of this Congress to stay with these grave problems until they are solved. If we delay overall relief and action now, we will merely insure the certain development of much worse conditions and dangers than those which confront us today.

Mr. HALPERN. Mr. Chairman, I wish to voice my wholehearted support for H.R. 17795, the Emergency Community Facilities Act of 1970. The purpose of this vital legislation is to meet a pressing problem facing many of our communities, both urban and rural; namely, the inability to finance urgently needed water, and sewer facilities. Such facilities are needed to provide basic safeguards for the health of these communities. They are needed to purify water and to decontaminate sewage. They are needed to guarantee the public health standards which our citizens require and demand. These facilities are a major factor in the fight against pollution. Pollution has killed the fish in many of our lakes and streams and has made many unfit for swimming and other recreation. It is essential to clean up America's lakes and waterways. The sewage facilities which would be built under the Emergency Community Facilities Act of 1970 would be one step along the road to cleaner streams and lakes.

The basic water and sewer facilities provided under the Emergency Community Facilities Act of 1970 will not just fight pollution. They can also help in the current economic downturn by providing needed jobs in construction and the other skills necessary to build water and sewer facilities. The completed projects may help attract industry to those communities which presently lack the water and sewer facilities necessary for large scale manufacturing. Such facilities cannot guarantee that factories will be built, but their presence will enable these towns to vie in the keen competition for new industry.

The Emergency Community Facilities Act of 1970 would provide these additional sewer and water facilities by authorizing $1 billion for grants under the public water and sewer facilities program operated by the Department of Housing and Urban Development.

This program is authorized under section 702 of the Housing and Urban Development Act of 1965. Its purpose is to help communities construct water and sewer facilities in order to promote orderly and efficient areawide community growth and development. The program provides grants of up to 50 percent for land and construction costs for new water and sewer facilities. In some cases, a grant may be up to 90 percent of land and construction costs if the community has less than 10,000 people.

Grants under the program can be made to any town, city, county, Indian tribe or public instrumentality. These broad eligibility standards make it possible for any community which needs to construct new sewer or water facilities to share in the $1 billion authorization contained in H.R. 17795, the Emergency Community Facilities Act of 1970.

This proposed legislation is of vital importance, and I strongly urge that you support it. The effects of this legislation will be felt in many areas that are of vital importance to Americans. It will help provide pure drinking water. It will help to make our streams as pure and clean as they were when our forefathers first settled this country. The Emergency Community Facilities Act of 1970 will provide jobs for the unemployed. It will provide the facilities needed to attract industry to those rural small town communities which currently are losing population and vigor because they cannot provide the jobs necessary to retain their youth.

These are all vital needs. I urge your full support for H.R. 17795, the Emergency Community Facilities Act of 1970.

Mr. MINISH. Mr. Chairman, I rise in support of the Emergency Community Facilities Act of 1970. This legislation authorizes an additional $1 billion in fiscal 1971 for water and sewer facility grants to check widespread water pollution and to alleviate high unemployment.

The administration requested only $150 million for this vital program. The Congress raised the amount to $500 million in the HUD-Independent Offices appropriations bill. Even the latter sum, however, greatly understates the needs of local communities for funds to combat pollution. Since 1966, the Department of Housing and Urban Development has rejected approximately $2.5 billion in applications for water and sewer facilities grants. In New Jersey alone, 163 applications for $92.5 million have been returned to localities because of a lack of Federal funds.

This measure, if enacted, will have a substantial and beneficial impact on the Nation's deteriorating economy by providing needed employment opportunities in the depressed construction industry. During the past 8 months, the unemployed rate in the country has risen from 3.5 to 5.1 percent. Unemployment in the construction industry, however, has reached a level of approximately 12 percent, more than twice the national average.

Mr. Chairman, as an important step to help thousands of Americans without work and to halt water pollution, I strongly urge passage of H.R. 17795, the Community Facilities Act of 1970.

Mr. DONOHUE. Mr. Chairman, I most earnestly urge and hope that this bill, H.R. 17795, the Emergency Community Facilities Act of 1970, will be promptly and overwhelmingly approved.

In my conviction, there are three very self-evident and imperative basic reasons that eminently justify the approval of this measure. First, there is an immediate and essential need of the water and sewer facilities that this bill would provide in order to safeguard the health and well-being of our citizens and contain the ever-spreading danger of water pollution; second, the evidence of record is strikingly clear that the already overburdened taxpayers in the great majority of our Nation's communities are totally unable to further finance the construction of these urgently required public facilities; and, third, the enactment of this bill, with the public facility construction projected, would provide an effective and practical method of combatting the alarming increase in unemployment.

Mr. Chairman, the Congress has, indeed, passed, over these last few years, a good many worthy measures designed to stop the present and prevent the future senseless pollution of our surroundings, including the Water Pollution Control Act of 1961, the Water Resources Planning Act of 1965, the Solid Waste Act of 1965, the Clean Water Restoration Act of 1966, the Water Quality Improvement Act of 1970, and several others. However, without sufficient money to implement the provisions of these and other measures, their well-meant designs and objectives cannot possibly be realized. That is why, Mr. Chairman, that throughout our legislative action on these measures, I have consistently appealed for reasonable increases in Federal appropriation assistance to carry out the purposes of the legislation, without which they are only empty and meaningless legislative gestures.

In my own State of Massachusetts, and I am sure in most every other State in the Union, local taxpayers are laboring under extreme financial hardships, especially in these inflationary times, and most municipal governments are sorely pressed to obtain adequate funds to even cover presently existing community programs and services.

Smaller communities throughout the country, like the towns bordering on the Blackstone River and other tributaries in my own congressional district, are in urgent and genuine need of greater Federal financial assistance if essential health and safety water and sewer lines are to be constructed.

Although many communities are making very strong efforts in trying to raise additional funds, their problems are compounded by the imposition of additional tax burdens which, of course, tend to discourage any new industry from moving into a particular area; at the same time, the striving communities cannot expect or hope to attract new industry without being able to furnish adequate water and sewer facilities. Let us clearly realize that the existing tight money, high-interest rate policies make it practically impossible for most communities to obtain long-term financing for public facilities at reasonable interest rates and, with unemployment at 5 percent nationally and nearly 12 percent in the construction trades, local officials are understandably most hesitant and reluctant to place additional tax burdens upon their people.

Therefore, the only sensible and prudent answer to this financial frustration on the part of local communities throughout the Nation is the greater Federal assistance this bill would provide and, with rapidly increasing construction costs, it is obviously more economically feasible and protective of the taxpayers' money to initiate the building of these public facilities as quickly as possible.

Mr. Chairman, several months ago, the President of the United States made the salvation of our environment the central theme of his state of the Union message, and I am earnestly hopeful that he will exert his tremenduous influence for the approval and use of these proposed increased appropriations to assist the harassed taxpayers in the towns and cities of Massachusetts and throughout the country to achieve and preserve a health and unpolluted environment.

As I have so often emphasized in the past, Mr. Chairman, the control and improvement of our environment has become as urgent as life itself and as nonpartisan as eventual death, so I hope that my colleagues from both sides will overwhelmingly join together in the adoption of this legislation that is so clearly in the national interest.

Mr. HOGAN. Mr. Chairman, I support the passage of the Emergency Community Facilities Act of 1970, as I have in the past supported other legislation to increase the Federal Government's assistance for the construction and expansion of sewage treatment facilities.

Nowhere will one find a better example of the need for this legislation than in my own district, the Fifth District of Maryland, which includes Charles County and Prince Georges County, one of the fastest growing counties in the Nation today. The tremendous growth Prince Georges County has experienced in recent years has naturally placed an exceptionally heavy burden on the Blue Plains sewage treatment facility which Prince Georges County has utilized in conjunction with the District of Columbia and Montgomery County.

This problem was brought to a head earlier this year when the Congress deleted funds from the District of Columbia appropriation bill for a $40 million expansion of the Blue Plains facility and the Department of the Interior stated that Prince Georges and Montgomery Counties could no longer use that facility and must immediately seek other means to take care of their needs. Suburban and State officials, along with the Interior Department, has agreed that Maryland must provide additional plants to take care of new growth in the county and to cover present sewage treatment requirements.

Thereafter, in May, 1970, the Maryland Departments of Health, because of the serious deficiencies in the sewage treatment system, felt it necessary to order a moratorium on building construction in five areas in the Maryland suburbs including much of Prince Georges County. This moratorium will continue to be in effect until the Washington Suburban Sanitary Commission can provide assurances that the present overload situation has been alleviated.

One particular area in my district known as the Westphalia Estates is facing a crisis due to the failure of septic tanks. In this area, the residents are literally living with sewage flowing in the streets, creating a serious hazard to their health which could have epidemic proportions. Their problem would have been resolved if the necessary sewage connections could have been made. Because of the existing problem, they can look forward to no relief unless some reversals are made.

In addition, there are numerous homeowners who have invested their savings in new homes but will not be able to move in because of the ban. The result will inevitably be not only hardships, but in increased cost to them.

This situation represents the type of "emergency" which can benefit most from the funds contained in this bill before us.

As I have said before, we can and must solve the water pollution problems of this country. It should be just as important to Members of Congress to desire to solve the pollution problems of the Nation's Capital and our national river, the Potomac. It is a question of whether we are willing to dedicate ourselves to committing the necessary resources and technology to solve these problems. The cost will be high today, but even higher tomorrow.

Mr. MOLLOHAN. Mr. Chairman, the bill we are considering today, H.R. 17795, is of vital concern to my State of West Virginia. At this time there are nearly 1,500 rural communities that either need new community water and waste disposal facilities or require substantial improvements in their present systems. To provide these improvements and new systems would cost approximately $460 million and would effect close to a million West Virginians.

In my First Congressional District alone, there are 324 rural communities that need either a new system or improvements in their present systems. And at present construction costs it would require $94 million to build these facilities.

Yet, at the present rate of funding, it would take 80 years to construct these systems for over the past 5 years, only $6 million has been provided for financing water and waste disposal projects in the First Congressional District.

H.R. 17795 is particularly important to West Virginia Mr. Chairman, because it would allow sector 702 funds available to local public bodies without regard to the size of the community being served. Presently HUD policy is to refer applications of communities with less than 5,500 people to the Farmers Home Ad-

ministration, yet just this year 36 applications in West Virginia have been rejected because of the lack of funds under the FHA program.

The Emergency Community Facilities Act would allow funds to be channeled into smaller cities and rural communities by removing this roadblock.

Mr. Chairman, it is urgent that our rural communities be able to expand and build water and sewer facilities not only for the benefit of the citizens now living in these small communities, but so that they can accommodate expansion and have a chance to thrive. For too many years, we have seen our cities and metropolitan areas being choked with population vastly beyond their abilities to allow humane and livable conditions. And at the same time, we are letting our smaller rural communities fall into disrepair so that they are in a poor situation to compete for the location of industry.

It is time that we start planning for the revitalization of rural America so that millions of citizens will have a place to move for a saner way of life. And the key to this effort is the expansion of our investment in community water and sewage facilities.

Mr. DENNIS. Mr. Chairman, it is politically tempting to vote for this bill.

No one can oppose water and sewer projects and water treatment facilities for the cities and towns of America.

Certainly I do not oppose such worthwhile projects. But the truth is that this measure, purporting at this time to authorize the expenditure of $1 billion for these purposes, is a delusion and a fraud.

The House recently passed the Housing and Urban Development appropriation bill, which was vetoed by the President in part because it appropriated $500 million—$350 million above the budget request—for these same purposes. This veto was sustained by the House—and I voted to sustain the veto, because the bill was $500 million, overall, above the budget requests, and was clearly inflationary in the face of a probable deficit of $10 to $15 billion.

In the face of this recent record it would not only be obviously inconsistent for me to now vote to authorize the expenditure of $1 billion for this same purpose, but it is also obviously completely unrealistic to expect the Committee on Appropriations to actually appropriate and provide such a sum of money. This committee is currently wrestling with the problem of bringing in a new HUD appropriation bill at a reduced figure, and this bill will of course contain moneys for water and sewer projects, but presumably in an amount less than the $500 million previously appropriated, and almost certainly nowhere in the neighborhood of a billion dollars.

The billion dollars authorized by this bill will never be appropriated; and the billion dollars worth of sewers and water projects which gentlemen talk about so eloquently will never be built.

Every Member of the House knows this. We are simply going through a political exercise, for the sake of a political record. We are kidding no one—except the people who would like to have sewers, and the taxpayers who would have to find the money if we were really going to appropriate it.

This is not building sewers; it is an election year gambit, in which I decline to participate.

Mrs. HECKLER of Massachusetts. Mr. Chairman, I rise in support of H.R. 17795, the Emergency Community Facilities Act of 1970. This bill reflects the urgent need to construct water and sewer facilities and I strongly urge its approval.

The city of Fall River, Mass., in my congressional district, recently was forced to order its residents to boil their water before drinking it. Dangerous bacteria were found in the system and a very serious health hazard existed until the water mains could be flushed and the source of contamination discovered.

Many parts of the Fall River system are old and do not meet modern standards. The age of the system increases the chances of a breakdown with a consequent critical emergency such as that which just occurred. Fall River must move rapidly to modernize its system and will need assistance from State and Federal agencies in doing so.

Fall River is not alone in the situation which has arisen. The Emergency Community Facilities Act was developed by the House Banking and Currency Committee of which I am a member. Our committee is well aware of the national water and sewer needs we face. The overwhelming approval of the measure in committee reflects the great need.

In addition, this bill provides important fiscal flexibility to the water and sewer program by increasing the authorized limit on expenditures. Recent economic indicators point to an upswing in the economy and we must be prepared to take advantage of this improvement through Federal budgetary policies.

The development of adequate water and sewer facilities is basic to life and essential if improvements in our standard of living are to be achieved. Unless water and sewer installations are adequate to meet increasing demand, the health and well-being of our citizens will be seriously jeopardized.

In addition, these facilities are the most important factor in the fight against water pollution. The dumping of poorly treated wastes into our waterways creates a health hazard, is seriously harmful to fish and wildlife and is an esthetic blight.

Beyond the direct benefits which will accrue from the strengthening of our water and sewer programs are the indirect benefits we shall receive. Most important, the number of annual housing starts is now beginning to build from the slump it has been in and the facilities authorized by this bill will be needed for new housing construction.

And, it is clear that many of the Nation's communities are unable to finance completely the construction of urgently needed public facilities. This bill will assist them substantially.

I am confident, Mr. Chairman, that this body will recognize this need with a strong vote of approval for this legislation.

Mr. PRICE of Illinois. Mr. Chairman, the need for this authorization is, I think, immediately apparent. The most conservative of estimates from the Federal Water Quality Administration for sewage and water treatment facilities calls for $10 billion over the 5 years from 1970–74. Other estimates, based on specific cost data gathered in a special survey by the National League of Cities and the U.S. Conference of Mayors, yield figures of $25 billion over the 5 years from 1972–76 and $33 to $36 billion over the next 6 years. The $1 billion we are asked to enact today, when added to the prior appropriation—also of about $1 billion—will barely cover what is necessary for fiscal year 1971. These costs are substantial. However, I truly believe that they are also necessary.

Today, we hear a great deal about the need for a "reordering of our national priorities." Again and again we are admonished that the improvement of the quality of our environment, and hence of our life style, is the consummate challenge facing our wisdom and technical skill in the years to come. In H.R. 17795 we have a chance to take a step in the direction of both of these goals.

First of all, this bill provides basic safeguards for the health and well-being of the people of the United States. In so doing it allows us the opportunity to stress our commitment to human needs and priorities. Second, the facilities authorized by this bill will greatly help check widespread pollution of irreplaceable water sources. Thus, it will show that this body does believe in the imperative necessity of maintaining ecological balance and of improving environmental quality. This legislation seems, in fact, of a piece with that which we have already passed this session; for example, the Environmental Education Act and the act establishing the Council on Environmental Quality. Now we are called upon for deeds as well as words, or rather succinctly, to put our money where our mouth is.

Finally, it should provide an effective and practical method of combating rising unemployment. As the committee report indicates, while national unemployment is 5 percent, the level in the construction trades is a crushing 12 percent. This aspect again pertains to what we consider important. It is a chance to see if we can achieve a healthy, full employment economy without undue dependence on defense construction items.

We are faced with a need and a challenge. We are also faced with the opportunity to meet them both. Thus, I strongly urge the passage of H.R. 17795.

Mr. WIDNALL. Mr. Chairman, I have no further requests for time.

Mr. PATMAN. Mr. Chairman, in view of the fact that neither side desires to use further time, I ask that the bill be read.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

H.R. 17795

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Emergency Community Facilities Act of 1970".

SEC. 2. (a) The Congress finds that a large number of municipalities and other entities of local government throughout the Nation are unable to finance construction of vital and urgently needed public facilities because of the shortage of funds for long-term borrowing.

(b) The Congress further finds that there is an immediate need for such facilities in order to provide basic safeguards for the health and well-being of the people of the United States, to check widespread pollution of irreplaceable water sources, and to provide an effective and practical method of combating rising unemployment.

SEC. 3. (a) Section 708(a) of the Housing and Urban Development Act of 1965 is amended by adding at the end thereof the following new sentence: "In addition, upon the enactment of the Emergency Community Facilities Act of 1970, there is authorized to be appropriated for grants under section 702 not to exceed $1,000,000,000 for the fiscal year commencing July 1, 1970."

(b) Section 708(b) of such Act is amended by striking out "1971" and inserting in lieu thereof "1972".

(c) Section 702(c) of such Act is amended by striking out "1970" in clause (2) and inserting in lieu thereof "1971".

Mr. PATMAN (during the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. Are there any amendments to be proposed? If not, under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. BROOKS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 17795) to amend title VII of the Housing and Urban Development Act of 1965, pursuant to House Resolution 1178, he reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. WYLIE

Mr. WYLIE. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. WYLIE. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. WYLIE moves to recommit the bill, H.R. 17795, to the Committee on Banking and Currency.

Mr. PATMAN. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. PATMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 281, nays 32, not voting 116, as follows:

[Roll No. 290]

So the bill was passed.

The Clerk announced the following pairs:

Mr. Hébert with Mr. Anderson of Illinois.
Mr. Hays with Mr. Morton.
Mr. Burleson of Texas with Mr. Cramer.
Mr. Daddario with Mr. Meskill.
Mr. Cabell with Mr. Price of Texas.
Mr. Anderson of California with Mr. Kuykendall.
Mr. Dent with Mr. Beall of Maryland.
Mr. Blatnik with Mr. Riegle.
Mr. Ottinger with Mr. Roudebush.
Mr. Friedel with Mr. Scherle.
Mr. Fallon with Mr. Skubitz.
Mr. Giaimo with Mr. Pelley.
Mr. Pryor of Arkansas with Mr. Wold.
Mr. Rivers with Mr. Wiggins.
Mr. Sisk with Mr. Goldwater.
Mr. Fulton of Tennessee with Mr. Brock.
Mr. Monagan with Mr. Clancy.
Mr. Miller of California with Mr. Cowger.
Mr. Tunney with Mr. Powell.
Mr. Macdonald of Massachusetts with Mr. Taft.
Mr. Jones of Tennessee with Mr. Bush.
Mr. Corman with Mr. Halpern.
Mr. Daniel of Virginia with Mr. Burton of Utah.
Mr. Davis of Georgia with Mr. Buchanan.
Mr. Dowdy with Mr. Berry.
Mr. Fountain with Mr. Burke of Florida.
Mr. Rogers of Colorado with Mr. Edwards of Alabama.
Mr. St Germain with Mr. Lujan.

Mr. Melcher with Mr. Esch.
Mr. Charles H. Wilson with Mr. Rousselot.
Mr. White with Mr. McCulloch.
Mr. Van Deerlin with Mr. Whalen.
Mr. Anderson of Tennessee with Mr. Findley.
Mr. Aspinall with Mr. Hall.
Mr. Landrum with Mr. Blackman.
Mr. Yatron with Mr. MacGregor.
Mr. Delaney with Mr. Button.
Mr. Carey with Mr. Quie.
Mr. de la Garza with Mr. Snyder.
Mr. Edwards of Louisiana with Mr. Frey.
Mr. Hanna with Mr. Schneebeli.
Mr. Lowenstein with Mrs. Chisholm.
Mr. Purcell with Mr. Sebelius.
Mr. Stephens with Mr. Thompson of Georgia.
Mr. Sikes with Mr. Watson of South Carolina.
Mr. Flynt with Mr. Whitehurst.
Mr. Madden with Mr. Landgrebe.
Mr. Murphy with Mr. Casey.
Mr. Pickle with Mr. Pepper.
Mr. Feighan with Mr. Stokes.
Mr. Stubblefield with Mr. Pryor of North Carolina.
Mr. Wright with Mr. Jones of Alabama.
Mr. Hicks with Mr. Fraser.
Mr. Gibbons with Mrs. Hansen of Washington.
Mr. Young with Mr. Hagan.
Mr. Long of Louisiana with Mr. Rees.
Mr. Kee with Mr. McCarthy.

Mr. NELSEN changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. PATMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and include extraneous matter on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

HEALTH INSURANCE FOR FEDERAL EMPLOYEES AND ANNUITANTS

Mr. DANIELS of New Jersey. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 16968) to provide for the adjustment of the Government contribution with respect to the health benefits coverage of Federal employees and annuitants, and for other purposes, with Senate amendments thereto, and consider the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Strike out all after the enacting clause and insert:

"That, except as provided by subsection (b) of section 8906 of title 5, United States Code, effective from the first day of the first pay period which begins on or after October 1, 1970, and continuing until the first day of the first pay period which begins on or after January 1, 1971, the biweekly Government contribution for health benefits for an employee or annuitant enrolled under a health benefits plan under chapter 89 of title 5, United States Code, shall be equal to 40 percent of the average of the subscription charges in effect on the beginning date of the adjustment, with respect to self alone or self and family enrollments, as applicable, for the highest level of benefits offered by—

"'(1) the service benefit plan;

"'(2) the indemnity benefit plan;

"'(3) the two employee organization plans with the largest number of enrollments, as determined by the Commission; and

"'(4) the two comprehensive medical plans with the largest number of enrollments, as determined by the Commission.'.

"SEC. 2. Effective January 1, 1971, section 8906(a) of title 5, United States Code, is amended to read as follows:

"'(a) The Government contribution for health benefits for employees or annuitants enrolled in health benefits plans under this chapter shall be adjusted on the first day of the first pay period of each year to an amount equal to 40 percent of the average of the subscription charges in effect on the beginning date of the adjustment, with respect to self alone or self and family enrollments, as applicable, for the highest level of benefits offered by—

"'(1) the service benefit plan;

"'(2) the indemnity benefit plan;

"'(3) the two employee organization plans with the largest number of enrollments, as determined by the Commission; and

"'(4) the two comprehensive medical plans with the largest number of enrollments, as determined by the Commission.'.

"SEC. 3. (a) Section 8901(3)(B) of title 5, United States Code, is amended to read as follows:

"'(B) a member of a family who receives an immediate annuity as the survivor of an employee or of a retired employee described by subparagraph (A) of this paragraph;'.

"(b) Section 8901(3)(D)(i) of title 5, United States Code, is amended by striking out ", having completed 5 or more years of service.'.

"SEC. 4. (a) Section 8907(a)(B) of title 5, United States Code, is amended by inserting 'and the Panama Canal Zone' immediately before the semicolon at the end thereof.

"(b) Section 8901(1)(ii) of title 5, United States Code, is amended by inserting 'and the Panama Canal Zone' immediately before the semicolon at the end thereof.

"SEC. 5. (a) The Retired Federal Employees Health Benefits Act (74 Stat. 849; Public Law 86-724) is amended as follows:

"(1) Section 2(4) is amended by inserting immediately before the period at the end thereof a comma and the following: 'and includes the Social Security Administration for purposes of supplementary medical insurance provided by part B of title XVIII of the Social Security Act';

"(2) Sections 4(a) and 6(a) are each amended by adding at the end thereof the following sentence: 'The immediately preceding sentence shall not apply with respect to the plan for supplementary medical insurance provided by part B of title XVIII of the Social Security Act.'; and

"(3) Section 9 is amended by adding at the end thereof the following subsection:

"'(f) Notwithstanding any other provision of law, there shall be no recovery of any payments of Government contributions under section 4 or 6 of this Act from any person when, in the judgment of the Commission, such person is without fault and recovery would be contrary to equity and good conscience.'.

"(b) The amendments made by subsection (a) of this section shall become effective on October 1, 1970."

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

Mr. GROSS. Mr. Speaker, reserving the right to object, and I have no intention of objecting, I merely reserve the right to ask the gentleman to give us a brief explanation of what is in the amendment, and what action is proposed.

Mr. DANIELS of New Jersey. I will be happy to do so.

Mr. Speaker, on July 9 the House passed the bill, H.R. 16968, requiring the Government to increase its sharing ratio of premium charges under the Federal employees' health benefits program from an existing level of approximately 24 to 50 percent of the total charges, effective next January.

Yesterday, the Senate amended the House-passed measure to provide in lieu of that 50-percent figure, a Government contribution equal to 40 percent, effective October 1, 1970.

The cost of H.R. 16968 for calendar year 1971, as originally passed by the House, was estimated at $314 million. In reducing the percentage of contemplated Government contribution from 50 to 40 percent, the Senate amendment reduces the estimated cost by $89 million, to $225 million for the calendar year 1971. This estimated cost is predicted upon an assumption that total premium rates will be further increased by approximately 12 percent in the next contract year beginning January 1971.

In addition to reducing the rate of Government contribution, the Senate also amended the effective date of the bill's provisions from January 1971 to October 1970. By so doing, the costs of the program for the remainder of the current contract or calendar year would be increased by $35 million, and would present insurmountable administrative difficulties to the Civil Service Commission and all employing agencies in affecting the changes in employee-employer cost sharing within such a short time period.

A change in cost sharing, as proposed in the House version of the bill, was designed to take effect at the most practical and administratively workable date, the beginning of the new contract year, January 1971.

Therefore, Mr. Speaker, the amendment offered to the Senate amendment to H.R. 16968 will, in substance, agree to a 40-percent Government contribution, but effective in January 1971, and perfect the language of the Senate amendment. I am confident that the Senate will readily concur in the amendment offered, paving the way for the bill's early enactment into law.

Mr. Speaker, I urge the unanimous adoption of the motion and the amendment offered.

Mr. GROSS. Mr. Speaker, I would ask the gentleman to state to the House what is proposed to be sent back to the other body.

Mr. DANIELS of New Jersey. As I already indicated, the Senate adopted the House-passed version, but it added two amendments thereto, one reducing the Government's contribution from 50 to 40 percent, and the other making it effective as of October 1, this year. We would accept one of the amendments passed by the Senate, that is the one reducing the Government's contribution from 50 to 40

percent, but we would change the effective date to January 1, 1971, because the Civil Service Commission contracts with all of the insurance companies on a calendar year basis.

Mr. GROSS. That is the amendment the gentleman proposes to offer here?

Mr. DANIELS of New Jersey. That is correct.

Mr. GROSS. To change the effective date of the bill?

Mr. DANIELS of New Jersey. That is absolutely correct.

Mr. GROSS. As the measure was messaged to the House?

Mr. DANIELS of New Jersey. That is absolutely correct.

Mr. GROSS. And the gentleman states that the bill as it now stands, and if approved by the other body as to the effective date, will increase the Government expenditure for health benefits for Federal employees, including Members of Congress, by approximately $225 million?

Mr. DANIELS of New Jersey. That is correct. And that is based upon the assumption according to the testimony given by the Honorable Robert E. Hampton, Chairman of the U.S. Civil Service Commission, that there will be an increase in rates next year of approximately 12 percent.

Mr. GROSS. I see.

Mr. DANIELS of New Jersey. And that is taken into consideration in the estimated cost.

Mr. GROSS. Mr. Speaker, let the record show that I opposed the increase to 50 percent, and I oppose the increase to 40 percent. I have no desire to ask for a rollcall vote on this bill because I voted against it when it was originally before the House, but I do not want the record to show that I am opposed to the 40 percent, which is a 16-percent increase over the present 24-percent contribution by the taxpayers. Even a 16-percent increase is too rich for my blood.

Mr. Speaker, I want to say to the Members that only yesterday the House passed a bill presumably to regulate the issuance of credit cards. I am sure, after noting the bill that was just approved by the House providing for an additional $1 billion for the so-called environment and pollution, that what ought to have been done yesterday was to approve a measure regulating the issuance of gift certificates, drawn on the U.S. Treasury by the same Members of Congress.

Mr. DANIELS of New Jersey. Mr. Speaker, will the gentleman yield further?

Mr. GROSS. Yes; I yield further to the gentleman.

Mr. DANIELS of New Jersey. Mr. Speaker, I would like to point out to the gentleman that the administration representatives who testified before the committee recommended in substance the bill that we are now considering.

The Civil Service Commission not only recommended the new formula by which these premiums would be determined in the future, as set forth in this bill, but also went as far as recommending an increase of Government contributions from the present 24 percent to 38 percent.

The only difference is an additional 2 percent. I think the U.S. Government as an employer ought to be a model employer and set the highest standards and criteria for private industry to follow throughout the United States. This small gift of 2 percent should not destroy the United States standing as such a model employer.

Mr. GROSS. I appreciate the gentleman's views on this subject. But let me say again that so far as I am concerned personally, a 16-percent increase to 40 percent in the taxpayer's contribution to our health benefits, is too rich for my blood and, therefore, I oppose the bill.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey (Mr. DANIELS).

There was no objection.

MOTION OFFERED BY MR. DANIELS OF NEW JERSEY

Mr. DANIELS of New Jersey. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. DANIELS of New Jersey moves to concur in the Senate amendment with an amendment as follows: In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

"That (a) section 8906(a) of title 5, United States Code, is amended to read as follows:

"'(a) Except as provided by subsection (b) of this section, the biweekly Government contribution for health benefits for employees or annuitants enrolled in health benefits plans under this chapter shall be adjusted, beginning on the first day of the first pay period of each year, to an amount equal to 40 percent of the average of the subscription charges in effect on the beginning date of the adjustment, with respect to self alone or self and family enrollments, as applicable, for the highest level of benefits offered by—

"'(1) the service benefit plan;

"'(2) the indemnity benefit plan;

"'(3) the two employee organization plans with the largest number of enrollments, as determined by the Commission; and

"'(4) the two comprehensive medical plans with the largest number of enrollments, as determined by the Commission.'.

"(b) The amendment made by subsection (a) of this section shall become effective at the beginning of the first applicable pay period which commences after December 31, 1970.

"SEC. 2. (a) Section 8901(3)(B) of title 5, United States Code, is amended to read as follows:

"'(B) a member of a family who receives an immediate annuity as the survivor of an employee or of a retired employee described by subparagraph (A) of this paragraph;'.

"(b) Section 8901(3)(D)(i) of title 5, United States Code, is amended by striking out ', having completed 5 or more years of service,'.

"SEC. 3. (a) Section 8701(a)(B) of title 5, United States Code, is amended by inserting 'and the Panama Canal Zone' immediately before the semicolon at the end thereof.

"(b) Section 8901(1)(ii) of title 5, United States Code, is amended by inserting 'and the Panama Canal Zone' immediately before the semicolon at the end thereof.

"SEC. 4. (a) The Retired Federal Employees Health Benefits Act (74 Stat. 849; Public Law 86-724) is amended as follows:

"(1) Section 2(4) is amended by inserting immediately before the period at the end thereof a comma and the following: 'and includes the Social Security Administration for purposes of supplementary medical insurance provided by part B of title XVIII of the Social Security Act.';

"(2) Sections 4(a) and 6(a) are each amended by adding at the end thereof the following sentence: 'The immediately preceding sentence shall not apply with respect to the plan for supplementary medical insurance provided by part B of title XVIII of the Social Security Act.'; and

"(3) Section 9 is amended by adding at the end thereof the following subsection:

"'(f) Notwithstanding any other provision of law, there shall be no recovery of any payments of Government contributions under section 4 or 6 of this Act from any person when, in the judgment of the Commission, such person is without fault and recovery would be contrary to equity and good conscience.'.

"(b) The amendments made by subsection (a) of this section shall become effective on January 1, 1971."

Mr. DULSKI. Mr. Speaker, will the gentleman yield?

Mr. DANIELS of New Jersey. I am very pleased to yield to the distinguished chairman of the House Committee on Post Office and Civil Service, the gentleman from New York (Mr. DULSKI).

Mr. DULSKI. Mr. Speaker, I rise in support of the motion by the gentleman from New Jersey, the chairman of the Subcommittee on Retirement, Insurance, and Health Benefits.

The amendment proposed is identical, with a single change, to the health benefits bill passed by this House July 9, 1970, on a record vote of 284 to 57.

The change to which I refer is the adoption of the Senate provision fixing the Government's contribution to the health benefits premium cost at 40 percent, whereas the House-passed bill provided for a 50-percent Government contribution.

Presently, the Government's contribution is equal to approximately 24 percent of the total premium cost, leaving the employees to bear the excessive burden of paying the other 76 percent.

Mr. Speaker, I strongly believe that the original House version is fully justified and that an equal sharing of premium costs between the Government and its employees would be both fair and consistent with what is being done in modern private enterprise.

However, from a practical standpoint, I feel that a Government contribution rate in excess of 40 percent cannot be finally approved and become law this year.

Accordingly, I strongly recommend adoption by the House of the motion by the gentleman from New Jersey.

Our health benefits bill, H.R. 16968, in this form represents a long step in the right direction—a step that is overdue and will at least partly correct an inequity under which our postal and other Federal employees and retirees have labored for the past decade.

The SPEAKER. The question is on the motion offered by the gentleman from New Jersey (Mr. DANIELS).

The motion was agreed to.

The Senate amendment, as amended, was agreed to.

The SPEAKER. The Clerk will report

the amendment of the Senate to the title of the bill.

The Clerk read as follows:

Amend the title so as to read: "An Act to increase the contribution by the Federal Government to the cost of health benefits insurance, and for other purposes."

The amendment to the title was agreed to.

A motion to reconsider was laid on the table.

FEDERAL RAILROAD SAFETY AND HAZARDOUS MATERIALS CONTROL

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (S. 1933) to provide for Federal railroad safety, hazardous materials control, and for other purposes, with the Senate amendments thereto, disagree to the Senate amendments, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia (Mr. STAGGERS)? The Chair hears none, and appoints the following conferees: Messrs. STAGGERS, FRIEDEL, DINGELL, SPRINGER, and DEVINE.

SOLID WASTE DISPOSAL

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 11833) to amend the Solid Waste Disposal Act in order to provide financial assistance for the construction of solid waste disposal facilities, to improve research programs pursuant to such act, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia (Mr. STAGGERS)? The Chair hears none, and appoints the following conferees: Messrs. STAGGERS, JARMAN, ROGERS of Florida, SPRINGER, and NELSEN.

PROVIDING FOR CONSIDERATION OF H.R. 17982, CORPORATION FOR PUBLIC BROADCASTING

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1194 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1194

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 17982) to amend the Communications Act of 1934 to provide for a one-year extension of financing for the Corporation for Public Broadcasting. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit. After the passage of H.R. 17982, the Committee on Interstate and Foreign Commerce shall be discharged from the further consideration of the bill S. 3558, and it shall then be in order in the House to move to strike out all after the enacting clause of the said Senate bill and insert in lieu thereof the provisions contained in H.R. 17982 as passed by the House.

The SPEAKER. The gentleman from Missouri is recognized for 1 hour.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Tennessee, pending which I yield myself such time as I may consume.

Mr. Speaker, I know of no controversy on this bill. It is an open rule, providing for 1 hour of general debate. It is a bill that has been before the Congress before. I therefore reserve the balance of my time.

The SPEAKER. The gentleman from Tennessee is recognized.

Mr. QUILLEN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1194 makes in order for consideration of H.R. 17982 under an open rule with 1 hour of general debate.

The purpose of the bill is to extend for 1 year—through fiscal 1971—the financing provisions of current law with respect to the Corporation of Public Broadcasting.

A permanent system of financing was not proposed when the corporation was created in 1968. Since that time funds for the operations of the corporation have come from two sources: Appropriated funds and private gifts or grants.

The bill authorizes $30 million for 1971 and also authorizes an additional appropriation of up to $5 million which could only by used to match gifts, grants, and other private contributions. Thus the corporation's budget for the year could reach $40 million.

The corporation is particularly active in two fields, program development and interconnection of the independent public television stations. The corporation has assisted in the funding for the development and production of "Sesame Street," the excellent children's program. It is now involved in negotiations with A.T. & T. on a rate structure with respect to use of the company's lines to interconnect participating public television stations into a nationwide hookup for programs of major interest. This network is expected to connect 166 public television stations.

The committee report makes clear that some permanent form of financing for the corporation must be developed soon.

There are no minority views.

I have no further request for time, but I reserve the balance of my time, and urge the adoption of the resolution.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FOR CONSIDERATION OF H.R. 11913, COMMUNICABLE DISEASE CONTROL AMENDMENTS OF 1970

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1129 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1129

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11913) to amend the Public Health Service Act to provide authorization for grants for communicable disease control. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Interstate and Foreign Commerce now printed in the bill as an original bill for the purpose of amendment under the five-minute rule. At the conclusion of such consideration, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions. After the passage of H.R. 11913, the Committee on Interstate and Foreign Commerce shall be discharged from the further consideration of the bill S. 2264, and it shall then be in order in the House to move to strike out all after the enacting clause of the said Senate bill and insert in lieu thereof the provisions contained in H.R. 11913 as passed by the House.

The SPEAKER. The gentleman from Missouri is recognized for 1 hour.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio, pending which I yield myself such time as I may consume.

Mr. Speaaker, I know of no opposition to this rule and reserve the balance of my time.

The SPEAKER. The gentleman from Ohio is recognized.

Mr. LATTA. Mr. Speaker, like the gentleman from Missouri, I know of no opposition to this rule, but I would just like to point out that this bill authorizes a 3-year program to continue the fight against communicable disease in the the United States.

Authorizations contained in the bill are as follows:

Fiscal year:	*Million*
1970	$20
1971	75
1972	90

Funds appropriated will be used by the Secretary of Health, Education, and Welfare to make grants to the States, and to local authorities with State approval, to assist in financing disease control pro-

grams. The diseases to be combated include TB, veneral disease, rubella, measles, polio, diphtheria, tetanus, whooping cough, and RH disease. These are capable of prevention by vaccination. Grant funds are generally used to purchase vaccines and pay personnel used to staff vaccination programs where they are needed.

The bill tends to reestablish to some degree the old category grants which, in the health field, were generally eliminated by the passage in 1966 of the Public Health Service Act which combined into one program a large number of category grant programs in the field. The theory was that the States themselves were the best judges of what areas needed first priority treatment. It is true that the Secretary of Health, Education, and Welfare in his budget presentation has earmarked specific amounts in a number of areas—but would Congress give him a blank check? Category grants, which can be used for no other purpose, are much more restrictive than an earmarking for budget presentation purposes.

The administration opposes the bill for this reason as evidenced by the letter from the Bureau of the Budget.

Mr. Speaker, I have no further requests for time, and I yield back the remainder of my time.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

EXTENSION OF FINANCING FOR CORPORATION FOR PUBLIC BROADCASTING

Mr. STAGGERS. Mr. Speaker, I call up the bill (H.R. 17982) to amend the Communications Act of 1934 to provide for a 1-year extension of financing for the Corporation for Public Broadcasting, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the bill, as follows:

H.R. 17982

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Public Broadcasting Financing Act of 1970".

SEC. 2. Subsection (k) of section 396 of the Communications Act of 1934 (47 U.S.C. 396 (k)) is amended to read as follows:

"(k) (1) There are authorized to be appropriated for expenses of the Corporation for the fiscal year ending June 30, 1969, the sum of $9,000,000, and for the fiscal year ending June 30, 1970, the sum of $20,000,000, and for the fiscal year ending June 30, 1971, the sum of $30,000,000.

"(2) In addition to the sums authorized to be appropriated by paragraph (1) of this subsection, there are authorized to be appropriated for payment to the Corporation for the fiscal year ending June 30, 1971, amounts equal to the amount of total grants, donations, bequests, or other contributions (including money and the fair market value of any property) from non-Federal sources received by the Corporation under section 396(g)(2)(A) of this Act, during such fiscal year; except that the amount appropriated pursuant to this paragraph may not exceed $5,000,000."

Mr. STAGGERS. Mr. Speaker, I move to strike the last word.

Mr. Speaker, H.R. 17982 would provide for a 1-year authorization of appropriations for the Corporation for Public Broadcasting. Under the bill, not more than $30 million could be appropriated to the Corporation for fiscal year 1971. An additional amount of not more than $5 million would be authorized to match gifts, grants, and other contributions to the Corporation.

The Corporation for Public Broadcasting is a bipartisan, independent, nonprofit corporation which was established under the Public Broadcasting Act of 1967. Its Board of Directors consists of 15 members appointed by the President by and with the advice and consent of the Senate. No more than eight members of the Board may be members of the same political party. The President of the Corporation is John W. Macy, Jr., who many of the Members of the House know personally.

Under its charter, the Corporation has three principal functions—

First, to assist in the development of programs of high quality for presentation over public radio and television stations;

Second, to assist in the establishment and development of a system of interconnection for such stations, and

Third, to assist in the establishment and development of such stations.

To state its purpose in a slightly different way, Mr. Speaker, the Corporation must help in developing high quality program matter to be presented over the 190 or more public TV stations and over 400 public radio stations which cover most of the United States. In addition, the Corporation is charged with assisting in the promotion and development of public broadcasting stations.

Mr. Speaker, to clarify a matter that has been the source of some confusion, let me say that the term "public broadcasting station," refers to radio and television stations which many persons still refer to as educational broadcasting stations. The term "public" is considered to be much more descriptive of their operation than "educational" since almost all such stations present more than instructional programing. In fact, most such stations present a wide variety of high quality programing directed at all age groups.

The Corporation has been fully operational for about a year and a half now and in that time its accomplishments have, I think, been impressive.

It has been instrumental in beginning the development of national television production centers in Boston, Chicago, Los Angeles, Pittsburgh, and San Francisco. Through grants and contracts it has assisted in the development and presentation of particular programs and series of programs. Perhaps the best example of these activities is "Sesame Street," a program developed and produced by the Children's Television Workshop. This series was designed for preschool children of low-income families. It consists of 142 programs which in many areas are shown several times a day. The series had its first run during the 1969–1970 school year and the results have been most encouraging. It is estimated that between six and seven million children saw the program each day over the 200-odd television stations showing it. Children who watched the program have been tested and have shown measureable educational advancement as a result of watching the "Sesame Street" series.

In carrying out its mandate to assist in developing a system of interconnection the CPB has established the Public Broadcasting Service, a nonprofit corporation, which will provide interconnection for public television stations. National Public Radio, another nonprofit corporation, has been established to provide for interconnection of public radio stations and to develop programs for presentation over those stations.

The Corporation has established a system of general support grants which are made directly to public broadcasting stations to assist them in better serving their public. These grants are expected to range between $12,500 and $32,500 for television stations, depending on such factors as the size of the station and the population served. In the case of public radio stations, these grants will amount to $7,500. These funds can be used as the stations see fit for equipment, personnel, programing, or to meet other needs of the station.

The Corporation also has established a fellowship program under which promising individuals are given stipends to work and study in areas that will better prepare them to work in the field of public broadcasting.

Mr. Speaker, the committee feels that the results of the Corporation's activities are already living up to earlier promises, and that considerable progress lies ahead, subject only to the availability of sufficient financing to permit the Corporation to meet its potential for public benefit.

Already, because of the Corporation's action, local stations are stronger, and, more importantly, are now offering their viewers and listeners superior programs, able to compete in attractiveness with the offerings of commercial broadcasters. The key, of course, to successful programing that will attract audiences is money. Guided by a bipartisan Board of Directors, the Corporation is showing that more than full value is received for funds that have already been made available.

However, in the future the Corporation must have a workable permanent financing plan. We intend to see that it shall get one. I am told that efforts are now underway in the Corporation, at the Federal Communications Commission and in the administration to develop such a plan promptly. The bill submitted by the administration, which I and the gentleman from Illinois (Mr. SPRINGER) introduced (H.R. 16338), would have provided an open end, 3-

year authorization for the Corporation. The committee has trimmed this back to 1 year in order to maintain more direct oversight with respect to the development of a permanent plan for financing the Corporation.

Mr. Speaker, I hope the Members of the House will give the legislation their consideration and support.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I do not quite understand why, on page 1 of the bill, there is authorized to be appropriated $9 million for the year ending June 30, 1969, and $20 million for the fiscal year ending June 30, 1970. Why is this language contained in the bill since both fiscal years have expired?

Mr. STAGGERS. I will say to my colleague from Iowa (Mr. GROSS) this is merely repeating the law as it is now. Perhaps my colleague from North Carolina (Mr. BROYHILL) can explain why it was kept in the bill in this form. The gentleman is the ranking minority member of the subcommittee.

I yield to the gentleman from North Carolina.

Mr. BROYHILL of North Carolina. I thank the gentleman for yielding.

The only thing we did was to add the language: "and for the fiscal year ending June 30, 1971, the sum of $30,000,000."

That is all we added to the act, in effect, in that particular section. We did not strike any language in that section. All we did was add that language.

It could have been done differently, I agree, but this was the way it was done. The total effect is to add the authorization for 1 fiscal year for this program.

Mr. GROSS. Mr. Speaker, I move to strike the necessary number of words.

Mr. Speaker, do I correctly understand that this bill authorizes $30 million, and that we may ignore the $9 million and the $20 million figures contained in the proposal?

Mr. STAGGERS. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from West Virginia.

Mr. STAGGERS. The date for the other has passed. We added the $30 million in order to keep it in continuity.

It is $30 million plus $5 million, the gentleman should understand. The $5 million is from matching grants which might come in from private sources.

Mr. BROYHILL of North Carolina. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from North Carolina.

Mr. BROYHILL of North Carolina. We can strike that language, but by leaving it in there it shows the history of what has been done in the past.

Mr. GROSS. If the gentleman tells me the bill authorizes $30 million, plus the $5 million in the next paragraph, for a total of $35 million, I certainly accept his statement. I was nonplused by the additional language in the bill.

Let me ask a question of the gentleman of West Virginia (Mr. STAGGERS). Is it proposed to go on in perpetuity appropriating to these so-called educational television projects? Is this television and radio, or just television?

Mr. STAGGERS. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from West Virginia.

Mr. STAGGERS. This is television and radio.

As I said, when the administration sent its bill up, which I introduced, it was for 3 years with an open end authorization. The committee in its wisdom thought the time had come for permanent financing. Public broadcasting has proposed a means of financing this program, but the administration has not yet OK'd it. We have to wait on the administration.

I am hopeful, and pretty certain, that by next year we will have a plan to finance public broadcasting. That is why the bill is for only 1 year.

Mr. GROSS. You will have a plan to finance it?

Mr. STAGGERS. Yes.

Mr. GROSS. I was in hopes the gentleman would say we were going to get out of the business of subsidizing educational television. From what I have seen it is carrying advertising and propaganda, at least in this area. What happens to the revenue derived now from educational TV, or is there advertising on educational TV?

Mr. STAGGERS. There is no advertising whatsoever. It is prohibited.

Mr. GROSS. What am I looking at on Channel 20? Is WETA not an educational station?

Mr. BROYHILL of North Carolina. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from North Carolina.

Mr. BROYHILL of North Carolina. Channel 20 is a commercial station. The educational channel in this area is Channel 26.

Mr. GROSS. And it carries no advertising at all?

Mr. BROYHILL of North Carolina. No.

Mr. GROSS. So we are going on indefinitely subsidizing educational TV and radio, is that correct?

Mr. BROYHILL of North Carolina. I would say to the gentleman that, whether it be local, State or Federal, tax moneys have been going into educational television so long as I can remember.

Mr. GROSS. Let me ask the gentleman about this man—Woestendiek or something of that kind, who was fired from one of the educational TV stations in Washington, D.C. What was his salary?

Mr. BROYHILL of North Carolina. Will the gentleman yield?

Mr. GROSS. Yes, of course.

Mr. BROYHILL of North Carolina. The pronunciation of his name I believe is Woestendiek. I would like to call the attention of the gentleman to the hearings that we held in our subcommittee. In fact we held this bill up until we went into this gentleman's release from the local educational broadcasting station in great depth. I would like to call attention to that section of the hearings. The gentleman's salary as I recall it is listed in here. I do not recall the exact amount but it is in the neighborhood of about $35,000 to $40,000.

Mr. GROSS. They do pay pretty good salaries in this educational television that is heavily subsidized by the Government, do they not?

Mr. BROYHILL of North Carolina. I would say there is also a very excellent study in this hearing record concerning the overall contributions made to educational and instructional television by the Federal Government. You will find it is a very small percentage and that State and local governments contribute far more to educational and instructional television and public broadcasting than does the Federal Government.

Mr. GROSS. Well, I do not know whether that helps or hurts.

Mr. BROYHILL of North Carolina. I am just saying that the Federal Government is a follower in contributions to this program nationwide over the years.

Mr. GROSS. Yes, it is something on the order of the bill that the House just approved, requiring the States to put up more and more matching funds. I can tell you that the requirement by the Federal Government for matching funds is killing the souls of the taxpayers all over this country. I am opposed to this bill.

Mr. BROYHILL of North Carolina. Mr. Speaker, I move to strike the last word.

Mr. Speaker, as the gentleman from West Virginia stated this is a 1-year extension of the authorization of this program. The committee hoped that by the time we got through another year we could have some type of long-range financing program that we could present. We cannot promise that. I am sure the gentleman from West Virginia was not making an ironclad promise but certainly we on the committee are going to work toward that end and hopefully we can come up with a program.

The Corporation for Public Broadcasting is a federally chartered, private, nonprofit Corporation created to promote the growth and development of the Nation's noncommercial television and radio systems.

PURPOSES

First, to strengthen local public broadcasting stations so that they may better serve their community;

Second, to aid in the development of an effective national interconnection system for both public television and radio—the Public Broadcasting Service and National Public Radio;

Third, to augment the national inventory of programs by improving the production capacity of local stations; and

Fourth, to support the total public broadcasting system through activities such as talent development, audience research, and public information.

BASIC FACTS ABOUT PUBLIC BROADCASTING

TELEVISION

Number of stations, 199.

Location: Every State in the Union except Alaska, Wyoming, and Montana.

Coverage: PTV signals reach 74 percent of the population.

Audience: Based on research October 1969, an estimated 24 million persons watch PTV each week.

Types of stations: 86 VHF; 112 UHF.

RADIO

Number of stations, 460. Number qualified for CPB grant assistance, 92.

Location: Every State except Mississippi, in which four stations are presently being constructed.

Coverage: Radio signals cover an estimated 75 percent of our population.

Audience: No accurate figure is available, but conservatively estimating, approximately 120 million people are reached by public radio.

Types of stations: 25 AM, 431 FM.

Station ownership: Public television and radio stations are owned and operated by nonprofit community organizations, universities, State authorities, local municipalities, and school systems.

Programing: Programing includes instructional courses, as well as programs that are educational in a broader sense. Public broadcasting schedules carry a mixture of public affairs, music, the arts, drama, and self-improvement programs for the community as well as instructional messages to classrooms. About 49 percent of the average broadcast day is devoted to instructional work.

FUNDING FOR THE CORPORATION FOR PUBLIC BROADCASTING

The Corporation is funded by the Federal Government and by private sources. In fiscal 1970, its total budget was $17.4 million of which $15 million came from the Government.

APPROXIMATE BUDGET BREAKDOWN

Local public radio and TV general support grants, $3,500,000.

Local public radio and TV program production competitions, $807,000.

Television programing, $5,500,000.

Radio programing, $441,000.

Interconnection charges, $4,200,000.

Improving quality and training of local station personnel, $600,000.

Administrative costs, $1,600,000.

CORPORATION FOR PUBLIC BROADCASTING MAJOR ACTIVITIES: 1970

Creation of the Public Broadcasting Service, the first nationwide regular interconnection facility for public television stations. PBS is an independent organization. The Corporation lead in its formation and is its chief source of financial support.

Creation of National Public Radio, which will serve as the primary national program service of public radio stations. NPR will produce, acquire, and distribute radio programs and related materials over a planned interconnected radio network. CPB also finances NPR.

With the aid of a 6-month planning grant from the U.S. Office of Education, created the Public Broadcasting Environmental crisis facing our Nation.

Provided general support for national program producers such as NET and the Children's Television Workshop—the producers of Sesame Street.

Establishment of TV production centers throughout the country for national programing.

CORPORATION FOR PUBLIC BROADCASTING BOARD MEMBERS

Frank Pace, Jr., Chairman of the Board of CPB; president, International Executive Service Corps, New York, N.Y.

Joseph Beirne, president, Communication Workers of America, Washington, D.C.

Robert Benjamin, chairman, United Artists Corp., New York, N.Y.

Albert L. Cole, chairman, the Reader's Digest, Pleasantville, N.Y.

Michael Gammino, Jr., president, Columbus National Bank, Providence, R.I.

Saul Haas, chairman of the board, KIRO, Inc., Broadcast House, Seattle, Wash.

Mrs. Oveta Culp Hobby, editor and chairman of the board, the Houston Post, Houston, Tex.

Joseph Hughes, vice president, T. Mellon & Sons, Pittsburgh, Pa.

Dr. James R. Killian, Jr., chairman, MIT, Cambridge, Mass.

Thomas Moore, chairman of the board, Ticketron, Inc., New York, N.Y.

Frank E. Schooley, director of broadcasting, University of Illinois, Urbana, Ill.

Jack Valenti, president, Motion Picture Association of America, Inc., New York, N.Y.

John Hay Whitney, New York, N.Y.

Jack Wrather, Wrather Corp., Beverly Hills, Calif.

One vacancy.

DRUG EDUCATION PROJECT

Public TV station WQED in Pittsburgh, with CPB support, is undertaking a series of drug education programs. These programs will first be presented locally, tested as to effectiveness, revised, and then presented nationally over the Public Broadcasting Service beginning in early 1971. The project has three aspects. Programs will be prepared for:

First. General audiences. Parents and children, viewing at home, in prime time.

Second. Academic inservice training. Programs for teachers, school administrators, and school board members, to be presented in mid-afternoon time, or whenever these special but important audiences can see them most conveniently.

Third. Children in school. These programs, most difficult of all to do, will be geared for youngsters between 9 and about 13, for viewing in school. They will emphasize information and prevention, not rehabilitation.

The Corporation has budgeted $500,000 for drug education.

PUBLIC BROADCASTING ENVIRONMENT CENTER

The Public Broadcasting Environment Center was established by the Corporation for Public Broadcasting in May 1970 with the aid of a $600,000 planning grant from the U.S. Office of Education. The major purpose of the Center is to develop programing to foster a national understanding of the relationship of man to his environment as a means to keeping the balance between the two intact. To this end, the Center will:

First. Produce radio and television programs for target audiences in the general public;

Second. Produce material for classroom use and associated teacher training material; and

Third. Develop manpower training programs to provide labor for inspection, detection, and remedy of environmental problems.

The U.S. Office of Education grant has helped support an initial 6-month planning effort for the Center, which will develop a pilot for a radio and television series called "The Quality of Life." In this early stage, the Center has begun work on the tasks it has set for itself, which include setting up a reference library, identifying its target audiences, identifying possible production sources, and, most important, exploring avenues for the public's participation. The key to the Center's efforts is the quality of life—it is not as concerned with the environment per se as it is with living in that environment. The Center hopes to inform the public so that it will take action to improve its environment. The Corporation has budgeted $1 million for the Public Broadcasting Environment Center in fiscal year 1972.

(Mr. SPRINGER (at the request of Mr. BROYHILL of North Carolina) was granted permission to extend his remarks at this point in the RECORD.)

Mr. SPRINGER. Mr. Speaker, the Public Broadcasting Corporation was created to encourage and assist in the creation of more and better programing for the growing number of television and radio stations owned by community organizations, universities, States, cities, and school systems. These stations, which are specially licensed by the FCC to provide educational and cultural material to the viewing and listening public, free of commercial connection, have come into existence in nearly every State. Most States have combined them into networks for the dissemination of this particular type of programing. At the present time there are 199 television stations in this category; 86 of them are VHF and 112 UHF. Radio stations number 460.

When the Corporation was authorized by Congress there were many of us who had some misgivings about the course it might take. Safeguards were built into the legislation to make certain that it would not get out of hand. No doubt these precautions were justified and may be partly responsible for the commendable record which is being made by the Corporation thus far. I think it is well to say that the people who have been selected to organize and run this Corporation have been dedicated and capable people. The results in the short time it has been in existence in the light of the inevitable problems of initial organization have been remarkable. Program production and origination has been encouraged in all parts of the country. Promising talent has been helped to improve and grow.

Funds to support the work of the Corporation have come from several sources. As might be expected at this stage of its development the bulk of the money has come from appropriated funds. In fiscal year 1970, $15 million was appropriated and an additional $2.4 million was supplied by public subscription and foundations. The amounts included here as public subscriptions does not take into account the many other millions contributed by the general public to build and sustain the stations themselves. As programing improves more of

this volunteer money will appear. It is for this reason that the bill which has been reported by our committee includes an authorization for $5 million which is subject to matching. The Corporation can acquire as much of this money as it can obtain from outside sources. This is a great incentive for effort in this direction and great encouragement to those who are willing to lend financial support.

In addition to the seed money, the bill provides authorization for $30 million for fiscal year 1971. Although the administration and the Corporation would have preferred a somewhat longer authorization, the committee felt obligated to restrict it in a continuing effort to work out a permanent financing plan for this whole operation. We have been telling the House each time the matter appears here that a permanent plan is being demanded. It has not yet appeared and we feel that the long-range good of the whole effort depends upon our continued insistence that this problem be solved. Although I would not try to claim that by doing what we recommend here today that beyond any doubt a satisfactory plan for permanent financing will be ready 1 year from today. I do claim that it will be done earlier because of our continuing pressure.

Purely educational programing is gaining rapidly because of the work of the Corporation. Most of the daytime hours on these stations is spent in direct classroom-type education or preliminary education efforts for preschoolers such as Sesame Street. Much more can be done in this area and much more can also be accomplished in the fields of art, drama, and self-improvement programs. The Corporation, I am glad to say, seems to be using the resources it has in sensible, progressive ways.

Another effort being carried forward by the Corporation is the creation of communication links between stations and the State networks of public broadcasting stations. Programs or events which have the greatest impact and value if shown simultaneously can be arranged if the means exist to bring the material to all stations interested in displaying it. Special arrangements with the Bell systems are almost complete to determine the cost of the system. Stations are under no obligation to accept any particular programs or to show them at any given time but some material will be useful if available while it is current. The Corporation is making this possible.

The Corporation for Public Broadcasting has thus far been a sound investment and a modest one at that. I recommend that the bill be approved by the House.

Mr. TIERNAN. Mr. Speaker, in 1967, the Congress amended the Communications Act of 1934 by establishing a nonprofit corporation to assist in establishing educational programs, to facilitate educational program availability, and to aid the operation of educationl broadcasting facilities. Thus, the Corporation for Public Broadcasting came into being.

The Public Broadcasting Act of 1967 established the CPB because it was in the public interest to encourage the growth and development of noncommercial educational radio and television, including the use of such media for instructional purposes. It is clear that the CPB has done its job well in these crucial formative years. There are 199 educational television stations and 460 educational radio stations. The TV stations are serving every State in the Union except Alaska, Wyoming, and Montana. The radio outlets are in every State except Mississippi.

The CPB has been able to do its job because Congress has seen fit to authorize the financing needed to date on a year-to-year basis. It is on that point that the problem arises. The Public Broadcasting Act of 1967 sought to afford maximum protection to educational broadcasting from extraneous interference and control. It it clear from the hearings on the bill, that the best way to achieve this freedom from interference would be through a plan of long-term permanent financing for the CPB. This was the goal which the Congress was seeking when it first authorized the CPB to get underway. It is 1970, and such a plan has still not been enacted.

The bill before us today, H.R. 17982, merely authorizes a 1-year extension of the financing for the Corporation for Public Broadcasting. The bill authorizes an appropriation of $30 million, plus up to $5 million for matching private contributions and grants for fiscal 1971. I am a cosponsor of this bill for two reasons: First, I support the efforts and commend the accomplishments of the CPB and thus believe we should continue to fund it. Second, I have cosponsored this bill because it is only a 1-year extension of the funding.

The original bill that was sent to the Communications Subcommittee in 1970—H.R. 16338—called for a 3-year extension of funding. I opposed this lengthy extension on the grounds that Congress initially set up CPB with the idea that long-term financing would be provided. But, a workable plan for such financing has not come forth. If we in Congress authorize a 3-year authorization, we will be guaranteeing that the necessity of a long-term, permanent finance plan will pass for 3 more years. This would be a travesty.

We in Congress should not let 3 more years pass without an adequate long-term financing plan which will permit the Corporation to be free of governmental procedure and administrative regulations that are incompatible with its purposes. We should avoid the overseeing of the CPB's day-to-day operations that would be a natural consequence of the annual budgeting and appropriations procedures.

The bill before us today was reported unanimously by the Interstate and Foreign Commerce Committee and I hope it will be passed by the House, not to show a lack of commitment to the corporation—but as an effective means of encouraging the administration to propose a plan of permanent financing. H.R. 17982 is an interim method of financing for the CPB.

I am today introducing a bill to provide permanent financing for the Corporation for Public Broadcasting. The original draft of the bill is the result of a study which the CPB conducted, at my request, for the Subcommittee on Communications. It is my hope that our committee will hold hearings early in 1971 on this bill, so that 1 year from now Congress will have an opportunity to vote on a viable long-term financing plan. I regret that this report was not completed earlier, so as to allow the Subcommittee on Communications to hold hearings in 1970 on such a proposal. Similar requests for reports have been made by me to the Federal Communications Commission and to the Department of Health, Education, and Welfare. I regret to say that neither group has offered any intensive or innovative study or plans to meet the need for permanent financing for the CPB.

This piece of legislation would amend the Communications Act of 1934 and the Internal Revenue Code of 1954 to provide for permanent financing for the CPB.

A public broadcasting fund would be established on the books of the Treasury.

The fund would be created and maintained on a continuing basis by deposits of: First, revenue from an excise tax on the value of radio and television receiving sets at the manufacturer or importer level, and

Second, funds in the general fund of the Treasury to match non-Federal contributions or payments to all elements—the Corporation, stations, and so forth—in the public broadcasting system, with the matching amount based on a formula calculated to stimulate and increase such non-Federal contributions or payments.

All moneys in the fund would be payable at the beginning of each fiscal year to the Corporation.

The Corporation believes—

This plan is best able to provide necessary financing under the particular conditions required for public broadcasting and most likely to be found acceptable by the Congress, the public, and the parties affected by it. However, each plan so far identified—including this one—has its shortcomings. Should new suggestions emerge, the Corporation would be glad to consider them in place of or as modifications to the plan outlined here.

Mr. SCHMITZ. Mr. Speaker, I am taking this opportunity to register my strong opposition to this legislation.

Funding for the Corporation for Public Broadcasting should be abolished, not continued. Its stated purposes and activities read like a blueprint for a Government propaganda network. Coupled with the growing restrictions by the Federal Communications Commission on the program content of private broadcasters—of which the recent decision against Station WXUR in Media, Pa., is the latest and worst example—this brings us closer to outright control of the communications media by those able to influence the Federal Government in their favor.

Government broadcasting is fundamentally inimical to freedom. Every advanced totalitarian state provides for full government control of the communications media. As everyone should know by now, Federal funding means Federal

control. There should be no Federally funded broadcasting network.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

The SPEAKER. Pursuant to the provisions of House Resolution 1194 the Committee on Interstate and Foreign Commerce is discharged from the further consideration of the bill (S. 3558) to amend the Communications Act of 1934 to provide continued financing for the Corporation for Public Broadcasting.

The Clerk read the title of the Senate bill.

MOTION OFFERED BY MR. STAGGERS

Mr. STAGGERS. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. STAGGERS moves to strike out all after the enacting clause of S. 3558 and insert in lieu thereof the provisions of H.R. 17982, as passed.

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 17982) was laid on the table.

COMMUNICABLE DISEASE CONTROL AMENDMENTS OF 1970

Mr. STAGGERS. Mr. Speaker, I call up the bill (H.R. 11913) to amend the Public Health Service Act to provide authorization for grants for communicable disease control, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the bill, as follows:

H.R. 11913

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Communicable Disease Control Amendments of 1969".

GRANTS FOR COMMUNICABLE DISEASE CONTROL

SEC. 2. Section 361 of the Public Health Service Act (42 U.S.C. 264) is amended by inserting at the end thereof the following new subsection:

"(c)(1) There are hereby authorized to be appropriated $60,000,000 for the fiscal year ending June 30, 1970, and $75,000,000 for the fiscal year ending June 30, 1971, and $90,000,000 for the fiscal year ending June 30, 1972, to enable the Secretary to make grants to States and, with the approval of the State health authority, to political subdivisions or instrumentalities of the States under this subsection. In the award of such grants the Secretary, in accordance with appropriate regulations, shall give consideration to the relative extent of the communicable disease problems and to the levels of performance in preventing and controlling such diseases. Such grants may be used to pay that portion of the cost of communicable disease control programs which is reasonably attributable to (A) purchase of vaccines or other agents needed to protect those portions of the population determined to be epidemiologically important to the control or prevention of communicable diseases and (B) salaries and related expenses of additional State and local health personnel needed for planning, organizational, promotional, and other epidemiologic activities in connection with such programs, including studies to determine the communicable disease control needs of communities and the means of best meeting such needs and personnel and related expenses needed to maintain additional epidemiologic and laboratory surveillance occasioned by such programs.

"(2) for the purposes of this subsection—

"(A) a 'communicable disease control program' means a program which is designed and conducted so as to contribute to a nationwide effort against tuberculosis, venereal disease, rubella, measles, poliomyelitis, diphtheria, tetanus, whooping cough and other communicable diseases which are transmitted from State to State, are amendable to reduction, and which are determined by the Secretary on the recommendation of the National Advisory Health Council to be of national significance, and

"(B) the term 'State' includes the Commonwealth of Puerto Rico, Guam, American Samoa, the Trust Territory of the Pacific Islands, the Virgin Islands, and the District of Columbia.

"(3) Payments under this subsection may be made in advance on the basis of estimates or by way of reimbursement, with necessary adjustments on account of underpayments, or overpayments, in such installments and on such terms and conditions as the Secretary finds necessary to carry out the purposes of this subsection.

"(4) The Secretary, at the request of a recipient of a grant under this subsection, may reduce the money grant to such recipient by the fair market value of any supplies (including vaccines and other preventive agents), or equipment furnished to such recipient and by the amount of the pay, allowances, traveling expenses, and any other costs in connection with the detail of an officer or employee to the recipient when the furnishing of such supplies or equipment, or of the detail of such officer or employee (as the case may be), is for the convenience of and at the request of such recipient and for the purpose of carrying out the program with respect to which the grant under this subsection is made. The amount by which any such grant is so reduced shall be available for payment by the Secretary of the costs incurred in furnishing the supplies, equipment, or personal services on which the reduction of such grant is based, but such amount shall be deemed a part of the grant to such recipient and shall, for the purposes of paragraph (3) of the subsection, be deemed to have been paid to such agency.

"(5) Nothing in this subsection shall limit or otherwise restrict the use of funds which are granted to a State or to a political subdivision of a State under other provisions of this Act or other Federal law and which are available for the conduct of communicable disease control programs from being used in connection with programs assisted through grants under this subsection.

"(6) Under this subsection, the Secretary shall be required to submit an annual report on performance in preventing and controlling communicable diseases."

COMMITTEE AMENDMENT

The SPEAKER. The Clerk will report the committee amendment.

The Clerk read as follows:

Committee amendment: Strike out all after the enacting clause and insert:

That this Act may be cited as the "Communicable Disease Control Amendments of 1969".

GRANTS FOR COMMUNICABLE DISEASE CONTROL

SEC. 2. Section 317 of the Public Health Service Act (42 U.S.C. 264) is amended to read as follows:

"COMMUNICABLE DISEASE CONTROL AND VACCINATION ASSISTANCE

"SEC. 317. (a) There are hereby authorized to be appropriated $20,000,000 for the fiscal year ending June 30, 1970, and $75,000,000 for the fiscal year ending June 30, 1971, and $90,000,000 for the fiscal year ending June 30, 1972, to enable the Secretary to make grants to States and, with the approval of the State health authority, to political subdivisions or instrumentalities of the States under this subsection. In the award of such grants the Secretary shall give consideration to the relative extent of the problems relating to one or more of the diseases referred to in subsection (b)(1) and to the levels of performance in preventing and controlling such diseases. Such grants may be used for meeting the cost of communicable disease control programs, including the cost of studies to determine the communicable disease control needs of communities and the means of best meeting such needs.

"(b) For the purposes of this subsection—

"(1) a 'communicable disease control program' means a program which is designed and conducted so as to contribute to national protection against tuberculosis, venereal disease, rubella, measles, Rh disease, poliomyelitis, diphtheria, tetanus, whooping cough or other communicable diseases which are transmitted from State to State, are amenable to reduction, and which are determined by the Secretary on the recommendation of the National Advisory Health Council to be of national significance, and

"(2) the term 'State' includes the Commonwealth of Puerto Rico, Guam, American Samoa, the Trust Territory of the Pacific Islands, the Virgin Islands, and the District of Columbia.

"(c) Payments under this section may be made in advance on the basis of estimates or by way of reimbursement, with necessary adjustments on account of underpayments, or overpayments, in such installments and on such terms and conditions as the Secretary finds necessary to carry out the purposes of this section.

"(d) The Secretary, at the request of a recipient of a grant under this section, may reduce such grant by the fair market value of any supplies (including vaccines and other preventive agents), or equipment furnished to such recipient and by the amount of the pay, allowances, traveling expenses, and any other costs in connection with the detail of an officer or employee to the recipient when the furnishing of such supplies or equipment, or of the detail of such officer or employee (as the case may be), is for the convenience of and at the request of such recipient and for the purpose of carrying out the program with respect to which the grant under this section is made. The amount by which any such grant is so reduced shall be available for payment by the Secretary of the costs incurred in furnishing the supplies, equipment, or personal services on which the reduction of such grant is based, but such amount shall be deemed a part of the grant to such recipient and shall, for the purposes of subsection (c), be deemed to have been paid to such agency.

"(e) Nothing in this section shall limit or otherwise restrict the use of funds which are granted to a State or to a political subdivision of a State under other provisions of this Act or other Federal law and which are available for the conduct of communicable disease control programs from being used in connection with programs assisted through grants under this section.

"(f) The Secretary shall submit an annual report to the President for submission to the Congress on the effectiveness of activities

assisted under this section in preventing and controlling communicable diseases.

"(g) Nothing in this section shall be construed to require any State or any political subdivision or instrumentality of a State to have a communicable disease control or vaccination program which would require any person who objects to such treatment to be treated, or to have any child or ward of his treated."

Mr. STAGGERS (during the reading). Mr. Speaker, I ask unanimous consent that the committee amendment be considered as read, printed in the RECORD, and open to amendment at any point.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

AMENDMENTS TO THE COMMITTEE AMENDMENT OFFERED BY MR. STAGGERS

Mr. STAGGERS. Mr. Speaker, I offer three amendments to the committee amendment.

The Clerk read as follows:

Amendments to the committee amendment offered by Mr. STAGGERS: On page 4, line 25, strike out "1969" and insert in lieu thereof "1970".

On page 5, line 3, strike out "264" and insert in lieu thereof "247b".

On page 5, beginning in line 7, strike out "$20,000,000 for the fiscal year ending June 30, 1970, and".

The SPEAKER. The question is on the amendments to the committee amendment offered by the gentleman from West Virginia (Mr. STAGGERS).

The amendments to the committee amendment were agreed to.

Mr. STAGGERS. Mr. Speaker, I move to strike the last word.

Mr. Speaker, the amendments just passed were technical amendments, and I would like to explain them just a little bit, because the first amendment just changed the title of the bill to read "Communicable Disease Control Amendments of 1970." The second was to correct an incorrect reference to the United States Code, and the third strikes out the authorization for the fiscal year 1970, since that fiscal year has already expired, and the bill carries authorizations for 2 years. It is a very important bill, in my opinion, to the Nation.

Mr. Speaker, the bill before the House today comes with the unanimous recommendation of the Committee on Interstate and Foreign Commerce.

Mr. Speaker, this bill would authorize a program of grants to the States for communicable disease control programs, with $75 million authorized for that purpose for fiscal year 1971, and $90 million for fiscal 1972.

This is not a new program. In 1955, Congress established the Poliomyelitis Vaccine Assistance Act, which was extended through 1962, at which time the program was expanded to provide funds to combat other diseases in addition to polio. The program was continued through June 30, 1968, but was permitted to expire at that time on the theory that the program of grants to the States under section 314 of the Public Health Service Act would suffice to meet the needs of the Nation in preventing and controlling communicable diseases.

Experience since 1968 has shown that this hope was a false one, since our hearings demonstrated clearly that communicable disease programs have been funded at far less than adequate levels, and we face the possibility of epidemics in some of our cities today, particularly among the poor.

The program set out in this bill will supplement the programs provided for in section 314 of the Public Health Service Act, through providing specifically designated appropriations dealing with communicable disease prevention and control programs. The programs which can be funded under this bill include programs against tuberculosis, venereal disease, rubella, measles, poliomyelitis, diphtheria, tetanus, whooping cough or Rh disease, as well as any other disease that the Secretary of Health, Education, and Welfare finds to be a major public health problem that is susceptible of practical elimination through vaccination or other preventive agents.

The cheapest possible form of medical care is prevention. Every dollar spent in prevention of disease provides multiple savings in the costs to our society of illness, not to mention permanent disability of the ill person and frequently unborn children as well.

Our committee was unanimous in reporting the bill to the House, and we urge its passage.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I am glad to yield to our distinguished colleague, the gentleman from Iowa (Mr. GROSS).

Mr. GROSS. By the time this bill is approved by both Houses of Congress it appears that the first quarter of the fiscal year 1971 will be gone. So why is the $75 million not reduced to that extent?

Mr. STAGGERS. I will say to the gentleman from Iowa that this has already passed the other body and we hope to get it passed and to conference next week and have it become law.

Of course, I am sure when it goes before the Committee on Appropriations they will take into consideration that part of the year has passed by.

Mr. GROSS. I notice the chairman of the Committee on Appropriations on the House floor I do not know whether I want to rely on the Committee on Appropriations for everything or not as much as I respect that committee. I think we ought to place some reliance and financial responsibility on the authorizing committees. I have no intention of voting for authorizing bills calling for $75 million on the assumption that members of the Committee on Appropriations, out of the bigness and goodness of their hearts in behalf of the taxpayers of this country, will reduce that amount. They do not always do that.

I repeat—a quarter or nearly a quarter of this fiscal year is gone—and I do not know of any reason why we should authorize $75 million for the full fiscal year 1971 which began on July 1, 1970.

Mr. STAGGERS. The bill was reported out of the committee in the month of May. It has taken all this time in trying to get it to the floor of the House, for many different reasons. But we have it here now.

The other body passed it a long time ago. I am sure the authorization will not be used if it is not needed. It depends on the seriousness of what is involved here. This will be brought out before the Committee on Appropriations, because it is a serious problem and it affects your family and my family and all the women and children in America. It affects all individuals in this land—or it could affect them.

Mr. GROSS. Let me ask the gentleman another question.

This bill authorizes a total of $165 million. Is this all the money that is being spent by the Federal Government on communicable diseases?

Mr. STAGGERS. No, sir.

Mr. GROSS. Could we get some kind of handle on how many more millions of dollars are being spent and by what agencies or departments of Government?

Mr. STAGGERS. The other programs are handled by the same department—HEW. There will have to be a correlation by the Department on this. They will spotlight these problems as they see them. There may be communicable disease problems right now that they have cleared up in different parts of the country, but in other sections they are expecting epidemics and some have already developed. That is the reason for this amount.

Mr. GROSS. They are expecting epidemics of venereal diseases?

Mr. STAGGERS. They already have them.

Mr. GROSS. Epidemics?

Mr. STAGGERS. Well almost and many of these diseases have certainly spread.

Mr. ROGERS of Florida. Mr. Speaker, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman.

Mr. ROGERS of Florida. I think the gentleman will agree that in 1968 there were 431,000 new cases of gonorrhea already. For 1969, the figures are in, there were 494,000 cases. This is continuing with an increase at the rate of about 15 percent a year. From 1965 when there were about 300,000 cases, we are now at the 600,000 level.

Mr. GROSS. There is no question but that those figures portray a serious situation, but after all there are 200 million people in this country.

Mr. ROGERS of Florida. The gentleman, too, might be interested to know that the increase in measles this year over last year is 100 percent.

The SPEAKER. The question is on the committee amendment, as amended.

The committee amendment, as amended, was agreed to.

Mr. ROGERS of Florida. Mr. Speaker, I move to strike the requisite number of words.

The SPEAKER. The gentleman from Florida is recognized.

Mr. ROGERS of Florida. Mr. Speaker, I rise in support of H.R. 11913, the Communicable Disease Control Amendments of 1970, and this Nation's main program of preventive medicine.

Man has for centuries dreamed of eliminating killer diseases, and then, as our sciences developed, we put an end to such diseases as the plague. In just this

century we have developed cures for, or vaccines against, such one-time killers as polio, measles, smallpox, German measles, TB, and venereal diseases.

We look with great satisfaction and not too little smugness at what American medicine has brought us. But, I think, we are looking at our medical problems in the area of communicable diseases with a little too much apathy and smugness.

We know that we can prevent measles and polio. But both are on the rise because we have not carried out a proper vaccination program. In fact, we heard during hearings that some would have us eliminate funding for this program and just lump it in with the partnership for health program, thus allowing each State to take money from other ongoing programs for vaccines.

I wish I had the confidence to do this now, but I do not. I feel that partnership is not ready to absorb the Communicable Disease Act and that this attempt would be a disaster.

We see that States now do not require total immunization for preschoolers entering the first grade. In fact, 23 States have no requirements for immunization upon entering school. Thirty-four have no requirements for measles vaccination, 31 for polio, and 27 do not require smallpox.

Yet, there are more than 11 million children susceptible in the United States to common measles.

And common measles are not to be taken as lightly as many would have us believe. In the coming 12 months, there will be 700,000 cases of which 5,600 will need hospitalization, resulting in a loss of 1.1 million schooldays. More importantly, 250 will become permanently retarded and 75 will die. Seventy-five deaths from common measles.

Of those retarded, the families or agencies responsible will spend approximately $25 million in the care of these children for the rest of their lives. With inflation being what it is, the cost per person may indeed double and we might actually see a figure between $25 and $50 million. And this, I would remind you, is just for 1 year.

In all, more than $40 million will be spent by American citizens as a result of measles next year. And this does not include the more serious German measles, or rubella, as it is often called.

As you know, the German measles, if contracted by an expectant mother, can result in a birth defect. In fact, during the epidemic of 1964, 20,000 children were born with birth defects, many resulting in permanent mental retardation. The cost then to the American citizens and our Government was estimated at $2 billion. The loss of life or a child's mind cannot really ever be estimated in dollars and cents.

According to our best medical forecast and with the help of history, we know that beginning next year, the rubella epidemic is again scheduled to hit the United States. And we know that there are about 36 million Americans susceptible. Men of medicine tell us that the dollars we are asking for still will not solve the problem—but it is a real attempt to do something.

Yet, some want to pass the buck. Some here will say "Let the States do it through the block grant approach." Unfortunately, the problem is growing too rapidly and we need to zero in on communicable diseases. This is a national problem. This is an area where the magic of our medicine has given us a weapon to prevent disease. If we do not use that weapon, it will be an act of gross neglect on the part of the Congress. We have the power to prevent measles and Rubella. The legislation we are considering can do this.

There are, of course, other diseases which will be paid attention to under the provisions of this bill.

Diphtheria is a problem of the past, or so we would believe, because we have about eliminated it. Diphtheria had been cut way down until an epidemic in Texas put it back on the front page of every paper in Texas and in most papers throughout the Nation.

In Texas as of today, 135 cases have been recorded for 1970. The previous epidemic of diphtheria in Texas was 1945 when 82 cases were reported. In all, there have been 245 cases reported across the Nation as of today for 1970.

Diphtheria is up about 150 percent in this Nation.

Polio is up about 125 percent today.

Measles are up more than 100 percent today.

And each one of these diseases can and does kill.

We have, in addition to the humane responsibility, another angle to consider when discussing this legislation.

The cost of inflation is outrageous in this Nation today. Health has been given the short end of the budget stick and in fact the administration is lumping programs together in an attempt to save money at the expense of the American citizen.

As a result, it has become frighteningly evident over the past 2 years that health is being relegated to one of the lowest priorities in the budget.

This means Americans are not getting the health care that is needed and possible, and at the same time they are paying inflationary prices.

We are contributing to inflation when we have the power to keep people healthy through immunization and yet do not. It is inflation of the first magnitude if we can keep people out of the hospital and do not.

Unfortunately, there are many communicable diseases which are not preventable through immunization. Because of this and the fact that we have not solved the problem to really combat venereal diseases, we have seen epidemics in most of our major cities.

Gonorrhea has been increasing by about 15 percent a year for the past 5 years and in 1968, there were 431,000 new cases reported; 494,000 were reported in 1969. Needless to say, this represents only a part of the real problem.

Syphilis is also on the rise at alarming rates. If a person is infected with syphilis and is not treated, one in 200 will go blind; one in 44 will become insane; one in 25 will be crippled or incapacitated; and one in 13 will develop heart disease.

We often think of tuberculosis as an extinct disease. But when two persons died of TB in the Nation's Capital, TB became a concern again—but, unfortunately, only for a couple of months.

Yet more than 6,000 people died of TB last year. And the city of New York alone spent more than $40 million in 1968 to control TB.

Gentlemen, we have spent millions—even billions—of dollars seeking answers that would allow us to control and eliminate diseases as TB, measles, polio, and the like.

If we do not now vote to continue this program and to see to it that our young people are given protection from these diseases when we have preventative cures, then all the research which has preceded us will have been for nothing.

We have an opportunity to prevent sickness and death. I can hardly see any alternative to using this power for the betterment of our citizens.

Mr. MICHEL. Mr. Speaker, I would like to add a word of caution on H.R. 11913. I realize this legislation has strong support and that we should do everything in our power to control communicable disease.

However, there is a fear in some quarters that this bill calls for a duplication of the efforts of the partnership-for-health program of the Public Health Service Act.

The Bureau of the Budget states this position rather strongly. They said:

> New legislative authority in this field is neither necessary nor desirable.

They added:

> Formula grants under section 314(d) may be used for the whole range of public health services, including the prevention and control of communicable diseases. Similarly, project grants under section 314(e) are available and have been utilized for communicable disease control.

The members of the Labor-HEW Subcommittee on Appropriations were very concerned about the increase in communicable diseases when we funded nearly $42 million this year, which was $400,000 over the request and $854,000 above the 1970 appropriation. Other funds, such as those for rubella vaccination, are also available.

The reestablishment of these categorical grant programs in the public health field may be unwarranted and possibly would complicate and confuse the grant authorizations we now have. In addition, the grant programs envisioned in H.R. 11913 run counter to the President's efforts to consolidate and simplify grant programs with the goal of achieving greater effectiveness and increased flexibility when distributing Federal funds.

Finally, even though the authorizations are high—$20 million this year and increasing to $90 million in 1972—I am not completely convinced that they offer a realistic prospect for fiscal security of the grant programs during periods of

budget belt tightening such as the one we are now experiencing.

I would prefer to go ahead with the clearly defined formula grant programs under section 314(d) of the Public Health Service Act which we now have. States are able to use their own judgment when allocating these funds for the control of communicable diseases. Under this concept, Federal aid in these areas tend to strengthen rather than inhibit the authority of State and local health agencies in the planning and control of their various health programs and activities.

Again, the prevention and control of communicable disease must receive our closest attention and concern, but let us make sure that when we fund these moneys we do under a grant consolidation program that will assure an effective Federal-State partnership in financing public health services.

Mr. MINISH. Mr. Speaker, I rise in support of H.R. 11913, the Communicable Disease Control Amendments of 1970. This measure would assist the States to prevent or control the transmission or spread of diseases that can be controlled. Such diseases would include tuberculosis. venereal disease, rubella, measles, poliomyelitis, diphtheria, whooping cough, and Rh disease.

The elimination of the categorical grant approach to combat communicable disease has not worked out, and has resulted in the underfunding or nonexistence of many programs. H.R. 11913 would restore some measure of control to the Congress to permit needed communicable disease authorizations.

One persuasive argument for the need for this legislation is the increase in communicable diseases which have vaccines or other preventive agents. Figures show a drastic increase in measles, although this is a disease which can be wiped out by use of a vaccine. Moreover, no Federal funds are going toward the purchase of measles vaccine, in spite of its increased incidence, although measles is a disease that sometimes bring serious complications such as encephalitis, otitis, and pneumonia.

German measles is another communicable disease that can be prevented with a vaccine. Although it brings only mild discomfort to children, if caught by a pregnant woman it can cause death, physical disability, and mental disorders to the unborn child. About 25 percent of women contracting German measles give birth to severely defective children. During the 1964 German measles epidemic, 20,000 children with congenital abnormalities were born. And it is predicted that there will be another Rubella outbreak shortly.

More than 24 million Americans are estimated to be infected with tuberculosis, yet only 1 million are receiving treatment in spite of therapy that has been proven highly effective for more than 95 percent of newly diagnosed cases. Newark has the highest active tuberculosis rate of any city with more than 250,000 population, although the disease can be controlled through adequate treatment for those infected and preventive treatment for those exposed.

Venereal disease is another communicable disease problem. It is on the incline, and accounts for some 2,400 deaths each year, not to mention those who are maimed or disabled. New Jersey had the highest percentage increase in infectious syphilis in the last fiscal year.

Although there is a poliomyelitis vaccine, many youngsters are not receiving it. Census estimates show that in 1969, over 5 million persons under the age of 20 had not received polio immunization.

Rh disease, another preventable disease, can lead to death, severe anemia, and jaundice of infants. The March of Dimes estimated that one out of every four women who need the vaccine are not receiving it.

The foregoing statistics provide reason enough for the continuation of Federal communicable disease assistance. Unfortunately, we have not yet eradicated many diseases even though we have had the tools to do so. H.R. 11913 provides one means of attaining the eradication of diseases that can be wiped out, and I heartily support it.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. DINGELL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 313, nays 1, not voting 115, as follows:

[Roll No. 291]

So the bill was passed.

The Clerk announced the following pairs:

Mr. Hébert with Mr. Anderson of Illinois.
Mr. Hays with Mr. Morton.
Mr. Burleson of Texas with Mr. Cramer.
Mr. Daddario with Mr. Meskill.
Mr. Cabell with Mr. Price of Texas.
Mr. Anderson of California with Mr. Kuykendall.
Mr. Dent with Mr. Powell.
Mr. Blatnik with Mr. Riegle.
Mr. Ottinger with Mr. Roudebush.
Mr. Friedel with Mr. Scherle.
Mr. Fallon with Mr. Skubitz.
Mr. Giaimo with Mr. Pelly.
Mr. Pryor of Arkansas with Mr. Wold.
Mr. Rivers with Mr. Wiggins.
Mr. Sisk with Mr. Goldwater.
Mr. Fulton of Tennessee with Mr. Brock.
Mr. Monagan with Mr. Clancy.
Mr. Miller of California with Mr. Cowger.
Mr. Tunney with Mr. Bush.
Mr. Macdonald of Massachusetts with Mr. Taft.
Mr. Jones of Tennessee with Mr. McCarthy.
Mr. Corman with Mr. Weicker.
Mr. Carey with Mr. Burton of Utah.
Mr. Davis of Georgia with Mr. Buchanan.
Mr. Dowdy with Mr. Berry.
Mr. Fountain with Mr. Burke of Florida.
Mr. Rogers of Colorado with Mr. Edwards of Alabama.
Mr. St Germain with Mr. Lujan.
Mr. Melcher with Mr. Esch.
Mr. Charles H. Wilson with Mr. Rousselot.
Mr. White with Mr. McCulloch.
Mr. Van Deerlin with Mr. Whalen.
Mr. Anderson of Tennessee with Mr. Findley.
Mr. Young with Mr. Hall.
Mr. Landrum with Mr. Blackburn.
Mr. Yatron with Mr. MacGregor.
Mr. Delaney with Mr. Button.
Mr. Edwards of Louisiana with Mr. Quie.
Mr. Hanna with Mr. Snyder.
Mr. Lowenstein with Mrs. Chisholm.
Mr. Purcell with Mr. Frey.
Mr. Stephens with Mr. Schneebeli.
Mr. Flynt with Mr. Sebelius.
Mr. Pickle with Mr. Thompson of Georgia.
Mr. Feighan with Mr. Landgrebe.
Mr. Stubblefield with Mr. Watson.
Mr. Hicks with Mr. Casey.
Mr. Long of Louisiana with Mr. Pepper.
Mr. Murphy of New York with Mr. Ayres.
Mr. Philbin with Mr. Jonas.
Mr. Hogan with Mr. Schwengel.
Mr. Celler with Mr. King.
Mr. Jones of Alabama with Mr. Keith.
Mrs. Hansen of Washington with Mr. Stokes.
Mr. Gibbons with Mr. Stuckey.
Mr. Fraser with Mr. Rees.
Mr. de la Garza with Mr. Dawson.

Mr. CRANE changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

The SPEAKER. Pursuant to the provisions of House Resolution 1129, the Committee on Interstate and Foreign Commerce is discharged from the further consideration of the bill S. 2264.

The Clerk read the title of the Senate bill.

MOTION OFFERED BY MR. STAGGERS

Mr. STAGGERS. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Motion offered by Mr. STAGGERS: Strike out all after the enacting clause of S. 2264 and insert in lieu thereof the provisions of H.R. 11913, as passed, as follows:

That this Act may be cited as the "Communicable Disease Control Amendments of 1970."

GRANTS FOR COMMUNICABLE DISEASE CONTROL

SEC. 2. Section 317 of the Public Health Service Act (42 U.S.C. 247b) is amended to read as follows:

"COMMUNICABLE DISEASE CONTROL AND VACCINATION ASSISTANCE

"SEC. 317. (a) There are hereby authorized to be appropriated $75,000,000 for the fiscal year ending June 30, 1971, and $90,000,000 for the fiscal year ending June 30, 1972, to enable the Secretary to make grants to States and, with the approval of the State health authority, to political subdivisions or instrumentalities of the States under this subsection. In the award of such grants the Secretary shall give consideration to the relative extent of the problems relating to one or more of the diseases referred to in subsection (b)(1) and to the levels of performance in preventing and controlling such diseases. Such grants may be used for meeting the cost of communicable disease control programs, including the cost of studies to determine the communicable disease control needs of communities and the means of best meeting such needs.

"(b) For the purposes of this subsection—

"(1) a 'communicable disease control program' means a program which is designed and conducted so as to contribute to national protection against tuberculosis, venereal disease, rubella, measles, Rh disease, poliomyelitis, diphtheria, tetanus, whooping cough or other communicable diseases which are transmitted from State to State, are amenable to reduction, and which are determined by the Secretary on the recommendation of the National Advisory Health Council to be of national significance, and

"(2) the term 'State' includes the Commonwealth of Puerto Rico, Guam, American Samoa, the Trust Territory of the Pacific Islands, the Virgin Islands, and the District of Columbia.

"(c) Payments under this section may be made in advance on the basis of estimates or by way of reimbursement, with necessary adjustments on account of underpayments, or overpayments, in such installments and on such terms and conditions as the Secretary finds necessary to carry out the purposes of this section.

"(d) The Secretary, at the request of a recipient of a grant under this section, may reduce such grant by the fair market value of any supplies (including vaccines and other preventive agents), or equipment furnished to such recipient and by the amount of the pay, allowances, traveling expenses, and any other costs in connection with the detail of an officer or employee to the recipient when the furnishing of such supplies or equipment, or of the detail of such officer or employee (as the case may be), is for the convenience of and at the request of such recipient and for the purpose of carrying out the program with respect to which the grant under this section is made. The amount by which any such grant is so reduced shall be available for payment by the Secretary of the costs incurred in furnishing the supplies, equipment, or personal services on which the reduction of such grant is based, but such amount shall be deemed a part of the grant to such recipient and shall, for the purposes of subsection (c), be deemed to have been paid to such agency.

"(e) Nothing in this section shall limit or otherwise restrict the use of funds which are granted to a State or to a political subdivision of a State under other provisions of this Act or other Federal law and which are available for the conduct of communicable disease control programs from being used in connection with programs assisted through grants under this section.

"(f) The Secretary shall submit an annual report to the President for submission to the Congress on the effectiveness of activities assisted under this section in preventing and controlling communicable diseases.

"(g) Nothing in this section shall be construed to require any State or any political subdivision or instrumentality of a State to have a communicable disease control or vaccination program which would require any person who objects to such treatment to be treated, or to have any child or ward of his treated.

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 11913) was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the two bills just passed.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

PROVIDING FOR CONSIDERATION OF H.R. 9804, YUMA MESA IRRIGATION DISTRICT, ARIZONA

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1187 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1187

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 9804) to amend Public Law 394, Eighty-fourth Congress, to authorize the construction of supplemental irrigation facilities for Yuma Mesa Irrigation District, Arizona. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit. After the passage of H.R. 9804, the Committee on Interior and Insular Affairs shall be discharged from the further consideration of the bill S. 2882, and it shall then be in order to consider the said Senate bill in the House.

The SPEAKER. The gentleman from Missouri is recognized for 1 hour.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA), pending which I yield myself such time as I may consume.

Mr. Speaker, I know of no opposition to this rule and I reserve the remainder of my time.

Mr. LATTA. Mr. Speaker, the purpose of the bill is to provide authority for the Secretary of the Interior to construct supplemental irrigation facilities for the Yuma Mesa Irrigation and Drainage District in Arizona.

This project was originally authorized in 1937 and reauthorized in 1947. Before it was constructed part of the lands involved were converted to military uses. In 1956 the construction of additional drainage facilities were authorized.

The Yuma Mesa project, and several other similar projects use the Gila Gravity Main Canal. During periods of peak use the Yuma Mesa systems do not receive adequate water. This can be eased by the construction of a regulatory storage system which can hold water for the Yuma Mesa system and deliver it at times of lower flow levels.

Construction of this storage system is estimated to cost $510,000. This will require the installation of an impervious lining on the sides and bottom of an existing excavation and will create a reservoir with a capacity of approximately 1.115 acre-feet. From repayments for water use, the Secretary currently has available $384,000, which sum is available for accommodating future drainage requirements under the terms of the original act.

The bill will permit the use of this sum for the construction of the storage system by authorizing the use of the funds for "irrigation works and facilities," thus broadening the purposes for which they may be used. The Federal cost of the project will be $384,000. The remaining cost, some $129,000 will be borne by the Yuma Mesa Irrigation and Drainage District and its water works.

The bill is supported by the Department of Interior. There are no minority views.

Mr. Speaker, I know of no opposition to the rule and reserve the remainder of my time.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FOR CONSIDERATION OF H.R. 16987, MINOT EXTENSION, MISSOURI RIVER BASIN PROJECT, NORTH DAKOTA

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1189 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1189

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 16987) to authorize the Secretary of the Interior to construct, operate, and maintain the Minot extension of the Garrison diversion unit of the Missouri River Basin project in North Dakota, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit. After the passage of H.R. 16987, the Committee on Interior and Insular Affairs shall be discharged from the further consideration of the bill S. 2808, and it shall then be in order in the House to move to strike out all after the enacting clause of the said Senate bill and insert in lieu thereof the provisions contained in H.R. 16987 as passed by the House.

The SPEAKER pro tempore (Mr. BOGGS). The gentleman from Missouri is recognized for 1 hour.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA) pending which I yield myself such time as I may consume.

Mr. Speaker, I know of no opposition to this rule and I reserve the remainder of my time.

Mr. LATTA. Mr. Speaker, the purpose of the bill is to authorize the Secretary of the Interior to construct, operate and maintain the facilities to divert and deliver water from the Garrison diversion unit to the city of Minot, S. Dak.

When the Garrison diversion unit was authorized in 1965, the city of Minot was included as one of the major participants in the municipal water function, with an ultimate demand for over 20,000 acre-feet of water annually. At that time the authorizing legislation did not include the facilities to divert and deliver the water to the city's storage facilities.

The city's water source is the Souris River and neighboring wells. Today, in peak use periods, the city and the nearby Air Force base must ration their water consumption. This is a totally inadequate situation, particularly with respect to future area development. The city cannot raise the money necessary for the construction itself because of the poor market conditions with respect to municipal bonds.

The bill authorizes appropriations totaling $12,910,000, based on January 1969 cost estimates.

Two pumping stations will be built to lift water from the Velva Canal and carry it some 10.5 miles to the Livingston Reservoir, from where the water will be conveyed to the city's treatment plant. This phase of the work will cost $10,830,000.

The remaining authorization. $2,080,000 will be used to build a pipeline from a recently discovered well field to the city's treatment plant.

All Federal costs of construction will be repaid by the city of Minot within 50 years.

The Department of Interior supports the bill. There are no minority views.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FOR CONSIDERATION OF H.R. 7521, RIVERTON EXTENSION, MISSOURI RIVER BASIN PROJECT

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1185 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1185

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 7521) to reauthorize the Riverton extension unit, Missouri River Basin project, to include therein the entire Riverton Federal reclamation project, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit. After the passage of H.R. 7521, the Committee on Interior and Insular Affairs shall be discharged from the further consideration of the bill S. 434, and it shall then be in order in the House to move to strike out all after the enacting clause of the said Senate bill and insert in lieu thereof the provisions contained in H.R. 7521 as passed by the House.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA).

Mr. Speaker, I know of no opposition to this rule and reserve the balance of my time.

Mr. LATTA. Mr. Speaker, I know of no opposition to this rule.

Mr. LATTA. Mr. Speaker, the purpose of the bill is to consolidate several related but separate projects into a single entity—the Riverton extension unit. This will place the unit, a part of the Missouri River Basin project, on a sound economic base.

New construction authorized by the bill totals $11,103,000 based on July 1, 1969, cost estimates. Also authorized are fish and wildlife enhancement measures, totaling $1,013,000. Funds will be used for land and habitat improvement for upland game and migratory waterfowl. Thus the total Federal cost is $12,116,000 at July 1969 price levels.

The project has a good cost-benefit ratio, determined to be 1.41 to 1 in direct benefits.

The Department of the Interior supports the bill. The Bureau of the Budget questions whether this bill is the best way to assist a financially troubled rec-

lamation project and raises questions of public policy based upon the issue.

There are no minority views.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FOR CONSIDERATION OF H.R. 10874, GULF ISLANDS NATIONAL SEASHORE

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1197 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1197

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 10874) to provide for the establishment of the Gulf Islands National Seashore, in the States of Alabama, Florida, Louisiana, and Mississippi, for the recognition of certain historic values at Fort San Carlos, Fort Redoubt, Fort Barrancas, and Fort Pickens in Florida and Fort Massachusetts in Mississippi, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio.

Mr. Speaker, I know of no opposition to this rule and reserve the balance of my time.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. BOLLING. I would be delighted to yield to the gentleman.

Mr. GROSS. This will mean the adoption of four rules on four bills. I do not know how many more rules we will adopt, or whether it is planned to run until midnight or 2 o'clock tomorrow morning in order to dispose of the legislation made in order by these rules. Are we going to run into the night or does the gentleman happen to know?

Mr. BOLLING. I am not in a position to advise the gentleman how late the House will run but I do understand that we will attempt to adopt two more rules after the four that I hope we will have adopted when we finish this one.

Mr. GROSS. That will be six or seven rules.

Mr. BOLLING. That will be six. Then I understand that the chairman of the Committee on Interior and Insular Affairs will take up the matters made in order by these rules. I also understand with the possible exception of one there is little or no controversy on any of these matters. When the chairman and the other members of the Committee on Interior and Insular Affairs appeared before the Committee on Rules there was little or no controversy. I think there was no controversy on five of these bills and there was no controversy on the rule on the sixth but there was a little controversy on the sixth bill. My understanding is that it is hoped by the leadership on both sides and by the members of the committee handling the bill that they will be able to handle not only these rules but also these bills in an expeditious fashion this afternoon thus completing the schedule on the whip notice and not making it necessary to meet tomorrow.

Mr. GROSS. If the gentleman will yield. I want to commend him for his explicit speech in behalf of adopting a long series of rules. Does the Committee on Rules plan to take a vacation the rest of the day after having disposed of these rules in lump-sum fashion?

Mr. BOLLING. With the good will of the gentleman, after we have adopted these rules I would hope we would not have to call up any further rules.

Mr. LATTA. Mr. Speaker, the purpose of H.R. 10874 is to establish a new national seashore on the Gulf of Mexico, to be known as the Gulf Islands National Seashore. It will be a prime recreation area for a seven-State region—Mississippi, Florida, Louisiana, Alabama, Georgia, Arkansas, and Tennessee—where some 23 million people reside.

The Department of Interior favors the bill.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FOR CONSIDERATION OF H.R. 13001, NAVAJO INDIAN IRRIGATION PROJECT

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1188 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 1188

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 13001) to amend the Act of June 13, 1962 (76 Stat. 96), with respect to the Navajo Indian irrigation project. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit. After the passage of H.R. 13001, the Committee on Interior and Insular Affairs shall be discharged from the further consideration of the bill S. 203, and it shall then be in order in the House to move to strike out all after the enacting clause of the said Senate bill and insert in lieu thereof the provisions contained in H.R. 13001 as passed by the House.

The SPEAKER pro tempore. The gentleman from Missouri (Mr. BOLLING), is recognized for 1 hour.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA), pending which I yield myself such time as I may consume.

Again, Mr. Speaker, I may say that there is no opposition to this rule that I know of, and I reserve the balance of my time.

Mr. LATTA. Mr. Speaker, the purpose of the bill is to permit revision of the previously authorized Navajo Indian irrigation project on the tribe's reservation in New Mexico.

The project was originally approved in 1962. It authorized an irrigation project covering 110,030 acres at a cost of $135 million. The plan also called for the irrigation of lands in eight adjacent, federally owned townships not a part of the reservation. Provision was made for purchase of these lands by the tribe at their appraised value.

Subsequently, these federally owned lands have been found to be unsuitable for an irrigation project. Alternative lands have been identified which are also adjacent to that part of the Navajo reservation which will be irrigated.

The bill provides for a revision in the original irrigation project. The federally owned lands which are adjacent to the reservation and suitable for an irrigation project are made available to the Navajos to be held in trust by the Secretary of the Interior for the Navajos upon payment of the appraised value.

The bill also provides that current grazing permitholders on the federally owned lands involved, if they are taken for use by the irrigation project, will be compensated by the Navajos for any permanent improvements made by such permitholders.

Finally, the bill increases the existing authorization from $135 million to a new level of $206 million. The earlier figure was based upon 1961 prices, whereas the new authorization is based upon costs as of April 1970. This new cost figure is $178 million. The additional $28 million is made available to cover the change in plans necessitated by the expected transfer of Federal lands to the Navajos, which will be irrigated as part of the project.

The Department of the Interior supports the bill as reported.

There are no minority views.

Mr. BOLLING. Mr. Speaker, I have no further requests for time, and I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FOR CONSIDERATION OF H.R. 9306, APOSTLE ISLANDS NATIONAL LAKESHORE

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules I call up House Resolution 1186, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 1186

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 9306) to provide for the establishment of the Apostle Islands National Lakeshore in the State of Wisconsin, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Interior and Insular Affairs now printed in the bill as an original bill for the purpose of amendment under the five-minute rule. At the conclusion of such consideration, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions. After the passage of H.R. 9306, the Committee on Interior and Insular Affairs shall be discharged from the further consideration of the bill S. 621, and it shall then be in order in the House to move to strike out all after the enacting clause of the said Senate bill and insert in lieu thereof the provisions contained in H.R. 9306 as passed by the House.

The SPEAKER pro tempore. The gentleman from Missouri (Mr. BOLLING), is recognized for 1 hour.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA), pending which I yield myself such time as I may consume.

Mr. Speaker, again I know of no opposition to this rule, and reserve the balance of my time.

Mr. LATTA. Mr. Speaker, like the gentleman from Missouri, I do not know of any opposition to this rule. There is some opposition to the bill.

Mr. Speaker, the purpose of the bill is to authorize the purchase of land and the development of the Apostle Islands National Lakeshore along Lake Superior in Wisconsin.

The area is an excellent one for a national lakeshore, containing beautiful beaches, 20 islands in the lake on which many animal species live, and much geological evidence of the glacial period, including caves, caverns, and arches carved out thousands of years ago.

The area of the park will include 20 islands totaling 39,500 acres and 2,470 acres of land in a strip some 10 miles long along the shoreline. The Indian lands in the area, owned by the Red Cliff Chippewas as a part of their reservation lands are not included as the Indians strongly object. Some lands once owned by the Indians and within the boundaries of the reservation are included in the proposed park. These lands are now owned privately by non-Indians and total over 1,500 acres of the almost 2,500 along the lakeshore.

The bill authorizes appropriations of $4,250,000 for land acquisition and $5 million for park development.

The Department of the Interior and the administration do not support the legislation.

Dissenting views are signed by a bipartisan group of five members opposing the legislation. They believe the bill violates the Indian treaty signed with the Red Cliff Chippewa Tribe in 1854 and also the implementing Executive order of 1856 which established the Red Cliff Reservation. Further, they point out that the park, as contemplated by the bill, does not comply with the primary criteria for the establishment of the lakeshore as a national recreation area.

They point out that the park will include 1,541 acres of land included in the original treaty and Executive order. The Indians strongly oppose the park because they want to repurchase this land and return it to reservation use. The park will also greatly alter the way of life of the Indians as it brings area development and many visitors to it. These members believe that nothing should be done until the Indians' rights are protected as guaranteed by the treaty of 1854.

They also note that the proposed park does not comply with the criteria for recreational area establishment and development in that it is not within 250 miles of at least 30 million people; it is within 250 miles of only 5 million.

Mr. Speaker, I yield 1 minute to the gentleman from Iowa (Mr. KYL).

Mr. KYL. Mr. Speaker, at this point I will be brief, and I will be explicit. There is opposition to this bill.

I would not want the pressures of the moment to prevent a thorough consideration of this bill today, even though it is the last one on the schedule.

I am opposing this bill because I think it includes an injustice to the people of the Indian nations of the United States. This opposition by the Indians is expressed in these telegrams which I hold in my hand. They are from:

Lorette V. Ellis, Minneapolis regional vice president of the National Congress of American Indians and Jean Taylor, president, Great Lakes Inter-Tribal Council, Inc.

Walter L. Moffett, second vice president, Affiliated Tribes of the Northwest Kamiah Idaho.

The National Indian Youth Council, Gerald Wilkinson, executive director.

Buffalo Tiger, chairman, Miccosukee Tribe of Indians of Florida.

Jacob Thompson, president, Oneida Indian Nation of New York State.

Purcell Powless, chairman, Oneida Tribe of Indians of Wisconsin, Inc.

Donald Wright, Alaska area vice president, National Congress of American Indians.

Great Lakes Inter-Tribal Council, governing body of 10 tribes—the Oneidas, the Winnebagos, the Stockbrider Munsees, the Forest County Potowatamies, the Mole Lake Lac Du Flambeau, La Courte Orille, St. Croix, Bad River, and Red Cliff Bands of Lake Superior Chippewa Indians.

Mr. Speaker, also to inform the Members of this body, I will say that when this bill does come to us for consideration later today, I will offer an opportunity for a quicker consideration of the bill through an amendment which would take from the bill all of the mainland areas which are included. The inclusion is objected to by the Indians.

This amendment would leave a lakeshore area, an area consisting of islands, totaling about 39,000 acres. If that amendment is adopted, and if we can have an agreement on that amendment, we need not take a great deal of time.

I say again, Mr. Speaker, I believe in view of the interest of the Indians in this legislation, it should have thorough consideration and all Members who are present here should hear the argument concerning the bill.

WHY SHOULD CASSIUS CLAY BE PERMITTED TO FIGHT FOR PROFIT WHEN HE REFUSES TO FIGHT FOR HIS COUNTRY?

Mr. LATTA. Mr. Speaker, I yield 3 minutes to the gentleman from Illinois (Mr. MICHEL).

(By unanimous consent, Mr. MICHEL was allowed to speak out of order and to revise and extend his remarks.)

Mr. MICHEL. Mr. Speaker, I read with disgust today the article in the Washington Post concerning the upcoming heavyweight fight of this country's infamous draft dodger, Cassius Clay.

The article said that Mr. Clay was out of shape, overweight, and winded. No doubt this comes about from his desperate and concerted efforts to stay out of the military service while thousands of patriotic young men are fighting and dying in Vietnam.

I wonder how the Justice Department would deal with these fine young Americans should they suddenly develop reservations about serving in the Armed Forces? Not having Mr. Clay's money or surrounded as he is by a battery of self-serving lawyers, I am sure the Department would have no trouble in seeing that a speedy trial and sentence was reached.

As it is, to quote an old proverb, every ass thinks himself worthy to stand with the king's horses. In other words, Cassius Clay cannot hold a candle to the average American boy who is willing to defend his country in perilous times.

Apparently Mr. Clay feels himself entitled to the full protection of the law yet does not feel he has to sacrifice anything to preserve the institutions that protect him. What a mess this country would be in if everyone felt this way. Heavyweight champion or not, Cassius Clay does not deserve the special treatment he seems to be getting at the hands of the Justice Department. Nor should the State of Georgia allow him to feather his own nest by fighting in Atlanta. Anyone who shows a complete disregard for our institutions should not be treated to the hospitality of a city which has always shown a great pride and concern for our American way of life.

Finally, I urge the Justice Department to proceed with deliberate haste to bring Mr. Clay's case to an end. At the end of this fiscal year there were 3,899 pending draft evasion cases involving 3,923 defendents in the Justice Department. This is indeed a heavy caseload, but to allow cases like Cassius Clay's to drag out for years is inexcusable and only tends to

destroy the confidence our citizens have in our system of justice.

Mr. LATTA. Mr. Speaker, I have no further requests for time.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

SUPPLEMENTAL IRRIGATION FACILITIES FOR THE YUMA MESA IRRIGATION DISTRICT, ARIZONA

Mr. JOHNSON of California. Mr. Speaker, I call up the bill (H.R. 9804) to amend Public Law 394, 84th Congress, to authorize the construction of supplemental irrigation facilities for the Yuma Mesa Irrigation District, Ariz., and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read the bill as follows:

H.R. 9804

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2 of the Act of January 28, 1956 (70 Stat. 5, Public Law 394, Eighty-fourth Congress), is amended by inserting after the word "buildings" the words "and irrigation works and facilities".

SEC. 2. Section 4 of the Act of January 28, 1956, is amended by changing the period at the end thereof to a comma and adding "but the contract executed on or prior to such date may be amended to include works authorized after such date by amendments to section 2."

Mr. ASPINALL. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, the purpose of H.R. 9804 is to enable the Secretary of the Interior to use funds heretofore authorized for the construction of drainage works for the construction of a small regulatory reservoir. Such facility is badly needed for effective operation of the Yuma Mesa Division of the Gila project.

The Yuma Mesa Division is completely operational. It receives its water supply from the Colorado River through a shared canal system with other projects in the area of Yuma. There are times when the common canal and the Yuma Mesa's pumping plant can not deliver enough water to satisfy peak demands of the crops, which are mostly citrus. A reservoir of 1,100 acre-feet which can be filled during slack periods will contain enough water to supplement adequately the delivery capability of the existing works; thereby providing an adequate water supply and realization of the full potential of the program.

The act of January 28, 1956, which authorized the existing repayment contract, authorized $1,350,000 to be appropriated for construction of certain specifically identified project facilities and drains. The regulatory reservoir that is now needed to offset the capacity bottleneck was not included among the items enumerated in the act.

All of the funds authorized by the act of January 28, 1956, have been appropriated and expended except some $384,000 being reserved for future drainage construction. Under the terms of H.R. 9804, the Secretary will be authorized to use these funds toward building the reservoir. Thereafter, if drainage problems arise, the Yuma Mesa Irrigation and Drainage District will cope with them at its own expense.

The reservoir that is now contemplated will be built by placing an impervious earth lining on the side slopes and bottom of a large excavation from which the Arizona Highway Department removed earth materials for highway construction. The right-of-way is in Federal ownership and no lands will need be acquired.

The construction cost is now estimated at $510,000 and the Irrigation and Drainage District will contribute funds to cover costs in excess of $384,000. Actually, this bill does not involve any new Federal expenditures since the Federal share would otherwise be spent for drainage construction over a period of time. The bill will have the effect of expediting in time the expenditure of this amount, however.

There is no local opposition to the measure, and no opposition in our committee to its passage. The program involves no new or unusual problems from the standpoint of water rights, compacts, court decrees, or from its impact on environmental values. I wholeheartedly commend the measure to the House and recommend its immediate adoption.

The SPEAKER pro tempore (Mr. BOGGS). The time of the gentleman from Colorado has expired.

(On request of Mr. UDALL, and by unanimous consent, Mr. ASPINALL was allowed to proceed for 1 additional minute.)

Mr. UDALL. Mr. Speaker, will the gentleman yield?

Mr. ASPINALL. I am glad to yield to my friend from Arizona.

Mr. UDALL. As the author of this bill and the gentleman in whose district the project lies, I wish to thank the chairman of our committee for his very clear-cut explanation of the bill, and I want to state my strong support for it.

Mr. SAYLOR. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I rise in support of this legislation to authorize the construction of supplemental irrigation facilities for the Yuma Mesa Irrigation District in Arizona.

The Yuma Mesa Irrigation and Drainage District is served water through the Gila Gravity Main Canal from the Imperial Dam on the Colorado River. Nearly all of the 19,970 irrigable lands in the district are planted in high value citrus, and the district is experiencing difficulty in delivering sufficient water to this acreage, particularly during the hot summer season. The irrigation district has expressed the need for a regulating reservoir which would enable the district to meet its critical demands for water.

The Yuma Mesa Irrigation District has located its proposed regulating reservoir in the form of a large excavated barrow pit. This pit was utilized by the Arizona Highway Department in the construction of an interstate highway. The barrow pit is located adjacent to the district's main irrigation artery and with appropriate modification could be converted to a balancing reservoir with an estimated capacity of 1,115 acre-feet of water.

The act of January 28, 1956, which authorized the Secretary of the Interior to execute a repayment contract with the district and to construct drainage facilities and works, does not contain the authority needed to construct the reservoir. H.R. 9804 will provide the authority necessary to construct the reservoir by amending section 2 of the 1956 act to include "irrigation works and facilities."

The preliminary cost estimate for modifying the barrow pit into a reservoir by lining the pit with soil cement to prevent seepage, and to equip the reservoir with appropriate pumping and conveyance facilities, is approximately $510,000. These costs will be met by permitting the use of $384,000 which was reserved but unexpended for construction of drainage facilities under the 1956 act. Any remaining costs or additional funds will be the responsibility of the Yuma Mesa Irrigation and Drainage District.

Mr. Speaker, I urge the passage of H.R. 9804.

AMENDMENT OFFERED BY MR. SAYLOR

Mr. SAYLOR. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SAYLOR: Page 1, line 6, change the period to a comma and insert the following: "and at the end of said section 2 delete the period and insert the following proviso ': *Provided,* That all identifiable flows of water from works and facilities authorized in this Act shall be periodically inspected and treated for the purpose of abating pollution and improving water quality in such manner as determined by the Secretary of the Interior.' "

The SPEAKER pro tempore. The gentleman from Pennsylvania is recognized.

Mr. SAYLOR. Mr. Speaker, this is the amendment I would like to see in this bill, but I am a realist. I realize that I cannot get this amendment in this bill, but I am going to put into the RECORD at this point an explanation of what I think this amendment would do.

Mr. Speaker, the purpose of this amendment is to carry out the congressional intent to abate water pollution and improve our environment. This Nation is on the threshold of a major attack on water pollution. The Council on Environmental Quality in its recent report recommended that a strong and consistent Federal policy should be developed to control water pollution and insure effective enforcement of water quality standards.

The place to begin is here in our consideration of legislation authorizing Federal water resource developments—be they large or small. And, the time to begin is now. This is essentially what the amendment I have offered does, by writing into basic law the requirement that all identifiable flows of water from works

and facilities authorized in this Federal project shall be inspected and treated for the purpose of abating water pollution and improving water quality.

This is not a complex amendment. The amendment merely requires: First, that the flows of water be identified from the works and facilities authorized in the act, if they cannot be identified then there is nothing to be done; and, second, if the flows of water can be identified, the amendment requires that the water flow be inspected for water pollution. If water pollution is found then the amendment requires that the water flows be treated to abate the pollution and improve the water quality. All this is to be done in such manner as is determined by the Secretary of the Interior. If the Secretary of the Interior does not have the money or manpower within his Department or the Federal Water Pollution Control Administration, then the Secretary, I am certain, will be more than willing to request more money and manpower from the Congress.

I am aware that there are those who will rise in opposition to this amendment and propose arguments against its adoption on the basis that this amendment has no place in this little project. I would point out to my colleagues that this Congress passed Public Law 91–190, commonly known as the National Environmental Policy Act of 1969. The amendment which I have offered is merely a step, a small step, in carrying out the congressional declaration of a national environmental policy. I would also say to my colleagues to beware of those who clamor for the improvement of our environment, so long as it is not required in their own backyard.

Improvement of our environment, abating water pollution, and improving water quality are all part of the same problem. If we in the Congress are to carry out our commitment to improve the environment then we must begin by requiring that Federal water resource developments, of large, small or medium size, be continually monitored for the purpose of abating water pollution and improving water quality.

If we are to have a national policy on the environment, then the Federal Government should set the example. I urge the adoption of the amendment.

Mr. Speaker, I ask unanimous consent to withdraw the amendment.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

AMENDMENT OFFERED BY MR. SAYLOR

Mr. SAYLOR. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SAYLOR: Page 2, at end of line 2, insert "The Yuma-Mesa division shall be operated in such manner that identifiable return flows of water will not cause the Colorado River stream system to be in violation of water quality standards promulgated pursuant to the Water Quality Act of 1965 (79 Stat. 903)."

Mr. SAYLOR. Mr. Speaker, at the time we had another project in Colorado, this was the formula that was agreed upon in the conference. This is a positive action, requiring that the Secretary of the Interior and the people in the Bureau of Reclamation shall operate this project so as not to lower the quality of the water in violation of the Water Quality Act of 1965. It is a positive action which the Secretary must take, and I urge adoption of the amendment.

Mr. JOHNSON of California. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from California.

Mr. JOHNSON of California. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, after looking over the amendment just offered by the gentleman from Pennsylvania, certainly we have no objection to it on this side of the aisle.

Mr. GROSS. Mr. Speaker, I move to strike the necessary number of words.

Mr. Speaker, twice I have heard it stated that this bill is not going to cost anything, but the report says:

The direct Federal cost of H.R. 9804—

Which is this bill—

is $384,000.

What I am supposed to believe?

Mr. JOHNSON of California. Mr. Speaker, when the original authorization was made available, it was for $1,350,000, and the works have been put in as stated heretofore, but they are not adequate to take care of the high peak flows of delivery of water for irrigation purposes. The bill here would authorize the construction of a re-regulating reservoir to store water in the off peak and deliver it in the peak flows to take care of the irrigation needs. This would take, $384,000 in Federal funds to construct this particular reservoir. The amount of money of $1,350,000 was made available for the irrigation system and the drainage system. In the event there is any deferred drainage, the district would have to make up that cost itself. At the present time the reservoir would be built in a pit used for highway purposes at a very low cost, $510,000. The $384,000 would be paid back by the district to the Federal Government.

Mr. GROSS. Let me ask the gentleman, how is this project paying out? Is it doing well?

Mr. JOHNSON of California. Yes, as far as I know the project is meeting its commitments, and at the present time there is no problem from the standpoint of repayment.

Mr. GROSS. What is the showing as to the original cost-to-benefit ratio?

Mr. UDALL. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I will yield to anyone who can help; yes.

Mr. UDALL. Mr. Speaker, this has turned out to be one of the best projects we have ever had. This was raw desert, and it is now extremely valuable citrus land. The fact is there is a $384,000 surplus which has been paid in by the irrigators into this account, and all we ask is the technical permission to take and use that money to build this reservoir, which will make this project more valuable.

It is not exactly fair to say there will be no initial cost to the Government. Initially the Federal Government will build this, but it will ask repayment of the cost from the district, and of that the Government already has $384,000 which has already been paid in, and the district will cough up the other $100,000, so in the final result there will be no cost to the Federal Government.

Mr. GROSS. We hope.

Mr. UDALL. We do not just hope. We know that.

Mr. Speaker, H.R. 9804 proposes a very minor amendment to Public Law 84–394, which authorized under a Federal repayment contract construction of drainage facilities by the Yuma Mesa Irrigation and Drainage District in Arizona. Yuma Mesa is one of five irrigation districts that share the Gila Main Gravity Canal, conveying water to the Yuma area from the takeout point at Imperial Dam.

When these drainage facilities were originally authorized in 1957, the water requirements of the area were substantially less than they now are. Thirteen years ago the district was principally a cotton producer; today it is planted to citrus, a crop which requires more water than cotton. To date, Yuma Mesa has only been able to meet this increased demand for water by borrowing unused capacity from neighboring districts. However, there is little reason to believe that these neighbors will continue to enjoy a water surplus indefinitely.

To meet its long-range needs, Yuma Mesa wants to build an additional reservoir where water could be stored for use during the peak summer months when the demand outstrips supply. By coincidence the Arizona State Highway Department, in the construction of U.S. Interstate 8, dug a 96-acre barrow pit immediately adjacent to the district's main "A" canal. Yuma Mesa proposes to buy this pit and employ it as a balancing reservoir, thereby solving its capacity problems.

In a search for the funds needed to make the purchase and to make necessary improvements, Yuma Mesa discovered that it still had $384,000 in drainage moneys which were authorized under Public Law 84–394. Since this money is not needed to meet its repayment obligation to the Federal Government, the district is seeking a simple amendment to the 1957 law allowing them to apply this surplus to the cost of purchasing and improving irrigation facilities. Let me emphasize that this bill will cost the U.S. taxpayers nothing. The cost of the proposed reservoir will be paid entirely by the irrigation district.

As the Secretary of Interior points out in his report on the bill, the proposed balancing reservoir has the sole disadvantage of being located on a mesa above other irrigated land. The Secretary concludes, and I am told that all parties concur, that strict precautions against seepage must and will be taken.

The cost of this undertaking to the Yuma Mesa District will not be insubstantial even if we approve this bill today. The Bureau of Reclamation estimates costs at $510,000, necessitating an

expenditure of more than $100,000 of the district's private funds. If we deny Yuma Mesa the relief that it needs, the project will simply have to be abandoned.

Mr. Speaker, I ask my distinguished colleagues to approve this amendment. The Yuma Mesa District comprises nearly 20,000 acres of high value citrus whose lifeline is threatened. This need not be the case. Through a small investment of public funds, together with a substantial private contribution, we can assure an ample flow of water to these crops for years to come.

Mr. ASPINALL. Mr. Speaker, if the gentleman will yield to me, the repayment contract was signed in the original days of the operation. It has already been signed, and it is a question whether or not the amount will be used for drainage or for a more important use, such as the building of the regulatory reservoir.

Mr. SAYLOR. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Pennsylvania.

Mr. SAYLOR. The gentleman asked a question which is pertinent: What is the benefit-cost ratio for this project? If my memory serves me correctly, this is one of the best benefit-cost reclamation projects ever presented, and it is slightly in excess of 1 to 3. It is current, and the contracts that have been entered into for the repayment are up to date.

This is one of the best irrigation projects we have in the United States.

Mr. JOHNSON of California. Mr. Speaker, H.R. 9804, to amend the act of January 28, 1956, will make it possible for the Secretary of the Interior to utilize the funds authorized to be appropriated for the Yuma Mesa Division of the Gila project in a more useful and timely manner than can now be accomplished. The Yuma Mesa Division is a fully operational reclamation project near the City of Yuma, Ariz. It receives its water supply from the Colorado River through a system of major canals which it shares with other entities. While the canal system is adequate to deliver the water to which the Yuma Mesa Division is entitled, there are critical times in which it is impossible to receive enough water to meet peak consumptive-use requirements. The solution to this problem lies in the construction of regulatory storage that may be filled with water in off-peak periods for subsequent use in periods of high demand.

Such storage can be provided by creating a reservoir from an existing excavation by the placement of impervious lining on the bottom and side slopes. This excavation was created by the removal of construction materials for use in nearby highway construction. The site is on lands controlled by the project and there is no land acquisition problem. Estimates of the cost of this activity at current-day prices is about $510,000. It is anticipated that the construction work will be performed by the Bureau of Reclamation utilizing reimbursable funds in the amount of $384,000 with the remainder being contributed by the Yuma Mesa Irrigation and Drainage District.

The Federal share of this program is already covered by a repayment contract between the United States and the Irrigation and Drainage District under which the district agreed to repay $1,350,000 to be expended by the United States for the construction of certain designated facilities. The act of January 28, 1956, authorizing the repayment contract set forth the facilities which might be constructed under its terms. A reregulating reservoir of the character needed was not included in the list of designated facilities and this legislation is needed to include the reservoir among the authorized facilities.

The Federal funds that will be used for this program are the unapplied balance of the $1,350,000 included in the original contract. This amount is now reserved for future drainage construction, if required. When the money is expended for the reservoir, this irrigation district will assume responsibility for future drainage. In this sense, H.R. 9804 actually does not involve any increase in Federal expenditures in excess of the obligations already committed by the repayment contract now in force.

In the hearings before our Subcommittee on Irrigation and Reclamation, we found the legislation fully supported by the executive branch and the local interests from the State of Arizona. The measure was approved unanimously by the Committee on Interior and Insular Affairs after full discussion. The program poses no problems of water supply and has no adverse environmental effects.

For these reasons, I urge the full support of all Members for H.R. 9804.

The SPEAKER pro tempore. The question is on the amendment offered by the gentleman from Pennsylvania (Mr. SAYLOR).

The amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

The SPEAKER pro tempore. Pursuant to the provisions of House Resolution 1187, the Committee on Interior and Insular Affairs is discharged from the further consideration of the bill S. 2882, to amend Public Law 394, 84th Congress, to authorize the construction of supplemental irrigation facilities for the Yuma Mesa Irrigation District, Arizona.

The Clerk read the title of the Senate bill.

The Clerk read the Senate bill as follows:

S. 2882

An act to amend Public Law 394, Eighty-fourth Congress, to authorize the construction of supplemental irrigation facilities for the Yuma Mesa Irrigation District, Arizona

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2 of the Act of January 28, 1956 (70 Stat. 5, Public Law 394, Eighty-fourth Congress), is amended by inserting after the word "buildings" the words "and irrigation works and facilities".

SEC. 2. Section 4 of the Act of January 28, 1956, is amended by changing the period at the end thereof to a comma and adding "but the contract executed on or prior to such date may be amended to include works authorized after such date by amendments to section 2."

MOTION OFFERED BY MR. JOHNSON OF CALIFORNIA

Mr. JOHNSON of California. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. JOHNSON of California moves to strike out all after the enacting clause of S. 2882 and to insert in lieu thereof the provisions of H.R. 9804, as passed, as follows:

That section 2 of the Act of January 28, 1956 (70 Stat. 5, Public Law 394, Eighty-fourth Congress), is amended by inserting after the word "buildings" the words "and irrigation work and facilities".

SEC. 2. Section 4 of the Act of January 28, 1956, is amended by changing the period at the end thereof to a comma and adding "but the contract executed on or prior to such date may be amended to include works authorized after such date by amendments to section 2." The Yuma-Mesa division shall be operated in such manner that identifiable return flows of water will not cause the Colorado River stream system to be in violation of water quality standards promulgated pursuant to the Water Quality Act of 1965 (79 Stat. 903).

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 9804) was laid on the table.

MINOT EXTENSION, GARRISON DIVERSION UNIT, MISSOURI RIVER BASIN PROJECT, NORTH DAKOTA

Mr. JOHNSON of California. Mr. Speaker, I call up the bill (H.R. 16987) to authorize the Secretary of the Interior to construct, operate, and maintain the Minot extension of the Garrison diversion unit of the Missouri River Basin project in North Dakota, and for other purposes, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER pro tempore (Mr. BOGGS). Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read the bill as follows:

H.R. 16987

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is authorized to construct, operate, and maintain the Minot extension of the Garrison diversion unit in North Dakota under the Federal reclamation laws (Act of June 17, 1902; 32 Stat. 388, and Acts amendatory thereof and supplementary thereto) for the principal purposes of conveying, regulating, and furnishing water made available through facilities of the Garrison diversion unit for use by the city of Minot and other communities for municipal and industrial purposes; conserving and developing fish and wildlife resources; and enhancing outdoor recreation opportunities.

SEC. 2. The Secretary is authorized to construct appropriate portions of the Minot extension to assist in the interim delivery of water from ground water sources prior to the availability of water through the facilities of the Garrison diversion unit.

SEC. 3. (a) Costs of the project, or any unit or stage thereof, allocated to municipal water supply, shall be repayable, with interest, by the municipal water users over a period of not more than fifty years from the date that water is first delivered for that purpose, pursuant to contracts with municipal corporations or other organizations, as defined in subsection 2(g) of the Reclamation Project Act of 1939 (53 Stat. 1187). Such contracts shall be precedent to the commencement of construction of the project. Contracts may be entered into with water users' organizations pursuant to the provisions of this Act without regard to the last sentence of subsection 9(c) of the Reclamation Project Act of 1939 (53 Stat. 1187).

(b) Expenditures for the Minot extension may be made without regard to the soil survey and land classification requirements of the Interior Department Appropriations Act of 1954 (67 Stat. 266).

(c) The interest rate used for computing interest during construction and interest on the unpaid balance of the reimbursable costs of the Minot extension shall be determined by the Secretary of the Treasury, as of the beginning of the fiscal year in which construction on the extension is commenced, on the basis of the computed average interest rate payable by the Treasury upon its outstanding marketable public obligations which are neither due nor callable for redemption for fifteen years from date of issue.

(d) The Secretary is authorized to transfer to a qualified contracting entity or entities the care, operation, and maintenance of the project works, and, if such transfer is made, to credit annually against the contractor's repayment obligation that portion of the year's joint operation and maintenance costs which, if the United States had continued to operate the project, would have been allocated to fish and wildlife and recreation purposes. Prior to assuming care, operation, and maintenance of the project works the contracting entity or entities shall be obligated to operate them in accordance with criteria established by the Secretary of the Interior with respect to fish and wildlife and recreation.

SEC. 4. The conservation and development of fish and wildlife resources and the enhancement of recreation opportunities in connection with the Minot extension shall be in accordance with the provisions of the Federal Water Projects Recreation Act (79 Stat. 213).

SEC. 5. There is authorized to be appropriated for the construction of the Minot extension the sum of $12,150,000 (January 1969 prices), plus or minus such amounts, if any, as may be justified by reason of ordinary fluctuations in construction costs as indicated by engineering cost indexes applicable to the type of construction involved.

Mr. ASPINALL. Mr. Speaker, I move to strike the last word.

Mr. Speaker, H.R. 16987 is a bill to authorize new project construction and is the last of the new reclamation project authorizations that we will be bringing out in this Congress. The Members will remember, I am sure, that I outlined a program of authorizations for this Congress aggregating about $150 to $175 million. We believed then, as we do now, that we should keep the machinery of project authorizations operating, but that the dollar volume should be carefully managed so that the Bureau of Reclamation can make some in-road into its backlog of authorized projects.

This program is badly needed and can be accommodated without appreciable impact on the backlog. It is a two-stage development having a total construction cost estimated at $12,910,000. The first stage of $2,080,000 is the only part that imposes an early budgetary demand, since the second stage can be deferred for several years, as I will explain later.

The first stage consists of a pipeline and pumping plant to deliver water from a well field about 7 miles to the central treatment plant of the city of Minot, N. Dak. The city will drill and equip the wells and install a collection system to deliver the water to a central point. The groundwater to be developed has only recently been discovered and tested out. It is sufficient to overcome the shortages the city now has and to provide for a few years of increased demand.

Within 6 to 10 years, depending on the rate of load growth, the city will need stage two of this project. At a cost of $10,830,000 a pipeline will be built from the Velva Canal of the authorized Garrison development to a reservoir at a site on Livingston Creek about two miles from the city. Here a holding reservoir will be built for storing water for peak demands and for winter needs. A pipeline spur will be built from the reservoir to intercept the pipeline constructed for the first stage. After the second stage goes into operation, the first stage will be retired to emergency standby.

Livingston Reservoir will be multiple purpose in the sense that it will be valuable for fish and wildlife and recreation. Being situated near the population center, being located out on the prairies, and being filled to capacity largely throughout the summer, it will have heavy utilization. The plan, therefore, includes some recreation development.

Except for nonreimbursable fish and wildlife and recreation costs, of $2,046,000 as determined by the current statutory formula, all of the costs will be repaid with interest. The city of Minot will repay the water supply costs and the Garrison Diversion Conservancy District will take care of the fish and wildlife and recreation obligations.

Since the Minot extension does not benefit irrigation, there is no cost allocated to that purpose. Thus we are not confronted here with any question of financial assistance, acreage limitations, surplus crops or any of the other issues that sometimes bother Members about reclamation projects.

The project has a good benefit-cost ratio of 1.93 to 1.0 at 4⅞-percent interest; there is no local opposition of which we are aware and the bill is strongly supported by our committee. Water rights are in order under the laws and procedures of the State of North Dakota and the project has no adverse environmental effects. In fact, the introduction of high quality Missouri River water into the Souris River Basin is calculated to have a very beneficial effect on the salinity of the water resources of this basin and will go a long way in resolving the conflicts which have existed between wildlife interests and commercial interest over water supply and water quality issues.

Mr. Speaker, this is a fairly small, albeit a very important project. It has been most carefully planned and analyzed. It meets all of the tests of law and policy and, in terms of public investments, must rank high among the developmental opportunities that have come to the House in recent years. I confidently request all Members to join with me in effecting speedy passage of this most desirable measure.

Mr. Speaker, here again the reason why this legislation comes up as it does under a rule but also being considered in the House as if it were in the Committee of the Whole House on the State of the Union is because of an amendment to be offered by the gentleman from Pennsylvania (Mr. SAYLOR).

Mr. SAYLOR. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I rise in support of this legislation authorizing the Secretary of the Interior to construct, operate, and maintain the Minot extension of the Garrison diversion unit of the Missouri River Basin project in the State of North Dakota.

The city of Minot, N. Dak., has experienced difficulty in meeting its immediate demands for municipal and industrial water. The present sources are not adequate to meet peak demands and during drought periods, serious consideration is given to water rationing. The city's existing source of supply from the Minot aquifer and the Souris River cannot be relied upon to meet the continual and growing water requirements.

The principal purpose of H.R. 16987 is to provide an interim supplemental water supply to the city of Minot and surrounding area to meet its critical short-term needs from the nearby Sundre aquifer and to develop a more dependable water supply by diverting water from the Velva Canal of the Garrison diversion unit to meet the city's long-range municipal and industrial water requirements in the future.

Construction of the Minot extension will involve two phases of development. The first phase will be the conveyance of the ground water supply from the nearby Sundre aquifer to the city's treatment plant. The principal features of this phase of development are a pumping plant near the aquifer, a pipeline leading from the pumping plant to the city's treatment plant. The second phase of development which will be required in 6 to 10 years involves the diversion of water from the Velva Canal of the Garrison diversion unit to the city's water treatment plant. The principal features of this phase will include the pipeline from the Velva Canal to the Livingston Reservoir, the Livingston Dam and Reservoir, two pumping stations and a pipeline to convey water from the reservoir to the city's water treatment plant. This second phase of development will also provide for fish and wildlife enhancement and recreational opportunities.

The total project cost of the Minot extension is estimated at $17,413,000. Construction costs on the first phase of development are estimated at $2,080,000 and the second phase of development is estimated to cost $10,830,000 plus a cash assignment of $4,503,000 from the Garrison diversion unit representing a pro rata share of the municipal and industrial water supply allocation in that

project. These project costs are allocated among the project purposes; $14,779,000 for municipal and industrial water, and $2,634,000 for recreation and fish and wildlife enhancement. Of the estimated total project costs of $17,413,000, approximately $15,370,000 or 88 percent is reimbursable with interest.

Mr. Speaker, I urge the passage of H.R. 16987.

Mr. KLEPPE. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I will be happy to yield to my colleague, the gentleman from North Dakota (Mr. KLEPPE).

Mr. KLEPPE. Mr. Speaker, I rise in support of this legislation.

Mr. Speaker, in 1965 Congress authorized the Garrison diversion unit of the Missouri River Basin project in North Dakota primarily to provide municipal and industrial water to various communities in north central North Dakota.

One of the major cities included in the municipal water aspect was Minot; however, the authorization to extend the Garrison diversion unit did not cover the facilities required to divert and deliver water from the major canals of the unit to Minot.

The purpose of H.R. 16987, legislation I sponsored along with my colleague from North Dakota, will authorize the Secretary of the Interior to construct, operate, and maintain the Minot extension of the Garrison diversion unit.

Minot, N. Dak., has been faced with a critical water supply problem and the city government has been considering the necessity of instituting the rationing of water. As one of the larger urban centers in North Dakota, Minot is the trade and service center for the west and central portions of the State. Minot's economy is rooted in agriculture and it is also the site of Minot Air Force Base, a permanent defense installation dependent on the city for its water supply. The present water service is from the Souris River and local aquifers reliant on the Souris River. The city's peak needs are not sufficiently met by these sources and they would be totally incapable of meeting the city's needs in the immediate future.

Because time has been of the essence, I wish at this point to express my sincere appreciation to a number of individuals in this body who have been instrumental in the progress of this legislation.

As chairman of the House Subcommittee on Irrigation and Reclamation, the gentleman from California (Mr. JOHNSON) concluded hearings on H.R. 16987 in record time and favorably reported the legislation to the full committee.

The able chairman of the House Interior and Insular Affairs Committee, the gentleman from Colorado (Mr. ASPINALL) realized the urgency of the situation in Minot and guided the progress of this legislation.

The ranking minority member of the committee, the gentleman from Pennsylvania (Mr. SAYLOR) was instrumental in establishing the relationship of the Minot extension to the overall quality of the human environment, particularly with a view toward its effect upon conservation. His diligence and perseverance in determining that a project of this nature enhances rather than destroys the environment sets an example that all of us should follow.

The city of Minot is now extremely close to what has in the past only been an idea—the availability of a dependable supply of municipal and industrial water. Passage of H.R. 16987 by this body will hopefully signal the start of construction in the very near future.

Mr. ANDREWS of North Dakota. Mr. Speaker, would the gentleman yield?

Mr. SAYLOR. I am happy to yield to the gentleman from North Dakota (Mr. ANDREWS).

Mr. ANDREWS of North Dakota. Mr. Speaker, I would like to commend the committee for the expeditious way in which they have handled this most important project.

H.R. 16987, a bill to authorize the Minot extension of the Garrison diversion project, is most important to the city of Minot and to the Garrison diversion unit.

The Minot extension will provide for the development of an interim water supply from a groundwater aquifer to serve the city until a water supply can be made available from the Velva Canal. Present plans contemplate that the Minot extension will be integrated with the Garrison diversion unit insofar as its operations are concerned. The total cost of the project which includes 14 miles of pipeline, two pumping plants, a dam, and 10,350 acre-foot storage reservoir, would approximate $12 million.

The total project and assigned cost, including interest during construction, allocated to municipal and industrial water supply will be reimbursed by the city of Minot with interest.

The Garrison diversion unit, authorized back in 1965 and now under construction, will provide a plentiful supply of good water to a number of cities in the project area for municipal and industrial use. The city of Minot is the largest city of those listed in the project report as potential municipal water customers of the project and is, without question, the city in the area with the most critical water supply problem.

Very simply, this bill will provide an opportunity for early utilization of the water being diverted by the Garrison project. Its approval will result in considerable savings in local and Federal tax dollars and it will hasten vitally needed industrial and municipal water to the city of Minot.

This city of 32,000 has suffered from a water shortage, and indeed employed water rationing, nearly every year in the last decade. The recent census revealed that Minot had experienced the slowest growth rate of any of North Dakota's four major cities and this fact can certainly be blamed on the lack of water for industrial growth.

Meanwhile, Minot citizens have witnessed the growth of the Minot Air Force Base near their city, a key military installation essential to our Nation's defense. The population at the base is presently about 18,000—and the mission of this base and its personnel is dependent on a reliable water supply from the city of Minot.

The project is greatly needed. It will result in a savings to the Federal Government over waiting until total project development and I urge my colleagues to support it.

AMENDMENT OFFERED BY MR. SAYLOR

Mr. SAYLOR. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SAYLOR: Page 2, line 4, Strike out "opportunities." and insert: "opportunities: *Provided*, That all identifiable water flows conveyed, regulated, or furnished by or through works and facilities authorized in this Act, shall be treated for the purpose of abating pollution and improving water quality in such manner as determined by the Secretary of the Interior."

Mr. SAYLOR. Mr. Speaker, this is the same amendment which I offered to the bill which we just considered.

Mr. Speaker, the purpose of this amendment is to carry out the congressional intent to abate water pollution and improve our environment. This Nation is on the threshold of a major attack on water pollution. The Council on Environmental Quality in its recent report recommended that a strong and consistent Federal policy should be developed to control water pollution and insure effective enforcement of water quality standards.

The place to begin is here in our consideration of legislation authorizing Federal water resource developments—be they large or small. And, the time to begin is now. This is essentially what the amendment I have offered does, by writing into basic law the requirement that all identifiable flows of water from works and facilities authorized in this Federal project shall be inspected and treated for the purpose of abating water pollution and improving water quality.

This is not a complex amendment. The amendment merely requires: First, that the flows of water be identified from the works and facilities authorized in the act, if they cannot be identified then there is nothing to be done, and second, if the flows of water can be identified, the amendment requires that the water flow be inspected for water pollution. If water pollution is found then the amendment requires that the water flows be treated to abate the pollution and improve the water quality. All this is to be done in such manner as is determined by the Secretary of the Interior. If the Secretary of the Interior does not have the money or manpower within his Department or the Federal Water Pollution Control Administration, then the Secretary, I am certain, will be more than willing to request more money and manpower from the Congress.

I am aware that there are those who will rise in opposition to this amendment and propose arguments against its adoption on the basis that this amendment has no place in this little project. I would point out to my colleagues that this Congress passed Public Law 91-190, commonly known as the National Environmental Policy Act of 1969. The amendment which I have offered is merely a step, a small step, in carrying

out the congressional declaration of a national environmental policy. I would also say to my colleagues to beware of those who clamor for the improvement of our environment, so long as it is not required in their own backyard.

Improvement of our environment, abating water pollution, and improving water quality are all part of the same problem. If we in the Congress are to carry out our commitment to improve the environment then we must begin by requiring that Federal water resource developments, of large, small or medium size, be continually monitored for the purpose of abating water pollution and improving water quality.

If we are to have a national policy on the environment, then the Federal Government should set the example. I urge the adoption of the amendment.

Mr. Speaker, I now ask unanimous consent to withdraw my amendment.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

AMENDMENT OFFERED BY MR. SAYLOR

Mr. SAYLOR. Mr. Speaker, I offer another amendment.

The Clerk read as follows:

Amendment offered by Mr. SAYLOR: on page 2 at the end of line 4, "The Minot extension to the Garrison diversion unit shall be operated in such manner that identifiable return flows of water will not cause the Souris River to be in violation of water quality standards promulgated pursuant to the Water Quality Act of 1965 (79 Stat. 903)."

Mr. SAYLOR. Mr. Speaker, this is the amendment which was agreed to when we discussed the amendment we had on the Narrows Unit in conference, and I am using the same language that was adopted there, and adding it to this bill.

Mr. JOHNSON of California. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from California.

Mr. JOHNSON of California. Mr. Speaker, having read the language of the amendment just offered, we have no objection to the amendment on this side.

The SPEAKER pro tempore. The question is on the amendment offered by the gentleman from Pennsylvania (Mr. SAYLOR).

The amendment was agreed to.

COMMITTEE AMENDMENTS

The SPEAKER pro tempore. The Clerk will report the committee amendments.

The Clerk read as follows:

Committee amendments: Page 2, line 17, strike out "precedent to" and insert "executed before".

Page 4, line 6, strike out "$12,150,000" and insert "$12,900,000".

Page 4, line 10, add the following sentence: "There are also authorized to be appropriated such additional sums as may be required for the operation and maintenance of the extension."

The committee amendments were agreed to.

Mr. JOHNSON of California. Mr. Speaker, H.R. 16987 will authorize the Secretary of the Interior to construct the Minot extension to the authorized Garrison diversion unit of the Missouri River Basin project in North Dakota. The works contemplated by this bill are necessary to enable the city of Minot to convey, regulate and utilize water for municipal and industrial purposes.

When the Garrison diversion unit was authorized by the Congress in 1965, the works did not include a means for municipalities to deliver the water from the major canals of the unit to the city systems. It was then recognized that supplementary construction would be required at a later date, even though the city of Minot has always been considered to be one of the major municipal beneficiaries of the Garrison development.

Minot is among the most important cities in the State of North Dakota. It is the trade and service center for a large portion of the State and is the site of a major Strategic Air Command base. The base relies on the city water system for all its water supplies. The town is experiencing a steady and constant growth rate and water supplies available locally from the Souris River and its tributary aquifers are no longer adequate for current needs and cannot possibly supply future growth increments. The city has been forced to curtail usage through rationing in which the air base has cooperated, has deepened its wells, and investigated all reasonable alternative means of augmenting its sources of water.

The Velva Canal of the Garrison unit will furnish such a source when it is completed and placed in service. The availability of construction funds for the works of the Garrison diversion unit has been such that a number of years will probably elapse before the Velva Canal is completed. In addition, the city's present indebtedness level and the general state of the bond market suggest serious questions of the municipality's capability to finance the interconnections to the Velva Canal when water is available from that source. All of these circumstances point to the plan of development that will be authorized by H.R. 16987 as the only viable solution to Minot's present and future water supply dilemma.

The plan envisioned by this legislation consists of two stages. The first stage has a Federal cost of only $2,080,000 and would include pumping plants and pipelines to convey water from a newly located aquifer about seven miles to the city's central treatment plant. The city plans to drill and equip the required wells and to install, at its own expense, the facilities to accumulate the water and convey it to the project pumping plant. This development will take care of the city's needs for the next 6 to 10 years, after which the second stage of the Minot extensions will be needed.

This part of the project will have an initial cost of $10,830,000. It will include a pipeline from the Velva Canal to the Livingston Reservoir, Livingston dam and reservoir, and a short spur outfall line from the reservoir to interconnect with the first-stage pipeline. When this stage enters service, the first stage will be placed on standby status for supplemental and emergency use.

Livingston Reservoir will be a multiple purpose facility having a very valuable fish and wildlife and recreation function. It will be within about two miles of the population concentration in Minot.

This fortunate location coupled with the fact that it can be kept filled throughout the summer season implies a heavy use by citizens of the community. Minot, being located in the heart of the North Dakota prairie country is badly in need of the fishing and other recreational opportunities afforded by a sizable body of water.

The Committee on Interior and Insular Affairs, in its hearings on this measure has been assured that water rights are in accordance with the requirements of the State of South Dakota and that there is no opposition to the legislation within the community or on the part of the agencies of State, local, or Federal Government.

The program will have a beneficial effect on environmental factors and will enhance natural values. The water to be imported into the Souris River Basin will be superior in quality to that which exists there naturally, and the increase in usable water will abate conflicts that have long existed between commercial and wildlife interests.

The project has a very fine benefit to cost ratio of 1.93 to 1.0 even at the high discount rates now being used by the executive branch for economic evaluation of water resource projects.

The development will be completely reimbursable with interest except for the write-offs to fish and wildlife and recreation authorized pursuant to the provisions of the Federal Water Projects Recreation Act. Under these authorities, the Garrison Diversion Conservancy District will pay $588,000 plus $19,000 interest during construction, with $2,046,000 being nonreimbursable.

Mr. Speaker, this is critical legislation which, I am sure, all Members can support freely. The project we are considering here meets all of the tests of economic and financial analysis; it will improve and enhance the quality of life of the immediate and nearby communities; it will strengthen the utility of a major defense installation; and it will be returned substantially to the Treasury with interest. Surely, I cannot conceive of an investment in rural America that could be expected to offer more widespread return to the well-being of the general public than will be the case with this legislation. I sincerely hope that every Member will join with me in enacting it into law without delay.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER pro tempore. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

The SPEAKER pro tempore. Pursuant to the provisions of House Resolution 1189, the Committee on Interior and Insular Affairs is discharged from further consideration of the bill S. 2808.

The Clerk read the title of the bill.

MOTION OFFERED BY MR. JOHNSON OF CALIFORNIA

Mr. JOHNSON of California. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. JOHNSON of California moves to strike out all after the enacting clause of S. 2808, and insert the provisions of the bill H.R. 16987, as passed, as follows:

That the Secretary of the Interior is authorized to construct, operate, and maintain the Minot extension of the Garrison diversion unit in North Dakota under the Federal reclamation laws (Act of June 17, 1902; 32 Stat. 388, and Acts amendatory thereof and supplementary thereto) for the principal purposes of conveying, regulating, and furnishing water made available through facilities of the Garrison diversion unit for use by the city of Minot and other communities for municipal and industrial purposes; conserving and developing fish and wildlife resources; and enhancing outdoor recreation opportunities.

SEC. 2. The Secretary is authorized to construct appropriate portions of the Minot extension to assist in the interim delivery of water from ground water sources prior to the availability of water through the facilities of the Garrison diversion unit.

SEC. 3. (a) Costs of the project, or any unit or stage thereof, allocated to municipal water supply, shall be repayable, with interest, by the municipal water users over a period of not more than fifty years from the date that water is first delivered for that purpose, pursuant to contracts with municipal corporations or other organizations, as defined in subsection 2(g) of the Reclamation Project Act of 1939 (53 Stat. 1187). Such contracts shall be executed before the commencement of construction of the project. Contracts may be entered into with water users' organizations pursuant to the provisions of this Act without regard to the last sentence of subsection 9(c) of the Reclamation Project Act of 1939 (53 Stat. 1187).

(b) Expenditures for the Minot extension may be made without regard to the soil survey and land classification requirements of the Interior Department Appropriation Act of 1954 (67 Stat. 266).

(c) The interest rate used for computing interest during construction and interest on the unpaid balance of the reimbursable costs of the Minot extension shall be determined by the Secretary of the Treasury, as of the beginning of the fiscal year in which construction on the extension is commenced, on the basis of the computed average interest rate payable by the Treasury upon its outstanding marketable public obligations which are neither due nor callable for redemption for fifteen years from date of issue.

(d) The Secretary is authorized to transfer to a qualified contracting entity or entities the care, operation, and maintenance of the project works, and, if such transfer is made, to credit annually against the contractor's repayment obligation that portion of the year's joint operation and maintenance costs which, if the United States had continued to operate the project, would have been allocated to fish and wildlife and recreation purposes. Prior to assuming care, operation, and maintenance of the project works the contracting entity or entities shall be obligated to operate them in accordance with criteria established by the Secretary of the Interior with respect to fish and wildlife and recreation.

SEC. 4. The conservation and development of fish and wildlife resources and the enhancement of recreation opportunities in connection with the Minot extension shall be in accordance with the provisions of the Federal Water Projects Recreation Act (79 Stat. 213).

SEC. 5. There is authorized to be appropriated for the construction of the Minot extension the sum of $12,900,000 (January 1969 prices), plus or minus such amounts, if any, as may be justified by reason of ordinary fluctuations in construction costs as indicated by engineering cost indexes applicable to the type of construction involved. There are also authorized to be appropriated such additional sums as may be required for the operation and maintenance of the extension.

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 16987) was laid on the table.

REAUTHORIZING THE RIVERTON EXTENSION UNIT, MISSOURI RIVER BASIN PROJECT

Mr. JOHNSON of California. Mr. Speaker, I call up the bill (H.R. 7521) to reauthorize the Riverton extension unit, Missouri River Basin project, to include therein the entire Riverton Federal reclamation project, and for other purposes and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read the bill as follows:

H.R. 7521

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the general plan for the Riverton extension unit, Missouri River Basin project, heretofore authorized under section 9 of the Flood Control Act of 1944 (58 Stat. 887), is modified to include relief to water users, construction, betterment of works, land rehabilitation, water conservation, flood control, and silt control on the entire Riverton Federal reclamation project. As so modified the general plan is reauthorized under the designation "Riverton unit of the Missouri River Basin project".

SEC. 2. (a) The Secretary of the Interior is authorized to negotiate and execute an amendatory repayment contract with the Midvale Irrigation District covering all lands of the Riverton unit. This contract shall replace all existing repayment contracts between the Midvale Irrigation District and the United States.

(b) The period for repayment of the construction and rehabilitation and betterment costs allocated to irrigation and assigned to be repaid by the irrigation water users shall be fifty years from and including the year in which such amendatory repayment contract is confirmed.

(c) During the period required to construct and test the adequacy of drains and other water conservation works, the rates of charge to land classes and the acreage assessable in each land class in the unit shall continue to be as established in the amendatory repayment contract with the district dated June 26, 1952; thereafter such rates of charge and assessable acreage shall be in accordance with the amortization capacity and classification of unit lands as determined by the Secretary.

(d) The district's repayment obligation under the amendatory contract shall reflect a credit for any amounts paid by the district in reduction of its repayment obligation under previous contracts, and the repayment period of individual tracts within the district shall be reduced to reflect a credit for any amounts paid by the district in reduction of its repayment obligation under previous contracts which are attributable to such tracts.

(e) During the first ten years of the repayment period under the amendatory contract, the annual payment obligation of the district shall be reduced by the amounts which the district has credited in the previous year to water users who have provided title for the project drainage program: *Provided,* That the total of such reductions shall not exceed $50,000.

SEC. 3. (a) Construction and rehabilitation and betterment costs of the Riverton unit which the Secretary determines to be assignable to land classified now or hereafter as permanently unproductive shall be nonreturnable and nonreimbursable: *Provided,* That whenever new lands or lands now or hereafter classified as nonproductive, are classified or reclassified as productive, the repayment obligation of the district shall be increased appropriately.

(b) All miscellaneous net revenues of the Riverton unit shall accrue to the United States and shall be applied against irrigation costs not assigned to be repaid by irrigation water users.

(c) Construction and rehabilitation and betterment costs of the Riverton unit allocated to irrigation and not assigned to be repaid by irrigation water users nor returned from miscellaneous net revenues of the unit shall be returnable from net revenues of the Missouri River Basin project.

SEC. 4. The limitation of lands held in beneficial ownership within the unit by any one owner, which are eligible to receive project water from, through, or by means of project works, shall be one hundred and sixty acres of class 1 land or the equivalent thereof in other classes, as determined by the Secretary.

SEC. 5. (a) Lands available for disposition on the Riverton unit, including property acquired pursuant to the Act of March 10, 1964, shall be sold at public or private sale at not less than appraised fair market value at the time of sale. The Secretary may dispose of such lands in tracts of any size, so long as no such disposition will result in a total ownership within the unit by any one owner in excess of the limitation prescribed in section 4 above.

(b) In the disposition of lands on the Riverton unit, resident landowners on the unit who have not obtained relief under the Act of March 10, 1964, as amended, shall have a prior right to purchase tracts in order to supplement their existing farms.

SEC. 6. Appropriations heretofore or hereafter made for carrying on the functions of the Bureau of Reclamation shall be available for credits, expenses, charges, and cost provided by or incurred under this Act. The Secretary is authorized to make such rules and regulations as are necessary to carry out the provisions of this Act.

Mr. ASPINALL. Mr. Speaker, I move to strike out the last word.

(By unanimous consent, Mr. ASPINALL was allowed to proceed for an additional 4 minutes.)

Mr. ASPINALL. Mr. Speaker, I take this time to speak on behalf of H.R. 7521, to explain its relationship to current water resources policy and to aid Members in understanding its importance and its merits. H.R. 7521 is a many-faceted measure. It is a fairly minor bill in terms of the new work authorized to be undertaken, yet it is far reaching in terms of

its potential impact on the future of the community and region which the Riverton reclamation development seeks to serve.

The purpose of this legislation, broadly speaking, is to put the various components of the Riverton project and the Riverton extension unit on a sound operating and fiscal basis. This is accomplished by authorizing the application of many present-day provisions of water resource law to a program where they have not heretofore been available. The bill which we bring to the floor today has been studiously considered in committee, and the Members will note later a number of very significant amendments that are believed vital to the attainment of the basic objectives of the bill.

In presenting this measure to the House, we do not represent it as a typical reclamation authorization, although when the bill passes, the program will be indistinguishable from the typical project. The departures from the typical in this bill are brought about by the necessity to face up to errors in judgment made at least 25 years ago by the Department and by the Congress and which have been left too long unattended. I will now explain to the House what we seek to accomplish in H.R. 7521.

NEW WORK AUTHORIZED

The bill authorizes new Federal expenditures in the amount of $12,116,000. This authority will enable appropriations for rehabilitation of the canals and laterals of the first and second divisions, and the installation of drainage works that were never completed in the initial construction phases. About $1 million will be authorized for fish and wildlife habitat development in the project lands and in connection with the water bodies on the project. Everyone should take particular note that we are not authorizing service to any lands to be newly irrigated and we are not sanctioning the expenditure of any funds whatsoever in behalf of third division lands. The work covered by this provision of the bill is typical of that frequently required on projects after they have been in service for 40 or 50 years, and some of the older structures begin to require more maintenance expense than can prudently be made.

AMENDATORY REPAYMENT CONTRACT AUTHORIZED

Under the terms of H.R. 7521, the Secretary of the Interior will be authorized to enter into an amendatory repayment contract with the Midvale Irrigation District. This contract will extend for a term of 50 years, consistently with the present policies of the Congress in such matters. The district will be obliged to pay in accordance with an up-to-date determination of its payment capacity for all of the lands including any lands of the third division which are still arable and which are acquired by Midvale operators and admitted to the district.

This contract will supersede the existing contract under which the Midvale district is obliged to continue payments for more than 100 years. The obligations currently in force under the existing contract will be assumed in part by the new contract and in part by revenues from the net proceeds of the Missouri River Basin power system. Financial assistance in the amount of some $19,000,000 is needed and is available for this purpose according to studies and testimony presented to the Committee on Interior and Insular Affairs.

Mr. Speaker, this aspect of H.R. 7521 can be likened to the refinancing of a loan not greatly dissimilar from the practices found in private business. Here, we are giving the Riverton people a new contract under the same terms and conditions that we would give a new project. In so doing, we are also asking these borrowers to assume the same obligations that a new borrower would assume. We want them to pay what they are able to pay, and to take care of operation and maintenance. We do not expect them to get any credit for what they paid under their old notes to the Government and have proposed amendments to delete certain proposed credits that would be granted as a consequence of such earlier payments and expenditures. The author of the bill and its primary supporter, the gentleman from Wyoming, our colleague, Mr. WOLD), understand and accept the logic and commonsense of this proposal as do the water users of Midvale.

ACREAGE LIMITATION ADJUSTMENTS

H.R. 7521 will allow the acreage limitation provisions of reclamation law to be administered on the class 1 equivalency concept. What this means is that a landowner may receive water for 160 acres of class 1 irrigable land or its income-producing equivalent in lands of lesser classes. The Congress has long recognized this as an equitable modification of the 160-acre law for projects where limitations of soils, climate, or crop adaptability make it impossible to operate successfully under the strict provisions of the original acreage limitation statute.

FISH AND WILDLIFE PROGRAMS

The bill provides that justifiable fish and wildlife enhancement works may be undertaken subject to the standard requirement of cost sharing by a non-Federal public body. The State of Wyoming through its duly authorized officials has agreed to operate and maintain the facilities, and to repay with interest one-half the separable costs in accordance with the standard formula set up by Congress in the Federal Water Project Recreation Act, Public Law 89–72.

THIRD DIVISION LANDS

In earlier legislation, the Congress authorized the Secretary of the Interior to acquire the holdings of the unsuccessful settlers on the third division and to make appropriate disposition of these lands. About $3 million was expended in extinguishing the rights of the settlers. Title to the lands of the third division is now in Federal hands and those lands which are arable are being operated under 1-year lease arrangements by the farmers of the Midvale district. H.R. 7521 would give these farmers a priority to acquire the arable lands of third division and thus restore them to productivity and local tax rolls. The bill also authorizes the Secretary to declare nonreimbursable costs of development associated with third division land found to be permanently nonproductive or nonirrigable.

Mr. Speaker, these are the major features of H.R. 7521. They have the combined effect of restoring the Riverton development to a position of being a credit to the community, the State, and the Nation. We should pass this bill and get the project back on track and forever erase it from our agenda of problems. I urge all Members to assist in passing this measure today.

Mr. SAYLOR. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, the Riverton project and in particular, the third division of the Riverton project, has been the subject of consideration by the Committee on Interior and Insular Affairs. Previous attempts to resolve the problesm in the third division of this Riverton project serve as an example of bureaucratic ineptitude and lack of innovation.

The Riverton project was originally placed under the jurisdiction of the Bureau of Reclamation in 1920. The Midvale Irrigation District, the operating entity of the original project, has been successful in operating the first and second divisions, but not without serious hardship and difficulty. In 1944, the third division of the Riverton project was authorized and the project ran into immediate difficulty because of the inability of the lands to accept irrigation water and support crops. In March 1964, the Congress authorized the Secretary of the Interior to repurchase the third division lands and approximately 19,000 acres have been rebought at a price of about $3 million.

H.R. 7521 proposes to consolidate and integrate the entire Riverton Federal reclamation project, the first, second, and third divisions, into a single entity, by reauthorizing it as the Riverton unit of the Missouri River Basin. H.R. 7521 does this by modifying the plan of the now authorized third division to include the entire Riverton project in the Missouri River Basin project. This permits the entire project to be administered as a unit under the Midvale Irrigation District, which will assume operation and maintenance responsibility for the project works.

The bill authorizes the Secretary to replace all existing repayment contracts with a single amendatory 50-year repayment contract with the Midvale Irrigation District. At the same time, the bill authorizes the construction, rehabilitation, and betterment on canal linings, structures, laterals, drains, and other modifications in the first and second divisions of the project at an estimated cost of $11,103,000.

In addition, the bill provides that the project will be financially integrated into the Missouri River Basin project, thus providing financial assistance from the net power revenues of the Missouri Basin. H.R. 7521 authorizes a priority of purchase to the present landowners within the project to purchase lands within the third division as supplemental to their existing farms. The bill also exempts the 160-acre limitation of Federal reclamation law to the whole project

with regard to class one land or their equivalent in other land classes as determined by the Secretary of the Interior.

As a result of this consolidation, the total estimated project cost of the Riverton unit as reauthorized is $43,063,728. Only $12,116,000 of this amount is new development authorized in this bill; $11,103,000 of this amount as previously mentioned is for rehabilitation and betterment works and is allocated to irrigation as a project purpose. The remaining $1,565,900 of the $12,116,000 authorized for new development involves the costs associated with fish and wildlife enhancement. Of this amount, the State of Wyoming has already expended approximately $533,000, leaving a $1,013,000 Federal expenditure and the State will assume the responsibility for operation and maintenance of the fish and wildlife enhancement works.

While I favor the overall approach taken in H.R. 7521, to make the Riverton unit a sound, financially feasible Federal reclamation project, I am dismayed at the committee's inability to permit credits to be given the farmers of the Midvale Irrigation District as was proposed in the legislation when introduced and supported by the Department of the Interior. In essence, the bill as introduced permitted credits in two instances in the sum of $1,419,119.03 and $50,000 for payments already made and betterment works already completed to be reflected in the new repayment obligation under the amendatory contract. I regret the committee did not see fit to go one step further in this respect in making this project more financially feasible.

Mr. Speaker, I urge the passage of this legislation.

The SPEAKER pro tempore. The time of the gentleman from Pennsylvania has expired.

(On request of Mr. GROSS, and by unanimous consent, Mr. SAYLOR was allowed to proceed for 5 additional minutes.)

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I thank the gentleman for yielding.

The chairman of the full committee, the gentleman from Colorado (Mr. ASPINALL), has said this was a project that went sour, or words to that effect, and apparently it went very sour. Now it is proposed to try to salvage something out of it, but is this in the nature of sending good money after bad? Can this project be salvaged?

Mr. SAYLOR. I am happy to tell my colleague, the gentleman from Iowa, that the first two units of the Riverton project, while they had difficulty in operating, were able to make their payments. The third unit of the Riverton project, which was authorized during World War II, was a fiasco from the day it was authorized. There was no proper survey of the land, and many young men returning from the service were led to believe that if they would go out to that area, they would get a 160-acre farm.

It was so bad that after hearings before our committee both in the field and here in Washington, D.C., we authorized the Bureau of Reclamation to go out and buy out all of the farmers who wanted to sell in the third unit of the Riverton project.

What we are doing in this bill by changing the 160-acre limitation law is allowing the farmers who are presently on units one and two the right to buy additional land in what was described as unit number three, and add it to their present farms or ranches, so that they can have a better project.

When the Bureau of Reclamation sent its report in, it asked that the sum of a little more than $1 million which had been paid by the irrigators in the third district be given as a credit against the new contract. The Committee on Interior and Insular Affairs decided that this was not correct, that they should not give the local farmers this benefit.

I understand from the people in the area, even though they would have liked to have credit for that $1 million plus, they are willing to accept this project now.

Mr. GROSS. Then this project does not add new lands for irrigation purposes, but rather is an attempt to rehabilitate, in part at least, that which has failed?

Mr. SAYLOR. That is correct.

Mr. GROSS. There is a figure on page 6 of the bill of $12,116,000, and following that, in parenthesis, it says "based on July 1969 prices."

Are we here today adopting an authorization figure of $12,116,000 knowing that there has been an increase in cost over the past year and that this figure will be increased?

Mr. SAYLOR. I might say to my colleague from Iowa that at the time we held these hearings early this year the latest figures we had available were the July prices. We cannot get a completely up-to-date figure. At the time the hearings were held and the witnesses appeared to testify this was the latest figure available to the committee.

Mr. GROSS. That was July a year ago?

Mr. SAYLOR. That is right.

Mr. GROSS. Not last July, but July a year ago.

I have one further question with respect to the language on page 5, which states in part: "on the basis of the computed average interest rate payable by the Treasury upon its outstanding marketable public obligations, which are neither due nor callable for redemption for 15 years from date of issue."

Is this normal language in a bill of this nature, and if so, is the interest rate on 15-year obligations more favorable to the borrower? What is the story?

Mr. SAYLOR. I might say to my colleague from Iowa, this is the formula which has been updated, to be used now. While it does not reflect the actual cost of present-day borrowing, it is the figure that has been used in all reclamation projects and all Public Works projects to determine the feasibility.

I want to say it is only because the Public Works Committees of the House and Senate have come into agreement that we have this updated and now have this figure. Up until about 18 months ago we had a figure considerably less than that.

Mr. GROSS. Considering the billions upon billions of dollars this Government is in debt, there are few, comparatively speaking, long-term or 15-year obligations. Most of it is very short term—5 years or less.

Mr. SAYLOR. A lot of the money at the present time which the Government is borrowing is on short-term notes. But we still do have outstanding some long-term loans.

Mr. GROSS. I thank the gentleman for his explanation.

AMENDMENT OFFERED BY MR. SAYLOR

Mr. SAYLOR. Mr. Speaker, I offer an amendment.

The Clerk read the amendment as follows:

Amendment offered by Mr. SAYLOR: Page 2, line 2, strike out "project." and insert "project: *Provided*, That all identifiable return flows of water from the general plan as modified and reauthorized shall be treated for the purpose of abating pollution and improving water quality, in such manner as determined by the Secretary of the Interior."

Mr. SAYLOR. Mr. Speaker, as I said before, this is the amendment that I would like to see adopted in this legislation. However, I am a realist and I realize it is impossible to get this amendment adopted at this time.

The purpose of this amendment is to carry out the congressional intent to abate water pollution and improve our environment. This Nation is on the threshold of a major attack on water pollution. The Council on Environmental Quality in its recent report recommended that a strong and consistent Federal policy should be developed to control water pollution and insure effective enforcement of water quality standards.

The place to begin is here in our consideration of legislation authorizing Federal water resource developments—be they large or small. And, the time to begin is now. This is essentially what the amendment I have offered does, by writing into basic law the requirement that all identifiable flows of water from works and facilities authorized in this Federal project shall be inspected and treated for the purpose of abating water pollution and improving water quality.

This is not a complex amendment. The amendment merely requires: First, that the flows of water be identified from the works and facilities authorized in the act, if they cannot be identified then there is nothing to be done; and, second, if the flows of water can be identified, the amendment requires that the water flow be inspected for water pollution. If water pollution is found then the amendment requires that the water flows be treated to abate the pollution and improve the water quality. All this is to be done in such manner as is determined by the Secretary of the Interior. If the Secretary of the Interior does not have the money or manpower within his De-

partment or the Federal Water Pollution Control Administration, then the Secretary, I am certain, will be more than willing to request more money and manpower from the Congress.

I am aware that there are those who will rise in opposition to this amendment and propose arguments against its adoption on the basis that this amendment has no place in this little project. I would point out to my colleagues that this Congress passed Public Law 91–190, commonly known as the National Environmental Policy Act of 1969. The amendment which I have offered is merely a step, a small step, in carrying out the congressional declaration of a national environmental policy. I would also say to my colleagues to beware of those who clamor for the improvement of our environment, so long as it is not required in their own backyard.

Improvement of our environment, abating water pollution, and improving water quality are all part of the same problem. If we in the Congress are to carry out our commitment to improve the environment then we must begin by requiring that Federal water resources developments, of large, small, or medium size, be continually monitored for the purpose of abating water pollution and improving water quality.

If we are to have a national policy on the environment, then the Federal Government should set the example. I urge the adoption of the amendment.

Mr. Speaker, I ask unanimous consent to withdraw the amendment.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

AMENDMENT OFFERED BY MR. SAYLOR

Mr. SAYLOR. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SAYLOR: On page 2 at the end of line 2, "The Riverton extension unit shall be operated in such manner that identifiable return flows of water will not cause the Wind River to be in violation of water quality standards promulgated pursuant to the Water Quality Act of 1965 (79 Stat. 903)."

Mr. SAYLOR. Mr. Speaker, at the time we had the Narrows project in Colorado before the House and went to conference this language was adopted as being a step forward in requiring the Secretary of the Interior to operate the reclamation projects in accordance with water quality standards. Therefore, this is the same amendment that has been agreed to in conference.

Mr. JOHNSON of California. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I am glad to yield to the gentleman.

Mr. JOHNSON of California. Mr. Speaker, the amendment just read by the gentleman from Pennsylvania meets with the approval of the people on this side. We have no objection to it.

The SPEAKER pro tempore. The question is on the amendment offered by the gentleman from Pennsylvania (Mr. SAYLOR).

The amendment was agreed to.

COMMITTEE AMENDMENTS

The SPEAKER pro tempore. The Clerk will report the committee amendments.

The Clerk read as follows:

Committee amendments: Page 1, line 7, after "conservation," insert "fish and wildlife conservation and development,"

Page 2, line 13, strike out "confirmed," and insert "executed."

Page 2, line 23 through page 3, line 12, strike out all of subsections (d) and (e).

Page 3, line 15, strike out "land" and insert "lands".

Page 4, line 4, strike out "project." and insert "project within fifty years from and including the year in which the amendatory contract authorized by this Act is executed."

Page 4, line 9, after "other" insert "land".

Page 4, following line 23, insert a new Section 6 as follows:

"Sec. 6. (a) The provision of lands, facilities, and project modifications which furnish fish and wildlife benefits in connection with the Riverton extension unit shall be in accordance with the Federal Water Project Recreation Act (79 Stat. 213).

"(b) The interest rate used for purposes of computing interest during construction and interest on the unpaid balance of the capital cost allocated to interest-bearing features of the project shall be determined by the Secretary of the Treasury as of the beginning of the fiscal year in which construction of said interest-bearing features is initiated, on the basis of the computed average interest rate payable by the Treasury upon its outstanding marketable public obligations, which are neither due nor callable for redemption for fifteen years from date of issue."

Page 4, line 24, renumber "Sec. 6." to read "Sec. 7."

Page 5, following line 4, insert a new Section 8 reading as follows:

"SEC. 8. There is hereby authorized to be appropriated for rehabilitation and betterment of the facilities of the first and second divisions of the Riverton unit, for completion of drainage works for said first and second divisions, and for fish and wildlife measures as authorized by this Act, the sum of $12,116,000 (based on July 1969 prices), plus or minus such amounts, if any, as may be justified by reason of ordinary fluctuations in construction cost indexes applicable to the types of construction involved herein. There are also authorized to be appropriated such additional sums as may be required for operation and maintenance of the Riverton unit."

The committee amendments were agreed to.

(Mr. WOLD (at the request of Mr. MCCLURE) was granted permission to extend his remarks at this point in the RECORD.)

Mr. WOLD. Mr. Speaker, I, first of all, would like to express my great appreciation for the outstanding leadership of Chairman ASPINALL and to my colleagues on the Interior and Insular Affairs Committee for reporting out my bill, H.R. 7521, to reauthorize the entire Riverton project as a single unit of the Missouri River Basin project. The Riverton reclamation project is located in central Wyoming in Fremont County.

The legislation before us today is in essence a reauthorization for the future of agriculture in much of central Wyoming. We hear a lot these days about urban decay and urban renewal. The urban problems are real and few would argue that the billions of dollars being spent to remedy these problems are unjustified. But we must not allow all this attention on urban problems to blind us to the fact that we also have rural renewal needs. Many of these symptoms are present in the situation which my legislation remedies.

Favorable consideration of H.R. 7521 is a matter of vital importance to the economic welfare of Wyoming. It has been the subject of exhaustive congressional study and deliberation for the past several years.

The bill under consideration would authorize the consolidation of 45,000 acres of the first and second divisions, designated the Midvale Irrigation District, and the 25,000 acre third division, designated the Riverton Extension Unit Missouri River Basin. By consolidating these projects into a single organization, the existing Midvale Irrigation District would assume responsibility for planning, operation, contracting, and maintaining the combined units.

The bill further provides that the combined units would be financially integrated into the overall Missouri River Basin project, with a 50-year repayment contract. The bill provides for the resale of Government-owned, arable third division lands to Midvale farmers. Authorization is also included for necessary drainage construction, needed rehabilitation of distribution systems and equipment, and financial assistance from the net power revenues of the Missouri River Basin project. The bill also authorizes a small fish and wildlife enhancement program consisting of lands and habitat improvement for game and migratory waterfowl.

By way of background, money for the original Riverton project was made available from the Indian Appropriations Act of 1918. The Bureau of Reclamation assumed control of the project in 1920 and 5 years later the first water was delivered for irrigation. Construction of the irrigation facilities serving the first two divisions was essentially completed prior to World War II. The third division, designated the Riverton Extension Unit, was authorized in 1944 and construction was initiated on a crash basis in 1946 to provide settlement opportunities for World War II veterans. Settlement commenced in 1949.

The project was plagued with financial difficulties from the outset.

Conditions caused a breakdown in the long-term repayment contract and in 1962 the contract was terminated. In 1964, Congress authorized the Secretary of Interior to purchase third division land. Virtually all of the third division was purchased by the United States.

The farmers of the first and second divisions now lease virtually all irrigable and productive third division land and have shown that in the hands of competent and experienced farmers it is as productive for crops and pasture as their own land in the first and second divisions of the Midvale Irrigation District.

The Midvale Irrigation District is directed by farmers who have shown over many hard and often lean years how to make a living in an environment of complex soil and erratic weather conditions.

The strength of these men is further reflected in their efficient and responsible irrigation organization, which among other things has never missed a repayment to the Government.

The Midvale Irrigation District has already demonstrated the capacity to assume central administration of the three districts. For several years, Midvale has been providing water to third division leaseholders. It is a matter of record that the cost of delivering water to the three divisions can be handled as economically as the unit cost presently in existence.

The legislation before us today is a reauthorization for the future of our rural communities.

Failure to reauthorize the Riverton project as I have proposed would seriously impair the economic and social growth of the region. Without rehabilitation of the first and second divisions, the Bureau of Reclamation estimates that about 24 percent of the land would be lost to cultivation because of continuing seepage, salinity, and structure failures. Loss of that much productive land in an agricultural based economy would be catastrophic.

Failure to act now would mean the continued degradation of third division lands, representing a Federal investment of more than $18 million.

Further delay will only feed the doubts of the enterprising agricultural people and the young farmpeople who want to stay on the farm but are discouraged by the unsettled economic conditions and limited opportunities for growth.

The problems facing Midvale are no less fundamental than the crisis confronting many of our cities. If one accepts this view, then the question is: Do we step up to the rural problems with the same imagination and support now working to iron out the urban problems? I would certainly hope so. Favorable action on my bill will be a step in that direction.

Mr. JOHNSON of California. Mr. Speaker, H.R. 7521, to reauthorize the Riverton extension unit, Missouri River Basin project, to include the entire Riverton Federal reclamation project, and for other purposes, is the result of a decade of cooperative study and consideration by the Department of the Interior and the Committee on Interior and Insular Affairs. As recommended to be amended by the committee, this measure will provide the basis for settlement of the outstanding problems which have confronted the Riverton community since shortly after World War II.

When H.R. 7521 is enacted and implemented, the Riverton extension unit as it will then be constituted will be a soundly based, operating water resource development that is a credit to those who have worked on it through the years.

In order for Members to understand the bill, it is important to review, very briefly, the history of Riverton; the evolution of its difficulties; and the interim steps that have heretofore been taken.

The original Riverton project, sometimes known as the first and second divisions, was started almost 50 years ago as an Indian irrigation project. Almost immediately, jurisdiction was transferred to the Bureau of Reclamation which delivered the first irrigation water in 1925. Construction of the first two divisions was substantially finished by 1940.

The third division was authorized as the Riverton extension unit in the omnibus bill of 1944 and was started under construction as soon as World War II was ended. Settlement of veterans on the farms of the third division was undertaken in 1949.

Difficulties soon arose on the third division. The lands were not well suited to irrigation, and particularly under the quality of management that was received from the inexperienced settlers. As a result, much of the land of the third division was ruined, the settlers were in financial distress, and the whole situation was almost beyond control. In the meantime, the first and second divisions were functioning reasonably well under a repayment contract between the United States and the Midvale Irrigation District.

Things finally got so bad that Congress, in 1964, passed an act under which the Secretary of the Interior was authorized to buy out the third division landowners and to make appropriate disposition of the lands. About $3,200,000 was expended in implementing this legislation. At the time the 1964 measure was under consideration, it was understood that the problems of the Midvale Irrigation District would be the subject of future legislation. H.R. 7521 is responsive to that understanding.

Simply stated, H.R. 7521 will modernize the Riverton project; it will authorize necessary rehabilitation of distribution works and provide drainage facilities long neglected; it will make realistic adjustments in reimbursable costs by writing off costs associated with permanently nonproductive lands and providing financial assistance for those costs which are beyond the water users' payment ability; it will adopt modern concepts of cost sharing for fish and wildlife; and it will adjust acreage limitations to a realistic basis. All of these provisions are consistent and compatible with current principles of reclamation financing. They are nothing more nor less than would be afforded to new projects now being considered for authorization and development.

As I pointed out earlier, our committee has looked at the Riverton from every standpoint. We have no record of anything but the most limited opposition. The Wind River Indians who have signed away their rights to the lands of the division have registered a mild protest, not with the bill but with certain land management and leasing practices, and one private citizen who desires to continue interim use of some public lands constitute the only opposition to this measure in the community, the State, or the Congress. The Interior Department also endorses the bill and the Bureau of the Budget endorses it in part.

Now, let us look and see what kind of project we will have when this bill becomes law.

Economic justification of the Riverton extension unit is demonstrated by a benefit-cost ratio of 1.78 to 1—total benefits—and a ratio of 1.26 to 1—direct benefits only. These computations take into acount all costs of the program whensoever incurred and the benefits that will occur with the development proposed by H.R. 7521. The incremental benefit-cost ratios associated with the developmental work and rehabilitation specifically authorized by H.R. 7521 are 2.07 to 1 and 1.41 to 1 for total and direct benefits, respectively.

The total estimated project cost of the Riverton extension unit, as reauthorized by H.R. 7521, including previous expenses and future development, is $43,063,728. This amount is tentatively allocable to water resource development purposes as follows:

Irrigation	$40,984,659
Power	513,169
Fish and wildlife	1,565,900
Total	43,063,728

The costs allocated to power are repayable with interest from revenues creditable to the power produced at the existing Pilot Butte powerplant. Surplus revenues from the sale of project power in the amount of $453,169 will be available to assist in the repayment of irrigation costs beyond the ability of the water users to repay.

Fish and wildlife costs will be returned in accordance with the policy requirements of the Federal Water Project Recreation Act, under which the State of Wyoming will assume total responsibility for operation, maintenance, and replacement of fish and wildlife enhancement works, and repay within a term of 50 years, with interest, one-half the project cost allocated to fish and wildlife purpose—$783,000. The costs allocated to fish and wildlife over and above those borne by the State of Wyoming will be nonreimbursable.

Costs allocated to irrigation will be repaid by water user revenues, by financial assistance from net power revenues of the Riverton extension unit and the Missouri River Basin project, by minor miscellaneous receipts, or will be nonreimbursable in accordance with previous legislation and the terms of H.R. 7521.

The studies available to our committee establish the availability of the required power revenues. On this basis, we have brought out this bill and believe that it merits approval by the House.

The SPEAKER. The question is on engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

The SPEAKER pro tempore. Pursuant to the provisions of House Resolution 1185 the Committee on Interior and Insular Affairs is discharged from further consideration of the bill (S. 434) to reauthorize the Riverton extension unit, Missouri River Basin project, to include therein the entire Riverton Federal reclamation project, and for other purposes.

The Clerk read the title of the Senate bill.

MOTION OFFERED BY MR. JOHNSON OF CALIFORNIA

Mr. JOHNSON of California. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. JOHNSON of California moves to strike out all after the enacting clause of S. 434 and insert in lieu thereof the provisions of H.R. 7521 as passed, as follows:

That the general plan for the Riverton extension unit, Missouri River Basin project heretofore authorized under section 9 of the Flood Control Act of 1944 (58 Stat. 887), is modified to include relief to water users, construction, betterment of works, land rehabilitation, water conservation, fish and wildlife conservation and development, flood control, and silt control on the entire Riverton Federal reclamation project. As so modified the general plan is reauthorized under the designation "Riverton unit of the Missouri River Basin project". The Riverton extension unit shall be operated in such manner that identifiable return flows of water will not cause the Wind River to be in violation of water quality standards promulgated pursuant to the Water Quality Act of 1965 (79 Stat. 903).

SEC. 2. (a) The Secretary of the Interior is authorized to negotiate and execute an amendatory repayment contract with the Midvale Irrigation District covering all lands of the Riverton unit. This contract shall replace all existing repayment contracts between the Midvale Irrigation District and the United States.

(b) The period for repayment of the construction and rehabilitation and betterment costs allocated to irrigation and assigned to be repaid by the irrigation water users shall be fifty years from and including the year in which such amendatory repayment contract is executed.

(c) During the period required to construct and test the adequacy of drains and other water conservation works, the rates of charge to land classes and the acreage assessable in each land class in the unit shall continue to be as established in the amendatory repayment contract with the district dated June 26, 1952; thereafter such rates of charge and assessable acreage shall be in accordance with the amortization capacity and classification of unit lands as determined by the Secretary.

SEC. 3. (a) Construction and rehabilitation and betterment costs of the Riverton unit which the Secretary determines to be assignable to lands classified now or hereafter as permanently unproductive shall be nonreturnable and nonreimbursable: *Provided*, That whenever new lands or lands now or hereafter classified as nonproductive, are reclassified as productive, the repayment obligation of the district shall be increased appropriately.

(b) All miscellaneous net revenues of the Riverton unit shall accrue to the United States and shall be applied against irrigation costs not assigned to be repaid by irrigation water users.

(c) Construction and rehabilitation and betterment costs of the Riverton unit allocated to irrigation and not assigned to be repaid by irrigation water users nor returned from miscellaneous net revenues of the unit shall be returnable from net revenues of the Missouri River Basin project within fifty years from and including the year in which the amendatory contract authorized by this Act is executed.

SEC. 4. The limitation of lands held in beneficial ownership within the unit by any one owner, which are eligible to receive project water from, through, or by means of project works, shall be one hundred and sixty acres of class 1 land or the equivalent thereof in other land classes, as determined by the Secretary.

SEC. 5. (a) Lands available for disposition on the Riverton unit, including property acquired pursuant to the Act of March 10, 1964, shall be sold at public or private sale at not less than appraised fair market value at the time of sale. The Secretary may dispose of such lands in tracts of any size, so long as no such disposition will result in a total ownership within the unit by any one owner in excess of the limitation prescribed in section 4 above.

(b) In the disposition of lands on the Riverton unit, resident landowners on the unit who have not obtained relief under the Act of March 10, 1964, as amended, shall have a prior right to purchase tracts in order to supplement their existing farms.

SEC. 6. (a) The provision of lands, facilities, and project modifications which furnish fish and wildlife benefits in connection with the Riverton extension unit shall be in accordance with the Federal Water Project Recreation Act (79 Stat. 213).

(b) The interest rate used for purposes of computing interest during construction and interest on the unpaid balance of the capital cost allocated to interest-bearing features of the project shall be determined by the Secretary of the Treasury as of the beginning of the fiscal year in which construction of said interest-bearing features is initiated, on the basis of the computed average interest rate payable by the Treasury upon its outstanding marketable public obligations, which are neither due nor callable for redemption for fifteen years from date of issue.

SEC. 7. Appropriations heretofore or hereafter made for carrying on the functions of the Bureau of Reclamation shall be available for credits, expenses, charges, and cost provided by or incurred under this Act. The Secretary is authorized to make such rules and regulations as are necessary to carry out the provisions of this Act.

SEC. 8. There is hereby authorized to be appropriated for rehabilitation and betterment of the facilities of the first and second divisions of the Riverton unit, for completion of drainage works for said first and second divisions, and for fish and wildlife measures as authorized by this Act, the sum of $12,116,000 (based on July 1969 prices), plus or minus such amounts, if any, as may be justified by reason of ordinary fluctuations in construction cost indexes applicable to the types of construction involved herein. There are also authorized to be appropriated such additional sums as may be required for operation and maintenance of the Riverton unit.

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 7521) was laid on the table.

PROVIDING FOR THE ESTABLISHMENT OF THE GULF ISLANDS NATIONAL SEASHORE

Mr. TAYLOR. Mr. Speaker, I call up the bill (H.R. 10874) to provide for the establishment of the Gulf Islands National Seashore, in the States of Alabama, Florida, Louisiana, and Mississippi, for the recognition of certain historic values at Fort San Carlos, Fort Redoubt, Fort Barrancas, and Fort Pickens in Florida and Fort Massachusetts in Mississippi, and for other purposes, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The Clerk read the bill as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in order to preserve for public use and enjoyment certain areas possessing outstanding natural, historic, and recreational values, the Secretary of the Interior (hereinafter referred to as the "Secretary") may establish and administer the Gulf Islands National Seashore (hereinafter referred to as the "seashore"). The seashore shall comprise the following gulf coast islands and mainland areas, together with adjacent water areas as generally depicted on the drawing entitled "Proposed Boundary Plan, Proposed Gulf Islands National Seashore," numbered NS GI 7100F, and dated May 1969:

(1) the Chandeleur Islands in Louisiana;

(2) Cat, Ship, Petit Bois, and Horn Islands in Mississippi;

(3) One Island in Alabama;

(4) Perdido Key in Alabama and Florida;

(5) Santa Rosa Island in Florida, exclusive of the Fort Walton, Navarre, and Pensacola beaches;

(6) the Naval Live Oaks Reservation in Florida;

(7) Fort Pickens and the Fort Pickens State Park in Florida; and

(8) a tract of land in the Pensacola Naval Air Station in Florida that includes the Coast Guard Station and Lighthouse, Fort San Carlos, Fort Barrancas, and Fort Redoubt, and Fort McRee on Perdido Key, and sufficient surrounding land for proper administration and protection of the historic resources.

SEC. 2. (a) Within the boundaries of the seashore, the Secretary may acquire lands, waters, and interests therein by donation, purchase with donated or appropriated funds, or exchange, except that property owned by a State or any political subdivision thereof may be acquired only with the consent of the owner. The Secretary may acquire by any of the above methods not more than one hundred acres of land or interests therein outside of the seashore boundaries on the mainland in the vicinity of Biloxi-Gulfport, Mississippi, for an administrative site and related facilites for access to the seashore; and not more than ten acres of land on or near Seville Square in Pensacola, for administrative or historical purposes. With the concurrence of the agency having custody thereof, any Federal property within the seashore and mainland site may be transferred without consideration to the administrative jurisdiction of the Secretary for the purposes of the seashore.

(b) When acquiring lands, waters, and interests therein within the boundaries of the seashore, the Secretary shall permit a reservation by the grantor of all or any part of the oil, gas, and other minerals in such lands or waters and of other minerals therein which can be removed without undue interference with the administration, development, or public use of the seashore, with the right of occupation and use of so much of the surface of the lands or waters as may be required for all purposes reasonably incident to the mining or removal of oil, gas, and other minerals which can be removed by similar means from beneath the surface of such lands and waters and the lands and waters adjacent thereto, under such regulations as the Secretary deems appropriate.

(c) With respect to improved residential property acquired for the purposes of this Act which is beneficially owned by a natural person and which the Secretary of the Interior determines can be continued in that use for a limited period of time without undue interference with the administration,

development, or public use of the seashore, the owner thereof may on the date of its acquisition by the Secretary retain a right of use and occupancy of the property for noncommercial residential purposes for a term, as the owner may elect, ending either (1) at the death of the owner or his spouse, whichever occurs later, or (2) not more than twenty-five years from the date of acquisition. Any right so retained may during its existence be transferred or assigned. The Secretary shall pay to the owner the fair market value of the property on the date of such acquisition, less their fair market value on such date of the right retained by the owner.

(d) As used in this Act, "improved residential property" means a single-family year-round dwelling, the construction of which began before January 1, 1967, and which serves as the owner's permanent place of abode at the time of its acquisition by the United States, together with not more than three acres of land on which the dwelling and appurtenant buildings are located that the Secretary finds is reasonably necessary for the owner's continued use and occupancy of the dwelling: *Provided*, That the Secretary may exclude from improved residential property any marsh, beach, or waters and adjoining land that the Secretary deems is necessary for public access to such marsh, beach, or waters.

(e) The Secretary may terminate a right of use and occupancy retained pursuant to this section upon his determination that such use and occupancy is being exercised in a manner not consistent with the purposes of this Act, and upon tender to the holder of the right an amount equal to the fair market value of that portion of the right which remains unexpired on the date of termination.

SEC. 3. The Secretary shall permit hunting and fishing on lands and waters within the seashore in accordance with applicable Federal and State laws: *Provided*, That he may designate zones where, and establish periods when, no hunting or fishing will be permitted for reasons of public safety, administration, fish or wildlife management, or public use and enjoyment. Except in emergencies, any regulations issued by the Secretary pursuant to this section shall be put into effect only after consultation with the appropriate State agencies responsible for hunting and fishing activities.

SEC. 4. With the exception of areas within Horn and Petit Bois Islands, the Secretary may, in accordance with such regulations as he deems appropriate, permit the removal of leaseable minerals from lands or interests in lands under his jurisdiction within the seashore in accordance with the Mineral Leasing Act of February 25, 1920 (41 Stat. 437), as amended (30 U.S.C. 181 et seq.), or the Acquired Lands Mineral Leasing Act of August 7, 1947 (30 U.S.C. 351 et seq.), if he finds that such removal would not have significant adverse effects on the administration, development, or public use of the seashore.

SEC. 5. Except as otherwise provided in this Act, the Secretary shall administer the seashore in accordance with the Act of August 25, 1916 (30 Stat. 535), as amended and supplemented (16 U.S.C. 1 et seq.). In the administration of the seashore the Secretary may utilize such statutory authorities available to him for the conservation and management of wildlife and natural resources as he deems appropriate to carry out the purposes of this Act. With respect to Fort Redoubt, Fort San Carlos, Fort Barrancas at Pensacola Naval Air Station, Fort Pickens on Santa Rosa Island, and Fort McRee on Perdido Key, Florida, and Fort Massachusetts on Ship Island, Mississippi, together with such adjacent lands as the Secretary may designate, the Secretary shall administer such lands so as to recognize, preserve, and interpret their national historical significance in accordance with the Act of August 21, 1935 (49 Stat. 666; 16 U.S.C. 461–467), and he may designate them as national historic sites. The Act of July 2, 1948 (62 Stat. 1220), which provided for the establishment of the Pensacola National Monument, is hereby repealed.

SEC. 6. The Secretary of the Interior and the Secretary of the Army may cooperate in the study and formulation of plans for beach erosion control and hurricane protection of the seashore. Any such protective works or spoil deposit activities undertaken by the Chief of Engineers, Department of the Army, shall be carried out within the seashore in accordance with a plan that is acceptable to the Secretary of the Interior and that is consistent with the purposes of this Act.

SEC. 7. There are hereby transferred from the National Wildlife Refuge System to the seashore the Horn Island and Petit Bois National Wildlife Refuges to be administered in accordance with the provisions of this Act.

SEC. 8. No provision of this Act, or of any other Act made applicable thereby, shall be construed to affect, supersede, or modify any authority of the Department of the Army or the Chief of Engineers, with respect to navigation or related matters except as specifically provided in section 6 of this Act.

SEC. 9. There is hereby established a Gulf Islands National Seashore Advisory Commission. The Commission shall terminate ten years after the date the lakeshore is established pursuant to this Act. The Commission shall be composed of three members from each county in which the seashore is located, each appointed for a term of two years by the Secretary as follows:

(1) one member to be appointed from recommendations made by the county commissioners in the respective counties;

(2) one member to be appointed from recommendations made by the Governor of the State from each county; and

(3) one member to be designated by the Secretary from each county.

Provided, That two members shall be appointed to the Advisory Commission in each instance in counties whose population exceeds one hundred thousand.

The Secretary shall designate one member to be Chairman. Any vacancy in the Commission shall be filled in the same manner in which the original appointment was made.

Members of the Commission shall serve without compensation as such. The Secretary is authorized to pay the expenses reasonably incurred by the Commission in carrying out its responsibilities under this Act on vouchers signed by the Chairman.

The Secretary or his designee shall, from time to time, consult with the Commission with respect to the matters relating to the development of the Gulf Islands National Seashore.

SEC. 10. There are authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

Mr. ASPINALL. Mr. Speaker, I move to strike the last word.

(By unanimous consent, Mr. ASPINALL was allowed to proceed for 3 additional minutes.)

Mr. ASPINALL. Mr. Speaker, H.R. 10874, as recommended by the Committee on Interior and Insular Affairs, carries out the basic thrust of the bill as it was originally introduced by our friends from the gulf coast States—Messrs. COLMER, SIKES, HÉBERT, and DICKINSON. If enacted, it will authorize the establishment of the Gulf Islands National Seashore.

FACTS ABOUT THE SEASHORE PROPOSAL

After considering the legislation in considerable detail, the committee concluded that most of the revisions recommended by the Department of the Interior should be approved. Consequently, the bill provides for a national seashore comprised of lands located only in the States of Mississippi and Florida. The Chandeleur Islands of Louisiana were removed from the seashore boundaries because they are already protected as a part of the national wildlife refuge system and because they are relatively isolated and unsuitable for mass recreation use. Ono Island and part of Perdido Key in Alabama were also removed from the seashore because they are already intensively developed and would require an undesirable increased outlay.

If approved, House Resolution 10874 will add to the Nation's inventory of outdoor areas a valuable recreation asset. Like Cape Cod, Assateague Island, and Point Reyes, the proposed Gulf Island National Seashore is located within easy driving distance of millions of Americans. It is anticipated that it will serve the recreation needs of people living within a seven-State region and that it will draw vacationers from the other parts of the country. Of the 23 million residents located in the vicinity, 10 million live within 250 miles of the proposed seashore and will be able to enjoy it relatively frequently. Because of the population concentration in the area, annual visitations are expected to reach 3.5 million within 5 years and may total 10 million within the foreseeable future.

Persons familiar with the areas involved in the Gulf Islands National Seashore might reasonably ask: Why do we expect such a heavy influx of visitors at this seashore? The answer to this question involves more than a simple reflection of the large populous residing nearby, it involves the nature of the area. The Gulf Islands Seashore proposal offers an outstanding combination of features to the visiting public—a combination that would be difficult to match in any other part of the country.

For the sportsmen, there are numerous opportunities. The beautiful sandy beaches of the area and the gulf waters offer a variety of water-oriented activities. Swimming, water skiing, fishing, boating, and beachcombing will all be popular activities. In addition, the location of the seashore at the bottom of the Mississippi flyway makes it an excellent area for migratory waterfowl hunters.

Recreation at the seashore, however, will not be limited to the usual outdoor pursuits, because the seashore has other significant values that will appeal to many visitors. People interested in the history and culture of our country will find the old forts located within the seashore interesting places to visit. Others interested in nature study, photography, and primitive camping will find other parts of the seashore a nice place for their retreat.

NEED

About a decade ago, the Outdoor Recreation Resources Review Commission reported that the Nation's principal out-

door resources were remotely located and relatively inaccessible to the Nation's major population centers and it recommended that all levels of government—Federal, State, and local—make a concentrated effort to expand the opportunities for outdoor recreation near them.

During the 1960's, the Congress moved to meet that need. Long before "environment" and "ecology" were common terms in our vocabulary, efforts were underway to provide a better place for people to live. Cape Cod National Seashore, Point Reyes, and Padre Island were the start of something new—they were the beginning of the national effort to provide large natural areas for the outdoor recreation needs of the people living in the densely populated regions of the east coast, gulf coast, and west coast. They were followed by many other areas like Assateague Island National Seashore, Indiana Dunes National Lakeshore, and the Whiskeytown-Shasta-Trinity Recreation area complex. Like all of those areas, Gulf Islands National Seashore aims at helping to meet a part of the national need for more readily accessible outdoor recreation areas.

Altogether, the seashore will comprise 18,100 acres of land—about 7,750 acres in Mississippi and approximately 10,350 acres in Florida. If approved as recommended by the committee, it will include three islands in Mississippi and a significant portion of Santa Rosa Island and Perdido Key in Florida as well as some very interesting old forts, an old lighthouse, and the old Naval Live Oaks Reserve on the mainland.

Much of this land is already in Federal or State ownership so that land acquisition costs should be relatively nominal. It is estimated that the privately owned lands or interests in lands needed for the seashore can be acquired for $3,120,000. State-owned lands and other publicly owned lands would be acquired by donation or transfer without cost. All land acquisition moneys, of course, would be appropriated from funds available in the Land and Water Conservation Fund for this purpose.

Mr. Speaker, H.R. 10874, as amended by the committee, is a sound bill. It will authorize an outstanding new addition to the National Park System and it will help to serve a national goal. I am pleased to recommend it to my colleagues and I urge its approval.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. ASPINALL. I am very glad to yield to my friend, the gentleman from Iowa.

Mr. GROSS. I notice in the report that there has apparently been some difficulty over Federal lands known as the Naval Live Oaks Reservation. This land was turned over to the State of Florida and has not been used properly, according to the terms of the Government stipulation as to use. What about this? Can someone explain it, at least briefly?

Mr. ASPINALL. I gladly yield to my friend, the gentleman from Florida (Mr. SIKES) in whose district this area is situated.

Mr. SIKES. This land was made available to the State of Florida years ago at low cost for public park purposes. A suit was brought within the State by private claimants who insisted that they held title to the property by having acquired tax deeds many years before, although the Federal Government had not at that time relinquished its ownership. The State supreme court ruled that the property should, in fact, belong to the private claimants, since it had been acquired by the State. However, the restriction on the use of the property continued. It could only be used for public park purposes. The Federal Government says it has not been used for those purposes.

Simply stated the Federal Government retained a reverter clause under which the land could be reclaimed if it was not used for public park purposes. The Federal Government is now in the process of recapturing the property by the exercise of its reverter clause.

Mr. GROSS. So the land will be recovered by the Federal Government and made a part of this seashore project?

Mr. SIKES. Yes, and it will be made a part of the seashore project.

Mr. Speaker, this is a very interesting area consisting of some 1,300 plus acres. It was one of the original sites established shortly after 1800 by the Federal Government as a source of live oak timber for naval vessels. As a matter of historical interest, some of the old trees are there now and the area has archeological values that are quite important.

It also borders on the Santa Rosa Sound and it is a very attractive area.

Mr. GROSS. I thank the gentleman.

The SPEAKER pro tempore. The time of the gentleman from Colorado (Mr. ASPINALL) has expired.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that the gentleman from Colorado may have 1 additional minute.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

Mr. GROSS. I would like to ask a question concerning what happens in this hurricane prone area in which the seashore project is being established. What happens in the case of a hurricane where there may be serious destruction of property? Does the Government rebuild it?

Mr. ASPINALL. If my colleague will permit me, let me say this: In the area on the continent itself we do not have any difficulty there, but these islands are constantly moving, as my colleague very well knows. They move to a limited extent, more than likely, toward the west. On the other hand, there will not be any development work in this particular area of any consequence, of any value, and any hurricane that would come in would simply move the sand area without disturbance to any valuable improvements.

Mr. GROSS. The gentleman speaks of boat dockings, marinas.

Mr. ASPINALL. Yes, there will be some boat dockings, some trails, and some camp ground development.

Mr. GROSS. It is not planned to put up any structures of any size?

Mr. ASPINALL. Important structures will not be based there, and the administration headquarters will be on the mainland.

Mr. GROSS. I thank the gentleman.

Mr. SAYLOR. Mr. Speaker, I move to strike the requisite number of words.

The SPEAKER pro tempore (Mr. MILLS). The gentleman from Pennsylvania is recognized.

Mr. SAYLOR. Mr. Speaker, I rise in support of this bill, H.R. 10874, to provide for the establishment of the Gulf Islands National Seashore in the States of Florida and Mississippi.

Establishment of the Gulf Islands National Seashore will represent a significant addition to our growing national seashore system. The Gulf Islands National Seashore will comprise approximately 18,080 acres of land, exclusive of submerged lands in the States of Florida and Mississippi. More than half of this total acreage is presently in public ownership.

The physical resources and wildlife of these gulf barrier islands provide an excellent variety of outdoor recreation. Perhaps the most outstanding resource of these islands are the wide, gently sloping white sandy beaches matched against the clear blue waters of the Gulf of Mexico. The land and waters of these islands will provide unlimited opportunities for camping, picnicking, fishing, swimming, skindiving, water skiing, boating, and hiking.

The seashore will present a prime recreational opportunity to some 23 million people in the seven State region of Florida, Louisiana, Arkansas, Tennessee, Mississippi, Alabama, and Georgia. Approximately 10 million people live within 250 miles or a reasonable driving distance of the proposed seashore. It is estimated that visitation to the seashore is expected to exceed 3½ million within 5 years after establishment of the seashore, and increasing to 10 million annual visits.

This bill also provides for the recognition of certain military fortifications and other values which are part of the historical panorama of this great Nation. The seashore then will not only provide much needed public recreational opportunities, but also, preserve certain of the historical values of importance in the early development of this Nation.

Establishment of the Gulf Islands National Seashore is estimated to cost $3,120,000 for the acquisition of lands and interests in lands. The costs for development of the seashore are estimated to be $14,799,000.

The passage and enactment of this legislation will be an important step in preserving for the benefit and enjoyment of future generations the recreational, natural, scenic, and historical values in this area. At the same time, the bill provides for the review of the unique flora and fauna in the proposed seashore for inclusion as wilderness under the Wilderness Act. The seashore will be a significant contribution in our effort to preserve for public use and enjoyment the diminishing seashore and adjacent islands of our Nation which are increasingly subject to private development.

Mr. Speaker, I support the passage of this legislation establishing the Gulf Islands National Seashore.

Mr. SIKES. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I am most appreciative to the distinguished chairman and the members of this outstanding committee for bringing this bill to the floor.

H.R. 10874, of which I am privileged to be a cosponsor, is a bill which I endorse wholeheartedly. My district, and in fact the entire gulf coast, is significantly affected by the bill and I consider it one of the most important measures that I have introduced in all of my time in Congress. I want to speak primarily to the Florida portion of the bill. My distinguished colleague, Mr. COLMER will discuss the Mississippi portion. In my opinion, the passage of this bill is essential for the preservation of historic sites of great national interest, essential for the protection of wooded and beach areas in their natural state, and essential for the the development of recreational sites of a type not available anywhere else in the Nation. Each of these values combine to provide an unusually attractive area and each will have constantly increasing value to posterity. Without this bill, we stand to lose magnificent beach and woodland areas to commercial development, and to lose important historic forts through decay and neglect. It is important to consider that neither the State nor the Federal Government over the years has provided the funds to keep the historic forts in a satisfactory state of preservation. They simply are not in the old fort business. As a consequence, these forts are deteriorating year by year and substantial parts of them now are closed to the public. This is a very sad commentary on what is happening to important historic sites.

Let me also call attention to the fact that nearly all of the land to be made available in the Florida portion of the seashore, although very valuable, is through donation. The historic forts, some of which date back to Spanish colonial days, and the old lighthouse, which has been in service more than 100 years, are now a part of the Pensacola Naval Air Station. The Fort Pickens State Park, which comprises Fort Pickens plus 7½ miles of island, fronted on the one side by the gulf and on the other by Santa Rosa Sound, is State property and it is to be transferred without cost to the Department of the Interior for inclusion in the seashore. An additional 7½ miles of Santa Rosa Island, also fronted on one side by the gulf and the other by the sound, will be made available by donation from Escambia County, Fla., which is the present owner of the property. The value of this property is hard to estimate, but it will run into many millions of dollars—$25 million would be a reasonable estimate—and it comes to the U.S. Government free of charge.

There are other areas which also are to be included in the Florida portion of the project. One is the Naval Live Oaks Reservation, more than 1,300 acres of land which borders on Santa Rosa Sound and on Pensacola Bay. This property is one of the first areas set aside by the Federal Government as a natural preserve. This was done in the early 1800's in order to have a source of strong timbers for naval vessels. The property still has many exciting old live oak trees, and in addition it has important archeological assets. The remaining portion which is to be made immediately available to the project is the eastern half of Perdido Key. Most of this property already belongs to the Federal Government, but some is privately owned and must be acquired by purchase.

It is of more than casual interest that this national historic and recreation area which will have great value to the people and great importance to the Nation can be established immediately with no cost for acquisition of most of the Florida land, which is to be included, and only minimal costs for initiating the program. The public can begin to reap the benefits from this exciting area without the time-consuming delays ordinarily accompanying the establishment of such public parks. The property is readily accessible by highways and bridges and usable on a year-round basis, not just in summer. The seashore will be interesting to all segments of the public—historians, swimmers, boaters, fishermen, hikers, tourists, and just plain beachgoers. It is strongly supported by local residents and by the State government and the county governments which are affected.

The committee well knows the tremendous demands which are now being made by a travel-conscious and recreation-minded public for facilities of this nature. There are no similar facilities operated by the Federal Government anywhere within hundreds of miles and none to my knowledge with such a wide range of interest to so many people. Here is an area in which 20 million people live within a day's drive. Many already are seeking out the pleasures of Florida's gulf coast. People come here from throughout the Nation, and more will come as word of the year-round desirability of this beautiful countryside becomes known.

I believe this will be an excellent development for the American taxpayer and one which will increase significantly in value to all of the people with each passing year. Fortunately it comes at bargain prices and this also will be of significance to the taxpayer.

Mr. GROSS. Mr. Speaker, if the gentleman will yield, is the Federal Government going to be called upon to liquidate the long-term leases on the land?

Mr. SIKES. Oh, no. The property that is under lease is not being acquired as part of the seashore. Leased and developed property are entirely separate and will continue under present jurisdiction. The Federal Government is not planning to acquire the leases. That would run into much more money than we are discussing now.

Mr. TAYLOR. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, H.R. 10874 is the culmination of the efforts of many individuals who spent many hours working out its details. During the 90th Congress, several members of the Subcommittee on National Parks and Recreation visited the area involved and conducted field hearings in both Mississippi and Florida. During the course of that trip, we became acquainted with the potential of the seashore which the chairman of the full committee has outlined and we had an opportunity to learn the desires and aspirations of local citizens.

With this basic background, together with a preliminary Washington hearing, several members of the subcommittee were quite familiar with this proposal when we began to consider it in this Congress. Hearings were held on H.R. 10874 this year and most of the testimony was favorable to its enactment; however, some amendments were suggested.

LEGISLATIVE PROVISIONS

As a result of this combined experience, the members of the committee were able to agree on the basic terms of the bill without difficulty. The bill contains many of the usual provisions customarily included in national seashore authorizations. It establishes the boundaries for the seashore and extends to owners of residential properties located within the boundaries the usual right to retain a limited estate in their property if it is not needed for public use, development or administrative purposes. The bill also contains the normal provision for the regulation of fishing and hunting within the seashore to assure compliance with Federal and State laws and it provides for the administration of the area in accordance with general authority granted to the Secretary of the Interior to administer such areas.

As has been the case in comparable areas in other parts of the country, the bill provides for the appointment of an Advisory Commission for the seashore. Members of this Commission will serve without compensation—except for expenses—and will help to provide a liaison between the park service and the local communities involved.

COMMITTEE AMENDMENTS

It should be noted that the committee adopted several amendments to perfect the bill. I would like to briefly enumerate them. First, with respect to the area included, the committee removed from the boundaries the areas which the Department indicated would not be needed to accomplish the objective of the seashore. In addition, the most controversial area within the original boundaries was a privately-owned island in Mississippi known as Cat Island. Because the committee concluded that its acquisition would be too costly and its contributions to the seashore too few, it was removed, also. This, of course, will result in a substantial reduction in the cost of the seashore.

Second, the provisions in the bill which provided for the possible future removal of minerals from the seashore were deleted from the bill because they were deemed incompatible with the purposes for which the seashore was to be established, but the committee recognized the importance of existing submerged pipelines which transport oil and gas resources from the Gulf of Mexico to refineries on the coast and it added a provision to assure the continued utilization of such pipelines subject to reasonable regulations established by the Secretary of the Interior.

Third, the committee approved a new

section 8 which provides that the appropriate portions of the seashore shall be reviewed for possible future designation as wilderness.

Finally, the committee adopted the usual provision limiting the amount authorized to be appropriated for land acquisition and development.

Mr. Speaker, as the chairman of the full committee indicated, authorization of this area will help meet a national need. It contains many natural, historic, and recreational values of national significance and is worthy of national recognition. Here, we have an opportunity to add a meaningful unit to our national heritage at a relatively low cost. Land acquisition should not exceed $3,120,000 and the development program, which will be spread over the next 5 years, should not exceed $14.8 million.

In conclusion, Mr. Speaker, I want to say that H.R. 10874 is the product of the work of many individuals, but the two principal sponsors of the bill deserve a great deal of the credit for their constructive contributions. Without the patience and helpful guidance of the gentleman from Mississippi (Mr. COLMER), it would have been very difficult to work out some of the problems which have now been resolved. Likewise, our friend from Florida (Mr. SIKES) was instrumental in helping to resolve one of the most controversial issues involving the cooperation of the State of Florida and its local governmental instrumentalities.

It is a special pleasure to join with these gentlemen in support of the enactment of H.R. 10874, as amended. I am sure the Members of the House will recognize the merits of this legislation and I recommend its approval.

Mr. KYL. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I assure my colleagues of the extreme value of this particular piece of legislation. These islands actually form white sand ribbons between the green gulf waters and the blue bay waters. There is, as has been suggested, a tremendous part of American history in this area, because the military establishments go through the Spanish and French and British and American occupation of the area.

There is also an extremely interesting ecology which is present on all the islands, but especially on a couple of them. Through some freak of nature, although these bodies are located in salt water, artesian water flows under the bay and through the center of these islands, and therefore we have the interesting aspect in which we have a dune wall area, with the interior having a fresh water ecology, and from the top of the dunes outward to the bay and to the gulf, we have a saltwater ecology.

This bill does authorize a project which is of value to all Americans and I think it should be adopted overwhelmingly.

Mr. SAYLOR. Mr. Speaker, will the gentleman yield?

Mr. KYL. I yield to the gentleman from Pennsylvania (Mr. SAYLOR).

Mr. SAYLOR. Mr. Speaker, it has come to my attention that an organization has been circulating a rumor in his district that the gentleman from Iowa has never taken any interest in matters of our national parks or recreation areas or matters of conservation. I, for one, would like at this time to pay tribute to the gentleman from Iowa (Mr. KYL), as a member of the House Interior and Insular Affairs Committee as being one of the most dedicated persons we have serving on that committee. The gentleman contributes tremendously to the discussion on all the bills and, in my opinion, he is an outstanding expert in the field of conservation.

Mr. KYL. Mr. Speaker, I thank the gentleman from Pennsylvania.

Mr. DON H. CLAUSEN. Mr. Speaker, will the gentleman yield?

Mr. KYL. I yield to the gentleman from California.

Mr. DON H. CLAUSEN. Mr. Speaker, I concur with the gentleman from Pennsylvania in his remarks about the gentleman from Iowa.

Mr. Speaker, I am pleased that the gentleman from Pennsylvania (Mr. SAYLOR) has taken the time to give recognition to the dedication and ability of our colleague, Mr. KYL of Iowa.

I want to compliment him and associate myself with these remarks and also to commend Mr. KYL for the contribution he just rendered in support of the Gulf Island National Seashore project.

This rendering is a typical example of the indepth explanations we have come to appreciate from Mr. KYL. In my judgment, he is the most articulate Member we have in the Congress on ecological matters.

Mr. Speaker, I would further like to record a few remarks regarding the performance in our committee and on the floor of the House of our very able and distinguished colleague.

It appears, as we enter the political season, that certain individuals and/or organizations have taken it upon themselves to attack Members of Congress for purely political reasons and without regard for truth or fact.

One of those Members selected as a "target" in this campaign year is JOHN KYL from the Fourth District of the great State of Iowa. It has been my privilege to serve with Congressman KYL for 6 of the 8 years I have been in the House of Representatives. During this 91st Congress, I have sat on the Parks and Recreation, and Public Lands Subcommittee, and the full Committee on Interior and Insular Affairs with JOHN KYL.

I have observed his day-to-day performance and I believe that if an impartial appraisal or description of his work on the committee could be obtained from other members of these committees, Democrats and Republicans alike, would agree that JOHN KYL is one of the most knowledgeable members of our committee. His exceptional intellectual capacity coupled with an objective, creative and constructive approach to all legislative proposals has contributed tremendously to improving the many park, recreation and conservation proposals that our committee considers on behalf of people, Congressman and conservation organizations throughout the country.

On many occasions, I have consulted JOHN KYL—seeking his advice as we deliberate and evaluate legislation during hearings and markup sessions of our committee. Mr. KYL can always be counted on to give you a positive, forthright and honest pro and con response because he is known for his brilliance and more importantly, as a man who "does his homework" on every bill pending before the committee.

The respect and appreciation we have for JOHN KYL can not be adequately described or expressed in words. His depth of knowledge and broad perspective has served the cause of conservation in every section of this Nation.

In my congressional district in northern California, the Redwood National Park and Point Reyes National Seashore have been established. They were among the most unique, costly and controversial conservation proposals ever to be enacted by the Congress. His assistance, constructive criticisms and alternative suggestions proved invaluable as we advanced these bills to successful completion.

Our State of California and the Nation are deep in their debt to Congressman JOHN KYL, and the people of Iowa who send him to Congress for his extraordinary efforts in all conservation matters. I stand ready to reciprocate in matters affecting the people of the Fourth Congressional District.

It is this type of cooperation that prompts all of us in the Congress to want to help him advance his district's interests and projects.

Respect from and cooperation with our congressional colleagues is an absolute essential to effective service in the Congress. His people are being served very well.

Mr. COLMER. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I take this time merely to express my deep appreciation for the dedicated work that the Committee on Interior and Insular Affairs has done, and particularly, of course, the able and distinguished chairman of that committee, the Honorable WAYNE ASPINALL, whom I am very happy always to commend publicly for his dedicated work and his statesmanship and his patriotism.

I should like to congratulate the gentleman at this time for just having been renominated for reelection. Regardless of the aisle which divides us here, I believe that Members from both sides of the aisle join me in that expression. We should like to have the gentleman here for many years to come.

I should also like to pay my respects to my colleague from Florida (Mr. SIKES) who has worked diligently on this matter, and to the chairman of the subcommittee, the very able and dedicated gentleman from North Carolina, the Honorable ROY TAYLOR, who likewise has been very active, as well as to the gentleman from Iowa (Mr. KYL). The gentleman from Iowa, along with other members of the subcommittee, visited and inspected these islands. He was very much impressed and has been a strong advocate of the project.

Mr. Speaker, I should certainly be amiss if I did not also express my personal appreciation to the gentleman from

Pennsylvania, the ranking Republican on the committee, Mr. SAYLOR, for his valiant efforts and cooperation. Although Mr. SAYLOR was unable to make the inspection trip with Chairman ASPINALL and the chairman of the subcommittee, Mr. TAYLOR, he has used his valuable influence to bring this bill to the floor.

Mr. Speaker, if time permitted I should like to talk a little bit about this project, but I practiced law long enough to know that when one has the jury with him it is a good time to quit.

I want to express my appreciation again to all the members of that committee for their work in preserving this great natural asset for all of the people rather than for a privileged few.

Mr. Speaker, I believe that the membership of this House is conscious of the fact that I am rather conservative when it comes to authorizing the expenditure of public funds. But, I hope that the membership likewise is conscious of my interest in the conservation of our natural resources. As one who has spent practically his whole life on the beautiful gulf coast of Mississippi, I have long been interested in preserving for the use of the general public in this ever-increasing population of this country these barrier islands. Therefore, I take some satisfaction in the fact that I may have contributed, as the cosponsor of this legislation, to this objective.

Again, I should like to pay my respects to the Director of our national parks, the Honorable George Hartzog, whom I succeeded in getting to visit these islands more than 2 years ago and who more than anybody else is responsible for this legislation. Mr. Hartzog came to the coast and envisioned the possibilities of the Gulf Islands National Seashore. If it had not been for his foresight and his cooperation, this bill would not have been here today.

Mr. TAYLOR. Mr. Speaker, I, too, commend the gentleman from Iowa on his statements. He is one of the most faithful and diligent members of the Subcommittee on National Parks and Recreation. He visited the Gulf Islands area and participated in the field hearings there. He was present when hearings were held in Washington and the bill was considered and marked up by the subcommittee.

On all legislation dealing with national parks, national seashore areas, and similar areas, the gentleman from Iowa thinks for himself and has been one of the best informed, most constructive, and valuable members of the subcommittee.

COMMITTEE AMENDMENTS

The SPEAKER pro tempore (Mr. MILLS). The Clerk will report the first committee amendment.

The Clerk read as follows:

Committee amendments: Page 2, lines 5 and 6, strike out "NS–GI–7100F, and dated May 1969:" and insert "NS–GI–7100H, and dated July 1970:".

Page 2, strike out all of line 7.

Page 2, line 8, strike out "(2) Cat," and insert "(1)".

Page 2, strike out all of lines 10 and 11 and insert "(2) the eastern portion of Perdido Key in Florida;"

Page 2, strike out all of lines 12 and 13 and insert "(3) Santa Rosa Island in Florida;" and renumber the remaining subsections accordingly.

Page 2, line 20, strike out "Redoubt, and Fort McRee on Perdido Key," and insert "Redoubt".

Page 3, line 4, strike out "one hundred" and insert "one hundred and thirty-five".

Page 3, lines 8, 9 and 10, strike out "seashore; and not more than ten acres of land on or near Seville Square in Pensacola, for administrative or historical purposes." and insert "seashore.".

Page 3, line 15 through page 5, line 2, strike out all of subsection (b) and reletter the following subsections accordingly.

Page 5, line 23 through page 6, line 9, strike out all of section 4 and insert a new Section 4 as follows:

"SEC. 4. Any acquisition of lands, waters, or interests therein shall not diminish any existing rights-of-way or easements which are necessary for the transportation of oil and gas minerals through the seashore which oil and gas minerals are removed from outside the boundaries thereof; and, the Secretary, subject to appropriate regulations for the protection of the natural and recreational values for which the seashore is established, shall permit such additional rights-of-way or easements as he deems necessary and proper."

Page 7, following line 17, insert a new section 8 reading as follows and renumber the following sections accordingly:

"SEC. B. Within four years from the date of the enactment of this Act, the Secretary of the Interior shall review the area within the Gulf Island National Seashore and shall report to the President, in accordance with subsection 3(c) and 3(d) of the Wilderness Act (78 Stat. 890; 16 U.S.C. 1132 (c) and (d)), and recommend as to the suitability or non-suitability of any area within the seashore for preservation as wilderness, and any designation of any such area as a wilderness shall be accomplished in accordance with said subsections of the Wilderness Act."

Page 8, line 1, strike out "lakeshore" and insert in lieu thereof "seashore".

Page 9, strike out all of lines 4 through 6 and insert a new section 11 as follows:

"SEC. 11. There are authorized to be appropriated not more than $3,120,000 for the acquisition of lands and interests in lands and not more than $14,779,000 (1970 prices) for development, plus or minus such amounts, if any, as may be justified by reason of ordinary fluctuations in construction costs as indicated by engineering cost indices applicable to the types of construction involved herein."

Mr. ASPINALL (during the reading). Mr. Speaker, I ask unanimous consent that the committee amendments be considered en bloc, that they be considered as having been read in full, and that they be printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The SPEAKER pro tempore. The question is on the committee amendments.

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "To provide for the establishment of the Gulf Islands National Seashore, in the States of Florida and Mississippi, for the recognition of certain historic values at Fort San Carlos, Fort Redoubt, Fort Barrancas, and Fort Pickins in Florida and Fort Massachusetts in Mississippi, and for other purposes."

A motion to reconsider was laid on the table.

NAVAJO INDIAN IRRIGATION PROJECT

Mr. JOHNSON of California. Mr. Speaker, I call up the bill (H.R. 13001) to amend the act of June 13, 1962 (76 Stat. 96), with respect to the Navajo Indian irrigation project, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read the bill as follows:

H.R. 13001

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act of June 13, 1962 (76 Stat. 96), is amended as follows:

(a) By deleting "and" in the first sentence of section 3(a) immediately preceding "townships 27" and by inserting immediately preceding "New Mexico principal meridian", the following: "townships 26 and 27 north, range 11 west, and townships 24, 25, and 26 north, ranges 12 and 13 west,";

(b) By deleting "$135,000,000 (June 1961 prices)" in the first sentence of section 7 and substituting in lieu therefor "$175,000,000 (January 1966 prices)"; and

(c) By adding the following subsection to section 3:

"(d) The Secretary of the Interior shall compensate the persons whose grazing permits, licenses, or leases covering lands declared to be held in trust for the Navajo Tribe pursuant to section 3(a) of this Act are canceled after the date this subsection becomes effective. Such compensation shall be determined in accordance with the standards prescribed in the Act of July 9, 1942, as amended (43 U.S.C. 315q), and shall be paid from the moneys received by the United States from the Navajo Tribe for the full appraised value of such lands under the provisions of section 3(a)."

Mr. ASPINALL. Mr. Speaker, I move to strike the last word.

Mr. Speaker ,the purpose of H.R. 13001 is to permit certain changes in the plan of development, increase the appropriations authority, and otherwise modify the act authorizing the Navajo Indian irrigation project. To put this bill in proper perspective, it should be kept in mind that is not a Federal reclamation project; it is an Indian project even though actual design and construction work is being performed by the Bureau of Reclamation.

When the Navajo Indian irrigation project was authorized, it was included in the same bill with the San Juan-Chama project, a reclamation undertaking as a participating project of the Colorado River storage project. These programs were considered simultaneously because they both make use of the limited water supplies of the San Juan River system.

The plan, at that time, was to irri-

gate 110,680 acres of land with a gross water diversion of 508,000 acre-feet from the existing Navajo Reservoir, at an estimated cost of $135,000,000 at 1961 price levels. Since that time, a number of things have happened, as follows:

First. Appropriations for the Indian project have lagged relative to those for the San Juan-Chama project. While this can be placed at the door of the Bureau of the Budget and not the Congress, it has raised suspicions on the part of the Navajos that the Government is not keeping faith with its agreements.

Second. There has been the same degree of inflation on cost estimated that we have experienced on other construction programs.

Third. Post authorization studies showed that much of the land intended to be irrigated was not suitable for irrigation and has had to be replaced with lands in other areas. This has involved designating for development additional lands which are not now within the reservation. The original plan contemplated service to some lands outside the reservation and established procedures for adding them to the reservation. The change in physical plan requires the addition of considerably more land to the reservation than was originally contemplated.

Against this background, H.R. 13001 will increase the appropriations authorization to $206,000,000 at April 1970 price levels. This is an increase of $71,000,000. About $43,000,000 of this can be attributed to inflation or increases in price levels. The remainder can be attributed to plan changes brought about by the need to replace unsuitable lands to keep the scope of the project to agreed upon levels.

The bill will also authorize the Secretary to declare parts of eight additional townships now in the public domain to be transferred to the status of being held in trust for the Navaho Tribe. This increases to 16 the number of townships eligible for such treatment, there having been eight included in the original authorizing act.

The bill will also authorize certain payments to grazing permittees on the lands designated for transfer to trust status. These payments will not be for the value of the permit as such but merely for the reasonable value of permanent improvements placed on the lands by the permittee. It will be the obligation of the Navahos to reimburse the permittees for such values, but the amounts paid to the permittees will be deducted from the amounts the Tribe is obliged to pay the United States for the appraised value of the transferred lands.

The revisions of the plan of development that will be sanctioned by the passage of H.R. 13001 will not upset the pattern of water allocations that have been worked out in the various compacts and statutes governing water use in the Colorado River Basin. In fact, the consolidation of the arable lands of the Navajo Indian irrigation project into a more compact configuration suggests the possibility of the use of enclosed conduits which would result in less loss and operational waste. This would be a water savings as compared to the requirements for the originally authorized plan of development.

By the same token, the revised plan will have a beneficial effect on the quality of return flows from the project. The lands that will now be irrigated, if H.R. 13001 is enacted, are relatively less saline than the shale-based soils west of Rio Chaco and would thus be less inclined to contribute mineralization to the San Juan system.

Mr. Speaker, I would like to emphasize to the Members that this is an authorized project that could proceed to some level of completion whether this act is passed or not. What I am saying is that the money could be spent, and the water diverted by the Navajos, for implementing a relatively inferior plan. The Congress must not allow this to happen. Passage of this bill will make a good project for the benefit of the Indians and to the credit of the United States.

The bill has no opposition in the State or local area. The project still has a favorable benefit-cost ratio and is badly needed. In addition, the passage of the bill will represent tangible evidence of good faith on the part of the U.S. Government to proceed to completion with an irrigation project of the same scope as was envisioned by the previous authorization.

The SPEAKER pro tempore (Mr. MILLS). The time of the gentleman has expired.

(On request of Mr. GROSS, and by unanimous consent, Mr. ASPINALL was allowed to proceed for 2 additional minutes).

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. ASPINALL. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I thank the gentleman for yielding.

Do I understand or am I correct in assuming that this brings more land into production through irrigation?

Mr. ASPINALL. This will bring more land into production and cultivation for the Indian Navaho Tribe; the gentleman is correct.

Mr. GROSS. Would it be safe to assume that this land will produce crops which will be consumed there, or will they come into competition with surplus farm products elsewhere?

Mr. ASPINALL. Knowing the land, and knowing the eight additional townships that are authorized by this legislation, the other eight having already been authorized, and knowing also the land that is withdrawn from the original legislation, west of the Chaco River, I am of the opinion that these lands will not come into competition as far as their products are concerned with other than the present agricultural development of that area.

These lands will be used primarily for Indian resource operations.

Mr. KYL. Mr. Speaker, will the gentleman yield?

Mr. ASPINALL. I yield to the gentleman from Iowa.

Mr. KYL. Mr. Speaker, I would say to the gentleman from Iowa that when this project first came to the floor for original authorization I opposed the bill because at that time I felt, and said, that this was a project to bring water to a city, and it came to the floor under a Navajo blanket, and I think that my prognostication was true.

But at this point everyone has benefited except the Navajos and, therefore, I must support this bill to bring full benefit to the people who were promised assistance in the first place.

Mr. GROSS. Mr. Speaker, will the gentleman yield for a further question?

Mr. ASPINALL. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I would say to the gentleman from Colorado that page 3 of the report refers to—and the gentleman mentioned it in his remarks—the authorization of payments to the holders of grazing permits on federally owned lands.

How are those permits handled? Do the permit holders have some sort of a vested interest? What will the Government be paying for?

Mr. ASPINALL. These are permits issued by the Bureau of Land Management at the present time, which lands will be transferred to the Indians upon certain payments.

Now, what we are asking for here, if I remember correctly, is that the people who are on these permit lands at present have some value for permit land improvements. These permittees will be reimbursed for such improvements. As far as the improvements are concerned the Indians themselves will pay for the improvements. I believe my statement is correct.

Mr. JOHNSON of California. If the gentleman will yield, the answer is yes to his unasked question; the fair market value of the improvements are all that would be considered.

Mr. GROSS. But are we paying for something which the Government could and should recover without payment?

Mr. JOHNSON of California. The Indian tribe will pay all of the improvement costs.

Mr. GROSS. I am talking about the payment——

Mr. ASPINALL. If the gentleman will permit me, the gentleman wants to know if we are placing any value on the permit itself by this legislation. It is my understanding that we are not.

The SPEAKER pro tempore. The time of the gentleman from Colorado has again expired.

Mr. SAYLOR. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I rise in general support of this legislation.

The Navajo Indian irrigation project was originally authorized by the act of June 13, 1962. The project was authorized at that time as a participating project of the Colorado River storage project, for the purpose of furnishing irrigation water to approximately 110,630 acres of land in the State of New Mexico. A portion of these lands are federally owned and located outside the Indian

reservation. The act authorizing the project authorized acquisition of these Federal lands for inclusion in the Navajo Indian irrigation project.

Subsequently, a restudy of the Navajo Indian irrigation project indicated that the federally owned lands in the western end of the project were not suitable for sustained irrigation and that the total estimated costs of the project are no longer sufficient to complete the project.

As a result of this restudy of the project, the nonirrigable lands to the west of the project were excluded from the original project area and an equivalent alternate area capable of sustained irrigation was located to the east of the project. Consolidation of the project area by the inclusion of this alternate land required corresponding changes in the project development plan and the need for this amendatory legislation.

H.R. 13001, as amended, provides for the acquisition of certain additional federally owned lands to be included in the Navajo Indian irrigation project in lieu of the lands excluded from the project. The bill increases the appropriation authorization from $135 million to $206 million on the basis of current price levels, and authorizes the payment of compensation to grazing permittees for the reasonable value of range improvements of a permanent nature.

It is this last provision of H.R. 13001, as amended, relating to the compensation of grazing permittees which causes me some concern and reservation. H.R. 13001 authorizes the payment of compensation by the Navajo Tribe to grazing permittees for the reasonable value of permanent range improvements when the grazing lands are needed for irrigation purposes, and permits the Navajo Tribe to deduct the amount so paid when paying the United States for the appraised value of the land. The Taylor Grazing Act specifically provides that issuance of a grazing permit shall not create any right, title, interest, or estate in or to the lands. On the other hand, there is an established practice recognized by Federal regulations, I am told, which does recognize payment for improvements when lands are disposed of by the United States. I am not informed if this practice is followed with regard to grazing permits. The question is, how far can we go in compromising the legal principle established by the Taylor Grazing Act?

If a grazing permit is only a privilege that can be withdrawn or terminated at any time for any use by the sovereign without the payment of compensation, it follows as night follows day, that any range improvements, permanent or otherwise, by the permittees, are placed thereon at his own peril and risk of loss. I see no reason why the United States should indirectly compensate the grazing permittee in this instance.

With this reservation, Mr. Speaker, I support the passage of this legislation.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to my colleague, the gentleman from Iowa.

Mr. GROSS. I appreciate the gentleman's very clear explanation. I thoroughly agree with the gentleman. I know of no reason why anyone should pay these grazing permit holders for improvements or anything else that are put on the land.

If the Government wants that land, it ought to recover it promptly for whatever purposes it needs it.

Mr. SAYLOR. I agree thoroughly with my colleague from Iowa. The Government should not have to pay. The Indians should not be entitled to charge the United States for whatever they have to pay for any permittee because indirectly, therefore, we are paying for this project.

Mr. GROSS. That is exactly right.

AMENDMENT OFFERED BY MR. SAYLOR

Mr. SAYLOR. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SAYLOR: Page 2, line 14, following line 14, add a new Section 2 to read as follows:

"SEC. 2. All identifiable return flows of irrigation water furnished to the lands authorized for acquisition and inclusion in the Navajo Indian Irrigation Project pursuant to Section 1 of this Act and in accordance with the Act of April 11, 1965 (70 Stat. 105), as amended by the Act of June 13, 1962 (76 Stat. 96; 43 U.S.C. 620-620o), shall be treated for the purpose of abating pollution and improving water quality in such manner as determined by the Secretary of the Interior."

Mr. SAYLOR. Mr. Speaker, the purpose of this amendment is to carry out the congressional intent to abate water pollution and improve our environment. This Nation is on the threshold of a major attack on water pollution. The Council on Environmental Quality in its recent report recommended that a strong and consistent Federal policy should be developed to control water pollution and insure effective enforcement of water quality standards.

The place to begin is here in our consideration of legislation authorizing Federal water resource developments—be they large or small. And, the time to begin is now. This is essentially what the amendment I have offered does, by writing into basic law the requirement that all identifiable flows of water from works and facilities authorized in this Federal project shall be inspected and treated for the purpose of abating water pollution and improving water quality.

This is not a complex amendment. The amendment merely requires: First, that the flows of water be identified from the works and facilities authorized in the act, if they cannot be identified then there is nothing to be done; and, second, if the flows of water can be identified, the amendment requires that the water flow be inspected for water pollution. If water pollution is found then the amendment requires that the water flows be treated to abate the pollution and improve the water quality. All this is to be done in such a manner as is determined by the Secretary of the Interior. If the Secretary of the Interior does not have the money or manpower within his Department or the Federal Water Pollution Control Administration, then the Secretary, I am certain, will be more than willing to request more money and manpower from the Congress.

I am aware that there are those who will rise in opposition to this amendment and propose arguments against its adoption on the basis that this amendment has no place in this little project. I would point out to my colleagues that this Congress passed Public Law 91-190, commonly known as the National Environmental Policy Act of 1969. The amendment which I have offered is merely a step, a small step, in carrying out the congressional declaration of a national environmental policy. I would also say to my colleagues to beware of those who clamor for the improvement of our environment, so long as it is not required in their own backyard.

Improvement of our environment, abating water pollution, and improving water quality are all part of the same problem. If we in the Congress are to carry out our commitment to improve the environment then we must begin by requiring that Federal water resource developments, of large, small, or medium size, be continually monitored for the purpose of abating water pollution and improving water quality.

If we are to have a national policy on the environment, then the Federal Government should set the example.

Mr. Speaker, as explained before, this is the amendment that I would like to see in all of these bills. However, as developed in the conference on the Narrows project, I was not able to convince the Members of the House and Senate conferees that that amendment should be included, and we have changed and adopted some other language. I therefore ask unanimous consent to withdraw my amendment.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

AMENDMENT OFFERED BY MR. SAYLOR

Mr. SAYLOR. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SAYLOR: On page 3, after line 13, insert a section 2 to read as follows:

"SEC. 2. The Navajo Indian irrigation project shall be operated in such manner that identifiable flows of water will not cause the project to be in violation of water quality standards promulgated pursuant to the Water Quality Act of 1965 (79 Stat. 903)."

The SPEAKER pro tempore. The gentleman from Pennsylvania is recognized in support of his amendment.

Mr. SAYLOR. Mr. Speaker and members of the committee, this amendment is probably surplusage, because the language of the amendment does not require anything more legally than is already required in the Water Quality Act of 1965. What this amendment does do, is that it imposes a positive Federal requirement on the operation of this project to carry out the national policy to abate water pollution. As a matter of principle I offer the amendment, which is the same amendment that I offered to the other three projects.

Mr. JOHNSON of California. Mr. Speaker, the amendment offered by the gentleman from Pennsylvania meets with the approval of the Members on this side of the aisle. We have no objection to it.

The SPEAKER pro tempore. The question is on the amendment offered by the gentleman from Pennsylvania (Mr. SAYLOR).

The amendment was agreed to.

Mr. FOREMAN. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, as the sponsor of this legislation, I am pleased to speak in support of H.R. 13001, to amend the act of June 13, 1962, with respect to the Navajo Indian irrigation project.

Enactment of this legislation will be another important and vital step in progressing toward the completion of the Navajo Indian irrigation project which was begun in 1962, with a target date for completion of 1979. The project has suffered setbacks because of lack of proper funding in the past, however, this year, $7.5 million has been approved for the project and we are optimistic that funding will be even greater next year.

As a result of the delays in adequate funding to maintain construction at the level anticipated when the project was initiated, there is the resultant increase in construction costs which is the reason for this request for an increase in authorization for continued funding of this project—one of the most necessary, if not the most vital project to bring self-supporting economy to the Navajo Indians residing on the vast Navajo Reservation—and to alleviate the present conditions of unbelievable poverty.

The Navajo Indians are not looking for a welfare handout. They are expecting from the Government of the United States fulfillment of the promises made by this Government which date from the 1868 treaty. The Navajo Indian irrigation project is also an obligation of this Government to the Navajo people.

The bill now before the committee will do three things. Under the first provision, it will authorize the incorporation of lands from eight townships not included in the original authorization for the Navajo Indian irrigation project by the act of June 13, 1962, as a participating part of the project of the Colorado River storage project. Restudy of the 110,630-acre project indicated that certain reservation lands west of the Chaco Wash, and included in the original feasibility study were not suitable for sustained irrigation, and these lands were removed from the project. To replace this acreage with an equivalent area, land will be included in the project in an area east of the Chaco Wash which contains soils of an equal or better classification than the lands excluded from the project, and will provide a more compact area. However, some of these new lands are outside of the reservation, and this amendatory legislation is necessary before these lands may be acquired.

The second provision in this legislation relates to grazing permits, licenses, or leases on lands which are taken for the project, and the authority for the Secretary of the Interior to proceed in this area.

The third and most important provision is the amendment of the authorizing act to increase the previous authorized appropriations from $135 million to $206 million.

The Navajo Indian irrigation project, upon completion, will have a capability for the irrigation of over 110,000 acres of land both within and adjacent to the Navajo Indian Reservation. It is estimated it will support some 1,120 new farms for Navajo families. In increased employment opportunities, it has been projected it will provide employment for 8,841 Navajos with an additional benefit and/or part-time employment for 33,000 Navajos or approximately 28 percent of the Navajo population.

As I have said before, this project is of vital importance to the Navajo Tribe and to the economy of northwest New Mexico and the Four Corners area. The economic hopes for the future of the Navajo Tribe center on this project to develop vast wastelands on the reservation into productive irrigated land.

The Navajo people looked forward eagerly to an improvement in their economic status on the reservation when the initial approval of the project was given by the authorization of 1962. But hope has waned with the delays in funding. The Congress is aware of the deplorable conditions under which these people now exist, and knows the disappointment which the Navajo Indians feel as the years have passed and the completion date for this project is extended.

We have a definite obligation as Members of Congress to fund the Navajo Indian irrigation project as required to completion. We have this obligation as a nation. Passage of this legislation is one more step, and a necessary step, in this direction.

Mr. STEIGER of Arizona. Mr. Speaker, will the gentleman yield?

Mr. FOREMAN. I yield to the gentleman from Arizona.

Mr. STEIGER of Arizona. Mr. Speaker, I would like to congratulate, as neighbor to the west, our colleague for sharing responsibility for the Navajo Tribe. I, too, wish to express my enthusiasm for the propriety of this legislation and the recognition of this Congress that the original legislation, while excellent in intent, simply did not fill the bill.

This legislation will provide not only useful water, but also useful land upon which to use the water.

Mr. Speaker, I congratulate the gentleman, and I thank the gentleman for yielding.

Mr. JOHNSON of California. Mr. Speaker, I move to strike the necessary number of words.

Mr. Speaker, H.R. 13001 is a bill to amend the act which authorized the Navajo Indian irrigation project in 1962. It is needed to clarify the status of the project, to conform the plan of development in accordance with postauthorization studies, and to symbolize the public commitment to the Navajo Nation to complete the Navajo Indian irrigation project.

The Navajo Indian irrigation project was authorized in 1962. It was included in the same bill that authorized the San Juan-Chama reclamation project. These projects both make use of the waters of the San Juan River system, a tributary of the Colorado River in the State of New Mexico. Simultaneous authorization of the two projects accomplished a division of the water resources between the Navajo people on one hand and the non-Indian community on the other.

In practical effect, Mr. Speaker, the Navajo people in accepting the Navajo Indian irrigation project have agreed not to assert any further claim against the waters of the San Juan River system. What remains to be done is for the Federal Government to prove that it intends to go forward with its share of the bargain. This is particularly so now that the San Juan-Chama project is essentially completed and ready for service. Passage of H.R. 13001 will furnish the required proof.

Let us examine briefly just what the Navajos were promised. It is really quite simple—an irrigation project of not less than 110,630 acres, for which the Navajos would be entitled to divert 508,000 acre-feet of water annually from Navajo reservoir of the Colorado River storage project system.

At the time of authorization, there was presented to the Congress by the Bureau of Indian Affairs a plan of development estimated to cost $135,000,000. The Congress determined that postauthorization studies and construction administration should be performed by the Bureau of Reclamation, and that agency has been in charge of the technical work since the first funding became available.

These studies have resulted in the finding that much of the land originally intended to be served, particularly in the western reaches of the project area, is simply not up to standards of arability and that which remains in an arable status west of Rio Chaco would be inordinately expensive to serve and operate. Accordingly, the Bureau of Reclamation has concentrated on locating replacement land resources in the eastern sector of the project area. While these lands have been located, their service will involve more cost for pumping and will also mean that more extensive revisions to the Navajo Reservation boundary must be made to bring all of the lands into the reservation in trust.

These changes in plan together with the effects of inflation have now increased the estimated cost of the project from $135,000,000—June 1961 prices—to $206,000,000—April 1970 prices. This is a total increase of $71,000,000 of which $43,000,000 is attributable to inflation and $28,000,000 is attributable to changes and refinements in the plan of development. Enactment of H.R. 13001 will have the effect of conveying congressional sanction to the revised plan as well as authorizing the necessary increased appropriations. Despite these in-

creases, current study shows that the project is still fully justified with a benefit-cost ratio of 1.39 to 1.

The provisions of H.R. 13001 will also authorize the Secretary of the Interior to transfer portions of eight additional townships of public domain lands to the Navajo Reservation to be held in trust for the Navajo Tribe. This brings to 16 the number of townships from which arable lands may be selected for inclusion in the project. This change in land base is, of course, made necessary by the determination on nonarability concerning much of the lands west of Rio Chaco.

The original authorizing language of the Navajo Indian project provided for the tribe to pay the United States for the appraised value of any lands transferred to the reservation in trust pursuant to its terms. No provision was made for extinguishing rights of permittees then enjoying the use of such public domain lands. The enactment of H.R. 13001 will require that the fair market value of permanent improvements made by permittees of lands designated for transfer be paid to the permittee with a corresponding reduction in the payment made to the United States. This provision recognizes the investments which have been made by grazing permittees and which have enhanced the value of the public lands without involving any more obligation on the part of the Navajo people than they would incur under the term of the legislation as it now stands.

Mr. Speaker, this is a fair bill, one with no hidden aspects and one which all Members can support as being consistent with our commitments to the Navajos. I urge each and every Member of the House to give their complete support to its enactment.

COMMITTEE AMENDMENTS

The SPEAKER pro tempore. The Clerk will report the first committee amendment.

The Clerk read as follows:

Committee amendment: Page 2, strike out all of line 2 and insert in lieu thereof "thereof '$206,000,000 (April 1970 prices)'; and".

The committee amendment was agreed to.

The SPEAKER pro tempore. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: Page 2, strike out all of lines 4 through 14 and insert in lieu thereof the following:

"(d) Each permit that is in effect on lands declared to be held in trust for the Navajo Tribe pursuant to section 3(a) of this Act shall continue in effect for the term thereof unless the land is needed for irrigation purposes, subject to regulations applicable to permits of Indian lands, and upon its expiration it shall only be renewed on an annual basis until the land is required for irrigation purposes. When, in the judgment of the Secretary of the Interior, such land is required for irrigation purposes, the Secretary shall notify the permittee and the permit shall be deemed to be cancelled, with no right of appeal. The permittee shall be compensated by the Navajo Tribe for the reasonable value of any range improvements of a permanent nature placed on the lands under authority of a permit or agreement with the United States, as determined by the Secretary of the Interior. Amounts paid to the United States by the Navajo Tribe out of tribal funds for the full appraised value of lands declared to be held in trust for the Navajo Tribe pursuant to section 3(a) of this Act shall be reduced by the amount of compensation paid by the Navajo Tribe to permittees pursuant to this subsection."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and motion to reconsider was laid on the table.

The SPEAKER pro tempore. Pursuant to the provisions of House Resolution 1188, the Committee on Interior and Insular Affairs is discharged from further consideration of the bill S. 203.

The Clerk read the title of the Senate bill.

MOTION OFFERED BY MR. JOHNSON OF CALIFORNIA

Mr. JOHNSON of California. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Motion offered by Mr. JOHNSON of California: Strike out all after the enacting clause of S. 203 and insert in lieu thereof the provisions of H.R. 13001, as passed, as follows:

That the Act of June 13, 1962 (76 Stat. 96), is amended as follows:

(a) By deleting "and" in the first sentence of section 3(a) immediately preceding "townships 27" and by inserting immediately preceding "New Mexico principal meridian", the following: "townships 26 and 27 north, range 11 west, and townships 24, 25, and 26 north, ranges 12 and 13 west,";

(b) By deleting "$135,000,000 (June 1961 prices)" in the first sentence of section 7 and substituting in lieu thereof "$206,000,000 (April 1970 prices)"; and

(c) By adding the following subsection to section 3:

"(d) Each permit that is in effect on lands declared to be held in trust for the Navajo Tribe pursuant to section 3(a) of this Act shall continue in effect for the term thereof unless the land is needed for irrigation purposes, subject to regulations applicable to permits of Indian lands, and upon its expiration it shall only be renewed on an annual basis until the land is required for irrigation purposes. When, in the judgment of the Secretary of the Interior; such land is required for irrigation purposes, the Secretary shall notify the permittee and the permit shall be deemed to be canceled, with no right of appeal. The permittee shall be compensated by the Navajo Tribe for the reasonable value of any range improvements of a permanent nature placed on the lands under authority of a permit or agreement with the United States, as determined by the Secretary of the Interior. Amounts paid to the United States by the Navajo Tribe out of tribal funds for the full appraised value of lands declared to be held in trust for the Navajo Tribe pursuant to section 3(a) of this Act shall be reduced by the amount of compensation paid by the Navajo Tribe to permittees pursuant to this subsection."

SEC. 2. The Navajo Indian irrigation project shall be operated in such manner that identifiable flows of water will not cause the project to be in violation of water quality standards promulgated pursuant to the Water Quality Act of 1965 (79 Stat. 903).

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 13001) was laid on the table.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate, by Mr. Arrington, one of its clerks, announced that the Senate had passed with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 17570. An act to amend title IX of the Public Health Service Act so as to extend and improve the existing program relating to education, research, training, and demonstrations in the fields of heart disease, cancer, stroke, and other related diseases, and for other purposes.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 17570) entitled "An act to amend title IX of the Public Health Service Act so as to extend and improve the existing program relating to education, research, training, and demonstrations in the fields of heart disease, cancer, stroke, and other related diseases, and for other purposes," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. YARBOROUGH, Mr. WILLIAMS of New Jersey, Mr. KENNEDY, Mr. EAGLETON, Mr. CRANSTON, Mr. HUGHES, Mr. PELL, Mr. DOMINICK, Mr. JAVITS, Mr. MURPHY, Mr. PROUTY, and Mr. SAXBE to be the conferees on the part of the Senate.

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 3619. An act to revise and expand Federal programs for relief from the effects of major disasters, and for other purposes.

PROVIDING FOR ESTABLISHMENT OF APOSTLE ISLANDS NATIONAL LAKESHORE, WISCONSIN

Mr. TAYLOR. Mr. Speaker, I call up the bill (H.R. 9306) to provide for the establishment of the Apostle Islands National Lakeshore in the State of Wisconsin, and for other purposes, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from North Carolina?

Mr. KYL. Mr. Speaker, I object.

CALL OF THE HOUSE

Mr. KYL. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll and the following Members failed to answer to their names:

[Roll No. 292]

The SPEAKER pro tempore (Mr. MILLS). On this rollcall 248 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PROVIDING FOR ESTABLISHMENT OF APOSTLE ISLANDS NATIONAL LAKESHORE, WIS.

Mr. TAYLOR. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 9306) to provide for the establishment of the Apostle Islands National Lakeshore in the State of Wisconsin, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from North Carolina.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 9306, with Mr. PRICE of Illinois in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from North Carolina (Mr. TAYLOR) will be recognized for 1 hour and the gentleman from Pennsylvania (Mr. SAYLOR) will be recognized for 1 hour.

The Chairman recognizes the gentleman from North Carolina.

Mr. TAYLOR. Mr. Chairman, I yield such time as he may consume to the gentleman from Colorado (Mr. ASPINALL).

Mr. ASPINALL. Mr. Chairman, H.R. 9306 authorizes the establishment of the Apostle Islands National Lakeshore in the State of Wisconsin. While this proposal has been somewhat controversial, most members of the committee agree that the lakeshore which the bill establishes will be a significant addition to the national park system.

FEATURES OF THE LAKESHORE

Basically, the lakeshore will consist of two units. The mainland unit, which will be located in Bayfield County, comprises approximately 2,500 acres and 10 miles of rugged Lake Superior shoreline. This area contains many outstanding natural features associated with the natural and geological history of the country's northland.

It is expected that this area will be the center attraction for the bulk of the visiting public. Camping, hiking, picnicking, sightseeing, and fishing will all be popular activities and the area should be useful as well for winter sports and outings. With snowmobiles increasing in popularity, it is expected that trails will be developed for their use.

In addition to the mainland unit, the lakeshore will include 20 of the 22 islands located along the coastline. Of the two excluded, one is highly developed and would require an unreasonably large expenditure for land acquisition; the other is a small, undeveloped island which is isolated from the lakeshore as it is now being recommended.

Altogether, the islands unit totals about 39,500 acres of land. Most of these areas have some seasonal residents, but few people live there on a year-round basis.

If H.R. 9306 is enacted, the members of the committee expect the islands to be developed in a manner compatible with their natural values. This will involve the construction of boat docks, campgrounds, hiking trails, and other suitable public facilities. Access to these areas will be limited to the water and, in all likelihood, privately operated excursion boats will be available to transport the people around the islands.

INDIAN LANDS QUESTION

Most of the controversy concerning this legislation has involved the question of the inclusion of Indian lands. Originally, the proposal included parts of the Indian reservations, but the bill recommended by the committee specifically excludes all lands held in trust for the Indian people residing in the area. Some lands are included in the lakeshore which have been sold by the Indians and which are technically non-Indian lands located within their reservations. But it should be emphasized that the boundaries of the lakeshore are drawn to exclude all Indian trust lands and section 2 expressly provides that no trust lands are to be acquired. There is, however, an exception to this policy provided in the bill which would permit the acquisition of two small shoreline tracts if the Indian owners desire to sell.

May I advise my colleagues that as the bill came before the Committee on Interior and Insular Affairs the National Park Service suggested that a large area along the lakeshore belonging to the Indians be covered into the proposed national park so that a road might be built along the lakeshore and that the Indians could be given certain benefits or opportunities because they would be living adjacent to the proposed lakeshore. They would have exceptional opportunities to serve the public. This proposal of the Department of the Interior was frowned upon by the committee after the extensive hearings which we held. We excluded this possibility and included only the lands that I have heretofore referred to in my statement.

Now, of course, these members of the Indian tribe are just like all of the rest of us. If they can see any benefits coming to them they would like to have those benefits. As I understand it this great opposition that has been generated concerning which our friend from Iowa has advised us—and, I think there is no question about the authenticity of the telegrams that he has in his possession—it is promoted by a national Indian organization. The Indians involved in the area in my opinion desire to have their cake and eat it at the same time. They do not desire any development to take place that would serve anybody else except themselves. If we are going to serve the public in this particular area with the facilities which are suggested in this legislation, and if the National Government is to spend money for the development of the lakeshore facility, then it is my opinion that it is about time the Indian population is fitting itself into the general complex of the general population. We have seen that in the past that the tribe involved has seen fit to sell their lands to non-Indians. Presently the lands which we have involved in this bill are not Indian owned as far as trust lands are concerned. The great opposition that we currently have simply comes from the fact that the Indians would like to have back the lands that they have heretofore sold to non-Indians. How they are going to get it is not apparent to me after hearing the testimony. The only way they can possibly get it is to have some kind of a development where they can take advantage of such development or an outright grant from the Federal Government itself. I do not think that this outright grant is forthcoming. To me it just makes sense that a facility such as is contemplated in this legislation will bring benefits to the Indians who heretofore have been for this legislation and recently have become opposed to it for some reason or other. It just makes sense that we go ahead and develop it as a

national park facility and then permit the Indians to receive the benefits which naturally come to the people of an area such as this.

COST

Originally the anticipated costs of this project involved some $13,310,000 for land acquisition and development. Because of the changes made by the committee, these anticipated outlays have been reduced. Appropriations are limited by the bill to no more than $4,250,000 for land acquisition and not more than $5 million for development.

Mr. Chairman, H.R. 9306 has been carefully considered by the Committee on Interior and Insular Affairs. We feel that it constitutes the best possible national lakeshore and that future generations will appreciate the fact that this modest amount of Lake Superior shoreline has been set aside for the recreational enjoyment of the American people.

I fully support H.R. 9306, as amended, and urge its approval by the House.

Mr. SAYLOR. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, I rise in support of this legislation as it is now presented. I believe that the House Committee on Interior and Insular Affairs has done all the compromising on this bill that is possible if you want to have a truly viable unit of the national park system.

Mr. Chairman, I wish that I had a map larger than this, but I would like to call the attention of the Members to this map of the area. It is the northern tip of Bayfield County in Wisconsin, and the Apostle Islands in Lake Superior. The bill as we presented it would include 20 of the islands that are offshore. We excluded Madeline Island and Long Island, two of the Apostle Islands, because of their development.

When the bill was originally presented to our committee it included all of the Bad River Indian Reservation, the area that is marked in yellow at the bottom of this map. It also included all of the Red Cliff Indian Reservation, which is marked in yellow along the lakeshore.

Now, because of the opposition of these two tribes of Indians our committee has excluded all of the land area in the Bad River Indian Reservation. We have excluded all of the Red Cliff Indian Reservation that is still in Indian ownership. But the remarkable thing about those who oppose the bill now, say that because we have included some land that is still presently within the original boundaries of the Red Cliff Indian Reservation we should exclude that land also.

Now, what is this land that we have included? The Indian tribes, the Red Cliff Band of Indians in Wisconsin, by their own tribal action in bygone years and with the full approval of the Indian Bureau allocated to individual Indian members of that tribe tracts of land within their reservation. They gave them deeds for it similar to the deeds you have in the property you own. And these Indians have either moved away or sold the land to other people, so that it is no longer in Indian ownership.

All of the land that is within the area that we now have in this proposed lakeshore is owned either by the State of Wisconsin, the Federal Government, or by private individuals.

Very frankly, some of the folks who support the minority views that have been filed say that sometime in the future, if the United States will establish the Apostle Islands Lakeshore, the Indians may get enough money some day to go to those people who own the land that was formerly in the reservation and buy it back and put it in Indian ownership.

I think it was aptly described by the chairman of our full committee—this is an example of a group of people who want to have their cake and to eat it too.

Now I was impressed, as were a number of other members on the committee, when we began to get telegrams from all over the United States from all of the Indian tribes and Indian councils to the effect that they were opposed to this bill. Those telegrams were sent to the members of the committee.

I would like to tell you that somebody slipped along the line. After all, you sometimes think that these Indians in the West and in the South and in the central part of our country have a common interest and, therefore, it was because they belonged to the National Association of Indians that they got the word.

But lo and behold, the Western Union one day made a mistake. I found out about one of the telegrams that was delivered to me, that the telegram was to be charged not to the Indian tribe out in California that sent me the telegram, but it was to be charged to a man who is a white man and lives in the area and who, in my opinion, is trying to use the Indians. In other words, this is not a spontaneous group of telegrams that have come from the Indian tribes who are looking out for their Indian brethren. These are telegrams that have been inspired by a white man who is in the real estate business up in that area and who is trying to use the Red Cliff Band of Indians for his own use and benefit.

I can say to the members of this committee, I would urge you to vote against any amendments that are offered to this bill and to support the bill as it was reported by the committee. We will then have a viable unit of our national park system.

I urge that all amendments that are proposed other than those adopted in the committee be rejected and that the bill as presented be passed.

Mr. TAYLOR. Mr. Chairman, I yield 5 minutes to the gentleman from Wisconsin (Mr. KASTENMEIER).

Mr. OBEY. Mr. Chairman, will the gentleman yield?

Mr. KASTENMEIER. I yield to the gentleman.

Mr. OBEY. Mr. Chairman, I rise in support of this bill which would establish an Apostle Islands National Lakeshore in the State of Wisconsin.

This legislation was introduced early in the 91st Congress by Congressman ROBERT KASTENMEIER, who was joined by several other Members of the House. Similar legislation was introduced in the Senate by Senator GAYLORD NELSON.

This proposal has had a long history, and over time it has acquired a long list of supporters, including newspapers, civic and business groups, agriculture and labor organizations, and conservation groups on the local, State, and national levels.

Congress first authorized a study for an Apostle Islands National Lakeshore in 1930. In his February 1966 conservation report to the Congress, President Lyndon Johnson asked that planning for the project be completed as soon as possible. In January 1967, President Johnson listed the Apostle Islands proposal as one of the top four priorities for national park authorization. The Senate has passed this legislation in 1967 and 1969.

Hopefully, the 91st Congress will recognize the beauty and uniqueness of this region and will bring to fruition the work which began 40 years ago to establish a national lakeshore in northern Wisconsin.

The lakeshore would include 41,966 acres of land along the shores of Lake Superior. It would provide an unspoiled and scenic area for thousands of persons in the Midwest who are searching for more and more outdoor recreation areas. Most importantly, this proposal preserves the natural beauty which surrounds the Apostle Islands.

A national lakeshore in this area would also be economically beneficial for an area which can badly use such economic assistance. An indepth study of the proposal by Prof. I. V. Fine, of the University of Wisconsin, has indicated that the Apostle Islands National Lakeshore would generate more than $7 million a year in spending for this area. It would bring 1 million visitors there, and each would be treated to a unique and beautiful area for hunting, fishing, boating, or hiking.

Consideration has and will continue to be given to protecting the historic rights of the Indians of this area. The lakeshore contains no Indian lands held in a trust status, or as far as can be reasonably ascertained, lands individually owned by any Indian.

If for no other reason, the Apostle Islands and the surrounding lakeshore should be conserved for conversation's sake. Recreational areas such as this are getting more and more scarce, and more and more expensive. The preservation of the Apostle Islands now will insure to future generations a recreation of enormous beauty. I am hopeful the House will see fit to enact this legislation which will make it possible.

Mr. KASTENMEIER. Mr. Chairman, the Apostle Islands National Lakeshore proposal has been 40 years in the making. Back in 1930, the 71st Congress authorized the Secretary of the Interior to investigate the advisability of establishing an Apostle Islands National Park in Wisconsin. House passage of H.R. 9306 will fulfill a long-held dream that many conservationists, in Wisconsin and throughout the Nation, have held for all these years.

I wish to compliment my chairman of our full committee (Mr. ASPINALL), my National Parks Subcommittee chairman (Mr. TAYLOR), the gentleman from Penn-

sylvania (Mr. SAYLOR) and all my colleagues on the Interior Committee. Their patience, understanding, and willingness to assist in the final drafting of H.R. 9306, have made it possible for the Apostle Islands legislation to reach the House floor. I also want to commend my colleague from Wisconsin (Mr. O'KONSKI) for his steadfast support for the Apostle Islands proposal.

Mr. Chairman, situated in northern Wisconsin along the shores of Lake Superior, the proposed 41,966-acre Apostle Islands National Lakeshore contains a unique collection of 20 islands unrivaled by any other island chain located within the continental boundaries of the United States. The lakeshore proposal also includes another rare and rapidly vanishing resource, undeveloped shoreline, approximately 10¾ miles, bordering on Lake Superior.

The Apostle Islands are an archipelago. The corrosive glacial streams of the last ice age cut them off from the massive sandstone blocks of Wisconsin shore, and they are clustered about the blunt-tipped, lofty-ridged Bayfield Peninsula. The islands are covered with a luxurious growth of mixed hardwoods and conifers. Their shores are characterized by steep slopes with many cliffs where the waves of Lake Superior have frequently carved arches, bastions, caverns, and towering walls. Along the protected bays and inlets are many magnificent white sand beaches. The islands remain almost in their primitive state, abounding in birds and mammals. The lakeshore unit has spectacular arches, caves, cliffs, and bays, eroded from solid rock by wave and stream action over thousands of years. These geological formations alternate with secluded sand and pebble beaches. Behind the shoreline stands a dense forest of spruce, fir, pine, and northern hardwoods.

The hand of man is not apparent here. He has made his few scratches, but he has not defiled this place and this place is the better for it. This unspoiled backyard of our upper Midwest is only hours away and within easy driving distance from the heavily populated areas of Milwaukee, Chicago, Detroit, Duluth, and the Twin Cities of Minneapolis-St. Paul. The lakeshore also is accessible from all parts of the country.

The increasing mobility of the American citizenry, coupled with its increase in population, demands farsighted planning and implementation of public recreation areas. A resource of the majesty, scope, and historic and geologic value, as the Apostle Islands, calls for nothing less than protection and management by the Federal Government.

The islands and the adjacent shoreline invite almost every outdoor recreation activity possible in the northern Great Lakes region: camping, boating, hiking, hunting, skimobiling, fishing, nature study, photography, beachcombing, picnicking, and sightseeing. With many miles of island and mainland shoreline, broken by vast areas of open water, relatively large numbers of visitors can be accommodated without crowding.

The Apostle Islands region is rich in history. It was Indian country before Columbus set sail from the Old World. The Chippewas settled on the shore of Lake Superior. Then, the fabled French voyageurs, looking for the Northwest Passage to the Orient, appeared in the 17th century. Eventually the French and British would fight each other for these lands. The French would lose, and then the British would lose to a new breed, the Americans. The Apostle Islands area became a thriving community settled by lumberjacks, miners and homesteaders. Today, however, the region is sparsely populated by our present standards.

The enactment of this legislation would also provide significant benefits to the Upper Great Lakes States through the immense economic potential of tourism and outdoor recreation. The Apostle Islands National Lakeshore will help the depressed condition of northern Wisconsin by revitalizing its sagging economy, which, in the past, had been dependent upon lumbering and mining. The bulk of the tourists will come in the summer months. However, skimobilizing and skiing activity is developing very rapidly so there will be lots of winter use in the area. Important as these economic considerations are, however, they should be secondary to preserving this remarkable area.

The Apostle Islands National Lakeshore proposal has received impressive endorsements from more than 180 various Wisconsin and national groups, including numerous civil business, professional, labor, farm and conservation organizations. The Advisory Board of National Parks, Historic Sites, Buildings, and Monuments has recommended its establishment. It is supported by this administration as it was by the previous administration.

Mr. Chairman, only a few areas of the quality of the Apostle Islands still remain. Any delay in protecting them will serve only to diminish their uniqueness. Unfortunately, we have watched too many of the resources of our environment weaken and die over the years. In preserving the Apostle Islands region, we are saving a priceless legacy for future generations. It would be nice to leave them this area, unspoiled.

The dissenting views on H.R. 9306 use two contradictory arguments to oppose the measure. On the one hand, they object to the bill because it involves land on the Red Cliff Reservation, while, on the other hand, they object because it reduces the size of the project to avoid infringing on Indian rights.

The legislation in no way violates the 1854 Treaty with the Chippewas of Lake Superior. The Indians, voluntarily, sold the 1,541.4 acres of alienated land within the boundaries of the Red Cliff Reservation that will be included in the lakeshore—1,541.4 acres—57.4 acres are the property of Bayfield and Russell townships, about 350 acres are Bayfield county land, and about 1,124 acres are private lands, not owned by any Indian, as an individual. The Red Cliff hope to reacquire the alienated lands, possibly, with funds awarded in claims now pending before the Indian Claims Commission. According to the Indian Claims Commission, however, the Red Cliff Band is one of several bands of Chippewa Indians included in competing claims.

"Assuming judgments in favor of the plaintiffs are eventually reported to the Congress in some of the above mentioned dockets, so many Chippewa bands are named in the claims and so involved is their interrelationship, it can reasonably be predicted that it will not be known with certainty who the beneficiaries will be until after the Congress has enacted legislation providing for the disposition of the judgment money." (Indian Claims Commission statement—March 12, 1970.)

It should be pointed out that if the Indians are so anxious to repurchase alienated lands, why are they engaged in leasing tribal lands for 50-year periods for vacation homesites. The wish of the Indians to reacquire alienated lands, however admirable, is based on vague hopes and dreams.

The dissenting views state that the lakeshore does not meet the criteria for a national recreation area. They submit that the lakeshore is essentially comprised of 20 islands standing alone. The administration and the Park Service have stated the need for inclusion of the Indian lands as part of the mainland units. The Indians are adamant in their opposition to the lakeshore and expanding the boundaries can be accomplished only at the expense of the Indians. The Lakeshore unit, while only 10¾ miles long, is undeveloped shoreline, a rare resource and should be protected. Also, the lakeshore unit has spectacular geologic formations with beaches that can be enjoyed by the public. Also hiking, camping, and so forth.

The dissenting views state that the lakeshore does not meet the criteria of circular No. 1, establishing the Federal executive branch policy governing the selection, establishment, and administration of national recreation areas by the Recreation Advisory Council. National recreation areas should be strategically located within easy driving distance, not more than 250 miles from urban population centers—should have total population in excess of 30 million people—the criteria was adopted in March 1963. Improvements in highways and motor vehicles and the increase in urban affluence, interest in outdoor recreation and leisure time make a mockery of such outdated criteria. Northern Wisconsin has become an important summer recreation area for Illinois citizens, for example. About 50 million people live within a day's drive. Assistant Secretary of the Interior Glasgow, in a March 19, 1970, letter to ASPINALL, said:

The proposed Apostle Islands National Lakeshore has been found to satisfy the criteria for national recreation areas set forth in Policy Circular No. 1.

The Advisory Board on National Parks, Historic Sites, Buildings, and Monuments has endorsed the proposal.

Mr. DAVIS of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. KASTENMEIER. I yield to my friend from Wisconsin.

Mr. DAVIS of Wisconsin. I wanted to say to my colleague from Wisconsin that I had had some reservations relating to

this project, and I felt that probably the form of the bill as it passed the Senate was such as to be biting off more than we fairly should attempt to chew in light of some of the complaints that some of the Indians there had made. But it is my opinion that the House committee has very carefully considered this matter and has offered this bill to us in a form that ought to be supported. I certainly want to reiterate what the gentleman from Pennsylvania has said. I hope there will be no amendments accepted in the House, and that our House conferees will stand fast, if it is necessary for this bill to go to conference, to keep the bill in exactly the form in which the House committee has recommended it.

Mr. KASTENMEIER. I thank my colleague, and I join him in the wish that this bill not be amended, and, further, that this bill unamended be insisted upon by the House Members should it go to conference.

I will say further to the membership that this is a third generation of the bill relating to this proposal, the first two having been compromised to meet certain objections, particularly from Indians. The first bill included all the lands to which Mr. SAYLOR alluded as part of the park proposal. This was objected to last year, even though our Indian friends in Wisconsin have at various times in the recent past supported the Apostle Islands National Park, and as recently as last year the Commissioner of Indian Affairs, supported the bill.

Actually Indians in the area have had floats in local parades supporting the Apostle Islands National Park a few years ago. So the opposition alluded to is a recent point of view.

But to meet this objection a second generation of the bill was offered, a bill which made it optional for the Red Cliff Tribal Reservation areas that are held in trust to be optionally included upon application of the Red Cliff and Bad River bands and upon showing that the tribe supported inclusion of their lands.

Even this was objected to, the alternative of coming into the park, and so what your committee has done as a last resort to meet that objection is to eliminate inclusion of all of these lands completely. I refer to the lands in trust and in allotments which are actually owned by Indians today.

Mr. Chairman, I hope that after 40 years, Wisconsin, the upper Midwest, and the Nation will be rewarded by passage of the bill, in the form, I hope, recommended by our committee, that the House will adopt it, and the other body will agree to it.

Mr. SAYLOR. Mr. Chairman, I yield 15 minutes to the gentleman from Iowa (Mr. KYL).

Mr. KYL. Mr. Chairman, a short time ago the administration sent to the hill some recommended legislation dealing with Indians of the United States. The bills were subsequently introduced following the recommendations, and other bills which were somewhat different were introduced, all having the same noble objective: To give the American Indian a greater share of the governing of his own affairs. When the bills in some form come to the floor, I suppose they will pass almost unanimously, if not unanimously.

But on so many occasions when we have specific matters before us, where the Indians would like to have a little voice in what goes on, we say we will wait until next time. Maybe, as someone has suggested, part of what the Indians object to in this bill is because of a dream. Maybe that is true. They have had thoughts of reacquiring some of this land which is revered by the Indians. They hope they might do it with funds from pending dockets before the Indian Claims Commission. We have had loans for projects of this kind even from the Farmers' Home Administration. We have had special legislative actions to achieve just the purpose about which these Indians dream. So maybe part of it is a dream.

They also argue from logic, and they also argue from suspicion, and whether those suspicions can be founded or not, they certainly have reason to hold some suspicions.

Before I proceed in that, let me note that there is no question about where the Red Cliff Band of the Lake Superior Chippewa Indians stand on this legislation. The chairman of the Red Cliff Tribal Council, Albert Bressette, says this in a letter:

> We, the people of the Red Cliff Band of Lake Superior Chippewa Indians wish to register our unalterable opposition.

Take this letter of September 9, 1970, from Loretta V. Ellis, Minneapolis Regional Vice President of the National Congress of American Indians, who says:

> The National Congress of American Indians which I represent vehemently opposes this bill . . .

Let us get back to those suspicions for a minute. At one time the Indians owned all this land and all this area, but this is a history of what happened:

HISTORY OF BAD RIVER AND RED CLIFF RESERVATIONS

(By Benjamin Armstrong, adopted son of Chief Buffalo)

The following is taken from, *Early Life Among the Indians.*

In 1837, the government entered into a treaty with the Chippewas of the Mississippi and St. Croix rivers at St. Peter, Minnesota, with Colonel Snelling of the army, and Major Walker of Missouri, being the commissioners on the part of the government, and it appears that at the commencement of this council the anxiety on the part of the commissioners to perfect a treaty was so great that statements were made by them favorable to the Indians, and were understood perfectly by them, that were not afterwards incorporated in the treaty. The Indians were told by those commissioners that the Great Father had sent them to buy their pine timber and their minerals that were hidden in the earth, and that the Great Father was very anxious to dig their mineral, for of such material he made guns and knives for the Indians, and copper kettles in which to boil their sugar sap.

The timber you make but little use of is the pine your Great Father wants to build many steamboats, to bring your goods to you and to bring you to Washington bye and bye to see your Great Father and meet him face to face. He does not want your lands, it is too cold up here for farming. He just wants enough of it to build towns where soldiers stop, mining camps for miners, saw mill sites and logging camps. The timber that is best for you the Great Father does not care about. The maple tree that you make your sugar from the birch tree that you get bark from for your canoes and from which you make pails for your sugar sap, the cedar from which you get material for making canoes, oars and paddles, your Great Father cares nothing for. It is the pine and minerals that he wants and he has sent us here to make a bargain with you for it, the commissioners said. And further, the Indians were told and distinctly understood that they were not to be disturbed in the possession of their lands so long as their men behaved themselves. They were told also that the Chippewas had always been good Indians and the Great Father thought very much of them on that account, and with these promises fairly and distinctly understood they signed the treaty that ceded to the government all their territory lying east of the Mississippi embracing the St. Croix district and east to the Chippewa river, but to my certain knowledge, the Indians never knew that they had ceded their lands until 1849, when they were asked to remove therefrom.

In 1842, Robert Stewart, on the part of the U.S. government, perfected a treaty at La Pointe, on Lake Superior, in which the Chippewas of the St. Croix and Superior country ceded all that portion of their territory, from the boundary of the former treaty of 1837, with the Chippewas of the Mississippi and St. Croix Indians, east and along the south shore of the Lake to the Chocolate river, Michigan territory. No conversation that was at this time gave the Indians an inkling or caused them to mistrust that they were ceding away their lands, but supposed that they were simply selling the pine and minerals, as they had in the treaty of 1837. When they were told, in 1849, to move on and thereby abandon their burying grounds—the dearest thing to an Indian—they began to hold councils and ask each other how they had understood the treaties and all understood them the same. That was: That they were never to be disturbed if they behaved themselves.

Messengers were sent to all the different bands in every part of their country to get the understanding of all the people and to inquire if any depredations had been committed by any of their young men, or what could be the reason for this sudden order to move. This was kept up for a year and no reason could be assigned by the Indians for the removal order.

In order to prevent trouble of a more serious nature, Chief Buffalo and Chief O-Shago, together with four other braves and Benjamin Armstrong decided to go to Washington to talk with President Fillmore. They left LaPointe on April 5, 1852, in a new birch bark canoe, called a four-fathom boat, 24 feet long with six paddles. The delegation was stopped at the "Soo" but after relating the seriousness of the situation they were allowed to proceed. The Indian agent again stopped them at Detroit and after several other difficulties they arrived in Washington on June 22, 1852.

Benjamin Armstrong set out to request an interview with the Commissioner of Indian Affairs which he decided to grant, and said, "I want you to take your Indians away on the next train west, as they have come here without permission, and I do not want to see you or hear of your Indians again."

Thus Armstrong was ordered out of the commissioner's office. Through the kindness of a Senator Briggs of New York and a member of President Fillmore's cabinet, they arranged an interview with the president.

A pipe brought by Buffalo especially for

this purpose was lit by him and then President Fillmore took a few draughts from it and smiling said, "Who is next?" at which Buffalo pointed out Senator Briggs and desired he should be next. The pipe was then passed to the Commissioner of Indian Affairs, the Secretary of the Interior and several others, including the delegation of Indians.

In a brief speech after learning of the Indian situation in the northwest, the president said that he would countermand the removal order and that annuity payments would be made on LaPointe and he hoped in the future there would be no cause for complaint.

This eventually led to the treaty of 1854. Each chief selected sites for their various homes and all lands embraced within these boundaries should belong to the Indians; they were as follows: L'Anse Bay, Ontonagon, Lac du Flambeau, Court O'Milles, Bad River, Red Cliff, Fond du Lac, Minnesota, and one at Grand Portage, Minnesota.

Now I say there might be some suspicion. If you had been told for 2 or 3 or 4 years that we were going to authorize a park in your area, but it would never be implemented until we got all the Indian lands we wanted to put into the park, would you be suspicious? That is what we told the Indians. That is what we told the committee.

That was not simply this administration. The same statement was made by the last administration. Mr. Udall's department said this was not a viable area unless we would have the Indian lands. This was preached over and over again in the early days of this administration.

If you were an Indian sitting in Wisconsin, and you heard this over and over again, and you heard someone saying now we are going to set up this park here, but we need the Indian lands, would you be suspicious?

I do not enjoy this role of delaying this session today. We are not doing something unexpected. There were dissenting views on this bill. A rule was granted on the bill providing for 2 hours of general debate.

I do not believe the committee staff knew that the last three bills in this group were going to come up today themselves until the whip notice came out.

But that is beside the point. I can help to speed this proposition. When the time comes, I shall offer an amendment which will remove those lands which are in disagreement with the Indians.

Incidentally, I do have messages from Indians, from New York to Wisconsin to New Mexico, and to Alaska. I have talked with some of these people, and they certainly were not being led around by the nose by some white developer.

But, if that amendment is adopted we will have an Apostle Islands area of 20 islands, 39,000 acres, and will have given some respect to the Indians, whom all of us bleed for and speak for all of the time.

We can have an Apostle Islands area, and I hope we can get it, but I certainly believe it is time to say a word for the American Indian and to follow that word with some deed for the American Indian.

I yield back the remainder of my time.

Mr. TAYLOR. Mr. Chairman, I yield myself 1 minute.

Mr. Chairman, in my opinion this legislation treats the Indians fairly. In fact, I believe it should work to their economic advantage, as I hope to point out in statements I desire to make after the amendment is offered.

I am pleased to join with the chairman of the full committee and the ranking minority member and our colleague from Wisconsin in endorsing the legislation. It is needed, and in the years ahead this should be greatly appreciated by those who have an opportunity to enjoy it.

Mr. Chairman, House Resolution 9306 is one of the most difficult national park bills which we have considered in recent years. It was not difficult for us because of the nature of the area involved—for its national significance is unquestionable. But it was difficult because of the complicated land situation which confronted us.

The proposed Apostle Islands National Lakeshore is located in the State of Wisconsin. As recommended by the committee, it would include 20 islands scattered along the coastline of Lake Superior and a mainland unit with slightly more than 10 miles of frontage on the lake. Altogether, the lakeshore would comprise about 42,000 acres of land.

The recreation and natural values in this area are different, in some respects, than are those in the Gulf Islands area, but they are equally important. Here, instead of swimming and sunbathing—except for a few weeks each year—the recreation activities will include cold winter sports in the snow and on the ice. But boating, fishing, camping and hiking will be popular in the other seasons.

In making its recommendation, the committee substantially altered the original lakeshore boundaries because there are two Indian reservations in this region. Originally, the lakeshore included Indian lands from both of these reservations subject to their desires to be a part of it. Those who testified before our committee on behalf of the Indians indicated that they did not want to participate; therefore, the committee decided that they should be excluded.

There are no Indian trust lands included in this lakeshore to our knowledge, and section 2 of the bill expressly provides that no Indian trust lands are to be acquired for the lakeshore. The only exceptions to this blanket prohibition are two small lakefront tracts—totaling 27.33 acres and 57.27 acres—which the Secretary is authorized to purchase if a majority of the owners agree to sell. Other than those two small tracts, there are no Indian-owned lands which House Resolution 9306 authorizes to be acquired.

Most of the Members feel that they have gone as far as they reasonably could to protect the Indian interests. While the Indians are not satisfied, we are convinced that they have been treated fairly as far as their legitimate interests are concerned.

As recommended by the committee, the bill reduces the size of the lakeshore, Mr. Chairman, but we do not feel that we have destroyed its value as a national asset. In deleting the Indian lands, there was no feasible alternative but to reduce the size of the lakeshore—from 57,511 acres to the 41,966 acres. Naturally, the Park Service wants it all—just as any bureau would—but it has acknowledged that the smaller unit will be manageable. One result, of course, will be a reduced cost for acquisition and development. As is the usual practice, our bill limits land acquisition costs—$4,250,000—and the development costs, $5,000,000.

In conclusion, Mr. Chairman, I want to say that some members of the Subcommittee on National Parks and Recreation visited the area last year and conducted field hearings on the legislation. While the witnesses did not unanimously endorse this proposal, everyone had an opportunity to have his views heard and considered.

I am pleased to join the chairman of the full committee and my colleagues from Wisconsin in endorsing this legislation. It is sound and it is equitable. In the years ahead, this area will be greatly appreciated by those who have an opportunity to enjoy it. I recommend the enactment of H.R. 9306, as amended.

Mr. SAYLOR. Mr. Chairman, I yield such time as he may consume to the gentleman from Wisconsin (Mr. O'KONSKI).

Mr. O'KONSKI. Mr. Chairman, I rise in support of this measure.

First I want to thank the chairman of the committee, the chairman of the subcommittee, my colleague from Wisconsin (Mr. KASTENMEIER), my colleague from Pennsylvania (Mr. SAYLOR), and all the other members of the committee for being so fair and so considerate and so compromising in arriving at a viable, working bill, after 40 years of dreams about this project.

This project first evolved under similar circumstances, when we had a Republican President, a Republican Cabinet member as Secretary of the Interior, and a Democratic House and a Democratic Senate. It was similar to the situation we have now. We have gone the full circle 40 years later.

After compromising, I believe that this committee has done the fairest and most admirable job of arriving at a workable and viable bill so that finally we can achieve the dream which was dreamed 40 years ago.

Let me give just a little bit as to the assets of this area.

From the standpoint of natural beauty, this area has no equal in our land.

From the standpoint of geology and geological interests, there is no area in our Nation comparable to that which exists in the Apostle Islands area.

From the standpoint of history, it has a value similar to the value of the East. The fact of the matter is that this area was settled by French missionaries and furriers at the time when the Pilgrims were landing on Plymouth Rock.

That is how historically valuable this area is. It is more than 1,000 miles inland from the New England coast. It is as old in history as the east coast. Something was said about not being fair to the Indians. No one is more concerned about Indian welfare than I am. I might say in passing that I happen to be an

hononary chief of the Chippewa Tribe of the Bad River Reservation, the telegrams some of which have been read over here. I have been an honorary chief of their tribe for the past 20 years. I should think if there were any real grassroots opposition to this lakeshore park that these Indians would have some communication with me. I have had none in opposition to this bill. The fact of the matter is that I have held office hours on August 17 at Ashland, Wis., just 6 miles from the Bad River Reservation, and not more than 15 miles from the Red Cliff Reservation, and among the things I announced in holding these office hours was that I would like to get the impression of the people of the area toward the formation of this lakeshore national park called the Apostle Islands and that I would like to meet with any interested groups in opposition to or in favor of this proposal. Not one single individual met with me opposed to this project. Twelve Indians, 10 from the Bad River Reservation and two from the Red Cliff Reservation queried me about where all of this opposition by the Indians comes from. They said:

> We hear of none on our reservation. We have had no public meetings discussing this bill or in opposition to it.

So, they could not understand why they were being quoted as saying that the Indians of the reservation were opposed to this bill.

Now, I venture to say that this sheaf of telegrams that my good and conscientious colleague from the State of Iowa has is from people who never read the bill, that is, the people who wrote those telegrams and who sent them never even read the compromise version of the bill. I doubt whether those people who sent those telegrams are aware of the fact that this bill has been compromised to the point where there is not one single solitary acre of Indian land involved in this bill. I am positive, if I might use Indian parlance, being an honorary Indian chief, that behind these telegrams there is more smoke than fire. I am positive that that is the situation. If it were not for the opposition by people who have a selfish interest, by people who are private owners of the property, I am positive that many of these telegrams would never have arrived in the Nation's Capital. In other words, I am again concerned about the welfare of the Indians but I am afraid that the Indians are being used and I resent the Indians being used just as much as my good colleague from Iowa does.

Mr. KYL. Mr. Speaker, will the gentleman yield to me?

Mr. O'KONSKI. I mentioned the gentleman's name and I yield to him.

Mr. KYL. Is the gentleman in the well familiar with the referendum which was held on the reservation?

Mr. O'KONSKI. On the reservation. Yes, I am very well acquainted with it. I might mention that I do not think the chief who sent you the telegram is any longer the chief. They recently changed chiefs. You have to have communication with him.

Mr. KYL. I cannot speak to that point because the most recent communication I have from him is not within the last week or two, but the referendum which was held by the Indians did indeed show that they were opposed, did it not?

Mr. O'KONSKI. Well, I think that if there was grassroots opposition to this, when I was holding these meetings within the immediate accessible area, and I spent 6 hours waiting for them, I think if there was any real organized grassroots opposition to the bill, that these Indians on the reservation, particularly when I told them my announcement that among the first order of business when we got back to Washington was going to be the consideration by the House of the Apostle Islands National Lakeshore Park bill—I am sure that they would have made it known to me.

I am positive that if there were grassroots opposition to the bill that the chiefs and the members of the tribes would have been over there to see me, particularly from the Odanah Reservation, since I am one of their honorary chiefs.

Mr. KYL. Mr. Chairman, will the gentleman yield?

Mr. O'KONSKI. I yield to the gentleman from Iowa.

Mr. KYL. Mr. Chairman, I think we must be fair about this proposition now, when we dismiss some of these telegrams because the Indians who sent them may not have read the bill. I think that is a little bit unfair because, as a matter of fact, I think the gentleman from Wisconsin will have to agree with me that when we vote on this bill a very small percentage of the Members of this House will have read this bill; is that correct?

Mr. O'KONSKI. Well, in some form or other, yes.

Mr. KYL. I thank the gentleman.

Mr. O'KONSKI. Mr. Chairman, I just want to say this in closing: that for 40 years this area in northern Wisconsin has been in a state of limbo. Forty years ago it was suggested that this area be set aside for a national park, a national lakeshore park. So for 40 years we have had no economic development, and no private development in that area, because any time anyone wanted to come over there to develop the area privately or economically, the prospective developer always was told that the people of Chicago—and incidentally we no longer can think of land in the United States of America in terms of provincialism. No matter where the land is, it has to be thought of in terms of the national interest. The people of Chicago, the people of Detroit, the people of Milwaukee, the people of Minneapolis-St. Paul, the people of St. Louis, the people of Indianapolis who come over there are all unanimously of the opinion that this area should be set aside as a national park. And because that has been in the making for the past 40 years no private developer would ever come in there and develop the area, and hence we are at an economic standstill. And, as I say, for the past 40 years we have been in that state of limbo, of economic standstill because the idea of a national park is so entrenched among the people within a radius of 500 miles of that area that they can think of that area in no other terms.

If you really want to help the Indians of that area I urge you to vote for this bill, because I see in this bill the making and the creation of jobs—jobs for Indians. And incidentally these 12 Indians who came over to see me, their main concern was getting jobs in the area and getting an economic development in the area.

This project will make jobs in the area, it will make jobs for the Indians. If you are really concerned about the welfare of the Indians of that area I plead with you and I beg you to vote for the passage of this bill as it is.

Mr. Chairman, in connection with the legislation before the House to establish the Apostle Islands National Lakeshore, I wish to point out to my colleagues and to future visitors that this area is one of the most significant in our Nation's history, both geologically and historically.

As an adopted member of the Bad River Band of Chippewa Indians at Odanah, given the name of Gigidoweinnay—Chief Man of the Council—I am interested in having this bill represent the intent of Congress and to honor my Chippewa brothers. Although the two reservations in the area are not included unless they later request it, I personally hope and feel that a monument should be erected and dedicated to the Chippewa Indians, to be erected at their one-time capital city at La Pointe on Madeline Island. Madeline Island, the largest of the Apostle Islands, is also not included in the legislation, but I am sure that future visitors will want to see Madeline and learn more of its past history.

It is thought that the Lake Superior region is the oldest of the known world and was the first to emerge from a global ocean. Because of its age and the violent eruptions to which the area has been subjected, it provides a rich source of geological study. It is in this area that the Apostle Islands are located.

Nelson Ross, in his informative book—"La Pointe—Village Outpost"—writes as follows:

> There is a village in Northernmost Wisconsin, little known today, which has experienced periods of prosperity, years of fame and decades of somnolence. La Pointe was the home of the Ojibway. It was the haven of safety for that tribe and for subsequent posts of the French and English fur trader, from the hostile attacks of the Sioux and other Indians. Here were planted the seeds of both the Roman Catholic and Protestant religions when the Northwest was unknown country.
>
> It is possible that the La Pointe area was being explored when the Pilgrims landed at Plymouth Rock. Its development, one thousand miles inland, under the French regime, came at the same time as that of the English thirteen colonies on the Atlantic seaboard. In the La Pointe region a church was founded the year after the English took Manhattan from the Dutch, and the village was a thriving settlement when George Washington was born.
>
> To the French, who were the first white arrivals, the terms La Pointe and Chequamegon (She-wam-egun) were practically synonymous, although the latter was the first known and older name.

The Apostle Islands, sometimes called the Enchanted Isles of Keche-Gamme, are clustered about the Bayfield Peninsula, which is the northernmost mainland of Wisconsin. They occupy an area of about 600 square miles in Lake Superior and comprise about 77 square miles of land area. Although named the Twelve Apostles by the early missionaries, there are actually 23 islands ranging in size from a fraction of an acre to the largest, Madeline, with an area of about 14,000 acres.

The Chequamegon Bay and Apostle Island area is rich in Indian lore and history. It is believed that the Chippewa or Ojibway Indians left their former home on the Gulf of St. Lawrence and arrived in the Chequamegon region about 1490, 2 years before the Columbus discovery of America. According to tribal legends, they were following the great white shell, Megis, which gave warmth and light to the tribe. The first Chippewa settlement in Wisconsin is said to have been at La Pointe, on Chequamegon Bay, where they found plentiful food, fish, and wild rice. Sister M. Carolissa Levy in her book, "Chippewa Indians of Yesterday and Today," says:

This village of La Pointe greatly antedated other early Wisconsin settlements, such as Ashland and Superior and La Pointe was old before these cities were even dreamed of by white men . . . La Pointe on the Chequamegon passed into oblivion when the Sioux declared war upon the Chippewa tribes living in that area, but a greater La Pointe arose some years later on the Apostle Islands.

The Chippewas made their settlement on Madeline Island, first named St. Michel's Island by the French priests. The Chippewas named this island "Moningwunakauning"—"The Home of the Golden Breasted Woodpecker" from the thousands of birds which used it in their yearly migrations. Here they lived and made it their principal home until about the time the Pilgrims were landing on Plymouth Rock in 1620.

It is a commonly accepted fact that the first white man to see the islands, was the French explorer Etienne Brule. The trips of Brule and a number of subsequent explorers were motivated by the French desire to open the mythical "Northwest Passage to China and the East Indies." A trip of real historical significance was made by French explorers and fur traders, Radisson and Grosseilliers in 1659. They left Montreal and spent the winter at the foot of the Chequamegon Bay, near the present city of Ashland, where they built a cabin, probably the first white man's house on the entire lake.

The next visit was under the leadership of Father Rene Menard, a Jesuit priest, who established a trading post with a band of fur traders. Father Menard died soon, but another Jesuit, Father Claude Alluex, came in 1665 to establish a mission, located between Ashland and Washburn, for the conversion of the Indians. He was followed by Father Jacques Marquette, both of whom had little success with the Indians' religious beliefs.

France, in 1671, formally took possession of the Great Lakes country and sent their envoys to negotiate with the Indian tribes engaged in fur trading. The envoys asked for permission to trade and promised the Indians the protection of the great French nation against all enemies. The Indians readily accepted the proposals of peace, protection and mutual support and from that day, the Chippewas called the French king "Father" and their lands were opened to French enterprise.

In 1678, the French Governor, Frontenac, encouraged Daniel Greysolon and Sieur Dulhut, in fitting out an expedition for Lake Superior to investigate the rich copper deposits which were associated with the Lake Superior country.

In 1693, Pierre Le Sueur, an adventurous forest trader, was sent by the French to keep open the trade route. Accompanied by a small band of soldiers and fur traders, he built the first stockaded fort on what was then called St. Michel's Island at La Pointe. About this time, the Chippewa Indians returned to the island and settled at La Pointe. Here, the new village became the seat of the Chippewa empire and the official headquarters for 12,000 Indians whose domain extended from Michigan westward to Lake Itasca and from Canada, southward to Shell Lake, Wis.

French fur traders continued to occupy Madeline Island until 1763, the close of the French and Indian War. However, because the earlier French traders on the lake shipped such a large volume of furs, the market prices declined to ruinous levels and the King of France, Louis XIV, prohibited further trading for 20 years. A succession of French commanders reestablished the fur trade and continued to occupy the island until New France fell to England.

The British now took over the fur-trading industry under the leadership of Alexander Henry, a resident of the colony of New Jersey. He took as his partner, Jean Baptiste Cadotte, the son of a French officer. Jean married an Indian woman and they had two sons, John Baptiste and Michel, both of whom were educated in Montreal. Michel took up the fur trading business and in 1785 returned to Madeline Island, where he married an Indian princess, who was renamed Madeline when she was baptized. Her father was so pleased with the marriage that he renamed the island Madeline, in honor of his daughter.

Madeline Island and the Village of La Pointe now became a thriving settlement when John Jacob Astor's American Fur Co. took over the fur industry. The fortunes of the area now fluctuated with the successes or failures of the fur industry, the copper, fishing, and lumbering industry and with periods of boom and panic experienced in the general economy of the American Government.

Today, although the area is no longer the capital of the Chippewa Indian Nation and the fur trading industry, its geological foundations, its startling beauty, and its historical importance make it an area of outstanding significance.

Madeline Island is truly billed the "Island of Antiquity"—Under four flags: Spain, 1512–1627; France, 1627 to 1762; England, 1763 to 1783, and the United States of America from 1783 to the present.

We find pages from the past today in the names of residents and villages and cities of the area; residents such as the Souliers, Bresettes, Lemieux, Royces, Gordons, Dupuis and others; villages, cities, and rivers such as Cadott, Radisson, Solon Springs, from the French explorer, Greysolon; Duluth, from Sieur Dulhut; and Brule and the Brule River.

A brochure from the Madeline Island Historical Museum at La Pointe, lists the highlights of the past of this historical area. I am now putting this commentary in the CONGRESSIONAL RECORD. The listing follows:

HIGHLIGHTS OF THE PAST

It is possible that Etienne Brule came to the region as early as 1618—two years before the Pilgrims landed at Plymouth Rock. The French trading post, located on the nearby bay was a thriving settlement when George Washington was born, and the American Fur Company's factory, under John Jacob Astor, was exploiting the region when Abraham Lincoln was a young man.

Some of the highlights of past history are as follows:

1659—Pierre Esprit Radisson and Medart Chouart, Sieur des Groseilliers came to Chequamegon Bay and traded with the Indians.

1661—Father Rene Menard, a Jesuit priest, came but lost his life on an errand of mercy.

1665—Father Claude Jean Allouez, another Jesuit, came and spent three years endeavoring to convert the natives to Christianity.

1669—Father Jacques Marquette followed Allouez but was forced to leave in 1670 due to the hostility of the Sioux Indians.

1679—Daniel Greysolon, Sieur Dulhut (later known as Duluth) spent the winter on Chequamegon Bay, and in the spring of 1680 discovered and traveled over the Brule-St. Croix route to the Mississippi.

1693—Pierre Le Sueur founded a trading post on the south end (modern Grant's Point) of Madeline Island.

1718—Paul le Gardeur, Sieur de St. Pierre, built a French post near the present Old Mission, and this survived until 1763 when the French were conquered by the English.

1793—Michel Cadotte founded a trading post for the (British) North West Company on the south end of the island, not far from Le Sueur's site of one hundred years before.

1816—This post was taken over by the American Fur Company which, after moving to present La Pointe in 1835, finally failed in 1845. From this time, the village gradually faded in importance until about 1895 when the locality gained prominence as a summer retreat.

As an interesting background, here is a brief description of the 23 islands comprising the Apostle Islands:

LONG ISLAND

Originally this was part of Chequamegon Point and did not become an island until about 1821. Therefore the early French and Indian names were applied to the entire peninsula. Indian name: Shagewomekong—"Soft Beaver Dam." Width: from 100 feet to ¼ mile. Acreage: about 325.

There is a lighthouse situated on the north side of the island about 1¼ miles from its west end. It is equipped with a fog horn, radio direction apparatus and radio tele-

phone. A smaller range light is located on the extreme west end, and this has a fog bell in conjunction. The island is a long and narrow sand spit with a growth of stunted pine. In years past it supported a profusion of blueberries, but these have died out to a considerable extent.

MADELINE ISLAND

Indian name: Moningwunakauning Miniss—"The Island of the Golden Breasted Woodpecker." (Miniss is the Ojibway for Island.) French names: Isle Detour, La Ronde, Montreal, St. Michael's, La Pointe, St. Esprit, Michel.

English names: Cadotte, Woodpecker, Yellow Hammer, Middle, La Pointe, Magdaline, Madeleine, Madelaine, Michael.

Length: 12½ miles. Width: varying from 1½ miles at the middle waist to 3½ miles. Acreage: about 13,168.

This is the only island with a permanent settlement and a system of roads. The fixed population is about 175, but this is increased during the summer months to about 500. There is one inn open in the summer only, the Chateau Madeleine. The village has a grade school and two churches, a Roman Catholic, and an Evangelical and Reformed Protestant. There are also three stores and a post office.

The island supports a number of farms, one or two of which have been fairly prosperous. The others, for the most part, might be classified as subsistence farms only. The short growing season and the glacial boulder drift are not conducive to large crops save where there has been a deep accumulation of forest humus. Aside from the summer tourist and resident trade, the economy of the island largely depends upon fishing. The fishermen inhabit the east side of the island where they are near the fishing grounds and reefs of the lake.

The island has been logged thoroughly, and all that remains of virgin timber is found at the northeast point where the treaty of 1854 reserved about 100 acres as a base from which the Indians might fish. A few isolated trees which the loggers missed appear here and there. The rest of the island is covered with second growth evergreen, and a preponderance of birch, oak, maple and poplar. On the southeast side and northeast end are a number of caves and arches which the waves have worn in the sandstone.

MICHIGAN ISLAND

Indian name: Bugadabi Miniss—"Hook and Line Island." Length: 3½ miles. Width: 1¼ miles at the south end, tapering to a point at the northeast. Acreage: about 1,296.

At the southeastern end are old and new lighthouses; the old one is a picturesque brick and masonry structure with the light keepers' quarters attached, the new one is of steel tubular construction, about forty feet higher than the old, and its light is about 170 feet above the lake. The light is now operated automatically, and keepers no longer live on the island.

CAT ISLAND

Indian name: Kagagiwanjikag Miniss—"Island of Hemlock Trees." Local name: Hemlock. Other name: Shoe. Length: 3 miles. Width: 1¼ miles at its south end. Acreage: about 1,920.

The outline of the island is not unlike that of a cat, and one early observer likened it to a shoe. These similes account for two of the names. The official and local names are often garbled into a single "Catterhemlock." There is a sand point at the south end with fairly long beaches. A few wave-washed rock formations appear at the north end.

OTTER ISLAND

Indian name: Nigig Miniss—"Otter Island." Former name: Alabama: Local name Hardwood. Length: 2 miles. Width 1¼ miles. Acreage: about 963.

While there may have been otter in enough numbers to warrant the Indian name, it is extremely doubtful if there are any on this island today. There is a small sand beach on the southeast side, the site of an old logging camp. The island averages about forty feet in height, and there are interesting rock formations at the north end.

ROCKY ISLAND

Indian name: Sinsibakwado Miniss—"Maple Sugar Island." Local name: Rice's. Length: main part, 2 miles. A narrow neck extends from the main portion in a northeasterly direction for 1½ miles. Width: main part, 1 mile. Acreage: about 751.

The east side is principally sand beach, with a sand point at the south. Along the east side is an excellent harbor for small boats. This feature has been capitalized by owners of a small resort which caters to the summer troller. The resort lies close to the most popular trolling waters. Two small settlements of fishermen have been located on this side for fifty years or more. The local name stems from one of the founders of the City of Bayfield, Henry M. Rice, who at one time owned all of the stumpage on the island.

SOUTH TWIN ISLAND

Indian name: Wabaso Miniss—"Rabbit Island." Local name: Willey's. Former name: Shoal. Length: 1 mile. Width: ¾ mile. Roughly an oval in shape. Acreage: about 350.

Aside from Long Island this is the only one in the group which shows no rock outcroppings. On the west side a short sand spit reaches toward Rocky Island. An abandoned fish camp also lies on the west side.

NORTH TWIN ISLAND

Indian name: Miskwassikag Miniss—"Red Stone Island." Local name: Brownstone. Former name: Cat. Length: 1 mile. Width: about ¼ mile at the center and tapering to points at each end. Acreage: about 158.

The island is practically all rock except for a small clay bank at the northeast corner. A small summer cottage is located at its northwest corner. Exceptionally good trolling waters lie off the north end at a distance of about two miles.

RASPBERRY ISLAND

Indian name: Miskominikan Miniss—"Island of Raspberries." Former name: Cranberry. Length: about 1 mile over its irregular shape. Width: about ½ mile. Acreage: about 293.

There is an excellent sand beach at the southeast point. There is a lighthouse on the south side equipped with a fog bell, both of which are operated entirely automatically, with no keepers in attendance.

BEAR ISLAND

Indian name: Mako Miniss—"Bear Island." Length: 2 miles. Width: 1¾ miles. Acreage: about 1,590.

While called Bear, the charts show an island shaped like a turtle, with head and forefeet to the north, and tail toward the south. Viewed from the water it has the silhouette of a whale. At the southeast point there is a long sand spit with excellent beaches. A fish camp has been located here for many years. There are picturesque rock formations on the east and north sides.

DEVIL'S ISLAND

Indian name: Matchimanitou Miniss—"Evil Spirit Island." Former names: Brownstone, Rabbit, Barney & Lamborn's. Length: 1¼ miles. Width: ½ mile. Acreage: about 318.

This is the northernmost body of land in Wisconsin, and is one of the most unusual islands in the group. Some of the deepest and most extensive cave formations on Lake Superior are found at its northern end. The entire island is owned by the Federal Government. An important lighthouse with a fog horn, radio direction apparatus and radio telephone is located at the north end. The keeper's small gasoline boat is kept at the south end, in the protection of a massive dock. The island supports a low ground growth, rather stunted trees and an abundance of very large blueberries.

SAND ISLAND

Indian name: Wababiko Miniss—"White Rock Island." Length and Width: about 2 miles, with a narrow neck about 1 mile long extending northward from the northeast corner. Acreage: about 2,900.

One of the phenomena of this island is the shoal connecting it with the mainland two miles away. This is entirely of sand, and geologists believe that it will eventually make a peninsula of the island. Soundings average about six feet in depth the entire distance. Those taken in 1823 showed depths of from 46 to 50 feet. The latter were made by Lieutenant Henry Bayfield, after whom the City and County of Bayfield were named.

At the north end of the projecting neck there is an automatic lighthouse. There are two fish camps on the east side, and at one time there was a small summer resort located at the southeast corner. Around the northwest corner are rather extensive cave formations.

EAGLE ISLAND

Indian name: Nabikwana Miniss—"Boat Island." Local name: Steamboat. Length and Width: barely ½ mile. Acreage: about 25.

Mr. TAYLOR. Mr. Chairman, I yield such time as he may consume to the gentleman from California (Mr. BURTON).

Mr. BURTON of California. Mr. Chairman, after the profound and moving address of the gentleman from Wisconsin (Mr. O'KONSKI), there is little that anyone can add.

Mr. Chairman, I rise in support of this legislation.

Mr. Chairman, the approval of this legislation—after so many years—reflects great credit on the many who have worked long and hard for this legislation.

Particular credit must be accorded to our distingiushed colleague, the gentleman from Wisconsin (Mr. KASTENMEIER).

This legislation ran the grave danger of being shunted aside this Congress—as it had been in the past. Due to the tireless persistence of BOB KASTENMEIER, who patiently met objection after objection posed by our colleagues, this noble project is now on the threshold of reality.

Future generations will owe a debt to many—but most of all to our effective colleague, Congressman KASTENMEIER.

Mr. TAYLOR. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. There being no further requests for time, pursuant to the rule the Clerk will now read the substitute committee amendment printed in the reported bill as an original bill for the purpose of amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to conserve and develop for the benefit, inspiration, education, recreational use, and enjoyment of the public certain significant islands and shoreline of the United States and their related geographic, scenic, and scientific values, there is hereby established the Apostle Islands National Lakeshore (hereinafter referred to as the "lakeshore") in Ashland and Bayfield Counties, Wisconsin, consisting of the area generally depicted

on the map entitled "Apostle Islands National Lakeshore", numbered NL–AI–91,000, sheets 1 and 2, and dated June 1970. The map shall be on file and available for public inspection in the office of the Director, National Park Service, Department of the Interior.

SEC. 2. No lands held in trust by the United States for either the Red Cliff Band or Bad River Band of the Lake Superior Chippewa Indians, or for allottees thereof, shall be acquired or included within the boundaries of the lakeshore established by this Act, with the following exception:

If the Indians who own more than 50 per centum of the interest in allotment number 74 GL or allotment number 135 in the Red Cliff Reservation agree to sell the allotment to the Secretary of the Interior (hereinafter referred to as the "Secretary"), the Secretary may consent to the sale on behalf of the other owners, purchase the allotment for the negotiated price and revise the boundaries of the lakeshore to include the allotment.

SEC. 3. The Secretary may acquire within the boundaries of the lakeshore lands and interests therein by donation, purchase with donated or appropriated funds, or exchange, but lands and interests in lands owned by the State of Wisconsin may be acquired only by donation. Notwithstanding any other provision of law, any Federal property located within the boundaries of the lakeshore may, with the concurrence of the agency having custody thereof, be transferred without transfer of funds to the administrative jurisdiction of the Secretary for the purposes of the lakeshore.

SEC. 4. (a) With the exception of not more than eighty acres of land to be designated within the lakeshore boundaries by the Secretary as an administrative site, visitor center, and related facilities, as soon as practicable, any owner or owners of improved property on the date of its acquisition by the Secretary may, as a condition of such acquisition, retain for themselves and their successors or assigns a right of use and occupancy of the improved property for noncommercial residential purposes for a definite term not to exceed twenty-five years, or, in lieu thereof, for a term ending at the death of the owner, or the death of his spouse, whichever is the later. The owner shall elect the term to be reserved. The Secretary shall pay to the owner the fair market value of the property on the date of such acquisition less the fair market value on such date of the right retained by the owner.

(b) A right of use and occupancy retained pursuant to this section may be terminated with respect to the entire property by the Secretary upon his determination that the property or any portion thereof has ceased to be used for noncommercial residential or for agricultural purposes, and upon tender to the holder of a right an amount equal to the fair market value, as of the date of the tender, of that portion of the right which remains unexpired on the date of termination.

(c) The term "improved property", as used in this section, shall mean a detached, noncommercial residential dwelling, the construction of which was begun before January 1, 1967 (hereinafter referred to as "dwelling"), together with so much of the land on which the dwelling is situated, the said land being in the same ownership as the dwelling, as the Secretary shall designate to be reasonably necessary for the enjoyment of the dwelling for the sole purpose of noncommercial residential use, together with any structures accessory to the dwelling which are situated on the land so designated.

SEC. 5. The Secretary shall permit hunting, fishing, and trapping on lands and waters under his jurisdiction within the boundaries of the lakeshore in accordance with the appropriate laws of Wisconsin and the United States to the extent applicable, except that he may designate zones where, and establish periods when, no hunting, trapping, or fishing shall be permitted for reasons of public safety, administration, fish or wildlife management, or public use and enjoyment. Except in emergencies, any regulations prescribing any such restrictions shall be put into effect only after consultation with the appropriate State agency responsible for hunting, trapping, and fishing activities.

SEC. 6. The lakeshore shall be administered, protected, and developed in accordance with the provisions of the Act of August 25, 1916 (39 Stat. 535; 16 U.S.C. 1, 2–4), as amended and supplemented; and the Act of April 9, 1924 (43 Stat. 90; 16 U.S.C. 8a et seq.), as amended, except that any other statutory authority available to the Secretary for the conservation and management of natural resources may be utilized to the extent he finds such authority will further the purposes of the Act.

SEC. 7. In the administration, protection, and development of the lakeshore, the Secretary shall adopt and implement, and may from time to time revise, a land and water use management plan which shall include specific provision for—

(a) protection of scenic, scientific, historic, geological, and archeological features contributing to public education, inspiration, and enjoyment;

(b) development of facilities to provide the benefits of public recreation together with such access roads as he deems appropriate; and

(c) preservation of the unique flora and fauna and the physiographic and geologic conditions now prevailing on the Apostle Islands within the lakeshore: *Provided*, That the Secretary may provide for the public enjoyment and understanding of the unique natural, historical, scientific, and archeological features of the Apostle Islands through the establishment of such trails, observation points, exhibits, and services as he may deem desirable.

SEC. 8. There are authorized to be appropriated not more than $4,250,000 for the acquisition of lands and interests in lands and not more than $5,000,000 for the development of the Apostle Islands National Lakeshore.

Mr. ASPINALL (during the reading). Mr. Chairman, I ask unanimous consent that the further reading of the committee amendment be dispensed with, and that it be printed in the RECORD.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

AMENDMENT OFFERED BY MR. KYL

Mr. KYL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KYL: Page 12, line 10, strike out all of Section 1 and insert in lieu thereof:

"That in order to conserve and develop for the benefit, inspiration, education, recreational use, and enjoyment of the public certain significant islands of the United States and their related geographic, scenic, and scientific values, there is hereby established the Apostle Islands National Lakeshore (hereinafter referred to as the 'lakeshore') in Ashland and Bayfield Counties, Wisconsin, consisting of the area generally depicted on the map entitled 'Apostle Islands National Lakeshore', numbered NL–AI–91,000, sheet 1, and dated June 1970. The map shall be on file and available for public inspection in the office of the Director, National Park Service, Department of the Interior."

Mr. KYL. Mr. Chairman, this amendment does one thing along with a couple of perfecting devices, to accomplish that single purpose. It would create a national seashore as would the original legislation, but that seashore would comprise 20 islands, all of the islands included in the bill which has been brought to the floor today. It would not include—and this is the difference—it would not include those mainland areas described in the bill that we are debating.

This amendment, in short, then would provide a significant park area—a significant lakeshore area—because this is not a national park but a lakeshore area. But it would also do so without violating the desires of the Indian groups who have lived in this area since long before the white man came.

Mr. TAYLOR. Mr. Chairman, I rise in opposition to the amendment.

Originally, the lakeshore area proposal provided for the inclusion of a considerable amount of Indian-owned lands provided the Indians elected to participate.

While the Indians at one time seemed to favor the proposal, they later became hostile to it. For this reason, the bill was amended while it was being considered in committee to take out more than 15,000 acres of Indian-owned land.

As a matter of fact, we took out all of the Indian-owned land except two parcels which I will mention in a minute.

The boundaries of the lakeshore were redrawn by the committee to exclude all Indian-owned lands except the bill does provide that two specified parcels of Indian-allotted lands which are located on the lakefront may be purchased by the Secretary if—and only if—a majority of the owners agree to the sale. These two parcels contain about 84 acres, and belong to numerous owners scattered in various parts of the Nation. These tracts are barren, unimproved, uncultivated, unproductive, and are not supporting one single Indian.

The area does include 1,541 acres of land lying within the original boundary of the Red Cliff Indian Reservation, but this is land that has been alienated by the Indians—that is, it has been sold to white purchasers with the approval of the Commissioner of Indian Affairs. The Indians have not taken any action to indicate that they have any plans to reacquire this land.

These Indians now say, "Do not create a part on this land because we may some day want to buy the land back." In my opinion, that is going too far.

I believe that Indian hostility has been encouraged to a great extent by white property owners for whom the Indians work.

During the field hearings in Wisconsin, I asked one Indian who was opposing the bill as a witness if he would oppose the lakeshore area if all the Indian-owned land were removed from the area. And he said, "Yes." I say, "Why?" He said, "We must protect our white brothers."

I agree with the gentleman from Pennsylvania and the gentleman from Wisconsin that these Indians are being used for selfish purposes. I am a member of the Indian Affairs Subcommittee and am as anxious as any Member of the House to see that the Indians are properly protected. But I believe in dealing with this bill we have gone as far as we

can and as far as reasonable in protecting their rights. As a matter of fact, I believe that in creating this park we will work a great economic advantage to the Indians. In my district of North Carolina we have the Cherokee Indian Reservation. It is located adjacent to the Great Smoky Mountains National Park. I am proud to be an honorary chief in that reservation. This park has caused the construction of more than a dozen fine motels on the Indian reservation. It has established restaurants, filling stations, craft shops, and other Indian-owned businesses.

It has established a market for crafts which many Indians work on during the entire year. It has accomplished wonders in raising the standard of living and providing employment for the Cherokee Indians.

I believe the Apostle Islands Lakeshore should provide some of the same results for the Red Cliff Indians and the Bad River Indians, whose reservation is next door.

Just one more statement: If and when this bill goes to conference we will insist and demand that the House language protecting the Indians be retained.

Mr. SAYLOR. Mr. Chairman, I rise in opposition to the amendment, and ask that it and all other amendments being offered, which will eliminate the Lakeshore Drive, be defeated.

Very frankly, I personally would have liked to have brought to the floor the Apostle Islands National Lakeshore as recommended by the Department of the Interior. That lakeshore would have had the Apostle Islands unit, the Red Cliff unit, and the Kakagon-Bad River slough unit. It would have comprised 55,787 acres of land, 33,050 acres of water and a 30 mile scenic shoreline drive. This would have provided a really viable unit to our national park system, and I think would have been a benefit to all the country, as well as all the Indians. I predict that when the House today passes this bill, within a matter of years the present Wisconsin Indian leadership that is opposing the establishment of this national lakeshore will come to their Representatives in both the House and the Senate and ask that this Apostle Islands National Lakeshore be expanded to include the project as it was originally proposed by the Department of the Interior.

I therefore ask that the amendment be defeated and that the bill as reported pass.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa.

The amendment was rejected.

The CHAIRMAN. Are there further amendments? If not, the question is on the committee amendment.

The committee amendment was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker pro tempore (Mr. ALBERT) having assumed the chair, Mr. PRICE of Illinois, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 9306) to provide for the establishment of the Apostle Islands National Lakeshore in the State of Wisconsin, and for other purposes, pursuant to House Resolution 1186, reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER pro tempore. Under the rule, the previous question is ordered.

The question is on the amendment.

The amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. KYL

Mr. KYL. Mr. Speaker, I offer a motion to recommit.

The SPEAKER pro tempore. Is the gentleman opposed to the bill?

Mr. KYL. I am, Mr. Speaker.

The SPEAKER pro tempore. The clerk will report the motion to recommit.

The Clerk read as follows:

Mr. KYL moves to recommit the bill H.R. 9306 to the Committee on Interior and Insular Affairs with instructions to report the same back to the House forthwith, with the following amendment: Page 12, line 10, strike out all of section 1 and insert in lieu thereof:

"That in order to conserve and develop for the benefit, inspiration, education, recreational use, and enjoyment of the public, certain significant islands of the United States and their related geographic, scenic, and scientific values, there is hereby established the Apostle Islands National Lakeshore (hereinafter referred to as the 'lakeshore') in Ashland and Bayfield Counties, Wisconsin, consisting of the area generally depicted on the map entitled 'Apostle Islands National Lakeshore', numbered NL–AI–91,000, sheet 1, and dated June 1970. The map shall be on file and available for public inspection in the office of the Director, National Park Service, Department of the Interior."

The SPEAKER pro tempore. Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER pro tempore. The question is on the motion to recommit.

The question was taken, and the Speaker pro tempore announced that the noes appeared to have it.

Mr. KYL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 29, nays 199, answered "present" 1, not voting 200, as follows:

[Roll No. 293]

Mr. Morgan with Mr. Farbstein.
Mr. Jacobs with Mr. Diggs.
Mr. Hanley with Mr. Symington.
Mr. Whitten with Mr. Yates.

Messrs. McFALL, WILLIAM D. FORD, DULSKI, CAREY, GUDE, and HOSMER changed their vote from "yea" to "nay."

The result of the vote was announced as above recorded.

The doors were opened.

The SPEAKER pro tempore (Mr. MILLS). The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

The SPEAKER pro tempore. Pursuant to the provisions of House Resolution 1186, the Committee on Interior and Insular Affairs is discharged from the further consideration of the bill S. 621.

The Clerk read the title of the Senate bill.

MOTION OFFERED BY MR. TAYLOR

Mr. TAYLOR. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. TAYLOR moves to strike out all after the enacting clause of S. 621 and insert in lieu thereof the provisions of H.R. 9306, as passed, as follows:

That in order to conserve and develop for the benefit, inspiration, education, recreational use, and enjoyment of the public certain significant islands and shoreline of the United States and their related geographic, scenic, and scientific values, there is hereby established the Apostle Islands National Lakeshore (hereinafter referred to as the "lakeshore") in Ashland and Bayfield Counties, Wisconsin, consisting of the area generally depicted on the map entitled "Apostle Islands National Lakeshore", numbered NL–AI–91,000, sheets 1 and 2, and dated June 1970. The map shall be on file and available for public inspection in the office of the Director, National Park Service, Department of the Interior.

SEC. 2. No lands held in trust by the United States for either the Red Cliff Band or Bad River Band of the Lake Superior Chippewa Indians, or for allottees thereof, shall be acquired or included within the boundaries of the lakeshore established by this Act, with the following exception:

If the Indians who own more than 50 per centum of the interest in allotment number 74 GL or allotment number 135 in the Red Cliff Reservation agree to sell the allotment to the Secretary of the Interior (hereinafter referred to as the "Secretary"), the Secretary may consent to the sale on behalf of the other owners, purchase the allotment for the negotiated price and revise the boundaries of the lakeshore to include the allotment.

SEC. 3. The Secretary may acquire within the boundaries of the lakeshore lands and interests therein by donation, purchase with donated or appropriated funds, or exchange, but lands and interests in lands owned by the State of Wisconsin may be acquired only by donation. Notwithstanding any other provision of law, any Federal property located within the boundaries of the lakeshore may, with the concurrence of the agency having custody thereof, be transferred without transfer of funds to the administrative jurisdiction of the Secretary for the purposes of the lakeshore.

SEC. 4. (a) With the exception of not more than eighty acres of land to be designated within the lakeshore boundaries by the Secretary as an administrative site, visitor center, and related facilities, as soon as practicable, any owner or owners of improved property on the date of its acquisition by the Secretary may, as a condition of such acquisition, retain for themselves and their successors or assigns a right of use and occupancy of the improved property for noncommercial residential purposes for a definite term not to exceed twenty-five years, or, in lieu thereof, for a term ending at the death of the owner, or the death of his spouse, whichever is the later. The owner shall elect the term to be reserved. The Secretary shall pay to the owner the fair market value of the property on the date of such acquisition less the fair market value on such date of the right retained by the owner.

(b) A right of use and occupancy retained pursuant to this section may be terminated with respect to the entire property by the Secretary upon his determination that the property or any portion thereof has ceased to be used for noncommercial residential or for agricultural purposes, and upon tender to the holder of a right an amount equal to the fair market value, as of the date of the tender, of that portion of the right which remains unexpired on the date of termination.

(c) The term "improved property", as used in this section, shall mean a detached, noncommercial residential dwelling, the construction of which was begun before January 1, 1967 (hereinafter referred to as "dwelling"), together with so much of the land on which the dwelling is situated, the said land being in the same ownership as the

dwelling, as the Secretary shall designate to be reasonably necessary for the enjoyment of the dwelling for the sole purpose of noncommercial residential use, together with any structures accessory to the dwelling which are situated on the land so designated.

SEC. 5. The Secretary shall permit hunting, fishing, and trapping on lands and waters under his jurisdiction within the boundaries of the lakeshore in accordance with the appropriate laws of Wisconsin and the United States to the extent applicable, except that he may designate zones where, and establish periods when, no hunting, trapping, or fishing shall be permitted for reasons of public safety, administration, fish or wildlife management, or public use and enjoyment. Except in emergencies, any regulations prescribing any such restrictions shall be put into effect only after consultation with the appropriate State agency responsible for hunting, trapping, and fishing activities.

SEC. 6. The lakeshore shall be administered, protected, and developed in accordance with the provisions of the Act of August 25, 1916 (39 Stat. 535; 16 U.S.C. 1, 2–4), as amended and supplemented; and the Act of April 9, 1924 (43 Stat. 90; 16 U.S.C. 8a et seq.), as amended, except that any other statutory authority available to the Secretary for the conservation and management of natural resources may be utilized to the extent he finds such authority will further the purposes of the Act.

SEC. 7. In the administration, protection, and development of the lakeshore, the Secretary shall adopt and implement, and may from time to time revise, a land and water use management plan which shall include specific provision for—

(a) protection of scenic, scientific, historic, geological, and archeological features contributing to public education, inspiration, and enjoyment;

(b) development of facilities to provide the benefits of public recreation together with such access roads as he deems appropriate; and

(c) preservation of the unique flora and fauna and the physiographic and geologic conditions now prevailing on the Apostle Islands within the lakeshore: *Provided*, That the Secretary may provide for the public enjoyment and understanding of the unique natural, historical, scientific, and archeological features of the Apostle Islands through the establishment of such trails, observation points, exhibits, and services as he may deem desirable.

SEC. 8. There are authorized to be appropriated not more than $4,250,000 for the acquisition of lands and interests in lands and not more than $5,000,000 for the development of the Apostle Islands National Lakeshore.

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 9306) was laid on the table.

LEGISLATIVE PROGRAM

(Mr. GERALD R. FORD asked and was given permission to address the House for 1 minute.)

Mr. GERALD R. FORD. Mr. Speaker, I take this time for the purpose of asking the distinguished majority leader the program for the remainder of this week, if any, and the schedule for next.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the distinguished gentleman from Oklahoma.

Mr. ALBERT. Mr. Speaker, in response to the inquiry of the distinguished minority leader, we have completed quite an extensive program for the week, including every bill listed on the program, and will ask to go over upon the announcement of the program for next week.

Monday is Consent Calendar day.

Also on Monday there are 12 suspensions, as follows:

H.R. 16607, National Council on Marine Resources and Engineering Development Extension;

H.R. 15549, Seamen's Service Act;

H.R. 14678, penalties for illegal fishing in fishery zone;

S. 3153, conservation of protective coral reefs;

H.R. 10634, State income tax withholding for interstate transportation employees;

H.R. 13543, to establish a program of research and promotion for wheat;

H.R. 18686, to authorize the transfer of Burley tobacco acreage allotments;

H.R. 15978, continuance of civil government for the Trust Territory of the Pacific Islands;

H.R. 18410, to establish the Fort Point National Historic Site, Calif.;

H.R. 1160, to establish the Wilson's Creek Battlefield National Park;

H.R. 140, to establish the Andersonville National Historic Site, Ga.; and

H.R. 13934, to revise the boundaries of Minute Man National Historical Park.

In addition to the suspensions there is scheduled for consideration on Monday H.R. 18306, to authorize U.S. participation in certain international financial institutions, under an open rule with 2 hours of debate.

For Tuesday and the balance of the week the program is as follows:

Tuesday is Private Calendar day.

There is scheduled for consideration H.R. 17654, the Legislative Reorganization Act of 1970, and we expect to conclude consideration.

Also scheduled are H.R. 18776, to establish the Sleeping Bear Dunes National Lakeshore, Mich., under an open rule with 2 hours of debate; and

H.R. 18583, Comprehensive Drug Abuse Prevention and Control Act of 1970, subject to a rule being granted.

This announcement is made subject to the usual reservation that conference reports may be brought up at any time and any further program may be announced later.

May I add, Mr. Speaker, after consultation with the distinguished gentleman from California (Mr. SISK), we are determined to, and plan definitely, to finish the legislative reorganization bill not later than Thursday of next week.

We ask the cooperation of Members in that regard. We also hope to get other business done next week but completion of the reorganization bill is one thing we said we would do before we left for the recess and it was one of the considerations involved in taking the recess. We would like to reiterate to Members that we are determined that that bill, which I think has been considered for 8 or 9 days already, shall be considered for 3 days next week; that is, Tuesday, Wednesday, and Thursday, the heart of the week, and that we will finish it at that time.

ADJOURNMENT OVER TO MONDAY, SEPTEMBER 14

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER pro tempore (Mr. MATSUNAGA). Without objection it is so ordered.

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS FOR THE WEEK OF SEPTEMBER 14

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule may be dispensed with on Wednesday next week.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ALBERT. Mr. Speaker, I make the further announcement that we will probably have the political broadcasting conference report next week.

STATUS OF ADMINISTRATION LEGISLATIVE PROPOSALS REFERRED TO COMMITTEE ON WAYS AND MEANS

(Mr. MILLS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include a table.)

Mr. MILLS. Mr. Speaker, from time to time, and recently with increasing frequency, there is comment and discussion about how well Congress and its committees are carrying out their responsibilities, in terms of consideration by the committees and the Congress of the various proposals that are sent to us by the President.

I think it is fair to state that the Committee on Ways and Means has had as heavy a workload in this 91st Congress as it has ever had in its entire history since its creation as a standing committee in 1802, and certainly the responsibilities which the committee has carried this Congress have been as heavy as those carried by any committee of the House. In view of this, and in order to permit facts to speak for themselves, I thought it might be helpful to all Members to present in chart form the status of legislative recommendations submitted by President Nixon which fall within the jurisdiction of the Committee on Ways and Means so as to show what action has been taken by the committee and the House on these recommendations.

Please note when you review this summary chart which I shall place in the RECORD that some of these subject headings encompass a vast amount of both committee and staff work in terms of volume and complexity. Also it will be noted that in terms of "major" proposals, there are, literally, only two, among the many which have been received, on which the Committee on Ways and Means has not yet taken action, and a part of one of these was considered in connection with the Tax Reform Act.

The chart to which I refer follows:

STATUS OF LEGISLATIVE RECOMMENDATIONS OF THE NIXON ADMINISTRATION UNDER THE JURISDICTION OF THE COMMITTEE ON WAYS AND MEANS AS OF SEPT. 10, 1970

I. Messages of the President—Subject matter	Date of message	Date draft bill received	Status of proposal
Tax revision	Apr. 21, 1969	None	Action completed (7 weeks of public hearings, beginning on Feb. 18, 1969, followed by 38 days in executive session; Public Law 91-172, H.R. 13270, the Tax Reform Act of 1969).
Debt limit	(1) February 24, 1969	March 5, 1969	Action completed (Public Law 91-8, H.R. 8508—Tax reform hearings interrupted for public hearing and executive consideration of debt limit).
	(2) May 14, 1970	None	Action completed (Public Law 91-301, H.R. 17802—Trade hearings interrupted for public hearing and executive consideration of debt limit.
Income tax surcharge and excise taxes	March 26, 1969	do	Action completed (public hearing followed by 7 days in executive session; Public Law 91-53, H.R. 9951; Public Law 91-172, H.R. 13270).
Airway user charges	June 16, 1969	June 17, 1969	Action completed (1 week of public hearings followed by 6 days in executive session; Public Law 91-258, title II, H.R. 14465, the Airport and Airway Revenue Act of 1970).
Unemployment insurance	July 8, 1969	July 8, 1969	Action completed (1 week of public hearings, followed by 6 days in executive session; Public Law 91-373, H.R. 14705, the Employment Security Amendments of 1970).
Drug control, etc	July 14, 1969	July 15, 1969	Committee action completed (following public hearing and executive consideration, language transmitted to Committee on Interstate and Foreign Commerce for inclusion as title II in omnibus bill reported to House.)
Welfare revision	Aug. 11, 1969	Oct. 2, 1969	Committee action completed (4 weeks of public hearings (including social security proposals) followed by 6 weeks in executive session; H.R. 16311, the Family Assistance Act of 1970, passed House Apr. 16, 1970).
Revenue sharing	Aug. 13, 1969	Sept. 23, 1969	No action as yet.
Social security	Sept. 25, 1969	Sept. 30, 1969	Committee action completed (H.R. 15095, providing a 15-percent increase in social security benefits effective Jan. 1, 1970, enacted Dec. 30, 1969 (title X, Public Law 91-172) (President had requested 10-percent increase effective Mar. 1, 1970); 4 weeks of public hearings (including welfare revision proposals) followed by 6 weeks in executive session; H.R. 17550, the Social Security Amendments of 1970, passed House May 21, 1970).
Trade and tariffs	Nov. 18, 1969	Nov. 18, 1969	Committee action completed (5 weeks of public hearings followed by 5 weeks in executive session; H.R. 18970, the Trade Act of 1970, reported to House Aug. 21, 1970).
Tax burdens of small business	Mar. 20, 1970	Apr. 21, 1970	No action as yet on proposal per se; however, some parts of subject considered in connection with Tax Reform Act.
Tax recommendations:			
(1) Accelerated collection of estate and gift taxes	Apr. 3, 1970	July 30, 1970	Public hearings commenced on Sept. 9, 1970.
(2) Tax on lead additives in gasoline	May 19, 1970	do	Do.
(3) Extension of certain excise taxes		do	Do.

I. OTHER DRAFT BILLS TRANSMITTED BY EXECUTIVE COMMUNICATION FROM EXECUTIVE BRANCH OF PRESENT ADMINISTRATION AND REFERRED TO COMMITTEE ON WAYS AND MEANS

Date referred	Subject	Action taken
Mar. 25, 1969	Treasury—income tax treatment of certain distributions pursuant to the Bank Holding Company Act of 1969.	No action as yet (H.R. 9451, Mr. Mills; legislation from another committee necessitating this action not yet enacted (H.R. 6678, reported in Senate Aug. 10, 1970)).
Apr. 2, 1969	Labor—collection of Federal unemployment tax in quarterly installments, etc.	Action completed (Public Law 91-53, H.R. 9951).
Apr. 30, 1969	Treasury—to establish a working capital fund for the Treasury.	Committee action completed (H.R. 16199, passed House May 19, 1970).
May 5, 1969	Bureau of the Budget—to eliminate limitation on number of civilian officers and employees in the executive branch.	Enactment as amendment to second Supplemental Appropriation Act (Public Law 91-47).
June 9, 1969	Treasury—extension of interest equalization tax.	Action completed (Public Law 91-128, H.R. 12829).
July 8, 1969	HEW—to limit Federal financial participation under public assistance and medicaid laws with respect to individuals in mental institutions.	Committee action completed (H.R. 17550, passed House May 21, 1970).
July 16, 1969	Treasury—to facilitate the management of the public debt by removing the interest rate ceilings on Government bonds, etc.	Action completed (Public Law 91-130, H.R. 14020).
Do	Treasury—to amend the Internal Revenue Code to permit charges for certain services.	No action as yet. (H.R. 16198, Mr. Mills).
July 30, 1969	Transportation—(1) to provide additional revenues for the highway trust fund; and (2) to provide for the imposition of waterway user charges.	No action as yet; however, see item below re extending highway trust fund.
Oct. 15, 1969	HEW—to amend the Social Security Act to improve the cost effectiveness of the medicare, medicaid, and maternal and child health programs.	Committee action completed (H.R. 17550, passed House May 21, 1970).
Dec. 2, 1969	Defense—to extend temporary provision for duty-free entry of gifts not exceeding $50 retail value from members of the Armed Forces in combat zones.	Action completed (Public Law 91-180 H.R. 15071).
Apr. 7, 1970	State—to continue until the close of Sept. 30, 1973, the International Coffee Agreement of 1968.	Hearings completed; no further action as yet.
Apr. 16, 1970	Commerce—to eliminate the duty now applicable to natural rubber containing fillers, extenders, pigments, etc.	No action as yet.
May 27, 1970	Renegotiation Board—to amend the Renegotiation Act of 1951.	No action as yet (Renegotiation Act does not expire until June 30, 1971; this is a minor proposal relating only to rate of interest imposed after finding has been made and case is under appeal)
June 10, 1970	Transportation—to extend the duration of the highway trust fund.	Committee has completed action to extend for 3 additional years except for formal approval of draft language.
July 29, 1970	Treasury—to amend the Tariff Act of 1930 to grant to the transferee of merchandise in bonded warehouse the right to administrative review of customs decisions.	No action as yet.

CURB IMPORTS—STOP EXPORTING PENNSYLVANIA JOBS

(Mr. DENT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. DENT. Mr. Speaker, in the coming fight on international trade it will be helpful to get as many viewpoints as possible.

Milton Shapp, formerly with the U.S. Commerce Department, and now a candidate for Governor of my home State of Pennsylvania, is a recognized expert in this field.

Mr. Shapp's position is clearly stated in the following address he presented to the district 6 meeting of the United Electrical Workers in Erie, Pa., on June 27, 1970.

I strongly recommend that all my colleagues study Mr. Shapp's message very carefully before considering action on any future trade legislation.

The statement follows:

UNITED ELECTRICAL WORKERS, DISTRICT 6 MEETING—ERIE, PA.

CURB IMPORTS—STOP EXPORTING PENNSYLVANIA JOBS

In 1961, as a consultant to the U.S. Department of Commerce, I participated in the discussions which resulted in the drafting of the present tariff laws.

I was an advocate of freer world trade. Even so, I was fearful at the time that because many foreign countries enjoyed a wide margin over American manufacturers in the use of more modern (post war design) machine tools and paid much lower wages than American workers earned, our nation would fall behind other nations in the production of consumer and commercial goods.

And I still would be a champion of open world trade today if not for four major factors:

1. The flood of imports in such major industries as electronics, steel, textiles, shoes, apparel, glass, chemicals, and others has reached such flood proportions that millions of American jobs are threatened.

2. Other nations through tariffs, taxes, quotas and other restrictions are keeping out U. S. goods.

3. Nixon's economic policies have created an economic recession which is leading to a depression with high unemployment nationwide.

4. Unfortunately, national recessions have always hit hardest and fastest in Pennsylvania and thus the Commonwealth faces a bleak future unless industries in this state receive protection. When the rest of the nation catches an economic cold, we get pneumonia.

NIXON MUST REVERSE POLICIES

And so, until such time as the Nixon Administration reverses its policies and seeks to expand the national economy and create more jobs (just as John Kennedy was doing at the time the present tariff law was written) I must and will fight to protect existing jobs in our nation and particularly in Pennsylvania.

It is important to analyze another major factor that has brought our nation into this serious position. Stated briefly—we have lost World War 2½.

By treaties at the end of World War II, we prevented our defeated enemies, Germany and Japan, from producing war goods. Thus, their industrial leaders were forced to concentrate on the production and marketing of consumer, commercial and industrial products. Under the Marshall Plan, we poured almost 100 billion dollars into war torn Europe and Asia to help rebuild their economies and launch their post-war manufacturers into operation.

However, it was not these acts in themselves which put us into our current crisis. We were duty-bound to help those war torn countries. But on the other hand, we were *not* duty-bound to make the next step, which was to achieve for ourselves a world stranglehold on the war material market.

Today, belatedly, we wake up to the realization that our foreign competitors have virtually stolen not only *worldwide* markets for consumer and commercial products, but are likewise sweeping our domestic markets. True, lower wages are a factor. But we delude ourselves if we do not recognize another extremely important factor. Foreign businesses devoted themselves diligently to producing non-military products and concentrated on marketing these products. Meanwhile, American manufacturers of electronics, aircraft, hardward, pharmaceuticals and chemical products devoted a major portion of their effort to gaining a worldwide monopoly for their products as part of our military armaments. Even many apparel manufacturers found it profitable and much simpler to produce their products for the military, than to establish consumer markets.

Now, our nation feels the pinch. We are the world's leading producer of war products. But, even our own citizens protest. We produce equipment for which this nation must generate its own markets—and this is a frightening prospect. It might be of greater value to the future of this nation if the Nixon Administration were to take the money now being spent for ABM's and MIRV's and the-obsolete-before-built battleships and subsidize commercial industries to develop markets for products for peace.

ESTABLISH OFFICE FOR CONVERSION

As Governor of Pennsylvania, I shall establish an Office of Conversion to help our manufacturers convert military production to consumer goods, but this would be of much greater value if accomplished on a national basis.

Coupled with its present emphasis on war goods, the Nixon Administration has managed to achieve an additional fantastic situation—rapidly increasing inflation along with rising unemployment in the middle of a war boom economy.

Even the captains of big business will not allow this situation to continue much longer. The alert was sounded recently by the President of the Bank of America. The war must end, he said. "It's bad for business." The Undersecretary of the Treasury joined in and said, "The war is bad for the stock market." The head of IBM also deplores our military position, as "bad for everyone."

Against this background, I should like to discuss some of the gravest elements of the import threat. Imports affect many industries, but the strongest challenges today as far as Pennsylvanians are concerned are coming in electronics, footwear, steel and apparel fields. I wonder how many Pennsylvanians realize the importance of these industries to their state.

For example, our largest employer is steel with over 280,000 workers. In the textile-footwear-apparel industries, Pennsylvania ransk eleventh among the states in the percentage of its work force employees. Some 270,000 persons work in this field. The electronics industry employs more than 150,000 in Pennsylvania.

The flood of imports hitting the electronics industry is severely cutting employment in Pennsylvania and nationwide. I know of no major American radio set manufacturer that wires its chassis in the United States. The components (largely foreign) are assembled in Japan, Taiwan, the Philippines, Hong Kong, South Korea and then the chassis are shipped to the states for insertion in cabinets. Likewise, over 4,000,000 TV sets per year are assembled overseas for American manufacturers and merely inserted into their cabinets here and sold as if they were indeed American-made products.

Tape recorders, Hi Fi equipment, switch gears, transformers, tape cassettes, transistor radios, electronic control circuits, computer cards, fire detection equipment and hundreds of other electronic items are assembled overseas and sold in the United States mostly by American firms under American trade names. It is impossible to calculate the tens of thousands of American jobs lost because of this practice.

In the apparel field there seems to be an endless flow of imports. Cloth, shirts, suits, blouses, under garments, brassieres, jockstraps, socks, curtains, (you name it) pouring in from Japan, Taiwan, Hong Kong, the Philippines and yes, Portugal, Turkey and other low wage areas of the world, are inundating our market. Already this year, thousands of workers in Pennsylvania's apparel industry have lost their jobs, and many manufacturers have closed their doors.

The shoe industry is also hit very hard. Pennsylvania is one of the major shoe producing states in the Union. There are approximately 150 shoe factories here, employing close to 29,000 people. In 1968, these factories produced 85 million pairs of shoes. In 1969—due in large part to imports—this dropped to 78 million pairs. 1970 will see a further drop both in production and in jobs.

Some 200 million pairs of footwear are expected to be imported in the United States this year. If these shoes were to be manufactured in the States, it would mean 40,000 additional workers, working 40-hour weeks.

Of major concern is this fact. A large percentage of Pennsylvania's shoe and apparel manufacturers are located in small towns scattered throughout the state. Often these companies are the major employers in the communities in which they operate. Thus, a major cut in the work force or worse, closing of these plants, might cause a major economic collapse bordering on catastrophe in these areas.

WESTERN PENNSYLVANIA MAY LOSE STEEL PRODUCTION

Our steel areas particularly in the western part of the state, are likewise in a critical position. As our production slackens due to the combined effects of the Nixon recession and the quantity of imports, many of our mills—particularly in western Pennsylvania—are in danger of being shut down and may never open again. The steel industry in the past six years has built tremendous overcapacity in Ohio, Illinois, Indiana, Michigan and Wisconsin along the shore of the Great Lakes. These plants are more modern than our open-hearth rolling mill plants and are located in the Great Lakes area where combined raw and finished material shipping costs are lower. Thus, any long term decline in steel demand may create ghost towns in the steel producing areas of western Pennsylvania.

The Journal of Commerce reported recently that the steel industry has estimated the impact of increased steel imports equal the "exporting of 70,000 jobs." Under existing circumstances, many of these jobs might be lost permanently in Pennsylvania unless we stop the flood of steel imports.

We can add to the list. Other products flood our markets. For example, few, if any, sewing machines—even those bearing American brand names—are made in the U.S.A. American typewriter production is dried up. Many items of sporting goods such as baseball gloves, basketballs, ping pong paddles and balls are made almost totally overseas. Watches, clocks, and quality glass production in the United States is virtually ended . . . and the list goes on. . . .

Many of these suppliers of foreign goods are foreign companies, owned by local people. However, an increasing number of foreign manufacturers are joint ventures with local and American capital involved.

But there is a new trend developing that forebodes even heavier penetration of our markets by foreign made goods.

An example of this involves Burlington Industries, one of America's largest textile and carpet manufacturers. Burlington Industries, according to the Japan Economic Journal last March 10, has signed an agreement with Mitsubishi Rayon Co., Ltd., to manufacture carpets, primarily for the U.S. market. We have a good number of carpet mills here in Pennsylvania, in Philadelphia and Carlisle. How many jobs will be lost in our state due to this combine?

This is a whole new trend which the Nixon Administration has failed to even note in international trade—the multi-international conglomerate. In their most common form, these conglomerates use American capital to underwrite production of goods for the American market in foreign countries where labor costs are lower. They are then marketed here under American trade names.

Let's run down a brief list of such operations from news items culled from the business press. Ford Motor Company is Britain's biggest exporter. Weyenburg Shoe Manufacturing Co. of Milwaukee is building a $4.8 million plant in Dundalk, Ireland, and plans to export the plant's entire output of 750,000 pairs annually to the United States.

The Cummins Engine Co., of Fort Wayne, Indiana, says it has captured 25 per cent of the United States diesel engine market for medium-duty commercial vehicles with engines made in Darlington, England.

The U.S. Department of Commerce reports that between 1950 and 1968, U.S. multi-nationals increased their direct U.S. investment abroad from $10 million to more than $60 million.

Fortune Magazine reports that the buying of cheap labor and parts abroad and selling the finished product in the United States at American prices merely tells part of the story. Fortune says these firms "can also adjust prices on these intra-company sales according to a deliberate plan . . . a useful device for keeping down the overall corporate tax liability."

These kinds of activity threaten the economic health of this nation. It is an attempt by some greedy people to kill the American golden goose, to destroy the economic system which has been built up over the years and through the combined work of labor unions and consciencious management has brought our people the world's highest standard of living.

STOP EXPORTING JOBS

I say that the time has come for Pennsylvania to stop exporting jobs by permitting the virtual unlimited import of goods.

We must put pressure on the Nixon Administration because we cannot expect to continue to dry up the job market for Americans and still expect them to consume goods.

In the long run, our world trade problem is not one of free trade or protectionism. It is one of fair standards and fair competition.

As a nation, as a political entity, as a trade market, as a pool of workers long guaranteed rights and benefits through unionism, we must now look to extend these protections to workers in other nations.

NEED IS FOR WORLDWIDE LABOR STANDARDS

We cannot permit cut-throat world competition based upon coolie labor standards any more than we can permit such competition here at home. We erected minimum wage laws at home to eliminate the sweatshop and outright wage slavery. Trade policy in the United States must be a legitimate weapon to establish fair labor standards and fair competition among our trading partners.

The theoretical goal of free trade will never be possible unless we work to have the labor forces of other nations put on an equal footing with our own. This cut-throat competition between nations based on exploiting lower-priced labor can only be destructive to our own economy.

And while I am talking about labor costs, let me knock a hole in another myth that is repeated so often it is accepted as fact: that the American consumer gets the benefit of these lower foreign labor costs. The labor cost, for instance, of producing a Japanese Toyota automobile is about $1.40 per hour compared to $5.31 an hour for a U.S. auto. But the Toyota costs nearly as much as a low-priced American compact when sold here in the United States. Who is getting the bulk of that wage differential? Not the American consumer.

The multi-national firms I talked about now import manual typewriters and sewing machines to displace the American-made products. But the prices of these products continue to zoom. Who is getting the benefit of these inflationary prices? Again, not the American consumer.

This brings us to some of the strange practices of some foreign countries who are hungry to exploit the rich U.S. market at the expense of their own consumers at home. It is becoming increasingly difficult in the United States for instance, to buy a cassette tape recorder that is not made in Japan or West Germany. Other Japanese electronic goods are becoming equally prevalent.

But did you know that you can buy a Japanese color television set here at half the price it costs a consumer in Japan?

This is the same Japan which is now fighting to prevent establishment of plants in Taiwan and Korea by U.S. firms because it knows the coolie wages in those countries will undercut Japan's own domestic products.

This is, by the way, no defense of these firms. Their real purpose is to build trade on human misery for export purposes, not develop underdeveloped countries and build living standards, just as General Electric uses cheap Mexican labor just across the borders of Texas and California to make components at low prices for resale in the States.

What I am saying is that this is the kind of hard reality we must fight as a nation before we can talk about the ideal of free world trade.

SUMMARY

In summary, we must establish trade policies today which are consistent with the realities of the present world because that is the only world we have. I am for extended trade but we can permit trade expansion only if we develop world monetary policies that permit it, wage policies that make for fair competition and two-way orderly trade among trading partners.

U.S. trade policy must be shaped to achieve these objectives. We must insist upon fair wage competition. When we do, we will help workers in other nations raise their standards above present sweatshop conditions. Perhaps we cannot obtain the world equivalent of a Fair Labor Standards Act. We can, however, use trade policy as a means of helping workers in other nations get better wages and better working conditions and also equalize import prices.

Our objective must not and cannot be to choke world trade. But we can insist on fair treatment and fair competition.

This is the policy I personally advocate. It is what I would favor as Governor of Pennsylvania.

It is a policy that must be adopted soon. We in the United States must reverse direction and limit the flood of imports until such time as our own economy moves into high gear again and creates new jobs to provide opportunities for those being replaced by foreign workers.

We must move the Nixon Administration which has become a reluctant dragon to establish quotas on more than just textiles as now contemplated in Congress, but on electronic goods, machine tools, steel and other items that threaten to put American men and women out of work. The Nixon Administration's reluctant support for textile quotas is too little—and obviously—too late.

The Nixon Administration is derelict in not moving in quick, concerted fashion to save jobs at home at a time when inflation and recession is destroying the American economy.

We must re-establish as our goal the fulfillment of the Full Employment Act of 1946 and not sacrifice employment opportunities of our own people by making them pawns in the fight to stop inflation.

President Nixon must be forced to realize that we are engaged in a war of survival here at home. He must reduce our dependence upon military expenditures, take steps to increase not cool down the national economy, and adopt import-export policies that will permit American consumer goods and commercial manufacturers to expand their production and increase employment.

As Governor of the nation's third largest state, my voice will be raised loud, clear and often to gather support for such policies.

CONGRESS TAKES THE LEAD IN PROVIDING INSURANCE COVERAGE FOR HOMEOWNERS AND SMALL BUSINESSMEN IN LARGE CITIES

(Mr. ANNUNZIO asked and was given permission to address the House for 1 minute, to revise and extend his remarks, to include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, last month the Subcommittee on Housing in the House Committee on Banking and Currency, chaired by the distinguished gentleman from Pennsylvania (Mr. BARRETT) included a milestone provision in the 1970 housing bill which, if enacted, will provide adequate insurance coverage for the residents of our large central cities. Every Member of the House knows that individual homeowners and small businessmen simply cannot get adequate insurance coverage today. The insurance industry, frightened by civil disturbances in the past few years, has reneged on their responsibility to provide insurance coverage in our cities.

In 1968 the Congress attempted to provide some kind of basic insurance coverage for those people whose policies were cancelled. As the Congress has found out through investigations, the 1968 insurance provision establishing the so-called fair plans has not done the job which we intended. In 1969 at the direction of the distinguished chairman of the Housing Subcommittee (Mr. BARRETT) hearings were held in my home city of Chicago to look into the collapse of the fair plan operation in Chicago. The subcommittee found out that not only were citizens not informed of the availability of fire insurance coverage under the fair plan, but that those lucky few who were insured under the fair plan had their premiums increased, in some cases, 1,000 percent. The result of the subcommittee investigation was the introduction of my bill, H.R. 13666, which has been cosponsored by over 100 Members of the House, which for the first time, will provide direct Federal writing of adequate insurance in our cities. This direct Federal writing would only be implemented when and if insurance rates exceeded the manual rate by 175 percent. The intent of my bill is to establish a Federal yardstick to keep insurance companies from writing premiums too high and to provide total insurance coverage including crime insurance, burglary and theft insurance, and malicious mischief insurance for our citizens. It is this bill that has been included in the 1970 housing bill, H.R. 19100.

I take this opportunity to praise Chairman BARRETT for his longstanding attempts to have the Congress provide adequate insurance coverage. His long-term interest in this problem and his outstanding and stalwart support of my bill deserves recognition and praise. Congressman BARRETT knows the insurance problem firsthand since he has been told that his homeowner's insurance policy and his office insurance policy will probably be canceled very soon. The only reason given is that he lives in the wrong type of neighborhood. He has not had a claim with his company in over 50 years. He has almost singlehandedly brought the whole insurance problem to the attention of the Congress. His cooperation with me in the subcommittee investigations and subsequent hearings on my bill represents outstanding work.

I would like to take this opportunity also to praise the chairman of the full committee, the distinguished gentleman from Texas (Mr. PATMAN), who has also cooperated with me in every way and has encouraged me in my efforts to obtain adequate insurance for our citizens. Congressman BILL MOORHEAD, of Pittsburgh, has been one of the most effective supporters of my bill in the subcommittee consideration. Mr. MOORHEAD chaired the special hearings of the subcommittee held in Chicago and has demonstrated since then a great knowledge of the insurance industry and the problems people have in obtaining adequate insurance coverage. The members of the Housing Subcommittee have also been most cooperative and willing to listen to my pro-

posals and have acted in a very intelligent and forthright manner. Congressman WIDNALL of New Jersey, has also evidenced concern over this whole problem and has given me bipartisan support for my efforts. Although he does not agree with me on the provisions of my bill, he has certainly recognized the need that exists here.

At this point, Mr. Speaker, I would like to include in the RECORD following my remarks an article appearing in today's Wall Street Journal on the whole problem of insurance in our cities:

FEDERAL PRESSURE IS MOUNTING ON INSURERS TO MAKE CRIME POLICIES AVAILABLE IN CITIES

(By Carol H. Falk)

WASHINGTON.—Like many city folk these days, Rep. Barrett (D., Pa.) got some bad news from his insurance company a few weeks back.

The company said it was considering canceling the insurance policies on his Philadelphia home and office, though he has never filed a claim in 50 years. The only apparent reason is that both are located in a poor, working-class neighborhood not far from a public-housing project that was the scene of recent racial confrontations.

But unlike his neighbors, Rep. Barrett is in a position to tackle the problem. As the second-ranking Democrat on the House Banking Committee, the Philadelphia Congressman heads a subcommittee that, at the time the word came from his insurance company, just happened to be considering a bill that would put the Federal Government in the property-insurance business.

"I was very much for the bill all along," says Rep. Barrett. "Many places where I live have gone out of business." However, he says his personal experience was a good way to bring the extent of the problem home to his colleagues. The bill won subcommittee approval for inclusion in a broad package of housing legislation.

While the measure is still a long way from law, its growing popularity reflects mounting pressure on the insurance industry to do something about the availability of crime insurance in urban areas.

TALKING ABOUT SOLUTIONS

Amid dire predictions that the urban businessman can't survive much longer without burglary and theft insurance at prices he can afford, not only Congress but the Nixon Administration and some segments of the insurance industry itself have begun to talk about possible solutions. The hitch is that no one likes anyone else's idea. As things stand now:

The industry is violently opposed to the bill under consideration by Congress, and the Nixon Administration regards it as an extreme solution.

Federal Insurance Administrator George Bernstein has come up with a proposal, but many Congressmen and industry representatives don't think it will work.

The insurance companies that sell most of the crime insurance prefer still another solution, but other insurance companies, the Federal Insurance Administrator and state insurance regulators don't like it.

In the meantime, urban residents and small businessmen have almost despaired of a way out of the problem, which assumed serious proportions following the urban riots of the late 1960s. In January 1968 a Presidential panel studying riot-affected areas of Boston, Cleveland, Detroit, Newark, Oakland and St. Louis reported that 40% of the business establishments and institutions responding were having significant burglary and theft-insurance problems.

And the situation continues to deteriorate. An official of the New York Insurance Brokers Council told Mr. Bernstein last May that "in most areas in New York City it is impossible to get" burglary and theft insurance.

In a July report on crime insurance availability released by the Department of Housing and Urban Development, Mr. Bernstein added that while the storekeeper who can't remain in business without crime coverage may present the overriding social problem, the urban resident faces similar difficulties. "Few knowledgeable persons would claim," he said, "that a single working girl residing in an apartment in New York City can obtain burglary coverage, or that a middle-class family in Chicago can readily insure their personal property against theft."

In urging Congressional action on the problem, Sen. Tydings (D., Md.), who, along with Rep. Annunzio (D., Ill.) sponsored the bill Rep. Barrett's subcommittee approved, observes that it doesn't take an outright cancellation to make insurance unavailable to many people. He notes that some premiums have been raised 300% or more, "well out of the reach of the average city dweller."

The Insurance Administrator's study points up the rate increases. A survey found that in Los Angeles County a $3,000 burglary insurance policy that cost $113 in 1962 cost $236 by 1969. Over the same period, annual premiums soared to $1,028 from $395 for $15,000 burglary coverage on a furniture store in the District of Columbia.

In 1968 a Federally sponsored plan offered relief in the area of fire insurance. Legislation passed that year set up a Federal reinsurance program to be available to companies if they agreed to participate in state pooling arrangements (called Fair Access to Insurance Requirements or FAIR plans). The plans were set up to absorb the inner-city fire insurance business rejected by individual companies, but burglary and theft insurance weren't included and vandalism and malicious mischief are just being added.

One insurance man concedes that the industry, for practical purposes, isn't writing urban burglary and theft insurance at all. He describes the risks that insurers are willing to accept as about on a par with the traditional definition of a good fire insurance risk: "Pig iron under water."

And the insurance industry, which agrees on very little else, pleads helplessness, maintaining that it can't be expected to bear the entire cost of high crime losses in the inner city.

Rep. Annunzio and Sen. Tydings believe that the industry might be persuaded to bear a bit more of the burden, however, if the Federal Government entered the field not only as a regulator but as a potential competitor. The real goal of their measure, according to Congressional sources, is largely to pressure private industry into providing more crime insurance at reasonable prices.

The complex bill essentially would require the inclusion of crime insurance, as well as fire, in the companies' state insurance pools and would provide for direct Federal writing of all property insurance if excessive private or pool rates (defined as those equal to 175% of the minimum for the category) couldn't be justified by state regulators to the satisfaction of Federal authorities.

"The idea," explains a Capitol Hill source, "is to give the Federal Insurance Administrator some clout in dealing with the industry and with state regulatory bodies. He'll be able to say, 'If you don't straighten out, the Federal Government will write the insurance directly.' It would put the burden on the states to prove that the rates weren't unreasonable. If there's anything this industry doesn't want, it's a Federal yardstick."

A NOTICEABLE PANIC

Indeed, there was noticeable panic among industry lobbyists when the Annunzio-Tydings proposal was approved by Rep. Barrett's subcommittee. Although the bill has to surmount some opposition in the full committee, get through the House Rules Committee and a floor vote, as well as the House-Senate conference on the housing legislation, "The industry is still running around like ants after the initial shock," says one Congressional observer.

The industry is becoming aware of the proposal's considerable political appeal, especially for Congressmen facing tough reelection campaigns in urban areas.

"We're just a little more scared than we were before," a spokesman for the National Association of Independent Insurers concedes. Whether the industry is scared enough to offer a viable alternative is yet to be seen; "The Annunzio thing is strictly a lead pipe being bounced off our skulls to get us to agree on something," complains an American Insurance Association spokesman.

The American Mutual Insurance Alliance calls the bill "simplistic." A spokesman says, "This doesn't solve the problem of crime, though it does bring some indemnification back to the victim." Arguing that assurance of indemnification might actually encourage businessmen to neglect protective measures and localities to be lax about law enforcement, he asserts that "in a way, crime insurance is subsidizing crime."

Andre Maisonpierre, vice president of the alliance, argues that another beneficiary of what he calls "an artificial barrier on premium charges" would be the slum landlord.

The alliance has had a committee studying the crime insurance problem for two years, but hasn't come up with any action proposals other than to "eliminate crime." The group maintains that the matter "is a social problem with some insurance aspects—not an insurance problem."

The AIA says direct Federal writing of insurance is unrealistic and unnecessary. It contends that for the Government to become an insurance company, "thousands of people" would be needed to staff the operation.

Federal Insurance Administrator Bernstein, while showing some relish for the additional clout the proposed bill would give him, warns: "Once the Federal Government is in the insurance business, it will expand." Before he resorts to any Federal solution, he says, he wants to give the states and private enterprise a chance to solve the problem. And to persuade them to take this responsibility he's using the power that the Annunzio-Tydings proposal gives him by its very existence.

Mr. Bernstein is offering the industry a buffer against the dreaded Federal solution awaiting it on Capitol Hill. His alternative is a state plan proposed in the report that HUD released in July. This plan would require all property insurers in states with crime insurance problems to participate in pools through which applicants refused insurance by individual companies could obtain burglary and theft coverage. Mr. Bernstein calculates that, unlike the FAIR plans for fire insurance, crime insurance pools are certain to have losses so high that people couldn't afford the premiums. Therefore he suggests that states consider a subsidy paid for by a tax on premiums on all other property insurance sold in the state—a tax he estimates could range from 0.2% in a state like California to 2.2% in the District of Columbia.

A HARD PLAN TO SELL

The main criticism of this plan is that it's going to be hard to sell in state legislatures. Congressional critics and insurance people alike note that state legislators aren't going to be eager to tax their rural and suburban constituents to subsidize crime insurance for the central city.

A little legislative arm-twisting to make the Bernstein proposal work, however, is being considered by a subcommittee of the Senate Banking Committee, which isn't as warm to the Annunzio-Tydings bill as is its

House counterpart. The Senate group has reached a "tentative policy decision" favoring a program for direct Federal writing of crime insurance to be implemented in those states that fail to deal with the problem by the end of the next legislative session. Committee sources say details of the plan and just what conditions would trigger Federal insurance in a given area will probably differ from those in the Annunzio-Tydings bill. The panel resumes its deliberations tomorrow.

At present, the only leverage Mr. Bernstein has to get states to accept his plan is a threat to withdraw the so-called Federal riot reinsurance covering fire insurance, if states with critical problems fail to take action by the end of the next full legislative session. "We have no direct power over the states," admits Mr. Bernstein. "They can thumb their noses at us."

The fact is that after several summers without major riot losses, many insurance companies are losing some of their enthusiasm for the Federal riot reinsurance fund, which has collected $64 million in premiums from the companies and paid out only $2.8 million in claims since 1968. "There's no incentive for the insurance companies to push for this plan," says one industry representative. "Their premiums are high enough anyway."

Because Mr. Bernstein's plan gives the states till the end of their next legislative session to comply—and a few state legislatures don't even meet until 1972—critics fear all it will do is delay a real solution another two years. But Mr. Bernstein insists that the key states will have made their decision by mid-1971.

Mr. Bernstein is talking tough at this point to line up support. "We're asking the states to put their money where their mouth is," he says. "Our philosophy is to leave insurance regulation with the states, but we're not about to let them botch it in the burglary field."

The only firm promise of support he has received thus far is from the National Association of Independent Insurers, which had proposed a plan identical to his except that the industry group, whose members sell a good deal of homeowner-type property insurance but very little specialized burglary and theft coverage, would apply the tax only to burglary and theft policies. Despite this difference, the NAII, whose chief goal is "to keep the Government out of this area as much as possible," says it is willing to lobby for Mr. Bernstein's plan in the state legislatures.

The American Insurance Association, the trade group whose members write over 80% of the crime insurance in the U.S., is less dedicated to a state solution and more skeptical about its prospects. The AIA says that though it's against the Government writing insurance directly, it would be willing to accept some Federal supervision in return for a Federal subsidy.

A spokesman explains that the association's preference is for early activation of a program under which the private insurers would act as fiscal intermediaries, receiving full reimbursement from the Government for all losses and expenses not covered by premiums collected.

The rest of the industry—larger than the AIA in terms of number of companies—as well as state regulators, tends to regard as heresy any such plan that would detract from the traditional state supervision of insurance companies.

And Mr. Bernstein makes clear that if there's to be a Federal solution he much prefers something like the Annunzio-Tydings plan to the AIA's suggestion of a Federal subsidy. He says that if the Federal Government is going to foot the bill he isn't about to let the industry run the program.

And if the industry doesn't line up fairly soon behind a solution that he considers more responsible than the AIA one (namely, his own proposal), Mr. Bernstein says he believes the Annunzio-Tydings bill might well pass Congress this session.

While he originally testified before the House subcommittee that the bill was "premature," now that his own plan is on the table he warns that "unless the state regulators and the industry take a firm position pretty quick . . . we will have to do a little rethinking." He stops short of promising outright Administration support for the pending bill but does say flatly that if the key states haven't produced workable crime insurance plans by mid-1971 "I'll be very quick to advise Congress we guessed wrong." He adds: "This Administration is committed to a solution. If that requires a Federal approach, we'll support it."

THE ENERGY CRISIS

(Mr. ROBERTS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. ROBERTS. Mr. Speaker, for some time this country has been aware of the fact that we are approaching an "energy crisis."

Recently the Honorable Frank Ikard, president of the American Petroleum Institute and formerly a distinguished member of the House Committee on Ways and Means, addressed a Capitol Hill group on this crisis.

My colleagues, Hon. BOB POAGE, Hon. JOHN YOUNG, and Hon. J. J. PICKLE join me in presenting Mr. Ikard's statement.

STATEMENT OF THE HONORABLE FRANK IKARD, PRESIDENT AMERICAN PETROLEUM INSTITUTE

The "energy crisis" is much in the news these days, and its existence must be both a surprise and a puzzle to many Americans. They have been told that their nation has almost inconceivably large deposits of coal in the ground. They have read reports of huge potential reserves of oil and natural gas remaining to be discovered. They have heard many glowing predictions about the future of nuclear energy in power generation. To the public the energy crisis must seem a strange and paradoxical instance of scarcity in the midst of abundance.

However, the energy crisis certainly does exist. It has been brought about by a complex combination of factors and forces which I will attempt to explain in a simple and direct way.

First, of all, it is important to understand the magnitude of our energy use.

The U.S., with less than six per cent of the world's population consumes 32 per cent of the energy. Three-fourths of U.S. energy is supplied by oil and gas. A publication of the U.S. Interior Department expressed the role of energy in American life in these words:

"Energy, in all its forms and applications, infuses, pervades, and upholds the daily activities of Americans in particular to an extent never remotely approached by the people of any previous age. The American householder who uses a thousand kilowatt hours of electricity during a month for which he may pay as much as $20 has had the energy equivalent of 60 men working for him on a normal 40-hour weekly schedule during that period. Driving his car down the road at seventy miles an hour he commands the energy equivalent of 1500 more. A locomotive engineer has at his disposal an energy equivalent of 100,000 men, and the effort of over half a million would be required to get a large jet transport into the air to its normal cruising altitude and speed. Even to provide the light of an ordinary reading lamp for a single evening would absorb the physical output of one man working a full eight-hour day."

Let's consider the elements that have brought this energy-dependent nation face to face with a tightness of supply without peacetime precedent. Not necessarily in any order of impact or importance, these are the ingredients of the energy crisis:

1. The much-heralded nuclear age has not kept up with its timetable. Completion of nuclear power plants is running years behind schedule, putting extra strain on other energy sources. Furthermore, construction of nuclear power plants has encountered stiff resistance from environmentalists and from neighbors who are just plain scared.

2. The coal industry is plagued with problems. Much of the coal from operating mines cannot meet the sulfur content standards required under today's air pollution control regulations. This has resulted in a severe coal shortage despite enormously abundant quantities of coal in place.

The Mine Safety Act, which went into effect on March 31, despite its meritorious features, further hampers coal producers—particularly the smaller companies.

The coal storage problem can be solved eventually. New mines can be opened in the West, where the sulfur content of coal is lower. Sulfur oxide emissions from coal can also be curbed by the development of flue gas desulfurization technology. But these changes will take huge amounts of money and lots of time. Raising money is difficult for any industry these days and as for time—we just don't have it. The energy crisis is on us now.

3. Natural gas could play a major role in averting today's energy crisis. But production of this clean burning fuel has been crippled by federal wellhead regulation dating back to a 1954 Supreme Court decision. Natural gas has been made a non-competitive product in a reverse way. Instead of being over-priced out of the market it has been so under-priced by unrealistic federal controls that the search for new reserves is discouraged. Today, natural gas is part of the energy problem when—with better judgment—it could be providing much of the solution to the current crisis.

4. This leaves oil to take up the slack where the other energy sources cannot meet today's energy crisis demands. There is a particularly heavy drain on available supplies of low-sulfur residual fuel oil to serve markets that would otherwise use coal, natural gas, or nuclear energy, if any of these were available.

The pressure on the petroleum industry to meet this rapid surge in demand for oil is only one of the pressures on the industry today. The other pressures make it much harder for oilmen to come through for the nation in this time of energy crisis.

You recall the old-timer who said: "I have had many troubles in my day, but most of them never happened." The oil industry has many troubles right now, and they are happening. They are not imaginary. Let me give you some examples.

The Chase Manhattan Bank estimates that to meet the growth in demand expected for the 1970's the petroleum industry will have to invest more than $300 billion in the Free World during this decade. This is over twice the level of expenditures for the 1960's. Even in the Sixties the industry's financing problems became more complicated. Traditionally, the petroleum industry had generated all but a small portion of its capital requirements from net earnings and provisions for capital recovery—notably depreciation and depletion. In recent years the industry has had to turn increasingly to the capital market—and especially to long-term borrowing.

A study of 37 leading U.S. companies, conducted by the First National City Bank of New York, found a capital gap—the funds that had to be sought from external sources—equal to 29 per cent of the total capital outlays of these companies in 1969.

This was the financial situation of the petroleum industry even before it felt the bite of the 1969 Tax Reform Act.

TAXES

It is estimated that this piece of legislation increased the petroleum industry's tax burden by about $700 million annually. This breaks down as follows:

[In millions of dollars]

The cut in percentage depletion and the changed treatment of production payments	370
The minimum income tax, which includes percentage depletion among its so-called tax preference items	160
Repeal of the investment tax credit	170

The jolt of these tax increases was made even harder by the trend of recent years. A study of the 27 leading oil companies, just released by the Chase Manhattan Bank, revealed that the direct tax burden of these representative petroleum corporations increased by 245 per cent—or almost $5 billion—between 1959 and 1969. The new tax increases will be added to the top of that rising pile.

It has been estimated that the effect of last year's tax measure is approximately equal to the 30 cents per barrel crude oil price reduction advocated by the Cabinet Task Force on Oil Import Control.

IMPORTS

The API proposed to the President that there be a Cabinet level review of the oil import control program. We did this because the existing program, though sound in concept, was having its effectiveness impaired by the introduction of special exceptions.

The report that resulted from this review has become a subject of controversy. Much has been said about the differences between members of the petroleum industry and the Task Force majority. It is worth noting and emphasizing, however, that there are some vital points of agreement:

There is no difference of opinion, for instance, on the role of petroleum in national security.

There is no difference of opinion on the need to maintain a domestic producing industry able to carry the country through a worldwide supply crisis.

It is true that there are statistical differences about the availability of supplies from U.S. and Western Hemisphere sources in an emergency. But the central dispute is over mechanism. The Task Force majority believes that a tariff is a better method of regulating oil import controls. The petroleum industry feels it is a clumsy and unworkable mechanism.

We also feel that the sad experience with natural gas regulation points up the folly of trying to use a tariff to manipulate domestic crude oil prices.

The apparent area of disagreement seems to be narrowing because members of the Task Force staff are now saying that the majority report was misinterpreted. They are now claiming—publicly and privately—that more weight should be given to the report's comments in support of import controls in the interests of national security. They maintain they did not assign as much importance to the price question as a reading of the report would suggest.

It would seem that the advocates of increased imports of foreign oil suffered a severe setback for their position with these developments in the Middle East:

1. The continued closing of the Suez Canal.

2. The refusal of Syria to permit repair of a break in the Trans-Arabian Pipe Line—which took place under mysterious circumstances.

3. The sudden government-forced cutback in Libyan oil production.

This combination has put a tremendous strain on tanker capacity with the result that spot tanker charges have quadrupled over the space of a year. Consequently, Middle East and North African crude oil delivered to the U.S. East Coast now costs about 75 cents more per barrel than domestic production on the spot market.

This is probably only a temporary situation caused by an accumulation of adverse circumstances. But it could be repeated in more severe form at any time in the future.

The situation shows how very vulnerable and uncertain is this "low cost" foreign oil.

Protests against the present oil import quota system have come mainly from the East Coast and especially from the New England States. But think what a financial bind these states would be in today if they were completely dependent on what is currently that "high cost" foreign oil. It seems to me that this situation should encourage some second thoughts among those who want to do away with, or radically curtail, the present oil import control system. For now we have proof that the low cost of foreign oil is no more dependable than the supply itself.

Despite these developments, the President continues to be under tremendous pressure to break down the present oil import controls. The fact that he has not acted yet to implement the tariff proposal should not lull us into believing this plan—or some version of it—has been permanently shelved.

Whatever effect the continuing and widely publicized attack on oil import controls may have, one thing is certain: This attack is bound to have a psychological impact on investors. It is not helping one bit in the industry's efforts to finance the capital investment required to meet the nation's energy needs in this time of crisis.

Opponents of oil import controls have carried the battle right into the oil country with severe criticisms of the Interstate Oil Compact Commission, and the commissions that regulate oil production in Louisiana and Texas.

These critics believe that the conservation agencies of Texas and Louisiana are, in effect, controlling oil prices. They feel that any control over the price of oil should be wielded by the federal government in Washington—and not by officials of producing states.

There's an old saying: "History teaches us that history teaches us nothing." The experience with federal regulation of natural gas—which has led directly to an acute and critical shortage of supply—should be sufficiently instructive to cure anyone of wanting to broaden federal control over petroleum production.

As for the charge that state conservation policies are actually a means of propping up crude oil prices, let's look at the record. The price of crude oil last year averaged less than four per cent above the level for the standard price index period 1957–1959.

By comparison, the wholesale price index for all commodities was up 13 per cent, and the retail price index was up 28 per cent.

The conservation commissions of Texas and Louisiana have done a magnificant job of stretching the nation's supply of oil and gas. But if they were really trying to prop up crude oil prices (as we know they were not), then they would have to be condemned as utter failures.

It goes without saying that blasts at policies adopted to prevent the physical and economic waste of oil and gas do nothing whatever to bring out the investment money needed for the required expansion of domestic petroleum exploration and development. Every misinformed and irresponsible attack on oil and gas conservation policies helps to aggravate today's energy crisis.

Another problem that is adding to the difficulties and costs of the petroleum industry these days revolves around the current campaign for air and water conservation.

The record speaks for itself. The petroleum industry is 100 per cent committed to doing all in its power to clean up the environment. In fact, oil companies were active in this field many decades before environmentalism became a popular fad.

The U.S. Department of Commerce has reported that petroleum leads all American industries in its expenditures for air and water pollution control. The industry's outlays for these purposes now exceed $1 million a day, with a substantial portion of this sum going for research and development.

Although much remains to be done, encouraging progress has already been made. For example, today's new automobiles give off less than a third of the unburned gasoline and carbon monoxide produced by cars of the early 1960's. Next year's new models will have devices to control evaporation losses from the carburetor and fuel tank, meaning a further important reduction in emissions.

There are rumors and reports that the gasoline engine can never be made sufficiently pollution free to meet acceptable air conservation standards. One story I picked up is that an old-time classic car—the Cord—is about to be revived as an electric automobile. Only this time it would be known as the Extension Cord.

Regardless of what you read or hear, the internal combustion engine can be made essentially pollution-free well before the end of this decade and long before any alternative means of propulsion can be perfected and put on the market.

We are also faced with an oil spills problem of major proportions and we know it. Some of you may know that St. Barbara is the patron saint of arsenals and powder magazines. It is an unhappy coincidence that the channel named after her should have been the site of an oil spill with explosive consequences for the petroleum industry.

The oil has been completely cleaned off the beaches there, but it is still smearing the industry's reputation.

We could defend ourselves by pointing to a drilling safety record that is even more spectacular than any oil spill that has occurred. Of some 9,000 wells drilled on the continental shelf through the end of 1969, only seven involved any spillage of oil. Other incidents have occurred this year, but even though they change the statistics they cannot impair what is an amazingly good record of safe operations under incredibly difficult conditions.

The petroleum industry is not taking refuge in statistics or excuses. It has developed, through the API, an action program for oil spills cleanup. More than a million dollars have been appropriated for this program through the end of 1970, with the expectation of even larger expenditures in the future.

The emphasis is on research for and development of more efficient ways of cleaning up oil spills, which are bound to occur occasionally even with the most extreme precautions.

With all the troubles and trials that the industry is now going through, there is some sunshine on the landscape. The nation's demand for oil and gas will considerably more than double between now and the start of the Twenty-first Century. This means the petroleum industry in Texas and elsewhere can have a bright and busy future if it is given a fair chance to do its job. This

is all we ask, and all we have a right to ask: A fair chance.

To get that fair chance we will have to get the facts about our industry, about the issues I have discussed and others before the public of the consuming states. This sounds much easier than it is. Today's vast expansion in the means of communication has been accompanied by tremendous competition for the public's attention.

We are trying to get the facts spread out in such a way that no one can ignore them or evade them.

I would place the communications problem high on the list of the most difficult and challenging tasks facing the petroleum industry today. But unless this one problem is solved, we cannot be very optimistic about the effective solution of the others. The entire petroleum industry realizes this, and is mapping its plans and directing its energies in accordance with this realization.

MERCURY POLLUTION

(Mr. OBEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. OBEY. Mr. Speaker, few "nonissues" have become "issues" faster than mercury pollution. It is a pollution problem which has been known in narrow circles for quite some time, but which has truly become a household phrase in the past few months.

Since findings last April of significant amounts of mercury pollution in the Great Lakes, the Federal Water Quality Administration has conducted an extensive survey of mercury contamination in waterways throughout the country. States have conducted similar surveys of their internal waters. Charges were filed against 10 industrial plants for discharging hazardous amounts of mercury into our Nation's waters.

The U.S. Department of Agriculture suspended the registration of some mercury compounds used for seed treatment, and canceled the registration of others used for slimicidal and laundering purposes. The National Governor's Conference adopted a resolution expressing their concern and asking for the establishment of "a minimum amount of mercury outflow which would not constitute a hazard to public health."

With an amazing amount of speed the Olin Corp. developed a device to measure and record almost instantaneously concentrations of mercury in air or water ranging from zero to 10 parts per billion—after, I might add, suits had been filed against two of its plants for mercury pollution.

Senator PHILIP HART has held hearings on the problem, as have the Wisconsin Department of Natural Resources and agencies in a number of other States. An International Conference on Environmental Mercury Contamination will be held at the University of Michigan beginning on September 30.

With all this action regarding mercury pollution—and it is action which I regard as most welcome—there is one source of mercury pollution which has not been dealt with to any great extent, if at all. The fact appears to be that hospitals and laboratories may be a serious but so far overlooked—source of mercury pollution.

Mercury has long been used by hospitals and laboratories in the preparation and fixing of material for the making of slides is histopathological, histological and other laboratory work.

The problem is that we have no idea how much mercury is used by the 7,200 hospitals in this country, and we don't know what happens to that mercury after it is washed down their laboratory drains.

Mr. Speaker, I was first alerted to this source of possible mercury pollution by Dr. Clarence Tarzwell, director of the National Marine Water Quality Laboratory in West Kingston, R.I.

In the past 6 months since I began looking into the problem of mercury pollution, I have come across few people in any Federal agency who are as concerned or as knowledgeable about mercury pollution as Dr. Tarzwell. In fact, few people seemed concerned at all until a few months ago when a crisis occurred.

In my investigation, Dr. Tarzwell's name came before me repeatedly as a man who was obviously well respected in this area, and one who has long been concerned about the effects mercury can have upon our environment. Although Dr. Tarzwell has made no specific estimate of just how much mercury is used by hospitals, he apparently believes that "mercury pollution from laboratories remains an important and undoubtedly an ever-increasing problem." Certainly other types of data would seem to bear this out.

According to the American Hospital Association, for example, the number of admissions into community hospitals—those institutions with which we are most familiar which provide general and selected special services—has increased 23 percent in the past decade. The average daily number of persons in these hospitals has increased 36 percent over that time. Of greatest significance is the fact that outpatient visits to hospitals, two-thirds of which are for clinic visits or laboratory services, have increased from 70.7 million to 120.8 million, or 71 percent, from 1960 to 1969.

The American Hospital Association also reports that "the volume and types of laboratory work performed—in these hospitals—have increased substantially."

We can only assume that as patient loads have increased and as laboratory work has gone up, so has the consumption—and dumping—of mercury by hospitals and laboratories.

Many of my colleagues are undoubtedly aware of the hearings which Senator HART's Subcommittee on Energy, Natural Resources, and Environment has held on the subject of mercury pollution. Although these hearings have brought out many important facts about the danger to our environment from mercury and other heavy metals, they have not to date dealt with the possibility of mercury pollution from hospitals and laboratories.

Consequently, I have written a letter to Senator HART urging not only that his subcommittee study this aspect of the problem, but asking that Dr. Tarzwell be invited to testify.

I have urged Senator HART to have Dr. Tarzwell testify for two reasons. First, we have a responsibility to obtain the knowledge which this gentleman seems to have about mercury pollution into the open so that pollution of this type can be quickly controlled and stopped; and, second, it appears Dr. Tarzwell has found an alternative method for the fixing of slides which does not require the use of mercury, and this alternative method is now being used in his laboratory.

While Dr. Tarzwell has indicated that such alternatives may be available to avoid the use of mercury altogether, at least two methods have been outlined for recovering mercury when it is used by laboratories. One method, which has been used at the National Marine Water Quality Laboratory, uses a sodium sulfite solution and another solution containing a mercuric chloride. The other method, now being used by a laboratory in Massachusetts, involves the placing of a few scraps of aluminum into a mercury-bearing solution and allowing it to stand overnight. The mercury precipitates out, and can be recovered.

Mr Speaker, in testimony before Senator HART's subcommittee, it was estimated that 163 million pounds of mercury have been consumed in the United States since the beginning of this century. However, only about one-sixth of our annual consumption is recycled each year. What happens to the rest?

That, Mr. Speaker, is a good question, and one which requires a rapid answer. It is a tragedy that with all the information available on the toxicity of mercury we waited so long to recognize the problems it can cause. Part of the solution, if even only a small part, is to determine how much of this material is used by hospitals, how it is disposed of, and whether alternative methods can be found to avoid its use in the future.

I am enclosing below a copy of my letter to Senator HART asking that he look into the problem, a copy of a letter from Dr. Tarzwell to me, and a short article from the Washington Star indicating one method now being used in a Massachusetts laboratory to recycle mercury.

U.S. DEPARTMENT OF THE INTERIOR,
FEDERAL WATER POLLUTION CONTROL ADMINISTRATION,
West Kingston, R.I., July 2, 1970.

HON. DAVID R. OBEY,
House of Representatives,
Washington, D.C.

DEAR MR. OBEY: Reference is made to your letter in regard to the toxicity of mercury and the effects of the ever-increasing use of mercury and its discharge into our environment. I have read with great interest statements in the *Congressional Record* which you forwarded to me. I feel that you have made a very good summary of the problem. I can contribute a few additional items of information based on our work here.

The study of the toxicity of heavy metals is one of the targets in our program of research on marine life. Among the heavy metals, mercury ranks second only to silver in toxicity to aquatic life. However, mercury is a more insidious poison. It acts in a greater variety of ways. It seems to be more readily absorbed. It is stored and passes on through the food chain. Further, it is apparent that with our modern industrial development, more mercury is being discharged as

a waste to our environment. It is acutely toxic to aquatic life at only a few parts per billion, varying somewhat with local conditions. However, short-term acute bioassays, which report results as exposure to the total concentration of mercury *added* to the test solution, may be misleading. Mercury is usually discharged in some form of a salt and the mercury salts are rapidly precipitated in the marine environment. Since mercury is rapidly precipitated, the actual amount to which the test organisms are exposed is considerably less than the amount added. Therefore, results showing levels toxic to aquatic life can be deceptively high.

We need long-term constantly renewed flow-through bioassays where the actual content of mercury available to the organisms is constantly monitored in order to determine the toxic levels of this material and maximum concentrations which should not be exceeded. These studies should be carried on over a considerable period with reference not only to the toxicity to individual organisms in their lifetime, but to the long-term effects in the second or third generation and the effects of biological storage and passage through the food chain.

Because mercury is so readily precipitated out, it creates a problem in bottom deposits. Concentrations in bottom deposits can reach much higher levels than occur in the water above them. Organisms living in these deposits, therefore, are in an excellent position to take up and concentrate this material. Therefore, studies should be made of the effects of mercury in bottom materials and its eventual circulation through the food chain and concentration in organisms consumed by aquatic life and man.

Since we do not have a flowing seawater system, our bioassays must be restricted at present largely to short-term acute studies. We have carried on studies of this nature and have tested the toxicity of 32 metals to the killifish, *Fundulus heteroclitus*. In our studies with *Fundulus heteroclits*, we found that the 96 hr. TL50 was 230 ppb. We express the exposure concentrations as tolerance limits, TL. The 96 hr. TL50 means that concentration of mercury or the toxicant under test at which 50% of the test organisms survive for 96 hrs. However, because mercury is very rapidly precipitated out in seawater, these test organisms were exposed to only a small fraction of this amount. It would be expected, therefore, that the mercury deposits in the bottom materials would be more important in the marine environment than in the freshwater environment. Mercuric chloride can be toxic to fish in soft freshwater at a concentration near 10 ppb. with longer exposure. I am enclosing herewith a paper which we published in 1953 which might be of interest to you. It is entitled "Critical Review on the Toxicity of Industrial Wastes and Their Components to Fish" and deals especially with the metals as salts. You will note that in the presence of sodium chloride in amounts approaching only a fraction of that occurring in seawater, that the toxicity of mercury declines rapidly.

There is a use of mercury and possible sources of pollution which I note you have not covered. It is the use of mercury salts and compounds by hospitals or laboratories in their pathological, histopathological, cytological and other studies. When it became apparent that our laboratory would be using mercury, I suggested that we must develop a method for recovering mercury for reuse. Within a short time, a method for the recovery of this mercury was developed. A copy of this method is enclosed. It is only preliminary, and I am sure much better recovery methods could be developed. However, it does indicate that such recovery can be accomplished. The recovery process was involved and time-consuming, and our limited staff felt that we could not engage in it. However, the problem was resolved by the use of another fixing method which did not require the use of mercury. Therefore, we have eliminated the problem at this laboratory, but mercury pollution from other laboratories remains an important and undoubtedly an ever-increasing problem.

At that time, I desired very much to determine what was the amount of mercury being discharged to our waterways from all the hospitals and laboratories which are engaged in the preparation and fixing of material for the making of slides in the histopathological, histological and other related work. Of course, as you know, I cannot devise a questionnaire and send it out for this information. I did learn, however, through a technician that one of the hospitals in Providence used at least 150 lbs. of mercury a year. I think it would be very interesting to determine how much mercury is used by the hospitals on an annual basis throughout the year. I am sure the National Institutes of Health must use a great deal of fixing materials in the period of a year. The mercury so used could be recovered or they could change to other fixing materials such as we have at this laboratory. I should also like to add that my comments only apply to histopathologically derived mercury. There are quite conceivably, other laboratories releasing mercury contaminated effluents in this country.

In my opinion, mercury is an insidious poison and those using mercury should make every effort to recover it; they should initiate good housekeeping methods so that mercury is not discharged to the environment; and above all, they should try to find substitutes for mercury which are not toxic, at least not as toxic or more easily controlled than is mercury. Toxicity in the aquatic environment has been a very serious problem to me in my endeavor to determine the adverse effects of wastes and to determine levels which should not be exceeded under long-term exposure. I am very pleased with the interest which you are taking in this problem, and I am sure that our environment will be the better for it.

Sincerely yours,

CLARENCE M. TARZWELL,
Director.

PROCEDURE FOR REMOVING MERCURY FROM MERCURIC SOLUTIONS AND RECLAIMING MERCURIC CHLORIDE IF DESIRED

Zenker's solution is used in histological laboratories as a fixative for tissue specimens. Because it contains 7% mercuric chloride, its disposal might present a pollution problem. In order to circumvent this problem and cut laboratory costs, a mercury removal and reclaiming procedure was developed.

Among several possible procedures, the following proved to be suitable for routine use in a small to medium size laboratory. The method is based on the insolubility of mercuric sulfide which is formed by the addition of sodium sulfide.[1] Mercuric sulfide can then be converted to mercuric chloride by treatment with aqua regia.[2]

MATERIALS

1. $NaS{:}9H_2O$ technical grade.
2. Concentrated hydrochloric acid.
3. Concentrated nitric acid.
4. Büchner funnel.
5. Whatman No. 42 filter paper.
6. 75% methanol.

PROCEDURE

100 ml. of a 40% sodium sulfide solution are added to 1 liter of used Zenker's solution or any other solution containing about 7% mercuric chloride in a large beaker. A slight excess can be added until precipitation is complete. The procedure should be conducted under a hood or in a well ventilated room.

A heavy black precipitate of mercuric sulfide quickly settles to the bottom and the supernatent is discarded. The mercury is now out of solution and can be handled as a solid.

If one wishes to reclaim the mercury as mercuric chloride, the sediment is washed with water and filtered on a Büchner funnel using Whatman No. 42 filter paper until the filtrate is clear. The precipitate is then transferred to a 1 liter beaker and dissolved in 160 ml. of aqua regia made up of 5 parts concentrated HCl and one part nitric acid. Small amounts of free sulfur are removed from solution.

The clear solution is gently boiled down to dryness under a fume hood being careful not to overheat the residue. The dried material is suspended in a minimum amount of 75% alcohol and slowly brought to a boil. After the material is in solution it is cooled at 4° C. until mercuric chloride crystalizes out of solution. The white crystals are filtered on filter paper and dried for use. The filtrate is pooled with the next batch of Zenkers to be reprocessed.

DISCUSSION

Removal of mercury salts from solution is relatively easy and inexpensive with sodium sulfide. The second step of reconverting the sulfide to a chloride is time consuming and expensive. Thus, it is not recommended unless necessary. Mercuric sulfide can be sold to a mercury refining company or disposed of in other ways. It can also be reduced to metalic mercury by heating, remembering that the fumes might be toxic.

HOUSE OF REPRESENTATIVES,
Washington, D.C., September 10, 1970.

Senator PHILIP HART,
Chairman, Subcommittee on Energy, Natural Resources, and Environment, Senate Commerce Committee, Washington, D.C.

DEAR SENATOR HART: I am aware of the hearings which your subcommittee has conducted on the subject of pollution from mercury and other heavy metals. I am hopeful that the information brought out in these hearings will be used to halt this type of pollution as quickly as possible.

It has come to my attention, however, that one source of mercury pollution which has not been dealt with is the possible pollution from hospitals and laboratories which use mercury in the making of slides in histopathological, histological and other laboratory work.

Possible mercury pollution from these sources was first brought to my attention by Dr. Clarence Tarzwell, Director of the National Marine Water Quality Laboratory. In a letter to me, Dr. Tarzwell has said that "mercury pollution from laboratories remains an important and undoubtedly an ever-increasing problem."

I would like to urge that your subcommittee study the possible pollution of our environment from mercury which is used by hospitals and laboratories. And, I would like to urge you also to invite Dr. Tarzwell to testify on this matter before your subcommittee.

I believe Dr. Tarzwell can provide useful information to your subcommittee for two reasons. First, I believe the information which he has on the whole matter of mercury pollution should be made public so that everyone working in this area can benefit from it. Second, Dr. Tarzwell has found an alternative method for the fixing of slides in laboratories which does not require the use of mercury, and this alternative method is now being used in his laboratory.

As one who shares your great concern over the problems of mercury pollution, I am willing to assist you in any way in an effort to come to grips with this problem.

---

[1] F. Field. J. Chem. Soc. 12:158, 1859.
[2] J. B. Hannay. J. Chem. Soc. 26:567, 1873.

I am enclosing for your information a detailed letter on mercury pollution from Dr. Tarzwell to me. I am sure it will provide you with some useful information in this area. I also intend to make remarks on this subject on the House floor today which you may find helpful.

Sincerely yours,

DAVID R. OBEY,
Member of Congress.

[From the Evening Star, July 28, 1970]

PROCESS TO SAVE MERCURY FROM WASTE IS DEVELOPED

LAWRENCE, MASS.—A state chemist says he has developed a simple process to screen out 99 percent of the mercury from chemical wastes—and make money too.

Chemist Ray J. Donlan, chief of the water laboratory at the Public Health Department experiment station here, said yesterday the process has been used successfully at the station for more than four months.

Donlan's comments came three days after the U.S. Justice Department announced it will file suits to require 10 companies to end discharges of mercury into navigable lakes and rivers.

Donlan said the process he developed involves placing a few scraps of aluminum into a mercury bearing solution and leaving them there overnight.

The mercury precipitates out and can be recovered and sold, in impure form, for about $4.50 a pound, he said. Purified, it is worth around $30 a pound.

Donlan said he thinks "every chemist is aware of the process," but he believes his laboratory is the first to make use of it.

"We discharge our wastes into the Lawrence sewage system, which flows into the Merrimac River, so we thought we should do a little housekeeping ourselves."

Donlan said the Lawrence laboratory began trying the process months ago, long before the discovery of potentially dangerous mercury concentrations in some fish.

PROPOSAL TO ESTABLISH STANDING COMMITTEE ON THE ENVIRONMENT

(Mr. BROTZMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BROTZMAN. Mr. Speaker, today I am reintroducing a resolution which would provide for the establishment of a standing Committee on the Environment in the House of Representatives. Since the time I first offered this proposal, in April of 1969, 162 of my colleagues have joined in offering identical resolutions, including the 14 Members whose names appear on the one I am introducing today.

Earlier in this session the House approved of the establishment of a Joint Committee on Environment and Technology. At that time, I stated that the joint committee was a desirable addition to the machinery of Congress. However, I also pointed out that the joint committee should be viewed as merely an interim device. Although this measure has now been placed on the Senate calendar, the other body has yet to take floor action.

Mr. Speaker, I believe that we in the House must move ahead now. We must, before the end of the 91st Congress, establish a standing Committee on the Environment so that the House will be ready to move full speed ahead on the important environmental bills at the outset of the 92d Congress.

Even if the joint committee is established in the near future, it will only have an advisory role. It will not have legislative power; no bills will be referred to it; and it will not report bills to the floor of the House. Yet more and more environmental bills are being introduced every day the House is in session. These bills are referred to various committees of the House. As a result, our approach tends to be fragmented. U.S. News & World Report recently estimated that it would cost $4.2 billion to solve our solid waste disposal problems, $13.1 billion to clean up the air, and $54 billion to clean up the water.

If Congress is going to be responsive to these and the other interrelated problems of environmental quality, I believe it is imperative that one committee, working with the expert assistance of one professional staff, consider all of the necessary legislation in the areas of air pollution, water pollution, solid waste disposal, acoustic problems, weather modification, and the use of pesticides and herbicides. A single standing committee with full legislative powers to deal with these problems would make Congress far more responsible and responsive to the environmental concerns of the American people.

Mr. Speaker, the sponsors of the various House resolutions to create a standing Committee on the Environment come from 44 of our States and from each of the standing committees which now serve the House. Members from both sides of the aisle and of widely differing philosophies have joined in this effort. I am confident that I speak for all 163 of us in asking that the Rules Committee hold hearings and report appropriate legislation yet in the 91st Congress.

I am pleased to announce that the gentleman from California (Mr. HOSMER), the gentleman from Massachusetts (Mr. BOLAND), the gentleman from South Dakota (Mr. REIFEL), the gentleman from Florida (Mr. SIKES), the gentleman from California (Mr. EDWARDS), the gentleman from Indiana (Mr. BRAY), the gentleman from California (Mr. TUNNEY), the gentleman from Massachusetts (Mr. DONOHUE), the gentleman from Minnesota (Mr. LANGEN), the gentleman from Pennsylvania (Mr. FULTON), the gentleman from Illinois (Mr. MICHEL), the gentleman from Rhode Island (Mr. ST GERMAIN), the gentleman from Iowa (Mr. SCHWENGEL), and the gentleman from New Jersey (Mr. RODINO) have joined myself and 149 other Members of this body in proposing a standing Committee on the Environment.

CURRENT PALESTINIAN GUERRILLA HIJACKINGS

(Mr. STAGGERS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. STAGGERS. Mr. Speaker, the hijackings of the Pan American, TWA, BOAC, Swissair, and El Al flights, and the holdings of some 300 hostages, by the so-called Palestinian guerrillas are not only deplorable, but also despicable. All of us are being asked what we are doing about it and what we plan to do about it. As an individual Member of Congress and particularly as chairman of the Committee on Interstate and Foreign Commerce, this matter is of grave concern to me.

I have long been concerned with the problem of airline hijackings. The committee which I chair has held extensive hearings on this subject. We issued a report—House Report 91-33, 91st Congress, first session, March 11, 1969. About the time of that report—which I would urge you to read—I stated that "we cannot legislate sanity." Most of the hijackings which had then come to our attention were perpetrated by desperate individuals, criminals, lunatics, people of deranged mentalities. The series of hijackings to Cuba in my opinion were not political in nature and the force flights to Havana and the passengers on those flights were safely returned. A number of hijackers have been apprehended, tried, convicted, and sentenced. Some voluntarily returned from Cuba, even though the penalty after conviction of an attempted hijacking under the Federal Aviation Act is a minimum of 20 years and a maximum of death.

Although the current actions of the guerrillas can be properly described as inhuman and even animal-like, unlike most earlier ones involving the United States, they are not the actions of single, desperate, and irrational minds. They have been planned and carried out through concerted actions of many persons.

The executive department, including the White House, the Department of State, the CIA, and the FBI, I am satisfied, have put their very best talents to this challenge. I am sure they are also joined by the Department of Defense, the FAA, and any other offices having a responsibility. I will keep in close touch with their progress and assist in any way that I can.

The actions of the Palestinian guerrillas are violently extreme. We may be required to take extreme or unusual steps in response. We, of course, will have to work to a large part through diplomatic resources and in cooperation with other nations whose citizens have been victimized and whose aircraft have been confiscated.

I do most emphatically want the hostages, their families, everyone in this country, and particularly the forces and the people who have perpetrated this inhumane and totally unacceptable action to know that it cannot persist and must not be duplicated.

VINCENT LOMBARDI

(Mr. SCHADEBERG asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. SCHADEBERG. Mr. Speaker, I

want to take a moment to reflect on the recent loss, Wisconsin, our country, and everyone who abides by the love of his fellow man, suffered with the passing of Vincent Lombardi.

This legendary man left a legacy that will last for eternity.

A great football coach, yes. More important, a truly wonderful man filled with insight, dedication, and leadership without peer.

He was admired by all and inspired those who came to learn under his tutelage.

Vince Lombardi made his mark upon our world and achieved successes that will remain as tremendous recollections for all of us.

I wish to join the many friends across the country in expressing sympathy to Mrs. Lombardi and her grieving family.

My prayers go for his everlasting happiness in Heaven.

AIRPLANE HIJACKINGS

(Mr. BARRETT asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. BARRETT. Mr. Speaker, the word community cannot continue to allow itself to be blackmailed and intimidated by international airplane hijackings.

There are a number of nations which share a certain amount of responsibility in this situation. Nations which are doing little if any thing to control those within their borders from these acts of piracy.

It may well be necessary for the International Federation of Airline Pilots Association to declare a boycott of the Arab states and demand that landing rights be refused to those airlines serving Arab countries.

I fully realize the inconvenience that such action may cause to the many who have need to travel to Arab countries. But there is little choice under the present circumstances.

One American-flag aircraft already has been destroyed at the Cairo Airport. Three aircraft, a British, Swiss, and American, are parked on the desert in Jordan and threats have been made to destroy them. But of far greater importance, Mr. Speaker, are the lives and welfare of about 300 airline passengers of many different nationalities who are being held as hostages and who have been threatened with death by the Palestine guerrillas if their demands are not met.

The issue is not racial, religious, or national. The issue is one of decency and humaneness.

The Philadelphia Inquirer this morning contains an article depicting the concern of a number of Philadelphia's citizens and their turning to prayer at this time of crisis.

I include the article at this point in the RECORD:

PHILADELPHIA JEWS RALLY IN PRAYER, DEMAND WORLD HALT PIRACY

(By Andrew Wallace)

Sounding alarms on a ram's horn and chanting in supplication, Jews of Philadelphia began an around-the-clock vigil Wednesday noon, praying for the safe return of 180 hostages held captive by Palestinian guerrillas.

Even as they began the solemn wait near the Monument to the Six Million Jewish Victims of Nazi Oppression at 17th and the Parkway, they learned that yet another airliner, with its crew and passengers, had fallen prey to the air pirates.

For them the threat was deeply felt and personal. Jerome Kaplan, president of the Greater Philadelphia Council of the American Jewish Congress—who was with his wife and son on the El Al airliner the guerrillas tried to hijack over London on Sunday—was there to tell of the ordeal.

LITTLE IS HEARD

Nearby, Mrs. Sylvia Silovitz and Mrs. Sarah Weisberg, sisters of Rabbi Menachem Raab, whose wife and five children are among the captives, received the sympathy of the 45 Jews who took part in the ceremony.

They have heard little, they admitted, except that the hostages were being fed and are allowed to sometimes leave the plane, stranded in the Jordanian desert, for short periods of time.

Those attending were not critical of the U.S. role in working to free the captives. "They are doing all that is possible," Mrs. Silovitz said.

Officials of Jewish agencies, along with City Councilman George Schwartz, freely expressed their anger at the terrorists and announced plans to try to move the United States to take direct action to halt the wave of hijackings.

PARTNERS IN CRIME?

Schwartz read what he termed the "guts" of a resolution he plans to introduce Thursday in City Council, memorializing Congress and the President and demanding governments and airlines to "declare a boycott of the Arab states and to refuse landing rights to Arab planes and those airlines serving Arab countries."

Failure to do so, he warned, "makes these governments and airlines partners in these criminal acts."

Kaplan said he sent a telegram to President Nixon urging "the immediate cessation of all American commercial flights to any Arab countries which allow plane hijackers to operate from their territory."

"COWARDLY TACTICS"

Theodore R. Mann, president of the Jewish Community Relations Council, sponsor of the vigil, contended the "cowardly barbaric tactics employed by the terrorists must not be tolerated."

Nearby, one man argued that the nation's Jews should immediately march on the White House to demonstrate for more concrete action.

At the fringe of the group was Rabbi Harold Novoseller and a small contingent from the Jewish Defense League, whose leader, Rabbi Meir Kahane, threatened earlier to retaliate in kind to Arab terrorist attacks.

Rabbi Novoseller warned that the terrorists "will suffer the consequences" if harm is done Jews or non-Jews.

"Was it an eye for an eye?" he was asked.

"It's two eyes for an eye," he replied.

THE WAVE OF TERRORISM NOW SWEEPING THE WORLD WAS FIRST DESIGNED BY THE SOVIET UNION AT THE TRICONTINENTAL CONGRESS IN HAVANA, CUBA

The SPEAKER pro tempore (Mr. MATSUNAGA). Under a previous order of the House, the gentleman from Illinois (Mr. PUCINSKI), is recognized for 60 minutes.

Mr. PUCINSKI. Mr. Speaker, the wave of terrorism now sweeping the entire world was first conceived, designed, and developed at the Tricontinental Congress held in Havana, Cuba, on January 2–14, 1966, with more than 600 top Communist leaders from 82 countries on three continents—Asia, Africa, and the Americas, in attendance.

This prophetic meeting, which received practically no attention from the world press at the time, was organized by the Soviet Union. Its main purpose was to draw up a blueprint for a new technique of coordinated Communist aggression by exporting the same kind of subversion and terrorism first developed by the Vietcong in South Vietnam to all of the 82 nations represented in the Congress on the three continents.

Let there be no mistake. The hijacking of aircraft, for kidnapings of diplomatic officials, for assaults on embassies, buildings, and other installations, the burnings and lootings, the subversion against established institutions of government, and the use of terror is not just something that is a coincidental happening throughout the world.

It should be perfectly clear that the trap into which the United States was pulled by the Soviet Union in the Middle East, when we naively agreed to sponsor a cease-fire, is part of the running conspiracy first developed in Havana, Cuba, 4½ years ago, and now being methodically carried out throughout the world.

There must be no doubt that the Soviet Union has engaged in the most violent diplomatic deceit when it misled the United States into believing that somehow, peace can be found in the Middle East through a cease-fire.

The Soviet Union never intended to support the cease-fire and in order to completely wreck it, the Communist-inspired, trained, and armed Palestinian terrorists hijacked four aircraft to create an international crisis.

I believe the time is long past due when the Soviet Ambassador to the United States, Anatoly Dobrynin, should be asked to leave this country, for, indeed, he has been an architect of the most brutal kind of deceit ever practiced in diplomatic circles.

Dobrynin should be declared persona non grata because on two major occasions, he has flagrantly deceived both Secretary of State William Rogers and former Secretary Dean Rusk. Both President Nixon and President Kennedy have been victims of Soviet treachery reflected by Dobrynin.

It was Dobrynin who, in pursuit of the blueprint worked on in Cuba 4½ years ago for world rebellion, subversion, and terrorism—first assured the American State Department that the Soviet Union would support a cease-fire in the Middle East. He helped write the cease-fire order in which the Soviets agreed not to change their military status.

It was not but a few hours after the cease-fire announcement that Soviet technicians were moving SAM 2 and 3 missiles into an offensive position within 15 to 18 miles along the Suez, categorically in violation of the cease-fire

agreement itself. While all this was going on, with U–2 flights dutifully recording this Soviet deceit, Dobyrnin was sweet-talking the State Department about the Soviet Union's peaceful intentions.

This was the same Ambassador Dobrynin who engaged in the same kind of violent deceit against President Kennedy in 1962 when he tried to persuade the late President not to believe there were Soviet missiles aimed at the United States, even though our own U–2 reconnaissance flights over Cuba produced indisputable proof of their presence as offensive missiles.

Mr. Speaker, the administration can no longer refuse to face up to the grim realities of Soviet infamy.

We have a right to ask, "Are we again being hoodwinked and bamboozled by Soviet treachery and surrender in the Middle East?"

It will serve no purpose to recall here the infamy of the Soviets in their massacre of 15,000 allied soldiers in the Katyn Forest; or when they triggered off World War II with the infamous Ribbentrop-Molotov agreement; or when they plunged 180 million people from Lithuania, Estonia, Latvia, Poland, Rumania, Hungary, Czechoslovakia, and Bulgaria behind the iron curtain after World War II through their false promises at Yalta and Potsdam.

No one in their right mind can afford to ignore the treachery of the Soviets during any of these episodes. They are, above all, a tragic reminder of the scope of Communist hypocrisy and should serve as warnings that we are again witnessing another Munich; this time in the Middle East, with Israel as today's victim of Soviet infamy.

One perhaps could try to understand the imprudent wishfulness of this administration that somehow problems of the world will go away and everything will return to normalcy. But, Mr. Speaker, it is becoming most difficult to understand our President, when it was Mr. Nixon who rose to fame and ultimately the Presidency of the United States, because of his hard line against Soviet deception and intrigue.

What has happened to the Richard Nixon who became the great disciple of warnings against Soviet infamy and why is the President today giving into the obviously bankrupt advice of career people in the State Department, whose record of failures literally paralyzes the sensitivities of man's values.

This Nation has a right to ask what has changed to make Mr. Nixon to believe that some how or other, the Soviet threat is any less today than it was 20 years ago when he sounded the first clarion.

The Soviets have kept the world in a state of constant turmoil since the end of World War II.

First, in their barbaric occupation of the captive nations of Europe; and second, their unbroken record of deceit and intrigue against institutions of freedom, starting with the civil war in Greece, which Communists fomented with the full blessings of the Soviet Union, because the Soviets wanted access to the Mediterranean, through Korea, through Vietnam, and now the Middle East.

At what point is the administration and the American Nation going to realize the scope of Soviet treachery?

At what point will we realize the Soviet Embassy right here in Washington is the nerve center for terror and subversion in this entire hemisphere.

The United States today stands as a partner in guilt for what is happening in the Middle East because our own government was foolish enough to rely on the deceit of Dobrynin and his government.

The Israelis, most reluctantly, agreed to the cease-fire knowing full well that the Soviets never intended to make good on their pledge.

Mr. Speaker, today it is only the Israelis who truly understand the magnitude of Soviet conspiracy. It is a tragedy of our times that a mighty nation like the United States can be forced to concede to the infamy of Soviet-Arab terrorists, while tiny little Israel, with slightly more than 2 million people, is the only nation courageous enough to stand up to Russia's brutal aggression.

The terrorism that we see in the Middle East today is part of Moscow's grand design to create enough turmoil in the Arab world so that Russia's own Soviet Muslims can move in and take over those countries as similarly Soviet-trained agents took over the captive nations of Europe.

Communism breeds on disunity and this is the Soviet's main weapon in the Middle East.

I said on the floor of this House that Soviet pilots were being used in the Middle East, and that statement was denied.

A few days later, it had to be confirmed in the face of overwhelming evidence.

I said the Soviet Union was recruiting Soviet Muslim from the provinces of Azerbaijan, Tadjistan, Turkman, and other Soviet Republics that contain large elements of Muslim populations in Russia and training them for duty in the Middle East.

This, too, was first denied but is now a proven fact.

The scope of Soviet treachery is best demonstrated by the fact that Moscow is too smart to try to destroy the deep roots of Muslim religion in Arab States by attempting to turn those states Communist. No, the Soviets are too smart for that and know that the long years of history are against such a plot. And so, instead, the Soviets are infiltrating Soviet oriented Muslims, trained in Moscow, and sending them into the Arab states for ultimate take over of those countries.

What an enormous tragedy that Arab leaders cannot understand that achievement of Soviet goals in the Middle East would mean the hammer and sickle would fly above the Kaaba stone in Mecca and the wailing wall in Jerusalem, and that Lenin's portrait would appear above the Holy Sepulchre in Jerusalem.

The United States has not lifted a finger to expose this brutal aggression or against the way the Soviet Union has methodically rearmed the Arab States to wage war against Israel.

The terrorist organizations now roaming the Middle East—holding hundreds of innocent victims hostages, engaging in most violent sabotage and terrorism—are armed with Soviet weapons.

Where is the voice of outrage by the Soviet Union against these hijackings and terrorism now sweeping the world? Moscow's only comment is that it gives their Arab allies a bad image throughout the world.

It is folly to ask the Soviet Union to join in a denunciation of these tactics when the record now clearly indicates that the Soviet Union itself is masterminding and conducting this orchestration of violence sweeping the world.

Let there be no mistake by the American people and the free world—Russia will not stop this terrorism until the ultimate goal of overthrowing the U.S. Government has been achieved by the architects of the Havana Manifesto which was issued at the conclusion of the Tricontinental Congress.

Even though 600 important Communist leaders from 82 nations of Asia, Africa, and the Americas attended the Tricontinental Congress, it was the Soviet Union who was the chief architect over this grand design for the destruction of freedom.

I warned here on the floor of this Chamber in 1966 of the brutal tactics against freedom that were being developed in Havana. I warned against this wave of terrorism now sweeping the world.

But the sophisticated press chose to ignore these warnings and even the New York Times, which prides itself on being the chronicler of world affairs, gave nothing more than sparse coverage to the Tricontinental Congress.

The rest of the world media literally ignored it.

The Tricontinental Congress met the first 2 weeks of January 1966, in the Havana Hilton Hotel, now called the Havana Libre, which was declared off limits for the public and press.

Leaders of the Congress said their time table called for full-scale terrorism and subversion in the United States and throughout the world by 1970. They said it would take them 4 years to properly train enough guerrilla leaders who would mastermind subversion and terrorism on the three continents represented at the Congress including the United States.

Our Central Intelligency Agency monitored the entire proceedings, and Mr. Speaker, it is absolutely uncanny how closely the time table for terrorism and subversion worked out in Havana is now being carried out throughout the world.

The belligerent tone of the Tricontinental Congress was set by Cuban President Dorticos in his inaugural speech on January 4 when he demanded the "overthrow of the United States."

He proclaimed that "the right as well as the duty of the people was to answer armed violence of imperialism with armed revolutionary violence."

The tone of the entire conference was against the United States and its involvement in defense of South Vietnam.

A number of speeches were made describing in detail terror tactics being tested by the Vietcong in South Vietnam with assurances that if these tactics succeeded against South Vietnam, they should be used in the 82 nations marked for rebellion by the Tricontinental Congress.

A permanent organization was formed at the conclusion of the Congress with headquarters in Havana, Cuba "to unite, coordinate, and impel the revolutionary struggle against North America."

Pedro Medina Silva, chief of the pro-Communist Venezuelan guerillas, was named as chairman of the permanent organization. The Tricontinental Congress urged increased efforts in preparing cadres for guerillas and subversive activities.

Our intelligence shows that Fidel Castro has converted many of the obsolete Soviet missile sites, abandoned by the Russians for more modern installations, into guerilla training camps, and a number of new camps have been constructed.

There are now 43 camps in Cuba equipped to train 10,000 activists a year to be guerillas and terrorists; experts in sabotage and espionage. The basic training period lasts 4 months with longer periods for special categories.

The main tactics being taught in the 43 camps include sabotage against all Yankee interests throughout the world.

In order to get crowds sufficiently aroused for mob action, heavy emphasis is placed on demonstrations, sit-ins, protest marches, meetings, and broad scale denunciations of American personnel as well as embassies throughout the world.

Kidnaping of American diplomats is considered one of the most effective means of deteriorating American influence abroad.

In the United States, mass murder of policemen is being encouraged as the most effective weapon for a complete breakdown of law enforcement machinery.

When a guerrilla candidate arrives in Havana through secret means, he is carefully questioned on all possible targets in his community for sabotage or subversion.

Castro's fishing fleet, financed by the Soviet Union, is especially useful for bringing guerrillas to Cuba and reinfiltrating them back to their home country after their training.

One of the most frequent routes to Cuba is Mexico.

Throughout the Tricontinental Congress and now in the training centers, it has been clearly apparent that the Soviet Union is not so much interested in inspiring established Communist leaders of the nations participating as it is in providing direct support to new guerrilla leaders.

Soviet support of facilities for training guerrillas in Cuba should open American eyes to the fact that the present wave of terrorism and subversion in America is Soviet-inspired and Soviet-financed.

The Paris publication, Le Monde, one of the few newspapers to provide any coverage of the Tricontinental Congress, gave us our best hint why Moscow had chosen at Havana to throw its weight behind guerrillas, rather than behind hardened Communist Party leaders, when its correspondent stated that the Tricontinental Congress "was clearly aimed at getting results in direct action, and more precisely, in armed action."

In other words, Moscow does not want to risk losing its hard corps Communist leaders in subversion and terrorism, so instead it finances guerrilla activities who obviously are expendable to the Communists after their usefulness has run its course.

There is no question in my own mind that much of the terrorism we are witnessing in America today is being exported from Cuba.

There is ample proof that the Black Panthers are being used by Cuban-trained guerrillas in their terror campaigns very much as other organizations are being used in carrying out terror campaigns.

Recently, Huey P. Newton, defense minister of the Black Panthers, told a Cuban publication that his group planned to study terror tactics being taught in Cuba.

He showed particular interest in the revolutionary methods developed by "Che" Guevera, but said his group was also interested in techniques for sabotage developed by Castro, Ho Chi Minh, Mao Tse-tung, and the Angola terrorists in Palestine.

Newton was in Cuba while out on bond awaiting trial in Oakland, Calif.

Newton is only one of thousands of young Americans being indoctrinated in Cuba after the Tricontinental Congress The stream of activists going to Cuba to harvest sugarcane is yet further proof.

The daily El Globo of Rio de Janeiro said editorially:

What took place in Havana was not a conference but a conspiracy reunion, the danger of which is so clear that only a blind person fails to see it. Once more the sinister shadow of subversion begins to cover the continent.

The Brazilian Ambassador to the Organization of American States declared that "except for the Soviet missiles in Cuba, no event threatens more dangerously the territorial and political integrity of our continent."

But, Mr. Speaker, even to this day, a wall of silence continues, and the Communists advance in their bizarre plan for world subversion.

In a page 5 story about the Tricontinental Congress, the New York Times stated that "Cuba is to become a center of anti-United States activities in the Western Hemisphere."

On March 26, 1966, the very distinguished Barrons magazine observed that a wall of silence has kept most Americans from learning the truth about Havana even though the Tricontinental Congress was momentous news.

Barrons reported:

With monolithic unity worthy of Stalin himself, the leaders of the global communist conspiracy in effect declared war on the Western Hemisphere.

Mr. Speaker, nobody wanted to listen in 1966, just as nobody wanted to listen when the first reports of the Katyn massacre were announced in 1944; just as nobody wanted to listen when the Soviet Union methodically pushed 180 million people behind the iron curtain in 1945 and 1946; just as nobody wanted to listen when the Soviet Union proclaimed its first Brezhnev doctrine last year after storming into Czechoslovakia; just as nobody wanted to listen when the Soviet Union moved her fleet into the Mediterranean and started to force the U.S. Sixth Fleet out of those waters; just as nobody wanted to listen when the Soviet Union, with great skill, rearmed all of the Arab states and declared her determination to destroy Israel and drive America out of the Middle East; just as nobody listened when we announced the appearance of Soviet pilots in Egypt; just as nobody has listened as we made clear that the Soviet Union has violated the latest attempt toward a ceasefire in the Middle East by installing offensive missiles along the Suez.

Mr. Speaker, we are at the crossroads of this Nation's very existence. Never has this Nation been more seriously threatened with complete and total isolation from without, and with barbaric terrorism and subversion from within.

Can we marshal the forces of the world to deal effectively with this monstrous assault and conspiracy against freedom?

Will this administration stand up and let the American people know the full, ugly facts of Soviet treachery, and indeed, will we have the courage to document the case against Russia in the forum of world opinion?

All of man's conflicts have been the result of a miscalculation. We Americans must state our case fully so there will be no miscalculation that we will not idly sit by and watch our freedom destroyed by Soviet deceit, treachery, terror, and subversion.

LIBERAL OIL IMPORT QUOTA POLICY WILL ALLEVIATE NEW ENGLAND FUEL CRISIS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. BOLAND), is recognized for 10 minutes.

Mr. BOLAND. Mr. Speaker, as winter approaches, we are being advised daily by stories in the news media of an impending fuel oil crisis that threatens the Northeastern States, and we are receiving complaints from constituents on the spiraling costs of currently available fuel oil.

The impending shortages and increased costs of fuel oil are attributable to varied and complex factors which seem to have coalesced into the prospective Northeast fuel oil crisis for the 1970–71 winter season.

Among these factors are the current Mideast crisis, the Suez Canal blockage, rupture of a crude oil pipeline in Syria, Libyan demand for crude oil price in-

creases, shortages of jumbo tankers for the long journey from the Persian Gulf around Africa's Cape of Good Hope to Atlantic ports, an almost insatiable demand for oil in Europe and North America, and the necessity for low-sulphur content oil to meet the new and stringent American antiair pollution standards.

The result is that New Englanders are paying a higher price for oil now, and they face the prospect of paying exorbitant and unreasonable prices this winter if, indeed, they can obtain the quantity of oil needed during the coming frigid seasons for the heating of homes, schools, hospitals, institutions, industries, and for the production of electricity.

Mr. Speaker, if we are to avoid an oil crisis this winter, I feel the Government must take action now to relax the stringent oil import quotas and the Defense Department should release some of its reserve and unused quotas for oil imports. Such action would guarantee New Englanders of an adequate supply of heating oil and help to force down prices. I have urged the President to consider these actions, and include a copy of my telegram to the White House with my remarks:

President RICHARD M. NIXON,
The White House,
Washington, D.C.:

Respectfully urge you order Interior Secretary Hickel and Defense Secretary Laird take immediate steps that would assure homeowners and industries in Massachusetts and New England of adequate fuel supplies at reasonable prices during the coming frigid winter season. I suggest this can be accomplished by further liberalizing the mandatory import quotas on No. 2 fuel oil and the emergency release of Defense Department oil quota reserves. Shortages of residual oil and coal supplies has forced industries, institutions, and utilities to seek No. 2 home heating fuel, also in short supply because of Mid-East crisis and shortage of jumbo tankers to make long voyage around Cape of Good Hope to East Coast ports due to Suez Canal closure. The Federal Government has the power to relieve the people of Massachusetts and New England of this unjust burden on their comfort and their pocketbooks. The mandatory import controls on home heating oil are artificial and arbitrary. Existing lack of flexibility in their administration serves no legitimate national purpose, but merely constitutes an unjust and inequitable discrimination against millions of Americans in the Northeast. If these proposals are not implemented to alleviate the fuel oil crisis, the alternative will be oil rationing and price controls for New England this winter.

EDWARD P. BOLAND,
Member of Congress.

Mr. Speaker, I also include with my remarks an editorial published in the September 6, Springfield Sunday Republican entitled "Fuel-Short Region":

FUEL-SHORT REGION

What may have been regarded in the past as a political agitation for lower fuel oil prices in the Northeast has emerged as something quite different. It is, obviously, not political and not a matter of cheaper fuel. The objective is fair treatment for consumers in the New England region, who face a shortage of heating oil at any price.

In the first of three regional hearings by the Governor's Emergency Commission at Springfield's city hall Thursday, public officials from the western counties colored the fuel picture black. Prices are rising sharply as supplies become scarce, it was reported. Industrial heating oil, on which much of the area's electric power supply depends, is in particularly short supply. Natural gas shortages are a problem for some industries.

But the pressure is also on home heating oil, the price of which has gone up—and which reportedly is being used by some suppliers to thin the heavier industrial oil. The prospect of fuel rationing in the coming winter, to say nothing of power brownouts, is disturbingly real.

Basically, the problem is a conflict between the interests of the domestic oil producers, who have been supported generally by both the Johnson and Nixon administrations, and the New England states, which have no oil refineries or gas supplies of their own and are remote from the production areas. The cost, and sometimes the inadequacy, of transportation has long been reflected in the high prices New Englanders have had to pay for fuel—and, indirectly, for steam-generated electric power.

Hopes of remedying the price inequity rose a couple of years ago when Occidental Petroleum Corp. announced plans to build a refinery at Machiasport, Me., which would process imported crude oil. But it was necessary for the state of Maine to apply for federal authority to establish a free trade zone in that state to free the imports of customs limitations. Also, the company needed permission, under the federal oil import quota program, to receive shipment of foreign crude oil. Neither application has succeeded.

The entire proposal was fought strenuously by the domestic oil industry, which cited "national security" as one reason to protect the home market against competition from abroad. Another reason was that the development of yet-untapped oil reserves in this country should be encouraged.

While the administration has given lip service to abandonment of the 11-year-old oil import quota system—and indeed seemed ready to replace it with a stepped-up tariff program—the picture changed abruptly in mid-August. The key was the position of the President's oil policy committee, which first recommended replacement of the quota system, then reversed itself—apparently on the strength of "national security" in the light of the Middle East situation.

(The Department of Interior, reporting on a study done for it a year ago, said that with removal of the quotas the United States could store ample oil for emergency purposes at much less cost to the nation than accrues from enforcement of the quotas. The cost to Americans because of the quotas was estimated at $7 billion to $8 billion annually.)

For now, the only apparent hope of a fair deal for New England oil users is the pressure that can be brought on Congress and the administration by public groups, such as Gov. Sargent's Emergency Energy Commission and the Massachusetts Consumers' Council, by the region's own U.S. senators and representatives—and by private individuals and organizations throughout the region.

ANNIVERSARY OF THE KINGDOM OF SWAZILAND

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. DIGGS), is recognized for 10 minutes.

Mr. DIGGS. Mr. Speaker, the Kingdom of Swaziland attained its independence on September 6, 1968, after 70 years of British administration. It is a small landlocked country surrounded by the Republic of South Africa and Portuguese controlled Mozambique, 50 to 60 miles inland from the Indian Ocean. Swaziland is a nonracial constitutional monarchy with a prosperous and growing economy. Its people pride themselves on their colorful cultural traditions and the development of their country as a modern nation. King Sobhuza II has been on the throne for almost 50 years and is much beloved by the people. Swazi-United States relations are excellent, and it is our policy to assist the country wherever possible in its orderly and progressive economic and social development. Having visited Swaziland in August of 1969, I have first-hand knowledge of its problems and promise. As Chairman of the Subcommittee on Africa, House Foreign Affairs, I am pleased to congratulate King Sobhuza II and the Swazi people on the second anniversary of their independence and offer them my good wishes for continued progress and prosperity.

THANK YOU, CAPT. JOHN PRIDDY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. PREYER) is recognized for 10 minutes.

Mr. PREYER of North Carolina. Mr. Speaker, the recent hijackings show us how easily the web of our interrelated technology can be broken by the guerrilla tactics of a few evil men. The hijackings even raise the question of man's capacity to survive his own technology.

In the spreading disorder, in the complicated technology of our world, it is reassuring to find man surviving, not through any great feats of technology, but through acts of simple human character and courage.

An example of this is the conduct of Capt. John Priddy, the pilot of the Pan American 747 jumbo jet which was recently hijacked to Cairo and there destroyed.

I have a special interest in Captain Priddy not just because he is from North Carolina—all of us in North Carolina are proud of that—but because my son was a passenger on the hijacked plane. His life and those of the other 187 passengers literally depended on the skill and steady courage and character of Captain Priddy.

The skill was considerable. He landed the plane, at night, at both Beirut and Cairo without having a flight book for either airport. He negotiated the takeoff of the plane from Beirut from a runway never designed for the huge jumbo jets. All of this, plus 8 to 10 hours of steady flying, was done with a cocked pistol at his head. Yet his voice in his announcements to the passengers never betrayed the least tension or fear but was always confident and reassuring and under perfect control. At Beirut he left the cockpit and strolled the aisles, steadying the passengers.

This perfect control was maintained under the nightmare conditions of the final emergency abandonment of the plane. Almost 200 people scrambled off

the plane in 1½ minutes, in the nighttime, sliding down steep chutes from a height equivalent to a two-story house, to be greeted by automatic weapons fire and tracer bullets streaking the night. When the party led by Captain Priddy reached a bus, the Egyptian driver, whether through terror or design, refused to drive the bus away from the plane to the airport. Captain Priddy took the driver's seat with most passengers lying on the floor of the bus to avoid the gunfire and drove it to safety.

That there has been no major mid-air disaster as a result of hijacking can be credited partly to good luck but mainly to the high level of training given the pilots and crews of our airlines for such emergencies. The stewardesses in this instance once again performed magnificently, as they have in other recent emergencies. Our comedians have created an unfair image of stewardesses in this country as just pretty "coffee, tea, or milk" dolls. But in the crunch they have proved to be made not of plastic but of iron.

Captain Priddy's attractive wife was a passenger. She was taking her first flight on a jumbo jet, observing her husband's office and working conditions like other wives. Her bravery was another steadying force, and at Cairo she took charge of sending messages to the passengers' families.

Captain Priddy summed it all up in his moving farewell talk to the passengers as they were flying back from Rome to America. As well as my son recalls it, he said:

> We live in a crazy, violent world and perhaps we have gained a deeper understanding of it because we have come so close up to it. We have learned the importance of working together and the importance of unity. I hope you will mull over the experiences of the past 24 hours in your minds and will always remember what saw us through it. I have been flying for 30 years with Pan Am and can truly say that this is the best group of passengers I have ever had. Thank you for all you did. God bless and God speed.

To you, Captain Priddy, on behalf of your passengers, their parents and relatives and friends, I say as sincerely as I know how: Thank you.

All of us are thinking of those passengers now in the desert of Amman, and their relatives and loved ones, and hoping their Captain Priddys will see them through.

NAVAL AFFIRMATIVE ACTION PROGRAM—INTEGRATION BY THE NUMBERS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Louisiana (Mr. RARICK) is recognized for 10 minutes.

Mr. RARICK. Mr. Speaker, with rare exception, the military bases in our country are under attack from within and without. The weapon of assault is exploitation of racial differences in the man.

Well-intentioned solutions and efforts by the military bureaucrats and top brass are traditional military. Those in command do not seek the cause—are not allowed to evaluate the real problem, and consequently pursue as an only solution what they have been trained to do; that is, command and discipline.

Typical of the naive lack of understanding in explosive racial relations in our military forces was the Executive order by President Nixon, ordering the Navy goal of a fully integrated work force. It makes little difference to the top echelon receiving such an order whether its force floats or sinks, fights, or is effective—it must be racially integrated, even if it destroys the morale and esprit de corps of the entire force.

To illustrate the absurdity to which one commander has proliferated his command in order to maintain a good efficiency report—of which racial integration of his command is a priority—I refer to a proposed area directive of the Naval Training Center at Bainbridge, Md.

In the proposal, responsibility for action includes maintaining contact with community-action organizations such as NAACP.

Additionally, under "Needed implementation action" is mentioned training courses "One. Sensitivity training to increase understanding of and empathy for the equal opportunity program."

A brief review of this naval "upward mobility" proposal would suggest that one of the reasons for breakdown in military discipline is that those with the responsibility to command are not given the authority to exercise their leadership positions.

Perhaps those who seek do-gooder solutions to unnatural problems would do well to study the military tragedies of the Russian Army first without officers, then with ideological political leaders and finally with the dual command of a combat leader and a commissar. Or then too, we might remember the problems created in the German Army when Hitler assigned to each Werhmact commander an SS or Nazi officer to assure that officers and men were properly indoctrinated in the basic goals of the German Reich.

If our military leaders are not soon given the responsibility of maintaining a first-rate fighting force, regardless of do-gooder wailings and racial differences, who can say how long before someone suggests a member of the NAACP—a whiteman's showcase for control—serve as a staff officer to every command and that the commander not be permitted to speak, write or command until after his orders and operation plans have been reviewed and approved by his staff race indoctrination officer and found free from "racial implications."

At some future date perhaps one of our great national leaders will dare suggest that by separating our troops into units according to race they would not only remove the constant agitation of racial differences but could instill competition and pride where suspicion and unrest now prevail.

There are those of us who served in the military who still feel that the goal of every branch of our military should be first and foremost an effective fighting force. To be otherwise constitutes a deviation from the constitutional mandate to provide and maintain a Navy.

Mr. Speaker, a copy of the Bainbridge consolidated affirmative action program follows my remarks:

NAVAL TRAINING CENTER,
Bainbridge, Md.

COMNTCBAIN/AREACORD instruction 12713.
From: Commander, Naval Training Center, Bainbridge, Md.
To: Distribution List.
Subj: Bainbridge Consolidated Affirmative Action Program.
Ref: (a) SecNav Notice 12713 of 9 Mar 1970; (b) COMNTCBAIN/AREACORD INST 12713.3 of 27 Mar 1970.
Encl: (1) Bainbridge Consolidated Affirmative Action Program.

1. *Purpose.* To distribute a new Bainbridge Consolidated Affirmative Action Program.

2. *Background.* Executive Order 11478, issued by President Nixon on 8 August 1969, called for a revitalization of Affirmative Action Plans designed to assure full realization of equal employment opportunities in the Federal Government. Responding to this and other high level implementing directives, the Department of the Navy promulgated reference (a) which contains the Navy-wide plan of action. This later directive requires the revision of local Affirmative Action Plans consistent with Navy requirements to achieve rapid progress toward the Navy goal of a fully integrated work force.

3. *Action.* Enclosure (1) outlines the new local plan and indicates action items to achieve progress toward goals discussed in reference (b). Addressees should make every effort to take action on designated items within available funds, ceilings and other resources.

REQUIREMENTS FOR AFFIRMATIVE ACTION UNDER E.O. 11478

I. Organization and resources

A. General Requirement. Sufficient manpower resources to carry out the program must be provided and all commands and other organizational units and all levels within those organizations need to be assigned specific responsibility and authority for EEO. The rolls and interrelationships of the EEO and Personnel Director and staff, line and staff managers and supervisors, unions, and rank-and-file employees must be spelled out.

B. Conditions

1. An organization that is consistent with current EEO program requirements already exists. This includes the Area Coordinator to provide the one Navy approach, and Consolidated EEO Committee with representation from all organizations to assure organizational input to action plans, a Domestic Action Officer who serves as the EEO Coordinator, staff technical advisors on the Civilian Personnel Office staff and counselors for the informal discrimination complaint procedure. These assignments are all on a "collateral duty" basis with no additional manpower resources allocated. Consequently the extra supporting workload (staff studies, statistical data, directives writing, investigations, enforcement, etc.) essentially falls to the staff of the Civilian Personnel Office which is already hard pressed to accomplish its basic job.

2. While the organization is current the directives establishing it and assigning responsibility are not. Several are in existence that should be combined to implement the entire EEO program including organization, responsibilities, goals and action required to accomplish goals.

C. Needed Implementing Action

Formulate an area directive with joint concurrence of all commands through mem-

bership on the CCEEO. Directive canceling all others on subject would establish Bainbridge position as unqualified support to Navy policy of a "Fully Integrated Work Force". The directive would assign specific responsibility and authority and define the rolls and interrelationships of the Center Commander as Area Coordinator, Commanding Officers, CCEEO, Domestic Action Officer, Director of Civilian Personnel and Counselors (if appropriate). The directive should note that all phases of personnel activity are subject to EEO considerations; that an affirmative action plan will be developed and published as a separate document providing specific goals to be used by all in achieving Navy policy objective, i.e., full integration, in making personnel decisions, such as whom to select for a vacancy, whether to redesign a position for employment at a lower level to permit competition by deprived minorities, where to concentrate leadership resources to motivate and achieve greater participation in training activities that will help develop minorities, etc. Additionally the need for allocation of full time manpower resources to EEO functions should be determined.

D. *Responsibility for Action.*

Action: Area Directives. Responsibility: CPO—Accomplished. Target Date: March 1970.

Action: Numerical Goals. Responsibility: CPO—Accomplished. Target Date. March 1970.

Action: Full Time Social Objectives Action Officer. Responsibility: Center Commander. Target Date: Fiscal Year 1971.

II. Recruitment

A. *General Requirement.* Continuing "recruiting relationships" with colleges having mostly minority or women students, and with minority groups and women on other campuses, ought to be established. Similar links might be forged with professional societies and other sources of candidates for technical, professional, and management level positions.

B. *Condition.* The Bainbridge work force is predominantly clerical with the majority of new hires at GS–2 level. Under the circumstances, recruiting relationships with local high school campuses which are all fully integrated are of primary concern. Continuing links with colleges, professional and technical societies would therefcre be redundant. Schools, churches and local minority organizations are kept fully informed of Bainbridge's employment needs on a current and continuous basis. This includes an active local high school contact program to assure that our predominately clerical hiring needs are met. Through this program, every local high school has taken advantage of "on campus" testing for Federal jobs. As a consequence, very adequate clerical registers of eligibles are maintained by the Civil Service Commission, Interagency Board for Maryland.

C. *Needed Implementing Action.* Recruitment practices are in many ways the foundation of an effective affirmative action program. All recruitment practices should be reviewed to insure that minorities in the recruitment and retention area are on notice regarding job opportunities. As a minimum, review and improve "recruiting relationships" with local high schools, minority organizations including NAACP and churches; develop further the use of minority employees (already on the rolls) in referring minority applicants; and assure that these sources are continuously advised of job openings and filing procedures.

D. *Responsibility for Action.*

Action: Review and adjust recruiting practices. Responsibility: CCEEO/CPO. Target date: Continuing.

Action: Enlist recruitment aid of current minority employees. Responsibility: CPO. Target date: Continuing.

Action: Encourage more Black high school students to follow Business study programs. Responsibility: CPO. Target date: Continuing.

Action: Provide leadership for and participate in community activities that are directly linked to the recruitment of minority workers, i.e., career day, job clinics, work experience programs and guidance seminars. Responsibility: CPO. Target date: Continuing.

Action: Maintain contact with community action organizations such as NAACP, secondary schools, State Employment Service. Such agencies are helpful in locating job applicants, providing general employment information and assistance in completing applications for Federal Employment (SF 171). Responsibility: CPO. Target date: Continuing.

III. Full utilization of the present skills of employees

A. *General Requirement.* Agencies should survey the existing work force to find underused or unused skills, and put the data in a "skills bank" to match underutilized employees with job openings. They should also insure that job qualifications requirements are realistic in terms of the jobs to be done.

B. *Condition.* There is no underutilization at Bainbridge. The nature of Bainbridge jobs is generally clerical in the lower pay levels. Because of this, target positions are available to all through the *normal* operation of the merit promotion program from one rung of the occupational ladder to another. There are some with unused skills but these are not considered underutilized because the skill is not needed at Bainbridge and the employee is unwilling to transfer to another Navy or Government agency where the skill is needed.

C. *Needed Implementing Action.* None. However, the nature of the work force should be watched for changes in this condition.

D. *Responsibility for Action.*

Action: Realistic Qualification Requirements. Responsibility: Line Officials/Supervisors/CPO. Target date: Continuing.

IV. Enhancing "upward mobility"

A. *General Requirements.* Career ladders should be constructed so that underutilized or talented employees can move up. Career counseling and guidance and training for lower graded employees who can benefit, should be provided. So should "active programs to communicate meaningful information."

B. *Condition.* Again reference is made to the characteristics of the work force and the fact that growth opportunity is limited by its very nature. Regardless, positions have been redesigned to permit entrance at lower "lead-in" levels by minorities and others who would not otherwise be qualified. Subsequent to qualification and performance demonstration such employees receive "career promotions" to the "full performance" level of their position. Thereafter such employees are on their own to compete for other available promotion opportunities. This same approach is used in "blue collar" positions using "shop learner" as the lead-in level. Employees having difficulty qualifying for these reduced "lead-in" levels are given assistance through special on-the-clock coaching and such other assistance as they individually desire thru the on-base Center. This study Center is operated in conjunction with the Cecil County Board of Education, Harford Junior College, Cecil Community College and the University of Maryland. Among the development courses available are Adult Basic Education for those with less than 8 years education, GED preparatory studies and a variety of undergraduate and graduate courses established to meet work force demands.

C. *Needed Implementing Action.* The "lead-in level"—Shop Learner Program should be expanded to provide even more opportunity for the undereducated, unskilled and/or inexperienced to be employed in positions that will help provide the foundation for further growth. Several expansion possibilities come to mind, namely (1) further redesign positions already in the "lead-in level" program to provide a greater grade spread such as GS–1 & GS–2 lead-ins for a GS–3 full performance position rather than the current GS–2 only lead-in, (2) use the "Shop Learner" approach thru helper and mechanic limited in the apprenticeable trades rather than limit to a few utility plant operating positions, (3) expand study-center operation to include Cecil VoTech Center or the Harford College VoTech Center to improve training capability for those in craft or vocational training.

In expanding this program, care should be exercised in its administration to assure a balanced intake of trainees and employees already fully qualified for full performance. This will assure continuity of on-the-job training capability and preserve the work force skill level necessary to assure capacity to do assigned work. Some formula for this balance intake might be used such as 1 out of 4 vacancies in any one occupation could be filled by a trainee.

D. *Responsibility for Action.*

Action: Continue emphasis on position management. Train supervisors in position management to further maximum utilization and development of employee capabilities. Responsibility: Command/PMO. Target date: Continuing.

Action: Encourage and publicize job restructuring actions enabling upward mobility in occupations with concentration of minority employment. Responsibility: Line Officials/Supervisors. Target date: Continuing.

Action: Expand use of the "lead-in level" program. Responsibility: Line Officials/Supervisors. Target date: Continuing.

Action: Expand use of Shop Learner and increase participation of minority employees through motivation. Responsibility: PWO. Target date: Continuing.

Action: Conduct study of possibility of providing vocational training through Cecil Vocational Technical Center to Shop Learners. Responsibility: CPO. Target date: Sept. 1970.

Action: Increase motivation of under-educated to use on-base study center and other growth and development opportunities. Responsibility: Line Officials/Supervisors. Target date: Continuing.

V. Supervisors

A. *General Requirement.* Management training courses should have EEO coverage. Realistic and fair criteria for evaluating supervision and management performance in the EEO area are to be constructed, and those who perform well by these standards should be rewarded.

B. *Condition.* Management training courses do include EEO coverage including the "Working Effectively with People" course which is conducted quarterly and "Civilian Personnel Policies and Procedures" which is conducted at least annually.

Criteria for evaluating supervisory effectiveness exists in the form of "Supervisors' Personal Obligations in the EEO Program", Article 713.1A of the Manual of Civilian Personnel Policies and Procedures. However, there is not now a requirement and consequently they have generally not been used to evaluate effectiveness of performance of Bainbridge officials and supervisors. Moreover, there is no record of any Bainbridge supervisor or official having been recognized or rewarded for exceptional performance in the EEO area. On the contrary, it would seem that policy statements, supervisors obligations and extensive management training efforts have had little positive effect. Attitudes toward EEO among most officials and

supervisors at Bainbridge seem passive rather than affirmative. Generally, there seems to be no firm commitment for progress towards the goals or objectives of this National social policy.

C. *Needed Implementation Action.* EEO coverage included in management training courses discussed in B. above should be dropped and three (3) full courses instituted as follows:

1. Sensitivity training to increase understanding of and empathy for the Equal Opportunity Program.

2. Civil Service Commission EEO Training Course for Supervisors to stress the roll and responsibility of supervisors in EEO under Executive Order 11478.

3. Local EEO Training for Supervisors to outline the Bainbridge plan for Affirmative Action and supervisory performance requirements thereunder.

The "Supervisors Personal Obligation" needs to be revised and reissued as EEO program performance standards to be used with other performance standards in determining the performance effectiveness of officials and supervisors. A specific plan of action needs to be developed and implemented to assure that supervisor effectiveness in the EEO program is determined and used in formal fitness reports or performance ratings. When each official and supervisor is required to answer to the consequences of his EEO performance effectiveness, they will consciously work toward the "full integration" goal of policy. Each must be completely committed and EEO goals and objectives must be a part of every decision having personnel management implications. Nothing less should be acceptable for a satisfactory or better fitness report or performance rating. Of course, those who perform well would be identified for special recognition under such an evaluation system.

D. *Responsibility for Action.*

Action: Revitalize "Working Effectively with People" Course. Responsibility: Domestic Action Officer. Target date: Sep 1970.

Action: Formulate Sensitivity Training Plans for Supervisors and Management. Responsibility: CPO. Target date: Oct 1970.

Action: Procure services of CSC to train supervisors in their role and responsibility under Executive Order 11478. Responsibility: CPO. Target date: Jan 1971.

Action: Formulate EEO Program performance standards and evaluation plans to assure supervisory EEO effectiveness. Responsibility: CPO. Target date: Feb 1971.

Action: Formulate supervisory course on local Affirmative Action Plan and Supervisory EEO performance requirements. Responsibility: CPO. Target date: Jun 1971.

Action: Formulate plans to recognize special EEO accomplishments. Responsibility: CPO. Target date: Apr 1971.

VI. Liaison with community efforts

A. General Requirement. This includes active support of local open housing efforts, assistance to employees for whom lack of adequate housing is a barrier to getting jobs, cooperation with local officials to improve transportation between work sites and residential areas, cooperation with groups seeking to set up day care centers for children of employees or applicants, and assistance to colleges and high schools to improve the quality of education and to develop criteria "which relate to the requirements of Federal positions."

B. Condition.

1. *Open housing.* Bainbridge is providing more than "support to local efforts." As a DoD activity Bainbridge has played and continues to play a major leadership role through the continuing DoD-wide action program designed to preclude discrimination against DoD personnel in housing as well as public accommodations. Housing is generally not a barrier to getting jobs at Bainbridge. The kind and level of jobs available usually only attract local candidates. However, the occasional transfer from other geographic locations requires vigilance. The fact that the DoD program operates at Bainbridge primarily for military personnel assures its availability for civilians when needed.

2. *Transportation.* No public transportation system exists between Bainbridge as a work site and the multitude of residential areas. While a bus franchise exists, its owners have been unable to operate it profitably. As a consequence car pools and "share-the-ride" schemes are essential. Since these schemes are quite adequate and generally preferred by the work force transportation does not seem to be impediment to EEO goals.

3. *Day Care Centers.* Bainbridge operates its own day care center for children of working mothers. While it is not used extensively by civilian mothers, it is available and used.

4. *Assistance to Colleges and High Schools.* The Bainbridge work force is predominately clerical and consequently has virtually no need for a college program related to the requirements of Bainbridge positions.

High School or less meets adequately the requirements of most positions. An active local high school contact program is maintained and through this program every local high school has taken advantage of "on campus" testing for Federal jobs. As a consequence very adequate clerical registers of eligibles are maintained by the Civil Service Commission IAB for Maryland. Thus far educational inadequacies related to position requirements have not been apparent.

C. *Needed Implementing Action.* None as long as present level of activity continues. CPO is responsible for recommending new activity at such time current efforts no longer meet needs.

VII. Program evaluation and progress reports

A. *General Requirement.* A census of minority employees in all grade levels, occupations and organizations should be taken. Results must be assessed and the program evaluated at regular intervals.

B. *Condition.* Census of minority employees are taken at least annually to determine progress towards EEO program goals. Results are used by management to adjust programs as necessary to assure progress. Census reports are usually accomplished as a result of directives from higher authority which will be discontinued since this date has been computerized. However, these details will generally not be available for individual command use requiring manual means to be continued locally.

C. *Needed Implementing Action.* Present action seems adequate CCEEO may wish to evaluate progress more frequently than annually.

D. *Responsibility for Action.*

Action: Develop statistics annually at the close of the fiscal year for use by the CCEEO as a means to measure progress toward EEO goals and deficiencies in Affirmative Action. Responsibility: CPO. Target date: July 1971.

VIII. Processing discrimination complaints

A. *General Requirement.* Sufficient numbers of EEO counselors and complaint investigators should be appointed and trained, and organizations should make provisions for disciplinary action where investigation of complaints of discrimination reveals discriminatory action by supervisors.

B. *Condition.* EEO counselors have been appointed and trained and are operating as part of the complaint processing procedure. Procedures for processing complaints have recently been promulgated and current information is posted on all official bulletin boards.

C. *Needed Implementing Action.* None. This requirement has been implemented in full. Counselors need the continued support and cooperation by all especially management.

THE C–5 GALAXY NOW OPERATIONAL

(Mr. PRICE of Illinois asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PRICE of Illinois. Mr. Speaker, the Air Force's C–5 Galaxy is now flying strategic cargo missions into both Europe and the Pacific, including Vietnam.

The aircraft is the newest one in the Air Force inventory and the largest in the world. It is proving to be every bit of the aircraft it was designed to be—a reliable jet transport with a tremendous capability for the movement of heavy and outsized cargo.

The initial Pacific flight was on schedule throughout its 10-day, 21,550-mile mission. It originated at Charleston Air Force Base, S.C., on July 3, and stopped for brief periods at Dover Air Force Base, Del., and Travis Air Force Base, Calif.—where future C–5 squadrons are to be located—before heading into the Pacific.

The C–5 stopped at Hickam Air Force Base, Hawaii; Andersen Air Base, Guam; Clark Air Base, Philippine Islands; Cam Ranh Bay, Vietnam; Kadena Air Base, Okinawa; and Yokota Air Base, Japan.

By July 13, when the aircraft returned to Charleston via Elmendorf Air Force Base, Alaska, it had airlifted varying amounts of military cargo between destinations—including 83,000 pounds which was off-loaded in Vietnam. Computed on a cube basis, the 118,000-pound load hauled between Alaska and Charleston would have required the service of about four C–141 Starlifters.

While one of the primary purposes of this first flight was the airlift of opportune cargo, it also provided orientation and training for the ground crews who will fuel, service, and maintain the aircraft during its regular Military Airlift Command operations.

Huge crowds gathered at each of the points where the C–5 touched down in its maiden Pacific flight. More than 100,000 persons inspected the gigantic airplane during that trip despite the fact that in each location the craft was on the ground for minimum time.

It is natural that the aircraft would stimulate interest and pride among servicemen and other Americans at these foreign ports and it is also natural that the C–5 would generate prestige for the United States among the foreign nationals who see it. After all, it requires the area of a football field to park with its 247.8-foot length and its wing span of 223 feet. The cargo compartment alone is 121 feet long, 19 feet wide and 13½ feet high—big enough to park six transcontinental buses. The C–5's tail reaches 65 feet in the air—the equivalent of a six-story building.

The first C–5 flight to Europe, similar in mission to the Pacific trip, departed Charleston on July 24, the same day that

the second operational flight to the Pacific returned. In Europe, the airplane stopped at Rhein Main Air Base, Germany; Lakenheath RAF Station, England; and Torrejon Air Base, Spain. It flew back to the United States on July 28. Once again, the C–5 delivered substantial amounts of cargo as well as giving ground crews in Europe their first chance at what will soon be routine servicing of the huge aircraft.

Military Airlift Command crews on these first historic missions enthusiastically endorsed the aircraft's performance throughout the flights. Each day now, as C–5's log more hours of operation in both the United States and overseas missions, the aircraft is proving it can perform the primary military mission for which it was intended—the safe deployment of outsized and heavy military equipment to any place in the world at jet speeds.

Operational flights will increase in frequency and number of bases served as more C–5's are delivered to the Military Airlift Command. And, in the meantime, rigorous tests of the C–5 continue by Lockheed Aircraft Corp., and by the Air Force—tests to prove and improve the systems and procedures—tests to give the United States the best end product. I believe these tests and the operational missions being flown by Gen. Jack J. Catton's fine MAC crews will also serve to dispel much of the criticism which has been directed toward this new aircraft.

In its deployment role, the C–5 will be teamed with the highly efficient C–141 Starlifters. Together, the pair will give the United States an unprecedented strategic airlift capability with the C–141's carrying combat ready troops and small vehicles while the C–5's transport the massive, outsized equipment of an Army division.

The C–5 is designed to airlift 220,000 pounds payload under emergency conditions and can load and off-load in a matter of minutes through its visor-nose front and rear ramp. In fact, it can load and off-load simultaneously. Seventeen C–5's could have done the 10-mile work of the 318 aircraft used daily during the Berlin Airlift.

When the 81 C–5's are in the Air Force inventory, the U.S. strategic airlift posture will be 10 times its 1961 capability. However, even with this impressive increase, a deficit still will exist in our ability to meet certain emergency contingency plans for this decade.

The C–5 touched down at Scott Air Force Base, Belleville, Ill., on August 18 on an operational mission to pick up a C–5 simulator for the training of pilots. The simulator is a duplicate of the cockpit of the C–5. It is outsized cargo of the type only a C–5 can carry. Previously such cargo could be handled only by ground transportation.

ST. LOUIS BANK REDUCES PRIME RATE; PRESIDENT NIXON SHOULD JOIN PLEA TO OTHER BANKS FOR LOWER INTEREST RATES

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, yesterday I urged the banking community to face up to its responsibilities to the American public and reduce the prime lending rate to at least 6 percent.

Late last night, I received a telegram from the president of the Southwest Bank of St. Louis announcing an immediate reduction in its prime lending from 8 to 7½ percent.

While this reduction falls far short of what is needed, I commend the Southwest Bank of St. Louis for responding so quickly to the call for lower interest rates. I hope that the example of this bank will set off a chain reaction throughout the banking community and that the big banks in New York, Chicago, and San Francisco will be announcing similar reductions in the next few days.

Many of the big banks are embarrassed to concede the bad mistake that they made in late 1968 and early 1969 when the prime rate was raised six times. I hope that this embarrassment will not prevent the big banks from doing what is right. With unemployment rising well above 5 percent, the economy is desperately in need of a sharp and lasting reduction in interest rates.

The stock market, which has suffered massive losses during this high interest period, also desperately needs a prolonged period of lower interest rates. In hopes that Chase Manhattan and other banks would respond to the pleas for lower interest rates, the stock market conducted a brief rally yesterday. That rally was a firm indication of the need and the strong desire for lower interest rates. It was a strong indication that only lower interest rates will restore confidence in the stock market.

Yesterday, I wrote David Rockefeller, chairman of the board of Chase Manhattan National Bank, urging him to use his leadership among the money center bankers to restore sanity to the economy. I have not yet heard from Mr. Rockefeller but in the interest of the American consumer and the entire economy, I hope that this New York banker is giving serious consideration to the request.

Once again, I commend Southwest Bank of St. Louis for moving quickly to reduce its interest rates. Undoubtedly, this bank, along with others across the Nation, will be able to further reduce rates if Chase Manhattan, Bank of America, First National City, Continental Illinois, and similar giants of the banking industry reduce their rates.

Mr. Speaker, let me emphasize that economic conditions call for a reduction of the prime rate to at least the 6-percent level existing the day that President Nixon was elected. This is a fair benchmark and it is one that I hope both the banks and the Nixon administration will support. Later, I am sure that we can move toward even lower interest rates.

Today, Mr. Speaker, I am also calling on President Nixon and Secretary of the Treasury David Kennedy to step forward and join my call for a reduction in the prime interest rate. The decision is hanging in the balance in the boardrooms of the large banks all over the Nation. A slight nudge from the President and his immediate economic advisers can bring the American people lower interest rates.

In making this plea to the President and the Secretary of the Treasury, I want to submit the President's Council of Economic Advisers' own inflation alert report as supporting evidence. Time after time, this report, issued on August 7, cites high-interest rates as a contributing cause to various price increases.

Speaking of rising costs in manufacturing, the report says:

> The largest rises were recorded in net interest. Increases in interest costs and capital consumption allocation occurred in virtually every industry.

Mr. Speaker, it is obvious that economic conditions will allow for at least a two-point reduction in the prime interest rate. And there is no justification for a delay in this downward push to interest rates. The President has the full authority and certainly, the highest responsibility, to bring to bear the influence of his office to urge the banks to take this very necesssary step.

In urging the big banks to come around on the interest rate question, the President is in a position to point out to the bankers that the Congress has given him, in Public Law 91–151, standby credit controls. The President can point out that he is in a position to trigger this authority if the big banks persist in their current profit binge. The proper use of this standby authority could bring about whatever rollback the President would desire.

Mr. Speaker, I hope that no bank or bank apologist will come forward with the idea that interest rates must be kept up to maintain a high level of profits. The banks have enjoyed fantastic profits during the interest rate binges of 1969 and 1970 and there is every evidence of further sharp increases in bank earnings. The Journal of Commerce, which follows bank earnings closely, published a detailed analysis of the bank profit figures on Tuesday, September 8. I place a copy of this article "Sharp Gains in Big Bank Profits Loom" in the RECORD:

SHARP GAINS IN BIG BANK PROFITS LOOM

(By Ed Tyng)

When statements of the country's major banks roll out for the quarter ending this month they will show for the quarter and the nine months ending Sept. 30 a huge expansion in deposits—out of which banks make loans and investments—and a big improvement in bank earnings as a result of more investments but, more particularly, interest savings through repayment of expensive Eurodollar borrowings.

All this will reflect the beneficent influence upon banks of the expansionary Federal Reserve policy which last Feb. 10 replaced a tight and restrictive policy.

By removing interest ceiling limits on bank issues of certificates of deposit maturing in 89 days or less last June the Federal Reserve Board gave the banks an immediate opportunity to bid for vast sums of time deposits at interest rates which ranged down recently to below 7 per cent. Also, since June, through open market operations, the Federal Reserve created large additions to bank demand deposits by buying $2.5 billion of government securities.

BIG DEPOSIT GAINS

Since the banks were allowed unrestricted sale of certificates of deposit in June volume of certificates issues by all the country's large commercial banks has risen more than $7

billion to a total of $20.1 billion, which is double the $11 billion they had outstanding Dec. 31.

The increase in certificates was mainly responsible for a gain in total time deposits since June of $10 billion and a gain in that item since the end of 1969 of over $13 billion. Demand deposits of all large banks have changed little since June and are down about $20 billion from the end of last year. Total deposits are up $10 billion since June but are still $7 billion below the total of last year end, a period in which deposits normally are at seasonal peaks.

EARNING ASSETS RISE

When banks sell certificates of deposit, buyers of them usually draw down demand deposits to pay for them, which tends to deflate demand deposits. These, however, are replenished both by Federal Reserve open market operations and by new loans and investments banks make.

At a recent date total earning assets—loans and investments—of all the country's large commercial banks showed an increase of over $6 billion from June 24 levels and an increase of about $2.5 billion since the end of last year. The principal increase was in investments, since bank lending has been on a plateau since June and is actually below the level of last December on an unadjusted basis. Most of the increase in investments has been in government securities, thereby restoring bank liquidity, but so far this year banks have also made substantial additions to their holdings of tax exempt securities.

PAYING OFF EURODOLLARS

At a recent date (Aug. 19) all large commercial banks had reduced their borrowings of Eurodollars from foreign branches by $1.4 billion since June and by $1.8 billion since last December. In this period the cost of the Eurodollars has declined to 8 percent from a range of 10 to 11 per cent. The 7 per cent cost of certificates of deposit, out of which most of the Eurodollar payments have been made, has resulted in substantial savings of interest paid by the banks for the money they lend or invest.

Despite the large payoffs of Eurodollars all large banks still owe $11.2 billion to their foreign branches. Meanwhile the foreign branches have continued to build up their own deposits to new records and while they have less demand for them by their head offices, they are able to employ the funds profitably in making Eurodollar (or other currency) loans to European borrowers, notable in recent weeks to German bank customers.

EFFECT ON PROFITS

It is the combination of employment of more funds in earning assets, and the saving of interest costs on money previously borrowed at high cost, that is going to result in a considerable turn for the better in bank profits during the current quarter, as contrasted with the more dismal earnings previously reported for the second 1970 quarter and the six months then ended.

It is too early to estimate how much profits for the third quarter will exceed those of earlier this year but the experts are guessing that for the nine months ended Sept. 30 profits after security losses will run somewhere around 8 per cent greater than in the like 1969 period. For the first half of this year many large banks reported profit gains over the year before of as little as 5 per cent and a few banks actually showed a decrease as compared with last year.

The profit trend could be adversely affected by a cut in the banks' prime lending rate to 7½ from 8 per cent, but if it should come it will be too late to affect materially current quarter earnings.

In a related development the bank stock firm of Keefe, Bruyette & Woods, Inc. last week distributed a monumental "Bank Stock Manual" which analyzed the banking industry in depth, while, providing a historical record of virtually all facets of the banking industry. Included in the manual was an analysis which showed that bank stocks over the 10 years 1959 outperformed most other stocks as investments.

For example in the 10 years the Keefe bank index showed a 99.5 per cent earnings gain as against 66.2 per cent for Dow Jones industrials and 79.7 per cent for Dow Jones utility stocks; the gain in dividends was 95 per cent for banks against 63.5 for industrials and 69.7 per cent for utilities. Average price earnings ratios were lower for banks than for the other two groups of stocks.

As to market record the per cent of appreciation (mean prices) was 93 per cent for the Keefe bank stock index against 41 per cent for Dow Jones industrials and 37 per cent for Dow Jones utilities. The Keefe, Bruyette & Woods compendium also contains numerous charts and tables covering the banking business.

Mr. Speaker, I also place in the RECORD the text of the telegram from the Southwest Bank of St. Louis and my letter to David Rockefeller, chairman of the board, Chase Manhattan National Bank:

SEPTEMBER 9, 1970.

Hon. WRIGHT PATMAN,
House Office Building,
Washington, D.C.:

Southwest Bank of St. Louis has reduced its prime rate from 8 to 7½ per cent effective immediately. This is Southwest Banks second reduction in prime rate this year. In March the bank was the first in the middle west to reduce its rate from 8½ to 8 per cent. We believe this reduction is in line with the recent trend in interest rates. Southwest Bank has assets of approximately 67 million and is 9th largest in the city of St. Louis.

I. A. LONG,
President.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., September 9, 1970.

Mr. DAVID ROCKEFELLER,
Chairman of the Board, The Chase Manhattan Bank, New York, N.Y.

DEAR MR. ROCKEFELLER: As you know, several small banks have announced a minor decrease in the prime interest rate in recent days. For these banks, the prime rate now stands at 7½%, one-half of a per cent below the prime lending rate of the nation's largest commercial banks.

These reductions are encouraging, but they are far too small to have any real impact on economic conditions. More importantly, none of the large banks have followed the lead of the smaller institutions and this fact alone prevents any improvement in economic conditions nationwide.

Mr. Rockefeller, you are regarded as a leader in the banking community and your statements carry great weight with your colleagues among the money center banks. Therefore, I am calling on you and your bank to lead the way to a sizeable and meaningful reduction of the prime lending rate. Just as many of the banks have followed Chase Manhattan's lead in raising interest rates, I am sure they would follow your action in establishing a reasonable prime rate.

For some reason, the large banks went on what I consider an unnecessary and highly unfortunate interest rate binge after the election of President Nixon in 1968.

I am sure that the banking community, in its private meetings, now realizes that it went too far with these interest rate increases in late 1968 and the early months of 1969. The results of this unfortunate profit-taking are seen in many places in the economy today, most notably, in a sharply depressed housing market and in the unemployment figures which have now soared above 5%.

Economic conditions cry out for a sharp rollback of interest rates and I think it is only fair that the initial point of this rollback be at 6%—the rate in existence at the time of the election of President Nixon in 1968. This would mean that each of the six prime rate increases recorded from November, 1968, to June 1969, would be rolled back. From this point, we could begin to return to economic sanity and to bring about conditions which would allow an even further reduction of interest rates.

There is no reason for a delay in reducing interest rates and I think it is important that this be taken care of well in advance of the upcoming general election in November. Many banks around the country and their top officials are participating in various fundraising efforts for political candidates, and it would be unfortunate if the bankers' political action somehow became involved in basic decisions concerning the level of interest rates. The decision to sharply reduce the prime lending rate should be made for the good of the economy and not for any political reasons on the eve of national elections.

Mr. Rockefeller, you can do the nation a great service by an immediate move to reduce your bank's prime lending rate to 6%.

Sincerely,

WRIGHT PATMAN.

OVERSEAS CREDIT UNION MILESTONE—A TRIBUTE TO CONGRESSMAN MINISH

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, at the end of July, the military credit unions operating overseas passed two 100,000 milestones. In less than 2 years, the credit unions had signed up more than 100,000 members and had made loans of more than $100 million.

Both of these are indeed impressive figures and are a tribute to the hard work of Congressman JOSEPH MINISH, of New Jersey.

Congressman MINISH was the head of a special subcommittee of the Banking and Currency Committee which visited major military installations in the European and Pacific commands on several occasions to press for the establishment of the credit unions. Prior to Congressman MINISH's efforts, servicemen stationed abroad were at the mercy of the money lenders who were able to extort interest rates as high as 60 and 70 percent. In addition, our gold flow problem was hindered because servicemen, for the most part, had to borrow from foreign-controlled loan and finance companies.

The first overseas credit unions were opened in Germany in late 1967, and, from there, credit unions were opened in England, Italy, Korea, and the Philippines. Overnight these credit unions were a success. Servicemen who had been paying interest rates as high as 70 percent for loans were now able to obtain loans as low as 9 percent and loans were made from the lowest ranking enlisted man to officers of the highest rank. The credit

unions forced the loan shark and the fast-buck operators to close their doors. And, for the first time, our servicemen overseas were not treated as second-class citizens in their financial dealings.

Mr. Speaker, a great deal of credit for the success of the overseas credit unions must go to the gentleman from New Jersey, Mr. MINISH, who worked long and hard to expose the fraudulent operators who were bilking servicemen and then to fight for the establishment of credit unions as the answer to the problem. There were many obstacles placed in his path and much redtape to be cut through. In many countries, it required detailed diplomatic negotiations before the credit unions could be established. In other situations, it required long hours of convincing skeptical officials that the credit unions could survive. But, throughout the fight, Congressman MINISH held fast in his belief that the credit unions would not only hold their own, but would become an important part of the serviceman's life. The success of the credit unions has borne out Congressman MINISH's foresightedness and has rewarded his efforts.

The work of Congressman MINISH in this important area has received far too little attention for, I think, he has performed one of the greatest services imaginable to our men and women in uniform, and as the overseas credit unions reach for their second 100,000 members and second $100 million in loans, I salute Congressman JOE MINISH for his efforts.

HIGHWAY SAFETY NOS. 9 AND 10—LAST OF A SERIES

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, the two concluding articles in the Christian Science Monitor series on highway safety were published while the House of Representatives was in recess. As I did with the first eight articles in the series, I today will insert them into the CONGRESSIONAL RECORD.

The ninth article was a penetrating discussion of the role of the liquor industry in the causation and solution of this national problem. The central point is one which ought to be remembered by legislators as they debate changes necessary to lower the automobile death toll, that the liquor industry bears partial responsibility for the current carnage on our highways and is not a disinterested party. Some of the necessary changes in our laws may, of course, concern the industry, but this is something which must be accepted so that America's highways can become safe for our wives and children, for our neighbors and friends, and for us, too. The liquor industry is not entirely an innocent party which may be harmed by these changes in our laws. Rather it is and must continue to be a regulated industry, so that the damage done by alcohol and by alcoholics can be limited.

The 10th article in this series has a shocking opening sentence:

Since this series began 10 weeks ago, drunken drivers have killed 5,000 Americans. And the toll continues, perhaps at 75 persons a day.

How many of us have had a friend or family member killed by these drunk drivers, who because of lax laws seem to be almost licensed to kill?

Mr. Speaker, my purpose in inserting this series of articles into the RECORD was to focus needed attention on the terrible carnage on our highways, including at least 28,000 who have been killed by drunk drivers. Every year such drivers cause over 800,000 accidents which result in economic loss of over $8 billion. Yet this intolerable situation is the subject of disturbing apathy, so that steps which would cut this slaughter drastically are just not being taken.

My mail suggests that some people have been listening, which is a hopeful sign. People are awakening, if slowly. Let us demand action.

The last two articles of the series follow:

[From the Christian Science Monitor, Aug. 20, 1970]

LIQUOR INDUSTRY PLAYS DR. JEKYLL AND MR. HYDE

(By Guy Halverson)

CHICAGO.—Imagine, if you will, the following hypothetical situation: A well-dressed man enters a tavern and consumes a number of drinks. The hours tick away. Though the bartender knows the man has had far too many drinks to drive safely, he can also see that the person is one who "holds his liquor" without any overly evident sign of intoxication.

Soon the man leaves. The bartender hears him roar off in an automobile.

Within minutes, the man has smashed head-on into another automobile.

Unfortunately, this incident is not really so imaginary. According to former alcoholics, many of them now key leaders in Alcoholics Anonymous, as well as the leaders of state police forces, it is a common occurrence. The files of state liquor-control boards, in fact, are jammed with records of tavern keepers who have oversold customers later involved in serious road tragedies.

More important, the illustration raises a number of nagging questions about the role of the liquor industry in society, and also about public policy and responsibility in general.

NECESSARY STEPS NOT TAKEN

The fact is that the liquor industry—and here that includes the bottling and brewing corporations, the distributors, the advertising and sales agencies, the retail outlets—is not yet taking the steps necessary to help stop the drunken driver. These could include unequivocal support on the state level of stiff presumptive blood-alcohol levels.

In fact, despite heavy expenditures in alcoholism research through university grants during the past decades, as well as a recent spate of magazine advertisements by the industry declaring its intention to help rid the highways of drunken drivers, the industry's role, some feel, has been lukewarm at best and perhaps even somewhat dangerously misleading.

Liquor lobbyists are active behind the scenes in every state legislature in the nation, utilizing high-powered law offices and public-relations firms. They are coolly efficient, skilled political tacticians and lavishly financed.

Many experts hold that there is a need for dispassionate, analytical studies of the correlation between liquor sales and per capita consumption and highway accident rates. Such information is needed to guide state legislators in setting realistic tavern and cocktail bar hours and liquor-license policies. Emotionalism, either against or for liquor sales on a totally unrestricted basis, cannot be tolerated when the highways are being turned into battlegrounds, they say.

ECONOMIC—AND POLITICAL—WEIGHT

This article clearly is not concerned with the long-standing dispute between "drys" and "wets" in the United States. Nor is it a plea for abstinence as such. Rather, it is concerned solely with those policies of the liquor industry that directly touch on highway safety—and which, in all fairness, have to be questioned if the problem is to be meaningfully resolved.

The liquor industry in the United States is an economic giant. Many a longtime newsman, particularly at the state level, would also say a sort of political giant as well. The industry, with an employment of about 1.8 million workers, grossed more than $21 billion in 1969 and paid out more than $8.2 billion in taxes. More than half of this went to the federal government.

The industry is also one of this nation's most important advertisers, spending more than $200 million annually—some $88 million of that going to magazines last year.

SUPPORT FOR U.S. DRIVE AVOWED

And now that cigarette advertising is being forced from the television screen, it is known that some broadcasting officials are casting hungry eyes at liquor advertising as possible new revenue sources. In addition, the liquor industry's many ties with the entertainment industry further its ability to reach the public in almost countless ways with a favorable public image.

On the national level, the industry avows its support for the Department of Transportation's new campaign to curb the drinking driver.

"What is our stand on the issue of drinking and driving?" asked a recent full-page Time and Newsweek ad purchased by the Licensed Beverage Industries, Inc. "It's the same as the National Safety Council and the American Medical Association." Industry spokesmen have stressed that the industry's position—like that of the NSC, the AMA, and the Department of Transportation—is twofold: getting the chronic alcoholic, who constitutes perhaps the largest part of the accident problem, off the highways, while also supporting educational campaigns to acquaint social drinkers with "safe" drinking limits.

Get down to the state level, however, where antidrunken-driver legislation—such as implied-consent statutes and presumptive levels—is enacted, and the picture clouds considerably. In fact, one invariably finds that the industry is quiescent (not supporting such measures at all) or actively in opposition.

"LET'S ENFORCE EXISTING LAWS"

Take Michigan, for example. Safety advocates there have been trying to lower the state's presumptive blood-alcohol level from .15 percent to .10 percent. The Michigan Licensed Beverage Association (LBA) is against the bill. "We say the state has enough laws now," argue Eddie Shepherd, coordinator of activities for the Michigan LBA. "Let's enforce the existing laws."

He adds: "Most accidents occur on roads within 25 miles of a person's home anyway. The answer is obviously diverting some of those Interstate-highway funds to secondary roads and arterials."

And the Michigan LBA's coolness to the .10 percent presumptive level, it must be said, is hardly unique.

The lack of *clear-cut* specific industry support for the federal .10 percent standard and implied-consent laws, say some critics of the industry, is only one part of its dubi-

ous role in stopping the problem of the drinking driver. Perhaps more important, they say, are certain industry practices and objectives that taken together almost ensure accidents.

Such practices, say these critics, include an industry drive to:

1. Increase across-the-board and per capita sales (per capita consumption on the national average has increased little over the past few years).

2. Expand Sunday sales (16 states do not allow such sales).

3. Lower the legal drinking age wherever possible. (Five states currently authorize sales of distilled spirits to persons under age 21, while 16 states allow sales of beer to persons under 21.)

Since the early 1960's, the State of Iowa has kept close records on liquor sales and highway accidents. The results are not pleasant. They strongly suggest, in fact, that increased sales and per capital consumption are followed by increased accident rates.

Most liquor-industry officials insist, however, that enactment of by-the-drink statutes does not lead to increased alcohol-related highway fatalities.

During the decade of the 1960's, drunken drivers killed more than 3,800 motorists on Iowa highways. But that is only part of the story.

"LIQUOR BY THE DRINK" IN 1963

On July 4, 1963, Iowa went to "liquor by the drink," whereby drinks could be sold across a bar, in a cocktail lounge, or club. Prior to that, liquor had been sold only in state liquor stores. During the 1960–63 period, before liquor by the drink, annual consumption averaged .73 gallons per person. By 1964, after liquor by the drink, the figure had risen to .86 gallons per person. And by 1969, it was 1.09 gallons—nearly a 60 percent increase over the 1960–63 average.

And of course, even though Iowa's consumption must be considered moderate on a national level—compared with the 1969 national per capita consumption of 1.81 gallons, the significant fact is that Iowa has shown a steady increase in consumption.

But so, too, have accident rates in that state.

According to studies undertaken by Preferred Risk Mutual Insurance Company, headquartered in Des Moines, fatalities increased 35 percent during the three years after legalization of liquor by the drink, compared with the three years before liquor by the drink. Population increase and vehicle registration stayed fairly constant. During this same period there had been a 32 percent increase in liquor sales.

Another way to measure what happened after liquor by the drink—with its attendant increased sales and consumption in Iowa—is to look at what didn't happen in neighboring Kansas. Kansas is one of a small number of states still without liquor by the drink (though voters will be asked to vote on the issue at the polls in November in both Kansas and Texas).

RATES OF INCREASE CONTRASTED

According to William N. Plymat, board chairman of Preferred Risk, the mileage death rate in Iowa increased 33 percent in the six years after liquor by the drink compared to the three years before. In Kansas without liquor by the drink, the mileage death-rate increase was only about 2 percent.

Studies by Preferred Risk also suggest that fatality rates are higher in areas with Sunday sales than in areas without Sunday sales. Take a comparison of Oregon and Washington states in the years 1965–68. Oregon had Sunday sales. Washington did not.

During the period, almost as many drivers were killed on Oregon highways on Sundays as on Saturdays: 314 persons were killed on Saturdays; 311 on Sundays.

In Washington, on the other hand, the difference was quite distinct. During those years, 437 people were killed on Saturdays when liquor sales were allowed. But on Sundays, when liquor sales were not allowed, 327 persons were killed.

The difference: 110 persons.

Researchers say that much still remains to be discovered about the effects of drinking on driver behavior patterns. A research program at the University of Vermont, funded in part by the Department of Transportation, is in fact testing such effects with a sophisticated new electronic device.

Some safety experts admit unease at the recent advertisements by the licensed-beverage industries, which they feel might encourage drinking and driving.

The recent advertisements, for example, carry a small "legal limits" chart prepared by the Rutgers University Center of Alcohol Studies in the lower right-hand corner. The chart shows how long a person must wait after certain numbers of drinks to be safely within legal presumptive levels in most states.

The chart, geared to .10 percent levels and above, indicates that a 160-pound man could consume three 1½-ounce drinks and then immediately drive.

WHAT CHART DOESN'T SAY

What the chart doesn't say, critics argue, is that the man may not be fit to drive safely, even though he is within legal presumptive limits; that different drinkers react differently to liquor; and that a novice drinker, for example, may be a deadly highway menace after three drinks. Or a tired drinker. Or an angry drinker. Or a hungry drinker.

A new guide recently issued by the National Safety Council is more realistic, it is felt. The guide says: "If you are going to drive, it would be better if you didn't drink anything at all. Or . . . drinking in such a manner that you will not be under the influence when you drive a car . . . if you choose the second, wait at least one hour per average drink before driving."

The AMA is known to be quite unhappy with the current advertising campaign of the Licensed Beverage Industries, Inc.—particularly its use of the Rutgers chart—which is not a "safety drinking level chart" but rather a legal-limits chart.

Says one of this nation's foremost highway specialists: "This type of [liquor industry] campaign could be disastrous. Would you want a tired motorist hurtling along the highway at 80 miles an hour toward your family after three stiff martinis?"

[From the Christian Science Monitor, Aug. 27, 1970]

DRUNKEN DRIVERS ASSAULT PUBLIC'S RIGHT-OF-WAY

(By Guy Halverson)

NEW YORK.—Since this series began 10 weeks ago, drunken drivers have killed 5,000 Americans. And the toll continues, perhaps at 75 persons a day.

Even a passing familiarity with the scope of the continuing tragedy makes one wonder how this nation—this informed, modern society—can possibly tolerate the conditions that cause it. For these deaths are not just statistics. These people are our families, our children, our friends, the neighbors who live on our streets, our classmates from high school and college, our associates at work.

It is an assault on our individual freedom, our right to move freely on the highways and through our cities and suburbs with a sense of confidence and dominion.

MORE THAN SKIRMISHES

"Twice as many people are being killed—you might say murdered—on a yearly basis by drivers who have had too much to drink as by all of the street criminals, impassioned spouses, and angry neighbors in the country," says Rep. James C. Cleveland (R) of New Hampshire. This member of the House Public Works Committee, which in part oversees highway safety, asks: "Where is our concern, where are our aroused citizens? Where is the indignation which the news media have for so many other causes? We are in the midst of a bloodbath and yet so few seem to care."

We can in fact stop the drunken driver, given our existing knowledge and technology, safety experts insist. We can begin now, but we must *want to*. The apathy must end.

Those already involved—the police, safety councils, government, concerned citizens' groups, and others—are fighting nothing less than a full-scale battle on our highways. But battles are not won through skirmishes. What's needed is a centralized, interagency attack, wherein all the specialists on alcoholism and highway safety join a systematic, direct attack.

Law enforcement, while basic, is not going to be enough. Drinking drivers fall into different groups which require different rehabilitative approaches. Distinctions must be made between chronic alcoholics, problem drinkers, novice drinkers, social drinkers, and occasional drinkers. And specific countermeasures must then be applied to these different groups.

U.S. PROGRAM A BEGINNING

The United States Department of Transportation's new alcohol countermeasures program—geared in great measure to an identification and control of the "problem drinker"—is an important first step. In many ways the program can even be called a heroic effort. Acting on a limited budget with small staff (fewer than 10), the program is seeking to roll back years of inattention and neglect. At present the $18 million program encompasses demonstration grants in some nine places around the United States. It is hoped that Congress will fund an additional 20 grants next year.

Yet even this small beginning is not enough. The economic cost of the problem alone amounts to $8 billion to $10 billion a year in the U.S. Without total commitment from the highest levels of the federal government, the countermeasures program may well turn out to be only a stopgap.

ONE ASPECT LACKS DATA

Nor should the problem of the driving social drinker be overlooked, though this seems to be happening. It is known that the problem drinker is responsible for perhaps the largest chunk of all fatal accidents. Researchers do not yet precisely know how many liquor-related fatalities on the highways are caused, on the other hand, by social drinkers.

Researchers do tell us that their role in fatal accidents is relatively small. But it would be foolish to ignore the problem. It takes only one accident.

Enforcement, however, is the crux. It was high atop a Colorado mountain peak, recently, with the magnificent Sangre de Cristo range directly opposite me, that I saw that clearly. My host was Prof. Robert F. Borkenstein, a gentle, articulate scholar-inventor, now in his fourth decade of police-science work. We must make the "drinking-driver public" more aware of the "reasonable likelihood" of arrest, argued Professor Borkenstein. "It isn't just a fear of punishment that is important. It's a reasonable assumption of apprehension. It's the inconvenience of being arrested and going through the legal system. It's the attendant humiliation. And jail or enforced therapy can be equally distasteful."

A meaningful attack on the drunken driver

would have to include the following steps as a minimum:

1. Each state should adopt an implied-consent statute and a minimum .10 percent presumptive blood-level statute. Once that level is reached, however, safety advocates should push for the more realistic Canadian and British .08 percent levels.

There is much to be said for the comprehensive Canadian and Ontario programs spelled out in the seventh article in this series. Utah has adopted an .08 percent alcohol blood-level statute. Eventually, the 49 other states will have to follow.

2. Police must step up enforcement and apprehension. Traffic units should be enlarged. Selective enforcement of problem areas along the lines of the San Diego force is essential. At the same time, political units should support the forces by realistic budgets.

SENTENCING FLEXIBILITY

3. Legislatures should adopt prearrest breath-test screening along the lines of the British and Baton Rouge, La., programs.

4. Courts must be given greater sentencing flexibility to combine fines, jail sentences, and enforced rehabilitation. But the laws themselves must be enforced.

5. States must tighten driver licensing standards, requiring road and written renewal tests at least every three years. State records systems must be computerized and interlaced—and then tied together into a national grid.

6. States should study the correlation of drinking hours and accident rates. This is perhaps the one area of the problem about which the least research exists. Weekend sales in particular should be given close scrutiny, as well as Saturday evening closing hours. It is no secret that the weekend driving hours are the most dangerous driving hours—and mainly because of alcohol.

HEALTH PROBLEM, TOO

7. Local communities and states must recognize that alcoholism involves health problems and must be treated as such—not as just a criminal offense.

8. Parents, educators, political and religious leaders must challenge the dangerously permissive attitudes about liquor that pervade society. Liquor is a drug, and it must be recognized as such.

9. Corporations and businesses must develop high-priority alcoholism and safe-driving programs.

Millions of miles of highways crisscross the U.S. They were built with tax money. Americans have a right to safety on the highways—control over them. Let's let our public officials know that. And let's demand action. Now.

PEOPLE TELL HOW TO STOP THE DRUNKEN DRIVER

Before this series began, the Monitor invited the public to share ideas on how to stop the drunken driver.

The response to a questionnaire was overwhelming—there were 15,670 returns. They came from specialists, such as traffic safety experts, law-enforcement officials, alcoholism rehabilitation workers, and from concerned private citizens, many of whom had lost relatives or friends because of drunk drivers. They came from all over the world.

Some returns covered large groups of people, such as the safety education class at Texas Wesleyan College, Fort Worth, Texas, which sent back comprehensive classroom papers discussing solutions to the problem.

The largest block of responses, more than 4,800 in all, came from employees of several plants of the Western Electric Company. Company officials had distributed the questionnaire among employees. The results indicated a desire for tougher enforcement through:

Stiffer jail sentences and fines for drinking drivers.

Some type of prearrest road breath test along the lines of the British system.

At the same time, many respondents urged a greater stress on rehabilitation of the problem alcoholic driver.

Here are the tabulated questionnaire results:

More public education	7,853
Compulsory testing to detect drunken drivers (on suspicion alone)	9,320
Immediate suspension of driving privileges at first offense	7,082
Stiffer fines	9,041
Stiffer jail sentences	9,888
Compulsory attendance at drivers' school for those convicted	6,956
More uniform laws	8,085
More federal and state studies of why people drink	3,879
Other	7,291

EXCERPTS FROM LETTERS

The victims

"My husband was killed by a drunk driver in 1957 leaving two very young children without a father. . . . Perhaps the thing which has troubled me most over the years was the quick return of the driver's license. I have often wondered if other innocent people have suffered as we did. . . ."

Mrs. Y.

KENMORE, N.Y.

Second offense—get tough

"My first husband was an alcoholic. Many times I was helpless to keep him from driving when he was intoxicated. A few times I tried hiding the car keys, but the frenzied rage he went into was not worth it. Sometimes even I and our two babies had no choice but to ride with him and our lives were endangered. . . . I strongly recommend that a second offender for drunk driving should have his license revoked. . . ."

Mrs. J.

MIAMI.

A national law

"There should be one national law set at .05 percent alcohol in the blood for the legal arrest of the drinking driver. . . . We cannot become too strict with the drinking driver. He threatens the highway safety of us all."

H.

WILMINGTON, DEL.

"The United States Government should withhold from those states that do not adopt a uniform drunk driver standard of .10 percent all funds for federal highway construction."

Unsigned.

A question of morals

"The real answer lies in the change of moral standards which precludes an acceptance of the drunken driver in society."

Ohio municipal court judge.

Weekend duty

"Weekend duty at emergency wards of hospitals. Let the intoxicated driver see . . . the agony, the tears, the heartbreaks involved in auto accidents when he or she is sober."

A Huntsville, Tex., Department of Corrections official.

Liquor-industry responsibility

"It is my opinion that the liquor industry should be held responsible for the great damage and loss of life due to their profitable product. . . ."

Unsigned.

"Maybe it is time the liquor people picked up the tab for rehabilitation instead of Mr. Taxpayer. . . . Somehow add a 1 percent or 2 percent tax to each bottle sold and let it take care of the troubles it causes."

M.

LONG BEACH, CALIF.

"Enforcement of the law is important, but it is attacking only the 'results' of the problem and not the 'cause.' The cause is the drinking, and the reason that that phase is not stressed is simply because too many people like to drink. It is like extinguishing fires without arresting the arsonists. The first step: Prohibit liquor advertising by law."

A Washington State municipal police court judge.

Rehabilitation

"The problem isn't driving: The problem is behavior. . . . Massive public education is needed, so that shame and guilt brought on by alcoholism isn't swept under the rug as it has been for generations, but is brought out into the open so that people learn that there is hope and help (and health) for the alcoholic."

F., an insurance company vice-president.

Fines and jail senences

"Fines and jail sentences are not likely to achieve anything constructive. I do feel that there should be an immediate suspension of driving privileges and if these are broken they should be punished by a mandatory jail sentence. But it is necessary to bring home to each culprit the enormity of the offense and his punishment should be made in some way to fit the crime, such as being a compulsory attendant to assist ambulance crews at traffic accidents and/or compulsory work to assist traffic accident victims in their hospitalization, treatment, and rehabilitation."

H.

Berlin.

"Suspend the license for life of anyone found driving under the influence of alcohol or of any other drug. . . ."

S., a senior at Sacramento State College.

"I believe that a stiff, uniform drunk-driving code throughout the United States, as in England, would be a deterrent. I do not believe the stiffer fine is the answer. The well-to-do think nothing of it and the more unfortunate lay it out in jail with a needy family being made to suffer. . . ."

An Idaho municipal police chief.

Local control

"I cannot avoid a feeling of impatience at the fatuity demonstrated by your multiple choices. . . . Allow me to dissect them seriatim: More public education: Unlikely to do much good. Everyone officially opposes drunk driving, just as everyone opposes Dutch elm disease and favors the whooping crane. Compulsory testing: You are stepping on my libertarian toes. . . . This is still a democracy, Jack. . . . The issue is inevitably, unavoidably, one of LOCAL CONTROL. Washington can't do a blamed thing. Raleigh can't do much more. Ultimately, the city and county . . . must do it for itself or it won't be done at all."

X.

DURHAM, N.C.

Identification

"Perhaps an indelible marking on the license plate to indicate publicly an offense, or [on] some permanent spot, but where it would not permanently damage the car."

Unsigned.

Insurance

"Insurance companies, with every justification, are raising their auto premiums. But with this increase, careful drivers are being penalized along with the drunken driver. This is not fair.

"Instead, the Department of Revenue should should keep the individual insurance company informed of the number of traffic and other violations the client has, so that only the client's rates will be raised and not the rates of other drivers."

BETHEL PARK, PA.

ON DEALING WITH THE TERRORISTS

(Mr. EDWARDS of California asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. EDWARDS of California. Mr. Speaker, today I am introducing a resolution urging the President to use his influence and exert moral leadership to establish a convention of all nations for the purpose of formulating an international agreement on the treatment of airline terrorists and the nations that give them support and asylum.

The events of the past few days have made it abundantly clear that terrorism will spread across the globe like a plague if it is not stopped quickly and firmly. No person using the national or international airways is safe from the terrorist organizations bent on achieving their political objectives by any means necessary. Such practices cannot be condoned by any civilized nation. Such practices are the height of barbarism and threaten the very foundations of orderly society everywhere. The use of terrorism cannot be nicely circumscribed and neatly contained. If the peoples of the world condone its use in one instance it will soon appear in another instance, and another, until no person is safe from it and we are reduced to the law of the jungle.

Not only must the terrorists be caught and punished, but the nations which harbor them must be put on notice that they will feel the weight of world disapproval and worldwide sanctions. They must be made to know that such practices are not acceptable in the community of nations any more than they are acceptable in the community of man. They must be brought to face the possibility of ejection from the community of nations, possibly through diplomatic and economic boycott.

As a starting point, I suggest the airlines of the world and all nations declare an airline boycott against the Arab States that harbor the terrorists and refuse to accept the airlines of those states or to fly to them until the hijackers are declared outlaws in their lands. If international agreement cannot be reached on this point, the United States should initiate its own airline boycott of those states.

The United States, through the Office of the President, in establishing worldwide accord on the treatment of international terrorists and the nations that harbor them and give them asylum, refuge, and support. I have refrained from suggesting the vehicle through which such accord should be reached, in order to give the President as much flexibility as possible in reaching the desired goals. If the convention is to be arranged through the United Nations, participation should not be limited to U.N. member nations. All nations should be invited to participate.

There being no objection, I would like to append to my remarks several newspaper editorials on this subject. Particularly I would like to bring to my colleagues' attention the fourth paragraph of the New York Times editorial, "Aerial Blackmail."

[From the New York Times]

AERIAL BLACKMAIL

Only the most uninformed can have been surprised by the latest aerial hijacking and by the ordeals of the unfortunates on the three planes seized by Arab terrorists. The fanatical commando group involved was earlier responsible for many similar outrages. Seven weeks ago these criminals demonstrated the political profitability of hijacking by extorting a promise from the Greek Government to release their jailed confederates. Buoyed by past successes, the Arab gunmen had every reason to suppose aerial blackmail would work against other states. Their judgment appears to have been sound. This outcome can only encourage more acts of piracy by political zealots in every part of the world.

The latest developments raise questions about the assumption that supine surrender to a hijacker is the best way to assure plane passengers' safety. As matters worked out, it was the passengers on the El Al plane, whose crew was prepared to fight back and did so, that fared best. Nonresistance made sense when it could be assumed that a hijacked plane would be brought to some airport governed by international law, and then quickly allowed to depart with its crew and its passengers. But that was not the scenario followed by the blackmailers who captured the Pan American, TWA and Swissair aircraft.

The complete failure of the major airlines to deal with the threat of hijacking is matched only by the impotence of the United States Government in protecting its planes and its citizens. Coming so soon after the Egyptian display of contempt for this country implicit in Cairo's wholesale violation of the standstill provisions of the Middle East cease-fire, the latest incidents must further convince Arab militants that the United States is a paper tiger. And the Israelis will naturally further question the worth of the promises of a country that is unable even to protect its own citizens and planes.

The crux of the problem posed by the Arab hijackings is that the terrorists involved are financed, armed and supported—openly or covertly—by the Arab states. Last July the hijackers of a Greek plane were received as heroes in Cairo. Last Sunday the hijacked Pan American 747 stopped in Beirut to take a commando explosives expert on board so that he could prepare the plane's destruction at Cairo. Yet no action has been taken to apply sanctions.

It is long past time for the airlines and governments of the world to declare a boycott of the Arab states, to refuse to let Arab planes land elsewhere in the world and to refuse to fly non-Arab planes to those countries until the hijackers have been made outlaws in the Arab lands. The failure to take such sanctions in the past has spurred the Arab terrorist campaign against peaceful air travel. Failure to impose sanctions now will mean that the major governments and airlines of the world are de facto accomplices of the fanatics who have endangered so many thousands of people in recent days and who intend to continue their potentially murderous crimes.

[From the Washington Post, Sept. 9, 1970]

THE SHOWDOWN IN THE DESERT

The grim drama being played out on the sands of the Jordanian desert is international blackmail in its basest form. The lives of scores of innocent people have been put on the auction block by a gang of vicious, desperate outlaws. What these gangsters expect to gain from this deadly exercise in ransom and threat is a renewal of the Arab-Israeli war; there is no place for rabid fanatics in a peaceful settlement. By raising their demands to include the release of 3,000 guerrillas held captive in Israel, the Palestine "liberators" made clear their purpose of increasing the pressure on the Israeli government to break the cease-fire, either before or after the ransom deadline runs out tonight.

The negotiations to release the hostages are so delicate now that no useful purpose would be served by public comment on them. Only those in close contact with them can judge the temper of the kidnapers. Those who are making that judgment for the Western nations now being blackmailed are entitled to proceed as best they can without a background of noisy advice. We only hope that in this, as in any other kidnaping, they chose wisely among the few courses of action open.

It is possible, however, to begin to plan ahead in hopes that the nations of the world can take some immediate steps to prevent any repetition of this tragic affair. The world cannot tolerate a threat of this kind to international air travel—a threat in which innocent people are pawns in a deadly international power play. There have been long negotiations and much talk in many national capitals since the wave of airplane hijackings broke out many months ago but very little concerted action. The massive dose of criminal activity that took place in one day—four planes under attack and three seized—ought to convince every nation that this outrage has gone on long enough.

The United States, in our view, should seize the initiative in this situation by ordering this country's airlines to suspend all service to and from any nation that welcomes hijackers, that treats hijacking as a minor offense, or that is unable to prevent its citizens from engaging in hijacking. At the same time, the government should deny landing rights in this country to any airline that serves such nations. This action should be taken, not so much as an economic sanction against offending nations—although there would be significant economic effects—but as a simple safety measure designed to protect American citizens.

There may be legal red tape in such a unilateral approach; international treaties governing landing rights and so on are complex affairs. But this should not be allowed to stand in the way. For one thing, surely most other civilized nations would join in such a ban since it would place the responsibility for hijacking squarely where it belongs—on those governments which have treated it as a game and which have encouraged it by throwing welcoming parties for the pirates. Even if other nations did not join immediately, the United States should take the first step since its prime responsibility in this situation is the safety of its citizens and of those citizens of other countries who travel on American air carriers.

The airlines themselves can help by strengthening their security measures, although the fact that would-be pirates got aboard an El Al plane last Sunday indicates that even Israel's relatively strict precautionary measures are far from fool-proof. It may be that for a while international travelers will have to undergo that kind of scrutiny now given to visitors of prison inmates. If so the price will not be too great if it helps to prevent another showdown on the desert sand.

THE INTERGOVERNMENTAL PERSONNEL ACT

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, I am today introducing the Intergovernmental Personnel Act of 1970. Already passed by the other body as S. 11, this bill will make possible for State and local government employees a scale and manner of training which have been taken for granted for decades in private business.

I believe, moreover, that this measure will be seen as a vital piece of legislation by all those concerned with the future of the American federal system.

STRENGTHENING THE FEDERAL SYSTEM

For the Intergovernmental Personnel Act is in essence an effort to strengthen the fabric of American federalism by improving the quality of the men and women who serve at all levels of government, State and local as well as Federal.

In this decade, according to the Bureau of Labor Statistics, the work force of State and local governments is expected to increase by 4,400,000 skilled men and women in technical, professional, and administrative positions.

These are the teachers of, and the policemen who will protect, the coming generations; they are the pollution engineers and waste managers; they are the program planners and operations researchers who will administer the quarter of a trillion dollars that the Federal Government will allocate to State and local governments in various forms of assistance over the next decade.

Mr. Speaker, this last astonishing figure is a measure of the complexity of modern life and of the variety of forms of intergovernmental cooperation that we have already invented to meet the challenges of our times. In 1948 Federal aid to States and localities was a mere $1.8 billion. This year the figure may top $25 billion, and there is no doubt it will grow. We are just beginning to confront seriously the problems of our contaminated environment. We have not begun seriously to assure the poor and the fatherless of genuine economic security. We have a long way to go to make our school systems what they ought to be.

IMPROVING LOCAL ADMINISTRATION

As we face these problems—and as we face them within a context of creative federalism in which we try to keep government responsive by keeping it close to the people it concerns—we are sure to turn more and more Federal dollars back to localities and States. But this money will be wasted if it is not competently administered.

We know that outside the large cities many heads of government departments are often ill-trained; familiar perhaps with their own regions, they are then uninformed about progress in their fields, about developments in other cities or about alternative ways in which their jobs might be done. In the rural counties and small towns, police and health officers are often desperately overworked and underpaid: to expect them to be well trained is to expect the impossible.

Mr. Speaker, I should also observe that pay scales at the State and local level are often too low to attract competent or qualified people. Operations research positions which bring comfortable salaries in the Federal Government or industry may offer considerably less in other branches of government.

Mr. Speaker, clearly we cannot expect money to be well spent if it is to be administered by or spent on technical, professional, and administrative workers who have been left behind by the modern demands on their jobs.

WHAT THE BILL DOES

Mr. Speaker, the Intergovernmental Personnel Act has 10 important functions, each of which will materially affect the quality of State and local government administration.

First. Through an advisory council appointed by the President, the bill would make possible the continued monitoring of State and local government training programs. Standards of training for such programs and proposals for the improvement of such training would be developed.

Second. The Civil Service Commission would be authorized to make grants to State and local governments to improve their systems of personnel administration.

Third. The bill will transfer to the Civil Service Commission the responsibility for overseeing the merit personnel administration provisions of certain federally assisted programs.

Fourth. Federal agencies will be authorized to admit State and local government officials to Federal training programs, with such training to be paid for by the Civil Service Commission or by the Federal agency concerned.

Fifth. The bill will authorize Federal agencies to include in their budgets provisions for the training of State and local officials who will be involved in administration of each agency's programs.

Sixth. The Civil Service Commission will be authorized to make grants to the State and local governments themselves to enable them to set up approved programs of employee training, and to finance Government service fellowships for some of their employees in graduate-level training.

Seventh. The Civil Service Commission will be enabled to enter into cooperative recruiting and screening arrangements—at the request of the State and local governments—through which the expertise of the Civil Service Commission will be at the disposal of those bodies.

Eighth. The bill will enable Congress to give its assent to interstate compacts designed to improve the personnel administration and training of State and local governments.

Ninth. Federal, State, and local governments will be authorized to exchange personnel temporarily with one another. Since education is largely a matter of exposure to alternatives, and since the best learning takes place in real life settings, I believe this is an innovation with tremendous possibilities for improving government administration at all levels.

Tenth. The Civil Service Commission will be directed to coordinate the training activities of various Federal agencies so as to cut out duplications and bring about the most effective use of resources for such training.

ACTION NEEDED NOW

Mr. Speaker, the Intergovernmental Personnel Act of 1970 is a natural complement to the education for public service program, of which I was privileged to be sponsor in 1968. The two together promise an improvement in local government administration to parallel that which took place in the Federal Government administration when the Civil Service Commission was created in 1883.

The problems of our time—and the challenges of the future—have been recently diagnosed by the author Alvin Toffler as "Future Shock." He tells us that in the private sector business approaches the challenge of these problems with training: often a man must be trained for new careers as conditions change, perhaps two or three times in his life. Clearly any corporation which never retrained its staff would soon be out of business. Yet the Intergovernmental Personnel Act has twice before come before this House and died here.

Mr. Speaker, the death of this bill again would be a contribution to the continuing crisis in our cities, towns, and State and county governments.

The passing of this bill would be a major contribution to enabling those governments to take up their responsibilities within the Federal Union.

Mr. Speaker, the crises of the future are the missed opportunities of the present. I urge the House not to miss the opportunity presented by the Intergovernmental Personnel Act—an opportunity to make State and local governments work, an opportunity to make the American federal system genuinely effective.

CREATION OF THE YOUTH CONSERVATION CORPS—ARTICLE BY CHARLES A. QUATTLEBAUM

(Mr. MEEDS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MEEDS. Mr. Speaker, probably one of the more important but least publicized pieces of legislation to emerge from this Congress was that creating the Youth Conservation Corps. It was my pleasure to be the chief House sponsor of the measure which became public law on August 5.

Dr. Charles A. Quattlebaum of the Legislative Reference Service recently prepared an article describing the legislative history and concept of the Youth Conservation Corps. For convenient reference by Members and the public, I insert the article in the RECORD at this point:

CREATION OF THE YOUTH CONSERVATION CORPS

(An article prepared by Charles A. Quattlebaum, specialist in education, Senior Specialists Division, August 26, 1970)

This year, 1970, may become a memorable one for thousands of American youth. On August 5 of this year President Nixon approved an Act of Congress establishing a program to be known as the Youth Con-

servation Corps. Some persons are already calling it the YCC. It will initially provide summer employment and conservation education for young men and women not less than 15 nor more than 18 years of age. According to plans for the Corps, enrollees will live and work on Federal lands, helping to restore forests, prevent or extinguish fires, improve recreational facilities, and perform other conservation activities. Meanwhile the enrollees will be receiving informal vocational training and experience.

Senator Henry M. Jackson and Representative Lloyd Meeds were the prime sponsors of the legislation in the Senate and in the House of Representatives respectively. The proposal to establish the Corps received bipartisan support in both Houses of Congress.

In the lengthy debate on the floor of the House, the argument for the bill was generally led by Representative Carl D. Perkins, Chairman of the Committee on Education and Labor. The Senate passed the bill without debate.

A PILOT PROGRAM

Reminiscent of the much-praised Civilian Conservation Corps of the nineteen-thirties, the YCC somewhat resembles that organization in basic concept and purpose. However, mindful of some other Federal ventures in education and employment of youth which were adversely criticized in the House debate on the YCC, the Congress provided for initiation of the Corps as a pilot program, costing the Government only $3.5 million annually for 3 years. Some sponsors of the legislation already have expressed intention to press for expansion of the program if it proves successful, as they believe it will.

In the House debate on the proposed legislation Representative Edward R. Roybal, of California, expressed the wish to see 3 million young people enrolled in the Corps. He predicted that the establishing act of 1970 "will go down in history as perhaps the best piece of domestic legislation passed by this Congress."

LEGISLATIVE HISTORY

At intervals during a number of years prior to 1969 various bills to establish youth conservation programs were introduced in Congress. Either in scope or in objectives, however, these earlier bills differed from the proposals to establish a Youth Conservation Corps which were introduced during the first session of the 91st Congress (in 1969).

On February 18, 1969, Senator Henry M. Jackson (for himself and Senator Ted Stevens) introduced S. 1076, a bill to establish a Youth Conservation Corps within the Departments of Interior and Agriculture. Senator Jackson was later joined by 24 of his colleagues for the support of this measure. Hearings on the bill, which had been referred to the Committee on Interior and Insular Affairs, were held before that committee on April 21, 1969. The bill passed the Senate on June 26, 1969, with the title amended so as to read: "An Act to establish a pilot program in the Departments of the Interior and Agriculture designated as the Youth Conservation Corps, and for other purposes. (Congressional Record, vol. 115, pt. 13, p. 17482.)

In the meantime, on May 12, 1969, Representative Lloyd Meeds (for himself and Representative Wendell Wyatt) had introduced a bill proposing to establish a Youth Conservation Corps within the Department of Labor. This bill was referred to the Committee on Education and Labor. On May 5, 1969, and October 8, 1969, respectively, Representatives Thomas S. Foley and Richard T. Hanna introduced bills proposing to establish a Youth Conservation Corps within the Departments of Agriculture and Interior. These bills were also referred to the Committee on Education and Labor. Hearings on all of these bills were held before the Select Committee on Labor of the Committee on Education and Labor on October 22 and 23, 1969.

On December 19, 1969, H.R. 15361, a new bill to establish a pilot program designated as the Youth Conservation Corps, was introduced by Mr. Lloyd Meeds (for himself, Mr. Daniels of New Jersey, Mr. Perkins, Mrs. Green of Oregon, Mr. Thompson of New Jersey, Mr. Dent, Mr. Brademas, Mr. Carey, Mr. Hawkins, Mr. William D. Ford, Mr. Hathaway, Mrs. Mink, Mr. Scheuer, Mr. Burton of California, Mr. Gaydos, Mr. Stokes, Mr. Clay, Mr. Powell, and Mr. Esch). Also on December 19, 1969, an identical bill was introduced by Mr. Lloyd Meeds (for himself, Mr. Blatnik, Mr. Kastenmeier, Mrs. Hansen of Washington, Mr. Adams, Mr. Foley, Mr. Dingell, Mr. Hicks, Mr. Howard, Mr. Saylor, Mr. Pelly, Mrs. May, Mr. Wyatt, and Mr. Sandman).

These bills were referred to the Committee on Education and Labor. On March 17, 1970, H.R. 15361 was reported from that committee by Representative Lloyd Meeds. After considerable debate involving several amendments, this bill passed the House by a vote of 256 to 54 on June 15, 1970. The Committee on Education and Labor was then discharged from further consideration of the similar bill which had passed the Senate (S. 1076); and the House agreed to a motion by committee chairman Carl D. Perkins to strike out all after the enacting clause of S. 1076 and insert in lieu thereof the provisions contained in H.R. 15361, as passed. The Senate bill, as thus amended, was then passed and H.R. 15361 was laid on the table (Congressional Record, page 19759, June 15, 1970).

DIGEST OF THE DEBATED PROPOSAL

The Senate passed S. 1076 without floor debate on the basis of pro and con material having been presented in the committee hearings and report on the bill. In order to perceive the applicability of some of the arguments set forth in the extensive debate on the floor of the House of Representatives, it is necessary to understand the proposal then under consideration by the House. Following is a digest of H.R. 15361 as it was presented to the House, before amendments, on June 15, 1970:

The bill proposed to further the development and maintenance of the natural resources of the United States by establishing a 3-year pilot program to be designated as the Youth Conservation Corps program. As proposed: (1) The Corps would have consisted of youth of both sexes, ages 14 through 18, employed by the Youth Conservation Corps Interagency Committee, which would have been created by the act. (2) The Corps would have been open to youth of all social, economic, and racial classifications. (3) Service as a member of the Corps would have been limited to not more than 90 days during any single year. (4) The Youth Conservation Corps Interagency Committee would have been composed of six persons, representing the Departments of the Interior, Agriculture, and Labor, who would have administered the Corps. (5) The committee would have (a) designated the public lands upon which members of the Corps could be effectively utilized in conservation work; (b) determined the rates of pay, hours, and other conditions of employment in the Corps; and (c) performed other duties specified in the act. (6) To carry out this program the act would have authorized an appropriation of not to exceed $3,500,000 annually for 3 years.

ARGUMENTS ADVANCED PRO AND CON

In brief and in substance, the following arguments favorable and unfavorable to this proposal, as expressed in H.R. 15361 and as reported in the House, were brought forth in the relevant Senate and House committee hearings and reports and in the House floor debate. While some of these arguments were not originally advanced in specific reference to H.R. 15361 the applicability of these arguments to that bill, as reported in the House, is demonstrable.

Altogether, in the hearings and on the floor, the favorable arguments were set forth at greater length than the opposing arguments. Hence in the following summary the pros run proportionately longer than the cons. All of the arguments are not stated in either case.

DIGEST OF THE FAVORABLE ARGUMENTS OFFERED

Following is a summary of the favorable arguments that were offered.

Young people employed in the Youth Conservation Corps would help reduce the tremendous backlog of work needing to be done in our national parks and forests and other public lands. The work accomplished by the Youth Conservation Corps would be of inestimable value to the public.

The Corps would provide the enrollees experience of great educational importance. Their participation in public service conservation undertakings would have maturing and stabilizing effects in the development of their personalities. They would acquire appreciation of our Nation's natural resources, and understanding of the needs and methods for maintaining their great national heritage.

The proposed Youth Conservation Corps would enroll young people within the age group most in need of summer employment. The Nation has an obligation to provide its youth opportunities for constructive use of their time during the out-of-school summer months.

The proposed program would not represent a duplication or overlapping of any existing program for youth. Generally persons claiming that the purposes of the proposed program could be achieved through existing programs have disregarded differences in goals as well as other important differences.

The Youth Conservation Corps would provide constructive and "relevant" experience for restless youth who complain that they cannot find such experience in traditional school curricula.

At this time of great national concern over the quality of the environment, the Youth Conservation Corps would offer opportunity to contribute to environmental improvement for present and future generations. The corps would lead toward a public effort to build the ecological basis needed for a modern society.

By providing summer earnings and stimulating interest in learning the proposed program would prevent many youngsters from dropping out of school. By providing meaningful work for youth the program would prevent much juvenile delinquency and crime.

Competent and suitable supervisors and instructors for the Youth Conservation Corps could be chosen from the reservoir of high school and college faculty available for employment during the summer months.

Boys and girls are together in the streets and alleys without any supervision at all. They would have some supervision in the YCC and both sexes should be included in the program.

Boys and girls only 14 and 15 years of age are not too young to be included. Experience has shown that both sexes can do useful conservation work without using potentially dangerous tools. The Youth Conservation Corps would not continue the discrimination against girls practiced by the Job Corps.

The highly successful experience with the Civilian Conservation Corps years ago showed the merits of the proposal expressed in H.R. 15361. Nevertheless, there would be distinct advantages in initiating the Youth Conservation Corps as a pilot program.

Because of the great differences in basic purposes and in other respects, the cost of

the proposed program per enrollee is not fairly comparable to the cost per enrollee in any other program. The Youth Conservation Corps would represent a wise investment in improvement of our public lands and in the growth potential of youthful citizens.

The proposed 90-day employment period would be adequate for the purposes of the Corps. The proposed legislation wisely provides that enrollees in the Corps would be employed on conservation projects as near to their homes as is practicable.

One of the most desirable and distinctive features of the proposed program is that it would be open to all American youth. In the Nation's attempt to solve its youth problems, and combat poverty, one of the great fallacies has been the assumption that young people in families of low income are the disadvantaged youth of the Nation. Young people can be disadvantaged or deprived in many different ways. Most of the Nation's youth are deprived of experience in conservation activities. In the Youth Conservation Corps enrollees of various backgrounds would learn from each other.

Some persons have referred to the proposed Youth Conservation Corps as if it would be a categorical manpower training program. It would not be such. Therefore, initiation of the Youth Conservation Corps would not conflict with the aims of the administration's proposed Manpower Training Act.

H.R. 15361 represents a bipartisan proposal.

DIGEST OF THE UNFAVORABLE ARGUMENTS ADVANCED

Following is a summary of the unfavorable arguments that were expressed.

The proposed restriction of employment in the Youth Conservation Corps to 90 days in a calendar year would limit the usefulness of the program. It cannot promise to achieve its goals of conservation and personal development in such a short time.

The cost of the proposed program per enrollee would be high in comparison with the cost of some comparable programs, such as the Neighborhood Youth Corps summer program. The 4–H program, if extended, could give urban youngsters outdoor experience without the Government's employing them.

The Government is already involving disadvantaged young people in conservation activities through the Job Corps conservation centers, the community action agencies, and the Neighborhood Youth Corps. Much of the conservation work which can be safely performed by youth is near their homes and does not involve transportation to remote locations in national parks and forests. It would be better to expand the existing programs than to initiate a new one.

The proposed program is not directed to disadvantaged youth, as it should be. These youth are most in need of work experience and income.

The proposed legislation does not adequately provide for the supervision and safety of enrollees in the Youth Conservation Corps. Their use of power tools in remote locations would be hazardous. Sufficient recruitment of competent supervisory personnel would be problematical.

The base of the legislation should be broadened so as to provide learning opportunities in many areas besides conservation.

It is not practical to try to draw together in a single program the interests of boys and girls ranging from 14 to 18 years of age. Those only 14 or 15 years old are too young to be included, as is proposed in the bills.

To bring together boys and girls of both races, 14 to 18 years of age, in forest camps would be very unwise.

Letters from the Departments of Agriculture, Labor and Interior show that none of these departments wants to administer the YCC program.

The State and local governments should take responsibility for programs such as the proposed YCC. It would be a good program for the States or localities but not for the Federal Government.

The proposed program would create a new bureaucracy when we need more consolidation and saving of administrative costs.

Creation of the Youth Conservation Corps would further fragment the Nation's manpower training effort and conflict with the integrating efforts of the administration's proposed Manpower Training Act.

AMENDMENTS TO THE HOUSE BILL

Early in the House debate on the YCC bill, Representative B. F. Sisk stated: "It is my understanding that the authors have agreed to accept some amendments and I expect to support them." Several amendments were adopted. One of these changed the age limitation for enrollees from 14 to 18 inclusive to 16 to 18 inclusive. Another gave authority to the Federal administrators of the Corps to arrange "directly or by contract with any public agency or organization or any private nonprofit agency or organization which has been in existence for five years" for services and equipment for the needs of members of the Corps. Another amendment transferred the responsibility for administration of the YCC from the proposed Youth Conservation Corps Interagency Committee to the Secretary of the Interior and the Secretary of Agriculture.

PRINCIPAL PROVISIONS OF PUBLIC LAW 91–378

Except for these amendments the Act as passed by both Houses of Congress and approved by the President (Public Law 91–378) is not markedly different from the bill (H.R. 15361) which was debated in the House. In layman's language, here are the principal features of the law.

The Act provides for gainful employment during the summer months of American youth, representing all segments of society.

It provides that this employment shall take place in the healthful atmosphere afforded in the national park system, the national forest system, the national wildlife refuge system, and other public land and water areas administered by the Secretary of the Interior and the Secretary of Agriculture.

The declared purpose of the Act is to further the development and maintenance of the natural resources of the United States by the youth upon whom will fall the ultimate responsibility for maintaining and managing these resources.

The Act establishes in the Department of the Interior and the Department of Agriculture a 3-year pilot program designated as the Youth Conservation Corps.

It specifies that the Corps shall consist of young men and women who are permanent residents of the United States, its territories, or possessions, who have attained age 15 but not age 19. It provides for employment of these young people during the summer months without regard to civil service classification laws, rules or regulations. It opens the Corps to youth of both sexes and of all social, economic and racial classifications. It limits employment of an individual in the Corps to 90 days during any single year.

The Act specifies certain duties of the Secretary of the Interior and of the Secretary of Agriculture relating to the Corps, including the following: (1) To determine the areas under their administrative jurisdictions which are appropriate for carrying out programs using employees of the Corps. (2) To determine the rates of pay, hours, and other conditions of employment in the Corps. (3) To provide for such transportation, lodging, subsistence, and other services and equipment as they may deem necessary or appropriate for the needs of members of the Corps. (4) To promulgate regulations to insure the safety, health and welfare of the Corps members. (5) To prepare a report indicating the most feasible and efficient method for initiating a cost sharing youth conservation program with State natural resource, conservation, or outdoor recreation agencies; and to submit this report to the President not later than one year following enactment of this Act for transmittal to the Congress.

The Act authorizes the Secretary of the Interior and the Secretary of Agriculture to contract with any public agency or organization or any private nonprofit agency or organization which has been in existence for at least 5 years for the operation of any Youth Conservation Corps project. The Act requires that, wherever economically feasible, existing but unoccupied Federal facilities shall be utilized for purposes of the Corps. The Act also requires that Corps members shall be employed on conservation projects as near to their places of residence as is feasible.

The Act specifies that upon completion of each year's pilot program the Secretary of the Interior and the Secretary of Agriculture shall prepare a joint report detailing the contribution of the program toward achieving the purposes of the Act. It also requires that this report be submitted to the President and that he transmit it to Congress.

For carrying out its purposes the Act authorizes an annual appropriation to the Secretary of the Interior and the Secretary of Agriculture of not to exceed $3,500,000 annually for 3 years.

CONGRATULATIONS TO MAYOR CHARLES PUKSTA, OF CLAREMONT, N.H.

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, recently a leading New Hampshire civic leader was appointed by President Nixon to the National Advisory Council on Adult Education. Charles Puksta, currently the mayor of Claremont, N.H., is an outstanding community leader. He has given selflessly of his time over the years in making Claremont a better city and will surely make a significant contribution as a member of the Advisory Council.

The need for better adult education programs has been long recognized by Mayor Puksta, who happens to be a personal friend as well as a constituent of mine. He is well aware of the fact that we need good adult education programs to complement the traditional youth-oriented educational system.

As an outstanding local community leader, he will be in a position to add much to the Advisory Council on Adult Education by making available his experience at the grassroots. Members of Congress are all too aware of the tendency of Washington-based experts to assume that they have all of the answers, to the extent that they often have lost touch with the very real problems of local communities. One answer to this problem lies in advisory councils like this one, so that outstanding community leaders like Charles Puksta can contribute their viewpoint and considerable local experience.

The Claremont Daily Eagle recently congratulated Mayor Puksta on his appointment with an excellent editorial

written and signed by the publisher, Ed Bennett. An outstanding civic leader himself, Ed Bennett has worked with Charlie Puksta on many endeavors and is in a good position to comment on the appointment. It is my privilege to have known and had the chance to work with both of these noted community and State leaders of New Hampshire.

I join the Claremont Daily Eagle in saying, "Well done, Charlie Puksta."

The editorial follows:

CONGRATULATIONS, MAYOR PUKSTA

Announcement was made this week of the appointment by President Nixon of Mayor Charles Puksta to the National Advisory Council on Adult Education.

Congratulations to the mayor for this singular honor and our thanks to him for his public service and dedication to Claremont so that a citizen of our community should be so recognized.

Mayor Puksta has unselfishly devoted most of his spare time to his community and to the political party of his choice, which happens to be Republican.

Over the years, since we have been in Claremont, Charlie Puksta has doggedly and faithfully served the city in a number of capacities.

No. "yes man," he has sometimes taken unpopular decisions, stated his case and stuck with his convictions.

A member of Claremont's active Polish community, Charlie and his wife, Lorraine, live humbly and work hard, their family of fine children helping Mrs. Puksta with their neighborhood store.

Mr. Puksta's service to Claremont cannot be measured in dollars and cents; the yardstick is the mayor's continued willingness to serve on the city council at no pay and the city's obvious satisfaction with his service.

The mayor is now serving his seventh consecutive term, two terms of which were assistant mayor, and two terms as mayor.

Claremonters will share Charlie's pleasure and satisfaction with the President's appointment.

They will join with The Eagle in wishing him well in this new, additional public service.

AMERICAN SECURITY COUNCIL POLL

(Mr. BINGHAM asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BINGHAM. Mr. Speaker, a misleading poll of public and congressional views on issues of national security is about to be released and disseminated nationwide by the American Security Council, headquartered in Washington, D.C. There is no doubt that the results of the poll when released will purport to show overwhelming support for the Council's rightwing views of the "national security issues" covered by the poll. The procedures followed and the questions themselves are designed to encourage those who agree with the council to fill out and return the questionnaire and to discourage those who disagree from doing so. This represents built-in distortion and adds up to a fraud upon the public. Members of the executive branch and of the Congress and representatives of the media should weigh the poll accordingly.

The American Security Council has, over the past several months, sent out thousands of letters to what it calls "opinion leaders" across the country requesting them to "serve on the national voter advisory board" of the council, to fill out a 10-point questionnaire on various "national security" questions, and to contribute $10 or more to help prepare and distribute the poll results to the news media, campaign workers, President Nixon, and the Congress. A mailing was sent to newspaper editors requesting them to publish the questionnaire and report the results. The council has also announced it is preparing a special analysis of the "actual national security voting record of each Member of Congress" for use in the coming fall elections.

The Council's so-called poll is a fraud in several respects. First, the letter accompanying the questionnaire implies that respondents must make at least a $10 contribution in order to become a member of the National Advisory Board and have their questionnaire replies counted. Obviously, those who do not support the ultraconservative positions of the Council will not fill out and return the poll because they will not want to contribute the $10.

Furthermore, while the Council indicates that its poll is intended to be sound and accurate, the wording and presentation of its questionnaire are anything but unbiased. Consider, for example, the following quotations from the ASC cover-letter accompanying the questionnaire:

We believe that most Americans support a strong national defense against Communist aggression, but we can't prove it without your cooperation in this poll.

Our staffers are not only expert on strategic military affairs but are also very knowledgeable on the various forces at work internally to destroy our country—the Communist Party, the Black Panthers, SDS, the Yippies, etc.

Many voters are not aware of how some Senators such as Kennedy, Gore, Muskie, Fulbright, Goodell, McGovern, Cranston, and others have taken positions on national security matters which weaken America's defense against Communism. For example, they all oppose President Nixon on both missile defense and Vietnam.

Thoughtful men may disagree about the significance and usefulness of polls in general. But no one would disagree that in order to be at all accurate, objective, and meaningful, polls should be conducted with extreme impartiality by organizations disinterested in the issues under inquiry. The American Security Council surely does not fit that description. It is generally regarded as a rightwing organization. If was founded and is still heavily supported by defense contractors and defense-related industries. It is clear from its publications and letters that it has very definite prejudices and views on matters of national security, and that it has equally definite intentions with regard to what its poll results ought to indicate.

In view of these facts, I want to urge my colleagues in the Congress and the representatives of the media to exercise due caution in the significance they might attach to the findings of the American Security Council when those "findings" are released. They should be recognized for what they are—rigged rightwing propaganda. No more significance should be attached to them than would be attached to findings similarly arrived at by any organization committed to a firm position on national security issues, whatever its location on the political spectrum.

SATELLITE AIRWAVES FOR EDUCATIONAL BROADCASTING

(Mr. BINGHAM asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BINGHAM. Mr. Speaker, the position that the United States will take at the World Administrative Radio Conference for Space Telecommunications, which will be held in Geneva, Switzerland, in June 1971, does not give adequate recognition and support to the needs of noncommercial and educational interests.

The U.S. position is being tailored to serve the Defense Department and commercial, profitmaking organizations at great expense to potential users of noncommercial, public satellite services, such as those provided by public broadcasting and other educational outlets. These potential users would include universities, school districts, hospitals, et cetera. The United States tentative position, which is now in its Seventh Draft at the Federal Communications Commission, makes available a disproportionate share of the frequency spectrum to the Department of Defense without requiring DOD to justify their present and future potential needs for frequency allocations with the same rigor that is being required of other applicants for use of the radio frequency spectrum. Private, commercial users of satellite communications are being given most of the remaining available frequency spectrum.

It is urgent that this situation be corrected before the final U.S. position is formulated and presented to the World Conference at Geneva next year. Accordingly I have sent letters to FCC Chairman Dean Burch, to Secretary of State William P. Rogers, to Secretary of Health, Education, and Welfare Elliot Richardson, to Presidential adviser Robert Finch, and to NASA Administrator Thomas O. Paine. These letters make specific recommendations for changes in the U.S. position in order to assure that the interests of noncommercial, public users of satellite services will be protected. The following is the text of my letter to FCC Chairman Dean Burch:

LETTER TO FCC CHAIRMAN DEAN BURCH

SEPTEMBER 5, 1970.

In the matter of an inquiry relating to preparation for a World Administrative Radio Conference of the International Telecommunication Union on matters pertaining to the radio astronomy and space services.—Docket No. 18294

DEAR MR. CHAIRMAN: I would like to urge that greater consideration be given to the exclusive allocation of a bandwidth of approximately 200 MHz for satellite services for non-commercial, public users, such as public broadcasting and educational services. I would urge that the preliminary

"Draft Proposals of the United States of America for the World Administrative Radio Conference for Space Telecommunications—Geneva, 1971," be modified to include such an exclusive allocation.

Paragraph 16 of the Seventh Notice of Inquiry states that "neither the Commission nor the OTM denies that a future requirement might develop for interconnection between and among the various educational outlets to the public." However the Commission and the OTM appear convinced that, based on present needs, there is no justification for an exclusive allocation of frequency spectrum for educational purposes at this time. I would dispute that conclusion. If public and educational users are to to be able to plan and construct facilities at the lowest possible cost, they must be assured that the necessary frequency spectrum will be available. An exclusive allocation in the 2500–2690 MHz band would make it possible for potential non-commercial, public users of satellite services to plan for the installation of inexpensive, receive-only ground terminals. While the Commission urges educators to look to the 11.7–12.2 GHz range for future accommodation of any interconnection requirements, the higher cost of the equipment required by the receiving stations would make such an allocation less desirable than in the 2500–2690 MHz band. The organizations which will be setting up these receive-only facilities will likely be the public and educational users, such as universities, local school districts, hospitals, etc. to whom the cost differential will be most critical.

I would also urge that if an additional portion of the frequency spectrum must be found to accommodate those users to which the 2500–2690 MHz space frequency spectrum is now proposed to be allocated, that the frequencies assigned to the Department of Defense be re-examined. I realize that the FCC has no statutory authority over the allocation and assignment of frequencies to the Executive Branch, including the Department of Defense. However, because of the growing demand by non-governmental users of the airwaves which needs to be met, I would appreciate whatever influence you can bring to bear to require reevaluation by the Executive Branch of its spectrum requirements. Particularly, the Department of Defense should be required to justify its present and its potential future needs for frequency allocations with the same rigor that is required of other applicants for use of the radio frequency spectrum. For example, by allocating earth resources satellites to some of the frequencies which DOD may now be using for similar reconnaissance satellites, the 2500–2690 MHz band could be allocated for satellite services for non-commercial, public users.

It is high time that non-commercial and educational interests be accorded new recognition and sufficient frequency allocations to fully develop their services. To seek their support for this position, I am sending copies of this letter to Congressman Harley O. Staggers, Chairman of the House Interstate and Foreign Commerce Committee; Congressman Torbert H. Macdonald, Chairman of the Subcommittee on Communications and Power; Senator Warren G. Magnuson, Chairman of the Senate Committee on Commerce; and Senator John O. Pastore, Chairman of the Subcommittee on Communications.

Sincerely,

JONATHAN B. BINGHAM.

PALESTINIAN TERRORISTS' HIJACKINGS DEMAND U.S. ACTION

(Mr. RYAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RYAN. Mr. Speaker, the world remains watching while three hijacked airplanes stand in the Jordan desert, their passengers' lives standing blackmail for the release of Palestinian terrorists. A fourth jet was destroyed in Cairo, after having been flown there at the command of its hijackers. Fortunately, no lives were lost. And a fifth jet's hijacking was only barely averted.

In all these instances, Palestinian terrorists were the criminals who perpetrated these hijackings. Acting with complete disregard for the law, they challenge the right of every nation, and of every nation's citizens, to travel in safety and security. And, what is more, they are challenging the right of Israel to exist.

This state of affairs simply cannot be allowed to exist.

The Palestinian terrorists have established themselves as an apparently independent fifth column within Jordan. In fact, their complete disdain for and resistance to the authority of the Jordanian Government—now carried to the extreme of overt hostilities—is object lesson which should be well contemplated by those who call upon Israel to open her doors and accept within her borders all the Palestinians now settled in her neighbors' lands. The actions of the Palestinian guerrillas rebut the suggestion of such action upon Israel's part.

The difficulties of the current situation do not justify diplomatic torpor, however. Again, if object lessons have any value—and they do—the past inaction of this administration in responding to the plight of Israel should demonstrate very clearly that it cannot stand mute now.

The matter of plane hijackings should be laid before the United Nations by the President in person. Both the Palestinian terrorists and the Arab States, which have—both covertly and overtly—offered support and assistance to the terrorists, look to that body for sympathy and as a forum for propaganda. While that body may be weak in terms of available courses of action it can undertake, its political value can be, and is, significant. The presence of the President of the United States cannot help but engender condemnation of the terrorists' tactics in that forum.

But not only must the President appear before the United Nations to condemn the acts of terrorism which have been, and continue to be, perpetrated. He must also call for an agreement between all nations of the world community to extradite hijackers to the country in which they committed their crime. Those nations which refuse to sign such an agreement must be declared off limits to passenger planes flying in international commerce.

Acting unilaterally, the President should direct the Civil Aeronautics Board to bar the use of U.S. airports by the planes of any nation which offers succor to hijackers.

In addition, Federal marshals in sufficient numbers should be assigned to international airports within this country, and the development and placement of weapons detection mechanisms at these airports must be expedited.

The dire peril which faces those hostages in the Jordanian desert demands the strongest condemnation by this country. The constant and growing peril which endangers Israel demands the same. To choose a phrase from the editorial which appeared in the September 9 edition of the Washington Post, the United States "should seize the initiative."

At this point, I should like to append this editorial, which I commend to my colleagues as a well-reasoned presentation which I support:

THE SHOWDOWN IN THE DESERT

The grim drama being played out on the sands of the Jordanian desert is international blackmail in its basest form. The lives of scores of innocent people have been put on the auction block by a gang of vicious, desperate outlaws. What these gangsters expect to gain from this deadly exercise in ransom and threat is a renewal of the Arab-Israeli war; there is no place for rabid fanatics in a peaceful settlement. By raising their demands to include the release of 3,000 guerrillas held captive in Israel, the Palestine "liberators" made clear their purpose of increasing the pressure on the Israeli government to break the cease-fire, either before or after the ransom deadline runs out tonight.

The negotiations to release the hostages are so delicate now that no useful purpose would be served by public comment on them. Only those in close contact with them can judge the temper of the kidnapers. Those who are making that judgment for the Western nations now being blackmailed are entitled to proceed as best they can without a background of noisy advice. We only hope that in this, as in any other kidnaping, they choose wisely among the few courses of action open.

It is possible, however, to begin to plan ahead in hopes that the nations of the world can take some immediate steps to prevent any repetition of this tragic affair. The world cannot tolerate a threat of this kind to international air travel—a threat in which innocent people are pawns in a deadly international power play. There have been long negotiations and much talk in many national capitals since the wave of airplane hijackings broke out many months ago but very little concerted action. The massive dose of criminal activity that took place in one day—four planes under attack and three seized—ought to convince every nation that this outrage has gone on long enough.

The United States, in our view, should seize the initiative in this situation by ordering this country's airlines to suspend all service to and from any nation that welcomes hijackers, that treats hijacking as a minor offense, or that is unable to prevent its citizens from engaging in hijacking. At the same time, the government should deny landing rights in this country to any airline that serves such nations. This action should be taken, not so much as an economic sanction against offending nations—although there would be significant economic effects—but as a simple safety measure designed to protect American citizens.

There may be legal red tape in such a unilateral approach; international treaties governing landing rights and so on are complex affairs. But this should not be allowed to stand in the way. For one thing, surely most other civilized nations would join in such a ban since it would place the responsibility for hijacking squarely where it belongs—on those governments which

have treated it as a game and which have encouraged it by throwing welcoming parties for the pirates. Even if other nations did not join immediately, the United States should take the first step since its prime responsibility in this situation is the safety of its citizens and of those citizens of other countries who travel on American air carriers.

The airlines themselves can help by strengthening their security measures, although the fact that would-be pirates got abroad an El Al plane last Sunday indicates that even Israel's relatively strict precautionary measures are far from fool-proof. It may be that for a while international travelers will have to undergo the kind of scrutiny now given to visitors of prison inmates. If so the price will not be too great if it helps to prevent another showdown on the desert sand.

AIRCRAFT HIJACKING

(Mr. SYMINGTON asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SYMINGTON. Mr. Speaker, in my first address to the House 2 years ago, I warned of the dangers of aircraft hijacking. At that time, I urged the State Department to take action to prevent a recurrence of such incidents.

A few months ago, I introduced a resolution urging an international convention to prevent the kidnaping and harassment of diplomatic personnel. I was joined in that resolution by 33 of my colleagues. Today, troubled by the consequences of inaction, I am introducing a revised version of that resolution which would extend its provisions to peaceful international travelers.

The inviolable right of individuals to unmolested international passage and the worldwide observance of diplomatic immunity are essential to maintain world peace. I am hopeful that my resolution will initiate action to deter groups seeking political advantage from such international crimes, and to provide for the swift administration of justice to those not deterred.

I shall urge my colleagues to join me in sponsoring this resolution.

TAKE PRIDE IN AMERICA

(Mr. MILLER of Ohio asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MILLER of Ohio. Mr. Speaker, upon coming to the United States, Svetlana Allilvyeva, Joseph Stalin's daughter, stated:

> Nobody here can realize the difference between the free world and the world of totalitarian ideology.

As one who witnessed and experienced the tyranny of the Soviet Union, she suggested that those who condemn America "should go and try it."

QUINCENTENNIAL CELEBRATION OF AMERICA'S DISCOVERY

(Mr. ANNUNZIO asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, today I am introducing in the Congress a concurrent resolution designating the State of Illinois as the host for the official celebration of the 500th anniversary of the discovery of America.

In 1892, the State of Illinois had the honor to host the official celebration for the 400th anniversary of America's discovery and did an admirable job in presenting the highly successful World's Columbian Exposition which more than 27 million people attended. It is entirely appropriate, therefore, that Illinois, in 1992, be given the honor of leading the 500th anniversary celebration of this important event.

The members of the Sixth Illinois Constitutional Convention, when they met recently in Springfield, Ill., unanimously adopted Constitutional Convention Resolution No. 68 encouraging the general assembly of the State of Illinois to make appropriate plans for the 500th anniversary celebration of America's discovery, and further, encouraging the Congress of the United States to recognize the State of Illinois as host to the official celebration of this anniversary.

I want to commend and congratulate each of the signers of this resolution for their foresight in endorsing a resolution that will make it possible to celebrate approximately the 500th anniversary of Christopher Columbus' momentous discovery.

Indeed, when the great Italian navigator discovered American in 1492, he not only achieved the most spectacular and important geographical discovery in the history of our planet, but he opened the door to development of the Western Hemisphere. His discovery, therefore, marked the actual beginning of our culture and country, as well as the other countries in both North and South America. Today the greatest democracy known to man is flourishing in America, and the indomitable spirit of Columbus has become part of us and our way of life.

As one of the early cosponsors of legislation to establish Columbus Day as a national legal holiday, I was certainly gratified when the United States Congress, in 1968, finally passed the Monday Holiday bill which accomplished this objective. The bill goes into effect in 1971, when for the first time in our Nation's history, Columbus Day will be celebrated as a national legal holiday on the second Monday in October.

The proper quincentennial observance of Columbus' epic voyage and discovery is the right and privilege of all Americans, and Illinois, having hosted the celebration once before, is seeking recognition for that honor once again.

Mr. Speaker, the great State of Illinois, and Chicago, the "hub of America," would be the ideal choice for hosting this celebration. First of all, Chicago is centrally located in relation to all portions of the country, and additionally, is the approximate center of our Nation's population. Twenty-eight railroads operate into Chicago, while 25 airlines, including 11 international flights, service Chicago, flying into Midway Airport and the world famous O'Hare International Airport. These facilities provide easy access not only to Chicago but to the entire State as well, and thus, a greater potential exists for drawing together visitors from all parts of the Nation, as well as from abroad.

Furthermore, Illinois during recent years has developed an interstate and intrastate highway system that is unexcelled and provides modern, rapid access to the city of Chicago and to Illinois via automobiles and buses. During 1967 alone, a total of $268,500,000 was spent on primary highways in Illinois, and in subsequent years, approximately equal amounts have been spent to improve the roads in Illinois.

Additionally, I want to point out that hotel, motel, and restaurant facilities in Chicago are among the most outstanding in our country. Chicago has long been recognized as the convention city and as such has established a fine record of meeting the needs of countless visitors to the heartland of America. Furthermore, Illinois recreational facilities, including land set aside for camping, fishing, hunting, boating, swimming, and water sports, totals more than 187,000 acres, and these facilities are maintained especially for the use of the people by the Illinois Department of Conservation.

By selecting Illinois as the official host for this celebration, Americans residing on the east and west coasts would be given the opportunity to become better acquainted with the marvelous development of America's great Midwest area. The tremendous growth of commercial, industrial, and cultural activities in the hub of America I feel best typifies the progress of civilization that has been made in the New World, the discovery of which the proposed quincentennial celebration is to commemorate.

For these reasons, Mr. Speaker, and for countless others too numerous to list, Illinois, and the city of Chicago, would be the ideal choice to act as official host for the quincentennial celebration. Therefore, in order that ample time may be set aside to make appropriate arrangements for this 500th anniversary observance of America's discovery, I urge that my colleagues join together to insure the early enactment of my resolution recognizing Illinois as the host for this official celebration.

The text of the resolution adopted by the Sixth Illinois Constitutional Convention, which I mentioned earlier, follows:

RESOLUTION CONCERNING THE 500TH ANNIVERSARY OF THE DISCOVERY OF AMERICA

(Proposed by the Legislative Committee, Sixth Illinois Constitutional Convention)

Whereas the Constitution of Illinois, as amended, proposed appropriate assistance for the World's Columbian Exposition held in Chicago pursuant to an Act of the United States Congress; and

Whereas the official celebration for the 400th anniversary of the discovery of America was held in the State of Illinois and the City of Chicago; and

Whereas plans should soon be made for the 500th anniversary of the discovery of America; and

Whereas the delegates to this Convention are proud of the Columbian heritage of our State and Nation;

Now, therefore, be it resolved by the Sixth Illinois Constitutional Convention in Convention assembled that:

Article 1. The General Assembly of the State of Illinois be encouraged to make appropriate plans for the celebration of the discovery of America; and

Article 2. The members of the Illinois Congressional delegation in the United States Congress be encouraged to have the State of Illinois designated to host the official celebration of the 500th anniversary of the discovery of America.

LIST OF SIGNERS

George J. Lewis, Chairman; Lucy Reum, Vice Chairman; Samuel L. Martin; Clifford P. Kelley; Anthony M. Peccarelli; Louis J. Perona; John L. Knuppel; William A. Sommerschield; Mary A. Pappas; William J. Laurino; Frank D. Stemberk.

PETITION SUPPORTING CONVENTION RESOLUTION ON THE DISCOVERY OF AMERICA

DISTRICT 1

Samuel W. Witwer, and Frank Cicero, Jr.

DISTRICT 2

Mrs. Lucy Reum and T. J. McCracken.

DISTRICT 3

John G. Woods and Mrs. V. B. Macdonald.

Clifford L. Downen and Robert L. Butler.

DISTRICT 58

George J. Lewis and M. A. Hutmacher.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. HAGAN (at the request of Mr. GRAY), for today, September 10, on account of official business.

Mr. CORMAN, for September 10, on account of official business.

Mr. CHARLES H. WILSON (at the request of Mr. ALBERT), for today, on account of official business.

Mr. BLATNIK (at the request of Mr. ALBERT), for today, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. DANIEL of Virginia), to revise and extend their remarks, and to include extraneous matter:)

Mr. BOLAND, today, for 10 minutes.

Mr. DIGGS, today, for 10 minutes.

Mr. PREYER of North Carolina, today, for 10 minutes.

Mr. RARICK, today, for 10 minutes.

Mr. GIAIMO, on September 15, for 60 minutes.

Mr. GIAIMO, on September 16, for 60 minutes.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the Appendix of the Record, or to revise and extend remarks was granted to:

Mr. ZABLOCKI in two instances and to include extraneous matter.

Mr. WIDNALL, to revise and extend his remarks during debate on H.R. 17795 today.

Mr. GROSS to revise and extend his remarks made today on H.R. 17795.

Mr. SCHMITZ during debate on H.R. 17982.

(The following Members (at the request of Mr. STEIGER of Wisconsin) and to include extraneous matter:)

Mr. WEICKER.

Mr. LANGEN.

Mr. MORSE in two instances.

Mr. ADAIR.

Mr. MCCLORY.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 3619. An act to revise and expand Federal programs for relief from the effects of major disasters, and for other purposes; to the Committee on Public Works.

ENROLLED BILL SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 18725. An act to establish a Commission on the Organization of the Government of the District of Columbia and to provide for a Delegate to the House of Representatives from the District of Columbia.

BILL PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, a bill of the House of the following title:

H.R. 18725. A bill to establish a Commission on the Organization of the Government of the District of Columbia and to provide for a Delegate to the House of Representatives from the District of Columbia.

ADJOURNMENT

Mr. DANIEL of Virginia. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 8 o'clock and 5 minutes p.m.), under its previous order, the House adjourned until Monday, September 14, 1970, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2363. A letter from the Chairman, District of Columbia Redevelopment Land Agency, transmitting the annual report of the Agency for fiscal year 1969, pursuant to section 15 of Public Law 592, 79th Congress; to the Committee on the District of Columbia.

2364. A letter from the Secretary of the Interior, transmitting various records relating to the sale of public lands to the Colorado River Commission of Nevada, pursuant to section 4(e) of Public Law 85–339; to the Committee on Interior and Insular Affairs.

2365. A letter from the Secretary of Commerce, transmitting the annual report of the Foreign-Trade Zones Board for fiscal year 1969, pursuant to section 16 of the Foreign-Trade Zones Act of 1934, as amended; to the Committee on Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. STAGGERS: Committee on Interstate and Foreign Commerce. H.R. 18583. A bill to amend the Public Health Service Act and other laws to provide increased research into, and prevention of, drug abuse and drug dependence; to provide for treatment and rehabilitation of drug abusers and drug dependent persons; and to strengthen existing law enforcement authority in the field of drug abuse (Rept. No. 91–1444 (Parts 1 & 2)). Referred to the Committee of the Whole House on the State of the Union.

Mr. BROOKS: Committee on Government Operations. H.R. 16443. A bill to amend the Federal Property and Administrative Services Act of 1949 in order to establish Federal policy concerning the selection of firms and individuals to perform architectural engineering, and related services for the Federal Government; with an amendment (Rept. No. 91–1445). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDREWS of Alabama:

H.R. 19115. A bill to amend the peanut marketing quota provisions to make permanent certain provisions thereunder, and for other purposes; to the Committee on Agriculture.

H.R. 19116. A bill to amend the peanut marketing quota provisions to make permanent certain provisions thereunder; to the Committee on Agriculture.

By Mr. CASEY:

H.R. 19117. A bill to amend the Federal Food, Drug, and Cosmetic Act to include a definition of food supplements, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. CELLER:

H.R. 19118. A bill to amend the act of March 3, 1931, relating to the furnishing of books and other materials to the blind and to other handicapped persons to authorize the furnishing of musical recordings and tapes to such persons; to the Committee on House Administration.

By Mr. CLARK:

H.R. 19119. A bill to amend the Federal Property and Administrative Services Act of 1949 in order to establish Federal policy concerning the selection of firms and individuals to perform architectural, engineering, and related services for the Federal Government; to the Committee on Government Operations.

H.R. 19120. A bill to provide a program of tax adjustment for small business and for persons engaged in small business; to the Committee on Ways and Means.

By Mr. DULSKI:

H.R. 19121. A bill to create a health security program; to the Committee on Ways and Means.

By Mr. GUDE:

H.R. 19122. A bill to provide a comprehensive Federal program for the prevention and treatment of alcohol abuse and alcoholism; to the Committee on Interstate and Foreign Commerce.

By Mr. MATSUNAGA:

H.R. 19123. A bill to provide certain retirement benefits under title 5, United States Code, for air traffic controllers, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. MOLLOHAN:

H.R. 19124. A bill to create a special bridge replacement program in title 23, United States Code; to the Committee on Public Works.

By Mr. RYAN:

H.R. 19125. A bill to protect consumers against unreasonable risk of injury from hazardous products and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 19126. A bill to amend the Fair Packaging and Labeling Act to require the disclosure by retail distributors of unit retail prices of packaged consumer commodities, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. SCHWENGEL:

H.R. 19127. A bill to amend the National Traffic and Motor Vehicle Safety Act of 1966 to require motor vehicle safety standards relating to the ability of the vehicle to withstand certain collisions; to the Committee on Interstate and Foreign Commerce.

H.R. 19128. A bill to extend certain Veterans' Preference Act benefits to civilian employees of the former War Department interned as prisoners of war during World War II; to the Committee on Post Office and Civil Service.

By Mr. TAFT:

H.R. 19129. A bill to protect the personal security and academic freedom of students, faculty, staff, and other employees of institutions of higher education by requiring the adoption of procedures by the States to govern the treatment of disruptive campus violence by students, staff, and other employees, as a precondition to Federal assistance, and to assist such institutions in their efforts to prevent and control campus disorders; to the Committee on Education and Labor.

H.R. 19130. A bill to amend chapter 3 of the Foreign Assistance Act of 1961, relating to U.S. contributions to international organizations and programs, to provide for a program to control illegal international traffic in narcotics, and to provide for withholding of U.S. assistance to nations refusing to take appropriate steps to control illegal international traffic in narcotics, and for other purposes; to the Committee on Foreign Affairs.

By Mr. BRADEMAS:

H.R. 19131. A bill to establish orderly procedures for the public announcement of contracts awarded by the Department of Defense; to the Committee on Armed Services.

By Mr. BRADEMAS (for himself, Mr. PERKINS, Mr. THOMPSON of New Jersey, Mr. DENT, Mr. DANIELS of New Jersey, Mr. O'HARA, Mr. CAREY, Mr. HAWKINS, Mr. WILLIAM D. FORD, Mr. HATHAWAY, Mrs. MINK, Mr. SCHEUER, Mr. STOKES, Mr. CLAY, Mr. MILLS, Mr. FRASER, Mr. LEGGETT, and Mr. MEEDS):

H.R. 19132. A bill to amend the Library Services and Construction Act, and for other purposes; to the Committee on Education and Labor.

By Mr. BRADEMAS (for himself and Mr. HATHAWAY):

H.R. 19133. A bill to reinforce the Federal system by strengthening the personnel resources of State and local governments, to improve intergovernmental cooperation in the administration of grant-in-aid programs, to provide grants for improvement of State and local personnel administration, to authorize Federal assistance in training State and local employees, to provide grants to State and local governments for training of their employees, to authorize interstate compacts for personnel and training activities, to facilitate the temporary assignment of personnel between the Federal Government, and State and local governments, and for other purposes; to the Committee on Education and Labor.

By Mr. BRINKLEY:

H.R. 19134. A bill to amend the Civil Rights Act of 1964 by adding a new title, which restores to local school boards their constitutional power to administer the public schools committed to their charge, confers on parents the right to choose the public schools their children attend, secures to children the right to attend the public schools chosen by their parents, and makes effective the right of public school administrators and teachers to serve in the schools in which they contract to serve; to the Committee on the Judiciary.

By Mr. LUKENS:

H.R. 19135. A bill to amend the Social Security Act to provide for medical and hospital care through a system of voluntary health insurance financed in whole for low-income groups, through issuance of certificates, and in part for all other persons through allowance of tax credits, and to provide a system of peer review of utilization, charges, and quality of medical service; to the Committee on Ways and Means.

By Mr. EILBERG:

H.R. 19136. A bill designating certain election days as legal public holidays; to the Committee on the Judiciary.

By Mr. GIBBONS:

H.R. 19137. A bill to amend title II of the Social Security Act to provide in certain cases for an exchange of credits between the old-age, survivors, and disability insurance system and the civil service retirement system so as to enable individuals who have some coverage under both systems to obtain maximum benefits based on their combined service; to the Committee on Ways and Means.

By Mr. HECHLER of West Virginia:

H.R. 19138. A bill to prohibit flight in interstate or foreign commerce to avoid prosecution for the killing of a policeman or fireman; to the Committee on the Judiciary.

By Mr. QUILLEN:

H.R. 19139. A bill to provide for a program of Federal assistance in the development, acquisition, and installation of aircraft antihijacking detection systems, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. SLACK:

H.R. 19140. A bill to amend the Consumer Credit Protection Act to retain the effectiveness of materialmen's and mechanic's liens; to the Committee on Banking and Currency.

H.R. 19141. A bill to amend title 38 of the United States Code to increase the rates and income limitations relating to payment of pension and parents' dependency and indemnity compensation, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. TIERNAN:

H.R. 19142. A bill to amend the Social Security Act to provide for medical and hospital care through a system of voluntary health insurance financed in whole for low-income groups, through issuance of certificates, and in part for all other persons through allowance of tax credits, and to provide a system of peer review of utilization, charges, and quality of medical service; to the Committee on Ways and Means.

H.R. 19143. A bill to amend the Communications Act of 1934 and the Internal Revenue Code of 1954 to provide permanent financing for the Corporation for Public Broadcasting; to the Committee on Ways and Means.

By Mr. VANIK:

H.R. 19144. A bill to create a health security program; to the Committee on Ways and Means.

By Mr. WYATT:

H.R. 19145. A bill to direct the Secretary of the Army to release on behalf of the United States a condition in a deed conveying certain land to the State of Oregon to be used as a public highway; to the Committee on Armed Services.

By Mr. FRASER:

H.R. 19146. A bill to promote the public welfare; to the Committee on Government Operations.

By Mr. ADAIR:

H.J. Res. 1363. Joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

By Mr. ANNUNZIO:

H.J. Res. 1364. Joint resolution recognizing the State of Illinois as host in 1992 of the official quincentennial celebration of the discovery of America; to the Committee on the Judiciary.

By Mr. BROOMFIELD:

H.J. Res. 1365. Joint resolution authorizing the President to declare one week each September as "National SS *Hope* Week"; to the Committee on the Judiciary.

By Mr. BRADEMAS (for himself and Mr. MEEDS):

H. Con. Res. 723. Concurrent resolution expressing the sense of the Congress with respect to international agreements providing for mandatory extradition of aircraft hijackers; to the Committee on Foreign Affairs.

By Mr. EDWARDS of California:

H. Con. Res. 724. Concurrent resolution calling for an international convention on the treatment of airline terrorists and the nations that give them support and asylum; to the Committe on Foreign Affairs.

By Mr. TAFT:

H. Con. Res. 725. Concurrent resolution for new initiatives at the Paris peace talks including a cease-fire and other matters; to the Committee on Foreign Affairs.

By Mr. WOLFF:

H. Con. Res. 726. Concurrent resolution expressing the sense of the Congress with respect to international aircraft hijacking; to the Committee on Foreign Affairs.

By Mr. MILLER of Ohio:

H. Con. Res. 727. Concurrent resolution to create a joint congressional committee to provide Congress with a plan for legislation to deal with the problems of rural America; to the Committee on Rules.

By Mr. PHILBIN:

H. Con. Res. 728. Concurrent resolution appealing to Soviets to cease persecution of Jews in Russia; to the Committee on Foreign Affairs.

By Mr. SHRIVER:

H. Con. Res. 729. Concurrent resolution expressing the sense of the Congress with respect to international agreements providing for mandatory extradition of aircraft hijackers; to the Committee on Foreign Affairs.

By Mr. BROTZMAN (for himself, Mr. HOSMER, Mr. BOLAND, Mr. REIFEL, Mr. SIKES, Mr. EDWARDS of California, Mr. BRAY, Mr. TUNNEY, Mr. DONOHUE, Mr. LANGEN, Mr. FULTON of Pennsylvania, Mr. MICHEL, Mr. ST GERMAIN, Mr. SCHWENGEL, and Mr. RODINO):

H. Res. 1206. Resolution to amend the Rules of the House of Representatives to create a standing committee to be known as the Committee on Environment; to the Committee on Rules.

By Mr. SYMINGTON:

H. Res. 1207. Resolution expressing the sense of the House of Representatives with respect to the spreading practice of international hijacking and the kidnapping of diplomatic personnel; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 19147. A bill for the relief of Frank Morgan; to the Committee on the Judiciary.

By Mr. BROYHILL of Virginia (by request):

H.R. 19148. A bill for the relief of Lilia C. Sanjur; to the Committee on the Judiciary.

By Mr. CLARK:

H.R. 19149. A bill for the relief of Nabil George H. Yaldo; to the Committee on the Judiciary.

By Mr. TEAGUE of California:

H.R. 19150. A bill for the relief of Robert W. Patterson; to the Committee on the Judiciary.

By Mr. WYATT:

H.R. 19151. A bill for the relief of Fred Devine, doing business as Fred Devine Diving Co.; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

CODORUS STATE PARK

HON. GEORGE A. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. GOODLING. Mr. Speaker, Codorus State Park in my congressional district came into being as the result of the cooperative efforts of the State of Pennsylvania and the P. H. Glatfelter Co. The State of Pennsylvania has obtained a valuable piece of scenic real estate, the Glatfelter Co. has gained a dependable water reserve, and the people have won an impressive recreational area located in the area I serve.

Because Codorus State Park vividly illustrates what can be done through the cooperative efforts of State government and private industry, I include in the RECORD an article prepared by the Pennsylvania Department of Forests and Waters on this interesting project, the first of its type in the entire country:

CODORUS STATE PARK

Pennsylvania's Codorus State Park is one of the Commonwealth's most recently acquired acres for the development of outdoor

recreational facilties and represents an outstanding example of cooperation between private industry and State government.

Located in York County, the Codorus State Park is being developed by the Pennsylvania Department of Forests and Waters' Bureau of State Parks in cooperation with the P. H. Glatfelter Co., of Spring Grove, one of the nation's leading manufacturers of paper products, for the benefit of the general public.

The Codorus State Park is a multiple purpose project:

1. It provides much needed outdoor recreational facilities, and

2. It satisfies the need for a more substantial water supply for the P. H. Glatfelter Co.

Consequently, because of this successful joint venture, Pennsylvania has a new and important recreational area in an urbanized region and the Spring Grove industry has an ample reserve supply of water upon which it can depend in the future.

This water resources development program was inaugurated following two years of intensive study of the water needs of the Codorus Creek Basin by the Department of Forests and Waters. Taken into consideration at the same time was the need, or demand, of the surrounding area for water oriented recreational activities.

Some 3,326 acres of land were acquired with funds from Project 70, Pennsylvania's Land Acquisition and Borrowing Act, and it was the P. H. Glatfelter Co., in cooperation with the Commonwealth, which constructed a 1,690 foot long, 109 foot high impoundment dam to create a 1,275 acre lake now known as Lake Marburg.

The paper manufacturing firm is permitted, by agreement, to draw water from the lake to a maximum of a 23 foot drop in the lake level. This would reduce the lake's size to 800 acres which is considered still ample enough to provide opportunities for recreation, such as, boating and fishing.

When the impoundment structure was dedicated on Aug. 5, 1965, William W. Scranton, then governor of Pennsylvania, described the project as "not only a major milestone within the entire 'Project 70' concept but it also marks, for the first time, a conservation wedding of private industry with State government for the mutual benefit of the people themselves."

Maurice K. Goddard, Secretary of Forests and Waters, has since emphasized that this "joint construction and development of the Codorus State Park by the State and the P. H. Glatfelter Co. is without parallel in the United States."

Following the impoundment of Lake Marburg, the department provided day-use facilities and a temporary boat mooring and access area, and just last May 9 another dedication took place there to mark the completion of permanent boat launching facilities.

This program not only marked the dedication of new facilities but also indicated the completion of the first Project 500 construction contract at a State park in Pennsylvania.

"Project 500," the Commonwealth's Land and Water Conservation and Reclamation Act, was approved by the voters at the 1967 Primary Election and was implemented by Gov. Raymond P. Shafer on Jan. 19, 1968. It provides the Department of Forests and Waters with funds for the development of State park lands acquired under "Project 70."

The original study of the area, involving outdoor recreational needs, revealed that water oriented facilities would attract over 600,000 visitors from Pennsylvania each year. This is based on the prospectus that the population of York County will just about double over the next 50 years.

That estimate (over 600,000 visitors annually) was readily acceptable when it is realized that 329,800 persons reside within a 25 mile radius of the park and there are over 1,140,000 persons within a 50 mile radius.

More recently a new contract was awarded for second phase park development which includes construction of an access road, overlook point and parking areas for picnicking and concession marina use.

Under design as part of the future development of the park are two major day-use areas and a maintenance area. Marina facilities are included in one day-use area project which will include a general marina building, with a repair shop and restroom facilities; an additional 400 car parking lot, picnic areas, and a restaurant with adjacent parking area.

The second day-use area will include a swimming complex with a one-half acre swimming area, a bathhouse, concession building, boat rental building, life guard and first aid station, sunbathing area, parking facilities for over 1,000 cars, picnic areas and playground facilities. Also planned is a mooring area for about 50 small rental craft and two group picnicking areas.

Campground facilities are also planned for those persons who prefer to "rough it" with sites to be developed at out-of-the-way areas which will be reached only by boat and thus provide a primitive atmosphere for the outdoorsman. A tent and trailer campground with approximately 400 sites is also proposed.

One of the most popular forms of outdoor recreation currently in force at Codorus is fishing and one other state agency, the Pennsylvania Fish Commission, has done much to stimulate interest by carrying out a stocking program to provide a variety of game fish for the angler.

This program began in 1967 and each year since then, with the exception of 1969, the commission stocked 80,000 northern pike fry in the lake. Some 80,000 muskellunge fry were stocked during 1967 and the following year saw another 80,000 fry, of this same species of game fish, placed in the lake.

Some 2,000,000 walleye fry were stocked during 1967, another 2,000,000 in 1968 and during the early part of 1970 the Fish Commission placed 300 adult walleye, ranging from 16 to 18 inches long, in the recreational impoundment.

The stocking program also included large numbers of largemouth bass. In 1967 there were 200,000 fry placed in the lake and later that same year some 4,000 fingerling were stocked. Another 200,000 fry went in during 1968 and that same year saw another stocking of 6,000 fingerling.

Black crappie and even channel catfish were included in the program. During 1967 and 1968 the commission stocked 42,000 fingerling black crappie in the lake, and during 1968 stocked the area with 80,000 channel catfish fry and 16,000 fingerling.

Therefore when total development is achieved, the Codorus State Park will offer a variety of outdoor recreational opportunities and will emerge as one of Pennsylvania's finest State parks as planned, designed and developed to serve the public not only for the present but for many years to come.

NEW LEGISLATION TO AID IN FIGHT AGAINST KIDNEY DISEASE

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, September 10, 1970

Mr. SCHWEIKER. Mr. President, the Senate has passed a measure vital to the basic health needs of our country, S. 3355, the Health Service Improvement Act of 1970. S. 3355 extends the regional medical program for a 5-year period beginning in fiscal year 1971 and provides $120 million for the program for this year, increasing to $250 million for fiscal year 1975.

In addition to extending the regional medical program, S. 3355 will extend and improve the comprehensive health planning and services program. It will also extend and improve the authority for the National Center for Health Service Research and Development, and, finally, it will create a National Council on Health Policy in the Executive Office of the President to set goals for a national health policy for the United States.

However, I particularly wish to call attention to another significant aspect of this bill—the $15 million authorization specifically for kidney disease. I have taken a strong personal interest in the serious problem of kidney disease, which afflicts about 8 million Americans and kills about 60,000 each year. In addition to cosponsoring S. 2482, the National Kidney Disease Act of 1970, I testified on February 17, 1970, before the Senate Health Subcommittee on S. 3355, the bill which has just been passed, and its importance in the fight against chronic kidney disease.

As I noted in my testimony before the Health Subcommittee last February, I am pleased that S. 3355 explicitly adds kidney disease to heart disease, cancer, and stroke as one of the diseases to which the program is specifically addressed.

In Pennsylvania, for example, this will allow the three regional medical programs, the Greater Delaware Valley regional medical program, the Susquehanna Valley regional medical program, and the Western Pennsylvania regional medical program, to become outlets for artificial kidney machines and related medical services. This bill will assist in prevention and rehabilitation, as well as diagnosis and treatment.

Increased research in this field is making possible much more preventive activity and Federal programs must keep pace. Until the passage of this legislation, there was no Federal program to provide kidney hemodialysis equipment for widespread treatment among the general public. The costs of maintaining a kidney machine are high. The kidney hemodialysis machines help keep a kidney patient alive by recirculating the patient's blood through the machine, thus removing poisonous wastes from the blood. However, kidney machines cost $3,000 to $6,000 to buy and install in the home, plus $50 a week maintenance cost. An estimated 8,000 kidney patients die each year for lack of this treatment. Mr. President, we can no longer accept statistics such as these in 1970 in the United States.

I am proud to say, Mr. President, that in many Pennsylvania communities there are private citizens, working through their civic and service organizations and labor unions, who are determined to help victims of kidney disease by raising funds for machines. Practically every week, in my mail, I learn of some local

fund-raising venture in Pennsylvania to secure a kidney machine for a deserving patient.

The United Steelworkers of America has been making a special effort to obtain better care for kidney patients. Many locals of the USW in Pennsylvania have established funds to purchase kidney machines. The USW nationally has backed such legislation as S. 3355, and the executive committee of the National Kidney Foundation has recognized the president of the USW, Mr. I. W. Abel, for his union's contribution to the fight against kidney disease. I, too, want to commend this labor union for devoting itself not just to the specific needs of steelworkers but also to the general needs of the community for better health care. It is a leadership role that this union has often taken.

In recent years, Mr. President, public awareness of kidney disease has greatly increased and it has become a matter of utmost concern for Federal and private research efforts. We have seen a major development of kidney dialysis techniques, but thus far these techniques remain beyond the financial resources of the average family. I hope that passage of S. 3355 by the Senate will go a long way toward providing the staff, facilities, research, and equipment that are needed.

ESSEX COUNTY, MASS., WEEKLY SEES NEED FOR MAINE POWER FACILITY

HON. WILLIAM D. HATHAWAY

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. HATHAWAY. Mr. Speaker, an article published recently in the Pennysaver, the largest weekly newspaper in Essex County, Mass., evinces strong concern for the power crisis which the northeastern area of the United States has experienced for the past several years. But the article also expresses confidence that the crisis can be substantially eased by the introduction of Federal hydroelectric power in New England.

In this regard, the Pennysaver piece answers a number of questions concerning construction of the proposed Dickey-Lincoln school hydroelectric power project in northern Maine—answers which provide a cogent argument for the project's completion.

In the very near future, a House-Senate Conference Committee will convene to resolve differences between respective versions of the fiscal year 1971 public works appropriations bill. A budget request totaling $807,000 in preconstruction planning funds for the Dickey project will be one of the points of discussion. I sincerely hope that the conferees will agree to inclusion of the funding, and that the Members of this House will subsequently endorse their agreement. In the meantime, I respectfully urge all my colleagues to review the contentions of the Massachusetts weekly's article:

QUESTIONS AND ANSWERS ON THE DICKEY-LINCOLN SCHOOL

1. What is the Dickey-Lincoln school project? The Dickey-Lincoln school project will consist of two dams located on the St. John River in Maine. It is the first Federal multipurpose water resource project to be authorized by Congress for construction in New England, and will provide 100,000 kilowatts of firm power to preference customers in Maine, and 650,000 kilowatts of peaking power to preference customers and private utilities throughout New England.

Electric power constitutes the major benefit from the project. Additional benefits in flood control and area redevelopment will be realized by Dickey-Lincoln, and the project will contribute significantly to the advancement and future development of the economy of Maine and New England, as well as bringing, for the first time, Federal resource development to an area where consumers pay the Nation's highest electric bills.

2. What action has Congress taken on the project? Dickey-Lincoln was authorized by Congress in 1965; funds appropriated for initial planning totaled $1.9 million through fiscal year 1967. The President's budget request for fiscal year 1968 included $1,676,000 for final engineering and design of the project. This amount was approved by the House Appropriations Committee on July 20, 1967, but rejected by the full House (233–169) in an amendment offered by Rep. Robert Giaimo (D., Conn.) on July 25, 1967.

3. Has Dickey-Lincoln been fully studied and justified? No other multipurpose hydroelectric project authorized by Congress has received such close scrutiny as Dickey-Lincoln School. As well as being approved by the Interior Department, Corps of Engineers, Federal Power Commission, Atomic Energy Commission, and the Bureau of Appropriations Committee. The Committee found the project to be completely justified, with a benefit-cost ratio of 1.9 to 1.

Since fiscal year 1963, Congress has authorized 17 other Federal hydroelectric projects, with benefit-cost ratios ranging from 1.11 to 1.97. Dickey-Lincoln School ranks with the best.

4. Is Dickey-Lincoln School a good investment for American taxpayers? The project meets all criteria for economically feasible multipurpose water resources development as required by Senate Document 97. It will pay for itself in full, with interest, in 50 years, with power revenues. After that, all revenues will go to the Federal Treasury.

5. Does Dickey-Lincoln school offer the lowest cost alternative for electric power production? The staff study showed that, under the criteria required in Senate Document 97, Dickey-Lincoln meets the test of the lowest possible alternative, including conventional steam, nuclear, or pumped storage facilities.

6. Is there a market for Dickey-Lincoln power? The Department of the Interior has received letters of intent to purchase power from preference customers indicating a desire to purchase 100,000 kw of firm power in Maine and over 650,000 kw of peaking power elsewhere in New England.

7. Is hydroelectric power outdated? As stated in the staff study: "Hydroelectric capacity, both conventional and pumped storage, is best adapted for providing swift peaking capacity and spinning reserve for load protection." Hydro power also offers the advantage of instant start-up in the event of a power shortage.

8. How will Dickey-Lincoln affect electric consumers in New England? According to the Federal Power Commission, electric consumers in New England pay the highest electric bills in the nation. The FPC also reports that 98 percent of the power generated in New England comes from private utilities. New England is the only area in the United States that does not have a multipurpose Federal hydroelectric development.

Construction of Dickey-Lincoln will introduce in New England the "yardstick" of Federal competition which has not only lowered electric rates throughout the nation but has spurred the private utilities into modernizing and streamlining their operations. In addition, Dickey-Lincoln will bring an annual savings to preference customers of more than $9 million, even though it will generate only 3% of New England's power requirements.

9. What will Dickey-Lincoln cost? Based on current figures, the total construction cost of the Dickey-Lincoln School project is presently estimated to be $229,313,000, according to the Corps of Engineers. The staff study showed that an increase of about 4% per year could be anticipated during the six year construction period based on experience with other Federal projects; however, this would not alter the fact that Dickey-Lincoln offers the lowest cost alternative for power production when compared to any other method, including nuclear generation.

10. Are the private utilities in New England planning for the future so as to prevent blackouts? The Northeast blackout of November, 1965, and recent outages on Cape Cod have shown that the private company opponents of Dickey are not meeting their public responsibilities. The so-called "Big Eleven" loop was formed in response to public outcries; however, no evidence of regional planning, including generation and transmission, has been produced by the private companies. An official of the private companies admitted under oath that the "Big Eleven" loop consisted solely of a newspaper ad.

11. Will Dickey-Lincoln create jobs? It is estimated that 11,200 man-years of work will be required to complete the project. The project will consume nearly 600,000 tons of concrete, 25,000 tons of reinforced steel in the dam and 45,000 tons of steel in transmission facilities. Construction of transmission lines would involve about 800 man-years of work. The power plant alone will cost $60,000,000, which will create more jobs in the electrical equipment industry.

PEOPLE FED UP WITH CAMPUS ANTICS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, September 10, 1970

Mr. THURMOND. Mr. President, an editorial column entitled "Public up to Here With Campus Antics" written by columnist James J. Kilpatrick, was published in the State newspaper in Columbia, S.C., on August 30, 1970.

Mr. Kilpatrick reports that the American people who support our institutions of higher learning are fed up with the disorders and destruction which shut down many colleges and universities last spring.

He reports further that college administrators and faculty members are facing demands from trustees, Governors, legislators and others that necessary control be exercised to restore order on campuses around the country.

Administrators cannot come crying to the President of the United States to

change conditions overnight and thus restore order to their campuses. These administrators need to show a little backbone and offer a little leadership. Many of them would do well to start with the firing of some faculty members who inspired and encouraged these disorders.

I ask unanimous consent that the article be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PUBLIC "UP TO HERE" WITH CAMPUS ANTICS—ORDER TO BE RESTORED

(By James J. Kilpatrick)

Forecasting coming events is a risky business as ever pundit knows, but I venture this prediction anyhow: Things will be better on American college campuses this fall. The flood tide of violent protest is about to be checked.

Two reasons prompt this view. One is the force of public reaction, which is slow to rise but irrestible in the end. The other is a sense of responsibility that belatedly is creeping over the college faculties. Together, these pressures will compel a restoration of order.

The level of public fedupness, which began as a small cloud over Columbia and Berkeley, is rolling up like a thunderhead in the Rockies. The people have invested great affection and great wealth in their institutions. They are now demanding of their governors, state legislators and college administrations that the violence be stopped and the disrupters be punished.

They mean business. Even before the tragic bombing at Madison a few days ago, Wisconsin residents were boiling over. "We have had it," writes a correspondent in Green Bay, "right up to here." The same anger is evident in California and Kansas. The next revolutionary who strikes a match in Seattle may start a political firestorm. Candidates who fail to sense this mood, and to respond actively to it, are asking for defeat in November.

If a counter-wave of repression is to be restrained, it will be up to the members of the faculties to build effective levees this fall. In the whole wretched chronicle of campus violence, no chapter tells a story more disgraceful than is told in their record of connivance, cowardice, and betrayal.

This is not my view alone. Dr. Sidney Hook, an eminent professor of philosophy and a certified liberal, laid it on the line last month in testifying before the Scranton Commission on Campus Unrest. He spoke scathingly of "fanatical student extremists" who have imposed their own brand of facism on their institutions. "And most shameful of all," said Dr. Hook, "these students have faculty allies who encourage and extenuate attacks on the academic freedom of their colleagues."

Dr. Hook laid his lash on "opportunistic administrators with flexible backbones," but in the last analysis, he said, "it has been the faculty who have been chiefly responsible for the decline in academic freedom. For they have lacked the moral courage to uphold the professional standards of their calling as teachers and seekers of the truth."

This "failure of nerve and intelligence," in Dr. Hook's view, has presented American colleges and universities with "the gravest crisis in their history." For the past several months, as president of University Centers for Rational Alternatives, he has been throwing his own formidable energies into a revitalization of faculty morale. His grassroots organization of scholars proposes something more effective than hand-wringing at faculty teas. They propose to restore true academic freedom, and they have an orderly plan for gaining that end.

The tactical proposals advanced by Dr. Hook call for the promulgation at every institution, at the start of the academic year, of a clear statement of principles and rules governing the expression of dissent. Faculty, students, and administrators, acting together, would define the kinds of impermissible conduct and behavior. Punishments would be spelled out with equal clarity.

Violations would be dealt with first by faculty-student marshals, then by obtaining court injunctions. If disorder escalates into arson, assault and vandalism, the university marshals should accompany police "so that their mission can be accomplished without force where resistance is not offered, and with minimum force where it is." Academic sanctions against guilty students and teachers must be strictly enforced. There can be no amnesty and no appeasement.

These proposals do indeed offer "rational alternatives" to the intolerable disorder of recent years. And this bears repeating: If responsible students, teachers, and administrators fail to embrace such plans this fall, by next winter an outraged body of parents, alumni, and legislators will impose much harsher plans of their own.

DICTATORSHIP OF THE MINORITY?

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. HÉBERT. Mr. Speaker, Maj. Gen. James F. Cantwell, president of the National Guard Association of the United States, has written in the National Guardsman magazine words worthy of our attention.

General Cantwell is experienced, knowledgeable, and respected in National Guard affairs. I can say this because I know him and know of his accomplishments personally.

Therefore, I believe what he says about criticism leveled at the guard for its handling of civil and campus disorders and his views on current unrest are of interest to all of us. I am inserting his article, which speaks for itself, at this point in the RECORD:

[From the National Guardsman, Sept. 1970]

DICTATORSHIP OF THE MINORITY

(By James F. Cantwell)

Some curious, and I think fallacious, propositions have been voiced with great frequency in the widespread debate that has preoccupied this Nation since the Cambodia decision and the Kent State incident. They embrace such ideas as these:

That the only way to bring student violence to an end is to terminate our involvement in the war in Southeast Asia.

The police and National Guardsmen have been more to blame than the New Left agitators and campus rowdies in the recent upsurge of campus-related violence.

That law enforcement officers and Guardsmen should not carry weapons while dealing with student mobs.

That defiance of the law, violence and rebellion are not only acceptable, but are to be desired, if that's what it takes to overturn our traditional structure of values and to remake our society.

That the student and faculty militants, and their mixed bag of political-intellectual-New Left supporters are right in their aspirations for America and their strivings for power, and that the vast majority of Americans—Middle America, they have been called—are wrong.

It is not the fact that such propositions are being uttered that is frightening, for a free society by its very definition must encourage open and free discussion of the manner in which that society should function.

What is shocking is the absolute insistence by a small and noisy group of radicals that they, and only they, know what is best for America, and their willingness to use any means—violence, intimidation, lies, and other reprehensible means—to attain their ends. Equally shocking is the equanimity with which many Americans are submitting to these radical ideas and to the techniques by which they are being spread.

There is much to be said for the apprehensions recently voiced by retired General Harold K. Johnson, that America is closer than many think to "a dictatorship of the minority."

It seems long past time for concerned Americans at every level to start expounding some counter-propositions, in clear and forceful terms:

That students and others with an idealistic fervor must expose their ideas to the same democratic processes as anyone else.

That young people may not always be right in what they envision as proper goals for our Nation, and that their Utopian yearnings may not always be acceptable as National policy.

That all of us must obey the laws that govern our society, else the Nation itself may perish.

That the burning of buildings, and physical violence, and other excesses not only will not be accepted as modes of expression but will be forcibly halted when persuasion fails.

That no one, whether police or National Guard, should be expected to cope with screaming, rock-hurling mobs of campus hoodlums without the means of protecting themselves and the lives and property of their fellow-citizens.

That peace, while it is eminently to be desired in all parts of the World, is not as simple as merely walking out on a conflict and leaving your friends to suffer the consequences.

When hearings are held by such agencies as the Presidential Commission on Campus Unrest, or various Congressional committees, such ideas as these are expressed, but they never seem to receive the same prominent coverage by the news media as the viewpoint of ultra-liberal or radical spokesmen.

Middle America can, and should, insist on being heard, else many of the Country's most cherished values may be lost, along with our greatness as a free Nation and a free people.

TOY SAFETY BILL

HON. FRANK E. MOSS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, September 10, 1970

Mr. MOSS. Mr. President, one of the important advances in consumer protection is the Toy Safety bill, which has been enacted at this session.

Miss Betty Furness, who is a member of the Consumer Subcommittee's Advisory Council, was enthusiastic about the bill at the time I introduced it, and she has now written an excellent summary of it for her "Cost of Living" column in the August issue of McCall's.

Miss Furness deals not only with the money loss to the parents and the disappointment to the child when a toy is

defective and immediately breaks, but with the far more serious problem of toys which are so poorly and carelessly constructed that they are dangerous to the child—as dangerous as a lethal weapon.

Miss Furness points out that the new law has not been put into operation because no funds have been appropriated. As lamentable as this fact is, it, of course, follows normal legislative procedures. Authorization bills do not carry appropriations, and new programs are usually funded in the budget requests sent to Congress the year following their authorization. If the Toy Safety Act is not adequately funded, I shall certainly do what I can to see that it is.

Mr. President, I ask unanimous consent that the Betty Furness comprehensive and informative discussion of the toy safety bill be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COST OF LIVING

(By Betty Furness)

By the time a child is old enough to ask questions about Santa Claus, he may also have a few questions about other manufacturers of his toys. Frustrated consumers are getting younger every day. Any parent who has coped with tears by noon on Christmas because a toy fell apart or failed to live up to its promises has faced a tragedy bigger than toy-size. As one mother wrote:

"Have you every tried to explain to a little girl on Christmas Day why her dancing ballerina won't dance any more or her baby doll won't eat, even though Santa brought it especially for her? This has happened to us two years in a row!"

Grown-ups have long suspected built-in obsolescence as one important element in the adult version of the consumer game. And many children are growing up suspecting that built-in sloppiness is one element in their version of the same game.

Two boys write with similar complaints. One says:

"I live in Chester, Pennsylvania. My name is Robert Bowden. I'm in the 7th grade.

"I want you to investigate a product called Triky Tommy Turtle.

"They claim it is supposed to move when you blow a whistle and stop when you blow it again. But it does not."

The other complains:

"My brother got a tricky tomy turtle and when we blew the whistle it just sat their and we tried different batteries and then we tried it again and it just sat their. And when we went visiting my cousin got one to and his didn't work.

"Your Friend,

BOB MYERS."

Although this young man has not learned how to get from their to there, he has discovered products that don't live up to his expectations of *their* own promise.

These letters raise questions a lot more complicated than the failure of a particular toy or the reality of Santa Claus. How can we teach children to respect their toys if their toys haven't been made to respect the children?

What happens to kids who grow up anticipating that nothing works and everything breaks? Will these developing consumers learn to scream their heads off (as indeed they should) when they buy a badly made automobile, or will these early-childhood experiences simply lead them to believe "that's how it is—and that's how it will be."

The first two definitions of "toy" in the Random House dictionary are:

"1. an object, often a small representation of something familiar, as an animal, object, person, etc., for children or others to play with; plaything.

"2. a thing or matter of little or no value or importance; a trifle."

According to the complaints I hear, too many manufacturers are following the second definition. For instance, there are $8 microscopes with glass of such poor quality you can't see through it, $17.50 guitars that can't be tuned, and $8 pedometers that can't be adjusted without breaking. All these so-called educational toys can possibly teach is an early disrespect and cynicism.

So much for the toys that don't work. They may be frustrating, but they don't do any physical harm. Some toys do. Take toy stoves. Some of them really cook. They cook cookies and hamburgers, and some of them even cook little girls.

There's a miniature corn popper that reaches a temperature of 500 degrees inside, 350 degrees on the side, and 190 degrees on the upper part of the handle.

The Magic Cool Oven says right on the package: "Outside safe for little fingers to touch." Yet little fingers don't always stay where they belong, and eager little girls don't always read instructions. Even when they can read. Punched into the metal of the Magic Cool Oven is this warning: "Caution: contact with hands inside of oven or inside of cooling chamber may cause burns." Also, "Remove plug before cleaning. Do not immerse in water. Clean with a damp cloth only."

Do they really think little girls are going to follow these instructions?

Along similar lines is a metal-casting set, sold as a toy, that reaches 800 degrees on the heating surface and 600 degrees on the sides. Some toy.

On the other hand, a toy electric iron that has been so carefully designed not to heat enough to hurt a child also doesn't heat enough to take the wrinkles out of anything. And that is just plain frustrating.

It seems to me very young children do fine with a fake toy iron or stove. Their imaginations will happily supply heat, electricity, and anything else. When a child is old enough to really cook, she can learn on a real live stove, under real supervision, and if you're feeling extravagant, a few small utensils of her own may heighten the fun.

In this sophisticated world, toy safety seems like such an obvious problem people always feel that somewhere out there someone is riding herd on it all. Well, unfortunately it isn't true.

The National Commission on Product Safety investigating toys found rattles of easily breakable plastic covering steel spikes that could be lethal in the hands of a baby. It found dolls and toy animals with legs attached with steel spikes (and not attached too well), and blowguns that were supposed to blow darts but, clumsily used, turned into suction tubes through which children inhaled metal pins. The commission felt that was enough of *that* and requested that the Federal Hazardous Substances Act be amended to cover dangerous toys. Congress and President Nixon agreed, and now we have the Child Protection and Toy Safety Act. Unfortunately, all we have is the act, not the protection. The law was to take effect January 6, 1970, but Congress hasn't appropriated any money for its enforcement, so we still have to be our own policemen in selecting toys. We and the child psychologists, who must predetermine how a child might use a toy. Not how it is intended to be used, but how it might be used by a child.

A survey on toy safety reported that "with respect to commercial toys, injuries usually result from misuse." But misuse is the order of the day with toys. You can't give an infant a toy with a list of do's and don'ts. A small child can't be expected to know what is hot or cold, sharp or dull, up or down, or even chewable.

Morris Kaplan, technical director of Consumers Union, says, "In designing a toy, a manufacturer has a responsibility to choose materials and methods of construction that require a minimum of education of the user to make it safe. Ideally," he goes on, "it should be childproof—that is, no imaginable use or abuse by a child should make it unsafe."

The National Safety Council doesn't agree with Mr. Kaplan. Its child consultant, Richard Manuell, told the Product Safety Commission, "A child has to experience some minor injuries, minor experiences of trauma, in order to learn." You betcha, Mr. Manuell; but as parents and grandparents, we don't have to pay high prices for toys that will provide these educationally traumatic experiences.

There are many considerations besides safety and shoddiness in choosing toys. Very like our grown-up marketplace, the variety of choice gets more staggering each year. In 1962 we bought a billion dollars' worth of toys and games. In 1969 sales amounted to two billion dollars. That's a lot of money to pay for anything—and too much to put out for unsatisfactory experiences.

How do you recognize a good toy?

Well, you start by recognizing the bad. Refuse to get swept up in fads. Refuse the ugly. The shoddy. Things that are obviously poorly made.

If you hate the way a doll looks or is dressed, don't buy it.

If your instinct tells you a toy will fall apart in a few hours, forget it.

If you can't follow the "simple" instructions on the box, the chances are your child won't be able to, either.

You know that if you buy yourself a washing machine with three new mechanical features, that's three things that potentially can go wrong.

The same is true of toys. A doll that can walk and talk and wet and suck its thumb and throw a kiss can also stop all this mechanical behavior and just sit there like any nice doll costing a lot less.

As obvious as it is that there are poor toys, it's equally obvious that there are splendid ones, responsibly made and sold, and a remarkable number of these toys are not unlike those that were right for you and me and our parents. Balls, good dolls, and hardwood blocks are still the stuff childhood should be made of.

If your budget is limited, build a toy collection the way you buy clothes. Spend good money on basics, and then improvise. A solid wooden dollhouse—empty—is a far better toy that an inexpensive, junky dollhouse full of poorly made furniture that can't possibly last. Furthermore, furnishing and decorating it can be a family project far more valuable than the money saved at the outset.

Try not to let your children grow up victims of every day and high-pressure television campaign. In the old days, when the time came for a child to get an important present, like a bike, the child and his family generally had a pretty good idea just what kind of bike it ought to be. The care and feeding of a bike was often a youngster's first important lesson in responsibility. Today's children are tempted by the potential delights of hi-risers, twenty-inch wheels, ten-speed speedsters, superduper handlebars, and fancy seats, often designed (according to a fourteen-year-old friend) "to look

good, but not necessarly work." But good bikes are still around, if you look for them.

Finally, make sure the toy you buy is self-contained; that if it needs batteries, it has batteries. A stamp book without stamps is not much fun.

In fact, nothing is more frustrating to a child than to come face to face with missing pieces. Here are a couple of letters I have received on that subject:

"I have bought many, many models and things with many pieces to them. I have found out that many of the pieces are missing. Especially in big models and models with lots of pieces.

"I am 12 years old and models is my favorite hobby. It makes me mad when I'm half way through the model and one of the most needed pieces to complete the model is missing. It would make me very happy if you would investigate this.

"Sincerely yours,

"BRAD KING."

"My name is Donald Pierce and I'm a 7th Grader. I was told to right a letter to you. I was cheated on a model that I bought. Half of the pieces were missing from it. We couldn't take it back because we already started putting it together."

Well, fellas, I phoned the Hobby Industry Association and was told that model pieces are all made from one piece of plastic, or wood, or whatever, and put immediately into a package, and sealed, so there couldn't be any pieces missing. Maybe the package became unglued, or got opened in the store, and pieces fell out, the man said. I think he sensed that his answer wasn't good enough for Brad or Donald or me, so he suggested that if a game player or model maker finds pieces missing, he write to the company that made the kit and complain. Loudly. You'll find the name and address on the box.

There's one element in model making that makes everything we've talked about so far seem truly child's play. That's the glue. Too many children have found that sniffing the glue used to put models together makes them feel high and giddy and takes them on more of a trip than any model plane will. Glue sniffing can easily lead to drug taking, and has. And glue sniffing can cause permanent liver and brain damage, and has.

Recognizing a need to put an end to this horror, the Hobby Industry Association assembled a list of 94 possible additives that might turn a glue sniffer off instead of on. The Testor Company, makers of glue, started testing the additives with number one, and when they hit number 34, they had it. Its name is allyl isothiocynate, or oil of mustard, known to its friends as horseradish. A child assembling a model won't notice that it's been added to the glue; but if put in a paper bag and sniffed, it affects your eyes the way a spoonful of hot mustard affects your mouth. It causes a lot of harmless tears and is something you wouldn't want to try twice.

The Testor Company immediately put the additive in its own glue and offered the formula free of charge, no royalty attached, to the glue industry. Testor reports that about 85 percent of the industry is now using it.

There's now a law in New York State that no glue can be sold within the state without the additive, and for once a whole industry hopes more such laws will be passed.

One could wish that the Toy Manufacturers of America, Inc., shared the enlightened self-interest of the Hobby Industry Association, A lawyer, speaking on their behalf at the Product Safety Commission hearings, said, "I am almost tempted to remark that if we wanted to be completely safe, maybe we should stay in bed."

I have a better idea. Instead of staying in bed, why don't the toy manufacturers get up earlier and develop better, more durable, safer toys?

THE BOOKKEEPING APPROACH TO WELFARE

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. WALDIE. Mr. Speaker, recently, thousands of handicapped persons in California were subjected to a shocking demonstration of insensitivity that may well leave a lasting imprint upon their trust and faith in the institution of government.

These handicapped individuals, dependent upon assistance from the State's aid to the totally disabled program, were informed that Gov. Ronald Reagan had instituted a deep cut in assistance to the program for home attendant care for the aged, blind, and disabled.

Understandably, this cruel announcement evoked fear and despair among the recipients and anger and criticism from the public.

Reacting to the latter rather than the former, the Governor hastily withdrew this ill-advised "economy" and announced that he was restoring the funds. However, Mr. Speaker, untold damage had already occurred to recipients of the program in the form of fear and distrust. These damages, I fear, may never be mitigated and the State administration must and should shoulder the blame for this sad and tragic misjudgment. No amount of scapegoating will absolve the true responsibiles in this matter.

An article by Bernice Scharlach in the August 23, 1970, issue of the San Francisco Sunday Examiner and Chronicle demonstrates the sad facts of this matter and I insert this article in the RECORD:

"THE BOOKKEEPING APPROACH TO WELFARE"

(By Bernice Scharlach)

Judy Taylor, a political science major at UC Berkeley, eagerly awaits the opening of classes for the fall semester. A month ago she didn't care. At that time there was little chance of her going anywhere except a convalescent hospital for the rest of her life.

Judy is a quadriplegic with only partial sensation and mobility in her arms and none in her legs. She became paralyzed six years ago as a result of a car accident. Enrolled in the educational program at the university for severely disabled students and planning a career as a teacher, she makes her home at the university's Cowell Hospital.

Under the Aid to the Totally Disabled program, she has a grant that enables her to employ a personal assistant for $300 a month for help in bathing, dressing, getting in and out of bed, bowel and bladder care, etc.

REAGAN CUTBACK

Last month, when Governor Ronald Reagan ordered a $10 million reduction—from $24 million to $14 million—in funds for the home attendant care program for the state's aged, blind and disabled, it meant for Judy not only the loss of her helper, but the loss of her hopes. It couldn't have happened at a worse time. She was using her summer vacation to undergo another round of surgery.

Now, with the rescission of that order that came two weeks later, Judy looks forward to the day when, with her teaching credential, she will be employable and self-supporting.

Leah P. was a licensed vocational nurse up until five years ago when she was stricken with rheumatoid arthritis. Now instead of working with the handicapped, she is one of them herself.

Although her doctor declared her to be 90 per cent disabled, she voluntarily cut down the size of her grant six months ago, requesting only a 10 per cent disability allowance. There are so many others so much worse off than I," she told her social worker.

TURN TO PANIC

Her allowance of $25 a month enables her to have an attendant once a week for a few hours to take her in and out of the tub, do the housework she is unable to do on crutches, and help her with her marketing.

When she was notified last month that her grant was to be discontinued, her resolve to retain what little self-sufficiency she still had turned to panic. "Suddenly I felt not 90 per cent disabled, but 100 per cent," she said. "Immediately, I notified my attendant that I would have to let her go, and then I sat down and wrote letters—six of them—to the governor and on down the State Department of Social Welfare. I hoped to make them understand what it feels like to have to beg for help."

Since the July 24 rescission for Judy and Leah and the other 32,000 people in San Francisco's home attendant care program, the distress they suffered as a result of the Governor's attempts to "cut down on the skyrocketting welfare costs" has been confined to mental anguish.

"Fortunately," said Ken Bryan, assistant general manager, San Francisco Department of Social Services, "our checks go out from this office on the first of the month. They had already been sent the usual amounts for July before the Governor issued his cutbacks the tenth of the month.

"When he reversed himself two weeks later, we were able to halt the altered August amounts in two of the three eligible groups: Old Age Assistance and Blind Aid. There wasn't time left to catch checks going to people on Aid to the Totally Dependent, but the changes were made on paper. This month we are picking up the differences in the ATD checks."

California taxpayers suffered something in addition to mental anguish. The cost to them for implementing and un-implementing the Governor's orders is near one half a million dollars, according to San Francisco Superviso Robert Gonzales.

How did he arrive at that figure?

THE $475,000 TAB

"First I made a careful estimate with Ron Born, general manager of the city's Department of Social Services, to determine what it cost San Francisco. It took one week of staff time on the part of 25 people to get out new procedural memos, to get computer readouts on those affected by the new orders to write revised checks, and then to reverse the whole procedure. In dollars and cents, that came to $25,000.

"San Francisco has five per cent of the welfare-recipient population of the state. By projecting this city's costs over the other 95 per cent of the recipient population, you get a pretty good idea of what it cost statewide—$475,000, or nearly a half a million taxpayer dollars."

WELFARE AIDES

If the Governor was not misled by welfare workers, could he have been done in by his own top welfare aides who wrote the Emergency regulations?

Although Paul Dowdall, director of social

services of San Francisco, refused to comment, he did point out a significant differences between the former state welfare director, John Montgomery, and the present chief, Robert Martin.

"Under Montgomery, before a new regulation was enacted, there were meetings of the SDSW staff and county welfare directors. Objections of county welfare directors were heard and considered. It is my opinion that under Montgomery, new regulations that were impossible to implement were never placed in effect."

Although Dowdall carries out SDSW orders in the second largest county in the state, he has never met Martin.

"HATCHET MAN"

James Karls, president of the Golden Gate chapter of the National Association of Social Workers, said:

"Martin is a lawyer by profession, and we feel he's in there as a hatchet man essentially. The same is true of Lucian Van der Griff, the Human Resources director, whose claim to fame is that he is a former prosecutor of welfare recipients in Butte County.

"There is a reason for some of Mr. Reagan's welfare policies. The kind of thinking that goes on with his staff is either bookkeeper mentality or legal mentality. A prosecuting attorney is not looking at people's needs, rather on whether or not the law is being violated. Bookkeepers are intent on keeping costs down. And that combination is deadly as far as human needs are concerned."

NEW COUNCIL

One group of concerned citizens organizing in the hope of changing the bookkeeping approach to welfare is the newly-formed California Legislative Council for Older Americans. Temporary cochairman is Isabel Van Frank, president of the East Bay Council of Senior Citizens Groups, a 14-year-old organization covering all organized recreational and church groups in the East Bay.

Mrs. Van Frank, a woman of fantastic energy, has all the crusading zeal of a latter-day bloomer girl.

Most tangible result of Mrs. Van Frank's leadership is the 10-cent fare senior citizens enjoy on AC transit. It took her 10 years to achieve it. Less tangible, but an achievement of which she is even more proud, is the fact that she removed what she called "the invisible sign that used to hang over senior citizens' recreation centers: "Think Not As Ye Enter Here."

"Senior Citizens were supposed to make holiday decorations or play whist but they couldn't listen to speakers on controversial things because it might be too upsetting," she said.

Co-chairman with Mrs. Van Frank in the effort to expand the senior citizens into a statewide legislative council is Rev. Edward Peet, semi-retired minister on the staff of Glide Memorial Church. Rev. Peet, who got his inspiration for the California group after a very successful one in Massachusetts, charges a lack of support from the Governor's office in the field of aging.

"NOT PARTISAN"

"This isn't a partisan attitude," he explains, "because Gov. Knight and Gov. Warren, both Republicans, were very outright in support of programs for the aging, and so, of course, was Gov. Brown. We are not partisan, but we are political."

Politics is very much on Rev. Peet's mind now. He is currently planning a giant two-day Congress of senior citizens and workers with seniors to be held on October 17 and 18 in Marina Junior High School. He expects more than 2000 people, representatives from hundreds of senior citizens' groups, to attend. They will work on the preparation of a platform of senior citizens' demands for legislative change and reform.

"Our positions will be circulated to all candidates for office from Governor on down. Then, depending on how they respond, we will decide on what candidates our group will endorse."

"We're adding a new color to the protest picture," beamed Mrs. Van Frank, "gray power!"

PITTSBURGH HOUSING

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, September 10, 1970

Mr. SCHWEIKER. Mr. President, I bring to the attention of the Senate an article dealing with the rehabilitation of slum areas in Pittsburgh, written by Mr. James P. Gannon, staff reporter of the Wall Street Journal, published on September 3, 1970.

The article points to the success of the rehabilitation effort in Pittsburgh through the Allegheny Housing Rehabilitation Corp. in contrast to the many other attempts which have failed. Mr. Gannon states:

The key to the success of this Pittsburgh venture is a blend of business efficiency and toughness, social conscience, help from the Federal Government—and constant effort to build rapport with the black community.

It is noteworthy that Mr. Gannon points to the business participation in this program as not being dependent on a self-interest to enlarge a market for its products. Clearly, this is a case of business skill being brought to bear on a social problem with excellent results.

I urge Senators to read Mr. Gannon's report and ask unanimous consent that it be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REHABILITATION OF SLUMS GAINING IN PITTSBURGH AFTER FAILING ELSEWHERE

(By James P. Gannon)

PITTSBURGH.—The Molloy family's days of slum housing are over. Until July the family of blacks on welfare lived in a crowded two-bedroom row house. All nine children shared one bedroom. Today the Molloys are proud of their newly renovated five-bedroom brick house only a few blocks from their old place. Delighted with the change, the heavyset Mrs. Molloy recalls with a sigh, "We were so cramped and tight before."

The Molloys benefited from a business-backed attack on slum housing that is succeeding where many similar efforts have flopped. The key to the success of this Pittsburgh venture is a blend of business efficiency and toughness, social conscience, help from the Federal Government—and constant effort to build rapport with the black community. In the white-dominated construction industry, the project has a 90% black work force and blacks help set policy.

The slum renovator, Allegheny Housing Rehabilitation Corp., is out to prove that slum rehabilitation can work. Known as Ahrco and supported by 40 Pittsburgh corporations, the three-year-old company expects to post its first profit this fiscal year—two years ahead of schedule. In the year ending next March 31, the company will build 100 new units and rehabilitate 700 houses, up from only 22 two years earlier.

VISITING PITTSBURGH

"When people come to me and say they want to know all about rehabilitation, I send them to Pittsburgh," says M. Carter McFarland, assistant commissioner for rehabilitation in the Department of Housing and Urban Development.

Such rehabilitation is urgent. Housing authorities estimate there are more than five million deteriorating but salvagable homes in aging city cores. A workable rehabilitation system could greatly alleviate urban decay.

Ahrco may recome a model for projects in other cities. "We want to generate more operations like Ahrco," says HUD's Mr. McFarland. Civic and business delegations from San Francisco, Washington, D.C., Wilmington, Del., and other cities have visited Ahrco recently. Charles Percy of Illinois has said: "Nowhere do I know of such a comprehensive, well-conceived attack on slum housing and community problems."

The Pittsburgh project avoids the usual pitfalls. Unlike many business-sponsored programs, it doesn't seek to develop markets for assorted construction products. Yet it has the business methods and financial backing that sometimes elude nonprofit projects.

AN APPROACH THAT FLOPPED

Thus Ahrco is getting better results than a Federal rehabilitation project in New York three years ago, which finally cost $45 a square foot—nearly three times the estimated cost and twice the price of brand new construction. Ballyhooed with nationwide publicity, the ill-fated project involved ripping the roofs off Lower East Side slum apartment buildings and dropping prefabricated room units into place. With far less fanfare at its death than at its birth, the project was killed.

Similarly, Armstrong Cork, the American Plywood Association and several other enterprises motivated partly by the desire to develop markets for their own products have dropped rehabilitation projects as uneconomic. Armstrong Cork found its investment was $5,000 more per house than the resale value. In many cases, of course, building products concerns favoring their own products tended to reduce their flexibility in cutting rehabilitation costs.

Though Ahrco doesn't promote products, it takes a tough-minded approach. "We're not social workers, and this is no giveaway program," says Frederick H. Springer, the company's 42-year-old president.

When word spread that Ahrco wanted a particular slum property, the owner demanded $99,000 for the parcel of 18 units. This far exceeded the fair price and would have made rehabilitation uneconomic. Ahrco hired a broker as a straw buyer and acquired the property for $55,000.

HARD BARGAINS

Ahrco says it rarely uses a straw buyer, but it never throws away money. "We drive a very hard bargain in purchasing," says Ralph Falbo, Ahrco's 33-year-old financial vice president. Before joining Ahrco, he was an accountant with Arthur Andersen & Co.

Ahrco's financial angels, which include U.S. Steel, Alcoa, Gulf Oil, Westinghouse Electric and Koppers Co., have bought $2.5 million of the company's debentures and common stock to provide working capital. Ahrco directors are executives of the sponsoring companies, but a racially integrated 25-man professional management staff runs the operation. Mr. Springer, the president, is a former Federal Housing Administration official.

Ahrco buyers scour the city's squalid inner city ghetto daily to find suitable properties for rehabilitation. The typical property is a vacant, vandalized but structurally sound row house or multiple-family dwelling. Concentrating on vacant properties reduces ten-

ant dislocation problems. Vandalized properties are often bargains.

Ahrco tries to concentrate its impact by rehabilitating many properties in a limited area. "This is what gives you total upgrading of a neighborhood," says Mr. Springer. "It doesn't do much good to go in and rehabilitate some properties, leave others untouched and leave vacant lots full of junk." Lately, Ahrco has decided the upgrading concept requires some new construction as well as rehabilitation. The company currently plans to erect 70 factory-built, steel-frame apartments on vacant land within one of its renewal projects.

Ahrco's rebuilding uses mainly old-fashioned hammer-and-nail techniques rather than new methods. But Mr. Springer did introduce a new spray-on acrylic plaster system. This cuts total rehabilitation costs by 15% and halves rehabilitation time, the official adds.

Sponsoring corporations agreed at the outset that Ahrco wouldn't favor their products. In fact, though Westinghouse Electric and Alcoa are sponsors, Ahrco uses General Electric's Hotpoint appliances and Reynolds Metals' aluminum window frames.

Rehabilitation costs average $8,500 per unit. Property acquisition, interest and other items bring the total cost to an average of $15,000 a unit. Ahrco relies on Federal housing subsidies. It arranges for mortgage funds at 1% to 3% annual interest rates; the Government makes up the difference between those low rates and the going mortgage rates.

The interest subsidies, coupled with Federal rent supplements, hold down costs to tenants. The 11-member Molloy family pays $139 a month (welfare funds pay $105 of this and the Federal rent supplement program pays the rest). Rent at the old Molloy row house was $70 a month, all paid from welfare funds. About a fifth of Ahrco's tenants have incomes low enough to qualify for Government rent supplements; the tenant pays 25% of his income for rent and the Federal Government picks up the balance.

Ahrco usually sells its properties to nonprofit sponsors like churches or community groups. With rental income, the new sponsor makes payments on the mortgage. Ahrco tries to set the sale price so that it makes a small profit on its rehabilitation. With constant turnover, the company doesn't expect to need more money from its sponsors than the $2.5 million already subscribed.

Besides upgrading housing, Ahrco aims to create high-paying construction jobs for black workers, as well as opportunities for black subcontractors. The largely black work force doubled to 268 in the last fiscal year from 135 the previous year. Another 100 workers will be added this year.

Typically, Roger Ward a year ago was earning only $1.50 an hour as a nonunion electrician's helper. Today the 26-year-old Negro draws $7.36 an hour as an electrician for an Ahrco subcontractor. "I like the money," says this slender man of few words as he wires a circuit breaker box in a dark, damp-walled basement.

Similarly, Alfonso Jones eked out a living as a nonunion plumber for 25 years. As an Ahrco plumbing contractor today, he keeps a crew of six busy and has begun to diversify. With profits from rehabilitation work, he recently opened a self-service laundry in his neighborhood.

Providing such opportunities, of course, benefits Ahrco's relations with ghetto residents. Keeping a good relationship is essential to Ahrco's success, and the company works hard at it. When the militant Black Construction Coalition last year shut down nearly all Pittsburgh construction sites with pickets and mass marches, it let Ahrco's work continue uninterrupted. The coalition seeks to remove the barriers that have long kept many Negroes out of lucrative construction jobs.

Six black community representatives sit on Ahrco's 18-man policy-setting executive committee. "Time and time again, the black members have reminded us that their lives have been a string of broken promises," says H. Edgar Lore, chairman of the Ahrco board and executive vice president of Dravo Corp., a big engineering and manufacturing company here. The black members have strongly influenced executive committee decisions, he adds. Mr. Lore contends that black representation is "absolutely essential" to the success of any slum rehabilitation project. Adds Milton A. Washington, Ahrco's black vice president for administration: "You must show you've got black guys not only as Indians but as chiefs, too."

Though Ahrco expects its revenue will soar to $9 million this year from only $550,000 in fiscal 1969, its relationships with blacks retain the flexibility of a small organization. Mr. Springer, the Ahrco president, recalls a black youth brought to court for stealing pipe from a house the company was rehabilitating. "He said he'd like to pay us back. So we told him we'd give him a chance to do that," says the executive. "Then we hired him. Now he's working out just fine."

PRESIDENT NIXON'S SOLID PROGRESS

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. WYMAN. Mr. Speaker, the effective administration of the Nation's affairs by President Nixon is building a record of solid progress that will stand all citizens in good stead amid the stresses of the 1970's. From North to South, East to West, our new President has steadily restructured both our foreign and domestic affairs, directing the national effort along constructive lines of redetermined national priorities that reflect both public concern and national need.

When President Nixon took office the country was on the downturn abroad and at home. His steps to combat inflation, his sound and courageous recommendation of measures to combat crime out of hand, his toning down of the American involvement in Vietnam, and his most recent leadership toward a ceasefire in the volatile Middle East, combine with his increased attention to environmental problems of waste, pollution, and noise abatement at home. His is an impressive record of solid progress.

In this connection Fortune magazine's editorial in this month's issue, September 1970, is an interesting and corroborative documentary. As Fortune says, the record of President Nixon is "A Heartening Progress Report."

The editorial follows:

NIXON: A HEARTENING PROGRESS REPORT

If an observer steps back from the daily headlines and looks at the record of what has been actually going on in Washington during the past twenty months, he may get quite a surprise. The Nixon Administration has emerged as extraordinarily activist and effective in both foreign and domestic policy. A lot of things that needed doing have been done, and more have been put on the rails. A lot of dangers have been foreseen and avoided.

When Richard Nixon took office the U.S. position on the world scene had fallen into appalling disarray. He wrought no overnight miracles. The international picture is still one of conflicts, confusion, and danger—and will be for many years ahead. But gradually coherence, balance, and initiative have begun to appear in U.S. foreign policy.

Nixon's basic instinct on the Vietnam war has been sound, whether viewed in terms of international politics or in terms of U.S. public opinion. On both grounds, further escalation of the American commitment in Vietnam or indefinite continuation of the war at the 1968 level would have been stupid and rash. Equally dangerous would have been an abrupt American withdrawal that might have destroyed among friends and foes the future credibility of any diplomatic position taken by the U.S. in East Asia, in the Middle East, in Europe, or in Latin America.

Between these two perils a less decisive Administration might have oscillated indefinitely. Nixon laid out a third course, and he has pursued it consistently. He is winding down the war in a resolute and orderly manner that really does furnish South Vietnam a fighting chance to retain its independence. The Cambodian excursion, given the divided and jittery state of U.S. sentiment—a condition aggravated by the manner of Nixon's announcement—probably was a risk not worth the military gains. But U.S. troops did come out of Cambodia as planned—and Nixon thereupon stepped up his timetable of withdrawal from Vietnam. American casualties have been lower in the wake of the Cambodian venture, just as he said they would be: in the six weeks after Cambodia, the number of combat deaths in Vietnam was at the lowest level in four and a half years.

His policy is difficult and delicate, especially in the teeth of an unfriendly press and an inflamed segment of antiwar youth. But so far his policy has worked.

It may be beyond the practical power of the U.S. to achieve peace in Vietnam—or anywhere else on earth. In judging U.S. foreign policy it has to be remembered that international order depends upon others as well as upon us. "Success" in this field is a highly relative and contingent matter.

This is obviously and emphatically true of the Middle East crisis. The initiative taken by Secretary of State Rogers has carried further than most observers thought it would. An uneasy cease-fire, achieved by Soviet pressure on Arab states and U.S. pressure on Israel, is admittedly a long way from an enduring Middle East settlement. The cease-fire even creates new dangers. But it would be difficult to claim that it is as dangerous as the uninterrupted drift toward war that preceded it.

Such "collusion" between the U.S. and the U.S.S.R. is viewed with alarm in some quarters. But nuclear powers, whatever their ideological antagonisms, do have a common interest in avoiding war with one another—an interest shared by most other nations. Joint action with the Russians on the Middle East somewhat enhances hope for the SALT negotiations on the limitation of arms that the Nixon Administration has pursued with appropriate energy. Both at home and in other countries Nixon's long anti-Communist record has helped to reduce the suspicion that any U.S. deal with Moscow will necessarily be a bad deal.

It is unlikely that the Nixon foreign policy is working toward some dramatic triumph,

some point at which everyone will recognize that the prospect for peace and safety has improved. The most that could have been expected was that Nixon would check and perhaps begin to reverse the deterioration of the international situation. It appears—for the moment, at least—that he has done so.

PRIORITIES REORDERED

The Administration's most urgent domestic concern has been how to contain inflation without sliding into a serious recession. Again with fingers crossed against the unpredictables, it can be said that the Nixon Administration so far has handled this one carefully and effectively. Inflation could have been attacked with more drastic measures, but only by increasing the risk of high unemployment and a sharp downward economic spiral—which, in turn, would have called forth another round of inflationary remedies. Nixon still runs the risk of a serious budget deficit but he has maintained a steady and courageous pressure on government spending, especially for arms.

A thousand editorials have called for "a reordering of national priorities," a shift of emphasis from military expenditures to such urgent needs as education, housing, and the environment. Most editorialists do not yet appreciate that Nixon has already presided over a massive reordering of national priorities.

The article beginning on page 110 of this issue reports on some aspects of "the turn to a peacetime economy." Military spending as a proportion of the federal budget is about to reach its lowest level since 1950. Most of the saving will go into the hands of taxpayers, but the shift of emphasis within federal spending will be huge. In the 1969 federal budget, the article points out, 44 percent of the money was allocated for defense and 34 percent for what Washington calls "human resources"—including health, education, and welfare programs. In the 1971 budget these proportions will be almost reversed: 37 percent will go to defense and 41 percent to "human resources."

Given the inertia and rigidity built into all governmental programs this shift represents a tremendous policy-making initiative on the part of the Administration. Headlines proclaim that Nixon, as part of his anti-inflation balancing act, has vetoed health, housing, and education bills that provided appropriations deemed beyond the limits of fiscal prudence. Almost unnoticed is the fact that the specific gestures of restraint affect details within a vigorous trend of increasing federal emphasis on these very categories of public service.

BOLDLY TACKLED DEFECTS

Coming down from broad policy patterns to concrete government programs and acts, the Nixon Administration has made important advances on scores of fronts. Old defects and inadequacies, seemingly irremediable, have been boldly tackled. Items:

A system of public welfare that induced regional distortions and was increasingly costly to the taxpayers and corrosive to the recipients appeared to be hung forever around the nation's neck. Nixon's family-assistance plan is the first major effort by any Administration to make some long range sense of welfare. Still bogged down in Congress (partly because the Administration's rhetoric on the subject has been less than compelling), the new plan has mobilized the support of those concerned people who know what it is about.

The Post Office is one of the oldest areas of weakness in government. Decade after decade its performance confirmed Thomas Jefferson's fears that the quality of its service would be undermined by its susceptibility to political manipulation. Last month the Post Office was finally removed by act of Congress from political control and put on a semi-autonomous basis.

The scandalous cost of subsidies to rich farmers has been reduced, the first serious limitation on per-farm payments in three decades of subsidies.

On school desegregation there has been more progress than the public thinks—perhaps more than some members of the Nixon Administration want southern whites to think. Presidential aide George P. Shultz was quite correct in stating recently that many southern whites have come to accept as inevitable a unitary biracial school system. To emphasize presidential support of an orderly, cooperative desegregation program, Nixon flew to New Orleans for a conference with members of biracial advisory committees set up by Shultz.

The Nixon programs on the protection of the physical environment show both a sense of urgency and a careful attention to some of the formidable legal difficulties that will be encountered in this area. His anti-pollution proposals call for more stringent laws and more active government efforts than many environmentalists had expected. His support for mass transit may help to correct a long imbalance in public policy that unduly favored highways.

The current federal-state-local cooperative drive against organized crime in one of its political strongholds, New Jersey, is a belated example of what government should have done years ago.

The independent regulatory agencies, after years of unsatisfactory performance, seem to be taking on new life.

In the broad political arrangements of the nation Nixon has supported such constructive changes as the sharing of federal revenues with the states, the reduction of the voting age to eighteen, and the reform of the method of electing Presidents.

This huge and varied program of change encounters resistance. In addition to the inertia of institutions, every proposal for change opens the doors for competing proposals. It is not the Nixon style to dramatize the conflicts his program engenders. He is loath to appeal to the public against Congress or against interest groups in unions or business. For example, as FORTUNE has argued, his present campaign against inflation might be more effective if he were to use guideposts to mobilize public opinion against cases where increases of wages and prices are extreme.

In the long run Nixon's way may be achieving a faster rate of change in government than a more tumultuous and exciting Administration could achieve. The drawback of Nixon's style is that the public is not aware of what is happening; thanks to style, John Kennedy, for example, probably got credit for more good works than he deserved while Nixon comes across as though nothing were being done. An impression of governmental stagnation and drift could so undermine U.S. morale as to outweigh all of Nixon's constructive efforts. A year ago Attorney General John Mitchell told a group of Negro leaders, angry over Administration statements on desegregation, to "watch what we do instead of listening to what we say." No question, the Administration's achievements are more impressive than its rhetoric. The danger is that the rhetoric, often misleading, will conceal a vigorous political leadership of which the President and the public have a right to be proud.

WATER RESOURCES, ECONOMICS, AND THE ENVIRONMENT

HON. FRANK E. MOSS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, September 10, 1970

Mr. MOSS. Mr. President, the development of our water resources continues to be a concern for all of us. In the West we have long had a great respect for water. A former member of the President's Water Pollution Control Advisory Board, Dr. William Warne, addressed himself to this vital concern for water at the 45th Annual Conference of the Western Economics Association. I ask unanimous consent that his address be printed in the Extension of Remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WATER RESOURCES, ECONOMICS AND THE ENVIRONMENT

(By William E. Warne)

Beginning about 8,000 years ago, man initiated the process of managing water to improve his environment. The earliest known agriculturists began irrigating fields around the golden crescent of the Middle East. Simultaneously, the process was started of building the body of law and regulation that has guided water developments throughout history.

Generally, men may own the land, but they may only establish rights to use the waters, which remain public property. In arid lands, where possession of water rights govern the ability to make the land productive, the body of water law has become most intricate. In humid and well-watered zones, control has been less-exacting, and at times it has been deemed enough to prevent a diversion by an upstream riparian owner from drying up the watercourse, leaving downstream mill wheels high and dry.

With few exceptions, the instances of historic controversy over water have involved quantities and not the quality of the waters in question. In recent times, even since it has been seen that lowering the quality reduces the value of water, some experts have contended that water rights can be satisfied with any water so long as it is wet.

In one instance, prominent in the early history of California, the test was made and befouled water was declared not acceptable. Great water projects were built in the mountains to serve the gold miners as the techniques of hydraulic mining advanced so that massive tertiary sand deposits could be attacked through the nozzles of the iron monitors. The hydraulic mines were capitalized by international investors and at their height, they constituted the new state's most important business. Mining after the gold rush had a glamor that gave the industry a sentimental advantage over others. Sediments were sluiced into mountain streams as mountainsides were washed away. Channels to carry the mining debris were tunneled from one tributary to another. Finally, the spectacular disregard of the downstream consequences of hydraulic mining for gold spread a threat against the safety and well-being of farm and city folk alike. Farmers of the valleys, through court actions and by marshalling their political strength, stopped the hydraulicking for gold in the Sierra. Even mining, the rich, glamorous industry, supported by tradition and sentiment, fell before the wrath of the people aroused by flagrant misuse of the water resource, but not before far-reaching changes had been wrought downstream through the aggradation of stream beds and the deposit of thick mantles of slickens over many thousands of acres of valley lands. The cessation of hydraulic mining was a victory, however, for clean water and for the principle that one interest should not use the water and its land in such ways as to damage the neighbors.

Agricultural pesticides in the water of the Golden State today are threatening the aquatic environment in somewhat the same fashion that the slickens from the mines threatened the streams and valleys a century ago. The farmers who won the old fight

are being arrayed in the position then occupied by the miners as the conservationists man their guns against DDT. Agriculture, now the glamour industry of the California valleys, has been slow in recalling the precedent. The State Department of Agriculture now is phasing out the use of persistent pesticides.

The logic of the development of water law in the United States has been confronted with a new fact as a result of rapid urbanization, facts that have disclosed the threadbare inadequacy of the old tools prepared to deal with the situations that have brought them to light. It is a fact that many streams of public water have become unhealthy, stinking and loathsome because of pollution and heavy loads of wastes. The 200,000,000 people of the United States put their wastes and the wastes of their industries into the streams, often with little regard of the consequences. Anachronistic political subdivisions, established for an earlier and simpler era, contest with each other in metropolitan areas and thwart efforts to resolve common water problems that will not yield to any but regional solutions.

Economists advocate the weighing of alternatives in the development of water plans, but they have failed to provide the engineers with a means of evaluating the public values, the amenities and the esthetics which they contend are frequently ignored. Environmentalists sometimes want planning stopped altogether as a means of preventing later actions that they believe may degrade the environment.

The acceleration of the growth in enormity of water and other environmental problems has been a function of the rapid increase in population. The point of criticality has been reached in the rivers of many regions, but the growth has not stopped. The reecntly forecasted 100,000,000 additional growth in the next generation will intensify problems in the field of water resources management on a far steeper line of incline than that of the increasing population, because limits of tolerance have been reached or nearly approached in many regions.

Water's influence on the quality of the environment may be both qualitative and absolute. Water fructifies the fields. Water refreshes man and beast. Water forms the still pools, lying beside which restoreth the soul. Water, however, loses its ability to satisfy the needs of irrigation farmers as its quality is deteriorated. Polluted water must not be used for drinking or bathing. Pollution and the lowering of the quality of the waters in their natural settings are adverse to the use of lakes and streams for recreation. Extreme abuse absolutely destroys the aesthetic values of both the waters and their settings, rendering them liabilities rather than assets to their neighborhoods, as everyone who has witnesses a stinking mudflat will confirm.

Today, more clearly than ever before, excellence of environment may be seen to develop good lives among the people, and repulsive, squalid environment to produce poor lives. National goals are based on these realizations. On his inauguration as the 37th President, Richard M. Nixon stated two of our national goals to be "protecting our environment and enhancing the quality of life."

Despite the new consciousness of water pollution as a menace to well-being in urban America, the programs undertaken to resolve water resources problems seem underdeveloped and hesitant. The new Federal Water Pollution Control Administration, like most of its state counterparts, where they exist, has been inadequately supported with appropriations. The Congress has not funded it vigorously to pursue its objectives. Older Federal water agencies have not been given marching orders to keep them abreast of the changing times. The WPCA is now, apparently, about to be placed in a new Environmental agency.

Under the Water Quality Act of 1965, 53 of the 55 affected jurisdictions adopted water quality standards that were in 1969 acceptable in whole or in part to the Federal Water Pollution Control Administration.

The lack of Federal financial assistance, after it has been authorized in Clean Water Restoration Act of 1966, held back progress in clean-up programs, which nevertheless have seen $15 billion invested in municipal and industrial waste-handling facilities since 1952.

THE OFFICIAL SENSE OF URGENCY

There is no lack of an official sense of urgency. One WPCA official said recently:

"The American people today are making *their* water *their* business. The American people are speaking to us through the news media. They are speaking to us through the polls. They are speaking to us through the mails. And in ever-increasing numbers they are making it clear that they want action—now. Local and State Governments are feeling the pressures. Industry is feeling the pressure. And the Federal Government is feeling the pressure."

As a result of the Water Quality Act of 1965 and the Clean Water Restoration Act of 1966, Morris B. Tobin, Congressional Counsel to the Committee on Public Works, has warned industry:

"It will no longer be possible to move into an area which allows environmental degradation in order to promote rapid industrial and economic growth. . . . Water quality standards will not be allowed to be used as a device by which a State may attract industry by allowing it to pollute, and to base its economic growth on environmental degradation."

The planning and implementation programs do not always reflect the urgency that is felt, even at the Federal level, as Dr. Raymond L. Nace, of the U.S. Geological Survey, has observed:

"The interactions of science and technology, public policy, and human activity with the environment during the last 30 years, and the increasing intensity of interaction which we can foresee in the next 30, create an entirely new and irreversible frame of reference within which planning must be done. The Reclamation Act of 1902 and the Flood Control Act of 1936 were appropriate in their time, but they are not coupled with the realities of the later 20th Century."

The slow starts of other programs that after centuries reached satisfactory levels of development will be intolerable in the era of accelerated growth ahead. Little comfort is found in the history of water utilities as capsuled by Dr. Nace:

"The first American public water utility, built in colonial Boston in 1652, did not, as one might expect, trigger a revolution in water supply. Most people had always gotten their domestic water from wells and springs, and they preferred to continue that way. About 150 years later the U.S. had only 16 public water systems and in 1850 only 83. Thereafter, change was rapid, and by 1966 about 160 million people received system's service. This service brought with it a change in the public attitude toward water."

The problems to be resolved in water resources in the preserving of a good environment in an urbanized society are not all in technical fields that can be assigned to the engineers or chemists or even the economists. The more intransigent problems are found in the fields of public policy formulation and political organization and administration.

In the technical fields desalination and weather modifications are interesting prospects and certainly some amelioration of the water supply problems and perhaps even the water quality problems of some areas will come through further research into these subjects. No technical breakthroughs, however, are required to treat sewage and industrial wastes, or even to purify drinking water from them. The construction of dams and canals to store and transport water from regions of surpluses to zones of deficiencies is a mastered art.

Progress is being recorded in altering the materials we use and put into water to reduce their damage to the environment. Biodegradable detergents have been introduced and have largely replaced the types that once persisted into the groundwaters and caused pumps to froth. Pesticides that will be effective but will lose their lethal powers are being developed to replace DDT and other persistent economic poisons. The pesticide that lurks and kills long after it is needed and in places far removed from the field where it was applied is being outlawed in several states, fortunately, it is believed, before DDT has irreversibly corrupted the food chains that support fish and many waterfowl.

The progress is not similarly reassuring to those interested in enhancement of the environment, when a review is made of the fields of public policy formulation and organization of political jurisdictions. No satisfactory means have been developed of including priceless benefits in the cost-benefit ratios of project valuation.

THE POTOMAC RIVER

That the abuse of natural waters in the United States is an open scandal has been the basis of wry jokes. Someone has said that on the Potomac River a boatman, who had a fire aboard, would have to weigh the alternatives before leaping into waters so polluted. Studies and plans have been made, and some actions have been taken to ameliorate the situation, but the Potomac has not been cleaned up. The delay is caused by jurisdictional disunities, both among local governments and Federal agencies. The President's Water Pollution Control Advisory Board, after studying the stream standards set for the Potomac River, told Secretary of the Interior Walter J. Hickel that the standards should be "achieved promptly as a pattern of performance for the rest of the country." Because Washington is on the Potomac River, the Board said that "the Federal Government must take a leading role in financing the rehabilitation of this river and promoting such legislation as is necessary to that achievement." The Board advocated that "a model regional waste treatment program" be implemented by the Congress. The proposal seems to be that a solution be sought through Federal action. This may be necessary with respect to the Potomac River because the national capital fronts a beautiful stretch of its shore. Washington and its environs contribute to the deterioration of the quality of the river. As with any megalopolis, satellite communities and suburbs have been spawned by Washington in Maryland and Virginia. Although they are outside the jurisdiction of the District of Columbia, and therefore, for this reason, not a direct responsibility of the Federal Government as is Washington, the suburbs frequently have provided major aggravation of the pollution of the Potomac. Streams of silt running from subdivision scars into the river may frequently be seen, for example, by any passenger on a plane circling for a landing at the National Airport. The need for a unifying authority for Washington over the whole of the metropolitan area may be filled by the National Government with more justification than elsewhere, because the District of Columbia is a Federal enclave. The requirement has not yet been met, however, even in this exceptional instance.

THE COLORADO RIVER

Development of the use of the waters of the Colorado River has proceeded, frequently in the midst of controversy. No other river in the United States equals the Colo-

rado in the degree of its economic importance to its own basin. Draining parts of seven states, it is the greatest river wholly within the arid zone of the United States.

When settlement of the Colorado River Basin began in the 19th Century, the newcomers were dependent on irrigation. The basin is vast but the river's annual flow is more limited in proportion to the land area than any other of our great streams. There are more projects that divert water from the Colorado River watershed into other adjacent basins than there are from any other United States watershed. This rather ironic development increases the aridity of the Colorado River Basin. Such diversions are defended by Colorado water users no matter in which state they reside as being compatible with the "law of the river."

Many of the diversions of Colorado River water into other basins are made near the headwaters at elevations where they involve high quality water, of which the Colorado River Basin downstream has then a diminished amount. The remaining waters of the Colorado River are used and reused. They are stored in a succession of reservoirs and their mineral content is concentrated as the result of evaporation from the surfaces. The waters wash the shores and banks and they receive the wastes of towns and the irrigation return from the agriculture in much of the basin. The waters gradually deteriorate in quality as they move downstream.

At the point of diversion for the Colorado River Aqueduct of the Metropolitan Water District of Southern California on the west bank of Lake Havasu above Parker Dam, the water is hard and the mineral content exceeds the United States Public Health Service recommended drinking water standards. At the Imperial Dam near the Mexican border, where water is diverted for the Yuma, the Wellton-Mohawk, and the Gila Projects in Arizona and the Imperial and the Coachella Valleys in California, the mineral content frequently approaches 800 parts per million, even less acceptable as drinking water, though many residents of the project areas use the water for that purpose. At Morelos Dam, below the Wellton-Mohawk and Yuma drains, the water diverted into the Mexicali Valley became so poor that Mexican farmers once refused to accept it, creating international contention.

The Colorado River Compact of 1922, upon which rests the division of waters between the upper and the lower basins of the Colorado River, deals only in quantities of water. Other succeeding agreements, stipulations, water filings, and court decrees that go into the make-up of "the law of the river" omit considerations of water quality. The Mexican Water Treaty which became effective November 27, 1945, limited the annual entitlement of the Mexicali Valley farmers and water users to 1.5 million acre-feet of water from the Colorado River. In the debates in the United States Senate, the deliveries were described as being "wet water." In the Mexican Senate, however, it was explained that the deliveries were to be of waters of usable quality.

The reason that the water at Morelos Dam fell to such low quality on the occasion referred to was that the groundwater basin beneath the Wellton-Mohawk Project in the lower Gila River Valley was being partially evacuated of highly saline waters through the operation of a series of drainage pumps. This pumped, drainage water was returned to the Colorado River below Imperial Dam. The Bureau of Reclamation contended that the quality of water reaching Morelos Dam, the only diversion below the discharge, was monitored and never fell below tolerable levels for irrigation. The drainage water, it was contended, made up a part of the Mexican entitlement. The Mexicans said the water that they got stunted their winter wheat and salted their lands at an alarming rate. Investigators pointed out that the Mexican farmers were not following safe irrigation practices in the use of Colorado River water within their area, but were spreading their supply of water too widely and not providing drainage to maintain proper salt balance in the soils of the lands that they irrigated. The Mexicans rioted and their government threatened to appeal for relief to the World Court at The Hague. The United States Department of State interceded. The Wellton-Mohawk drainage pumping schedule was revised. A canal to carry Wellton-Mohawk waste waters to a discharge point below Morelos Dam was hastily constructed by the Bureau with funds appropriated by the Congress for the purpose. During periods of low releases from Lake Mead, the salty drainage water is discharged through the new ditch below the point of the Mexican diversion. Since 1961, this saline discharge has been the only water from the Colorado River reaching the Gulf of California, so completely is the river controlled by its great dams and reservoirs and so fully is the flow utilized by the many projects that the river supports. The filling of Lake Powell created by Glen Canyon Dam, of course, has placed an unusual requirement on the river during this period.

The Imperial and Coachella Valley water users, unlike their Mexican neighbors, have worked out very exacting irrigation formulae to maintain a tolerable salt balance in the root zones of their crops. The districts that operate the irrigation systems have provided trunk drains to the Salton Sea. The landowners have tile-drained hundreds of thousands of acres of the farmlands in these valleys. The irrigation practice is to apply more water as the mineral content in the irrigation supply increases so as to flush the salts through the soils. Cultural practices, quite intricate, have been devised for various crops in order to avoid accumulation of alkali at the points where the plants are growing. The salt is caused to concentrate at higher points on the ridges as capillary action brings the water to a surface where it can evaporate. After harvest, the ridges are broken down and the excess salts are again flushed by heavy application of water.

The method may seem precariously complex, but the irrigators get record crops at harvest. A satisfactory balance of salt input and salt discharges has been maintained and some areas formerly unproductive because of alkali have been restored to use. These cultural practices, however, increase the water demand necessary to produce a crop. An interesting collateral effect of the drainage program, likewise, is not beneficial to the environment. The salts and residues of fertilizers and pesticides that are carried through the farm drains complicate the problem of projecting into the future the recreational uses of Salton Sea, which ultimately receives them all. The sea has experienced a remarkable popularity among fishermen and water recreationists, who flock in great numbers to its desert shores. It is destined, however, to become a dead sea in a few decades, unless it is rescued. A monumental civil engineering project has been proposed to fence off a portion of the area of the sea in which the saline concentrations can be held above the limits necessary to support life.

The Salton Sea lies at the bottom of a sink 280 feet below sea level. It was recreated by the flood waters of the Colorado River, which the promoters of irrigation in 1904 turned into the Imperial Valley. It has been maintained by the wasting of water from the irrigation systems. Whether or not the drains from the valleys continue to empty into it, the Salton Sea will suffer the same fate in the course of time, unless a rescue project is built. So long as the drainage waters do not introduce poisons in quantities actually lethal to the fine corbina that abound in the waters, and thereby take over the responsibility for destroying the resource, their effects may be ignored as peripheral and not central to the problem of saving the Salton Sea.

Under the "law of the river," exact quantitative limitations are placed on allowable diversions from the Colorado River, although in practice they may not be strictly enforced except when shortages occur. The limitations in the Imperial Valley, for example, are based on criteria reflecting the quantity of water beneficially used in the year 1929. Since in 1929 the quality of the water from the Colorado River was better, the same quantity as was used in that year will not irrigate so many acres with the cultural requirements of today. The work the water does in growing crops is not so efficient because of deterioration of its quality. Clearly, then, the lower the quality the less the water is worth. There is an economic gain to be realized through preserving or restoring water quality. Parenthetically, I note that the economists have not yet measured this gain to my knowledge, although to do so would help in justification of alternatives that might better protect the environment.

Water users in California so far have contended they are satisfied so long as they get their allotted number of acre-feet of water from the river. This has been true with respect to both the irrigators in the low deserts and the Metropolitan Water District of Southern California, the complex public agency financed in part by taxes from its constituent municipalities and districts. The MWD wholesales Colorado River water on the Coastal Plain south of the Tehachapi Mountains.

The time may come, however, when the irrigators and the domestic users in California will join the Mexican irrigators in protesting poor quality water. The costs of softening the hard water from the Colorado River in the MWD's enormous treatment plants are high. Softening does not reduce the parts per million of dissolved solids, but rather replaces some of the minerals with others. The water which is being introduced from the Colorado River into Southern California groundwater basins, whether treated or not, is of relatively poor quality at the time of first entry. Through use and reuse after joining the groundwaters, from which it is pumped for irrigation and municipal purposes, this water is further deteriorated.

What is the solution to the problem as revealed in the review of the Colorado River record? Augmentation of the flow of the Colorado River with water of satisfactory quality is the solution that has been pointed out by the water users of the seven basin states. The Colorado could be augmented by diversion from other watersheds that have ample supplies, though suggestions along this line have drawn political fire from the Pacific Northwest. Desalination may eventually provide a supplemental source of very high quality water for mixing with and dilution of the degenerated natural waters.

The problem of protecting the quality of the waters of the Colorado River within tolerable limits for irrigating crops and within absolute limits for human consumption seems certain in the future to shape the water projects that will be constructed to serve the vast and important seven state basin.

Arizona has won authorization by the Congress of a project she sorely needed to divert her share of the Colorado's remaining water into the central part of the state. California was fearful that construction of the project would threaten curtailment of diversions from the river that are already provided for, and objected until certain

guarantees of minima were included in the authorization. Another protection was to clarify the responsibility to fulfill the demands of the Mexican Water Treaty. The Arizona project may hasten the day when augmentation of the flow of the Colorado River will become essential. Title Two (Sec. 202) of the Colorado River Basin Project Act provides:

"The Congress declares that the satisfaction of the requirements of the Mexican Water Treaty from the Colorado River constitutes a national obligation which shall be the first obligation of any water augmentation project planned pursuant to Section 201 of this Act authorized by the Congress."

While the Colorado River Basin Act authorized and directed the Secretary of the Interior to "conduct full and complete reconnaisance investigations for the purpose of developing a general plan to meet the future water needs of the Western United States," it added a proviso which took cognizance of the political sensitivity of the Columbia Basin as follows:

"Provided, That for a period of ten years from the date of this Act, the Secretary shall not undertake reconnaisance studies of any plan for the importation of water into the Colorado River Basin from any other natural river drainage basin lying outside the States of Arizona, California, Colorado, New Mexico, and those portions of Nevada, Utah, and Wyoming which are in the natural drainage basin of the Colorado River."

Since the deadline set in the Act for the Secretary to make his final report is June 30, 1977, the provision would seem to limit the planning for augmentation of the Colorado River's flow to desalting the sea, to other unproved potential sources and, practically, to diversion of water from the streams of the North Coastal Counties of California. These streams have the only appreciable surpluses remaining within the states named in the law as qualified for study during the first decade.

With reference to this discontinuity in the flow of policy within the Act, Senator Frank E. Moss, of Utah, spoke of misgivings gained from his studies of national water needs:

"I remind the Senate—and particularly Senators from the States west of Missouri—of the projection of the Senate Select Committee on National Water Resources that eight of the 22 water resources regions of this country would have their water in full use by the year 2000. These eight regions encompass an area stretching from Kansas City on the east to Los Angeles on the west, and from the Canadian border to Brownsville, the southern tip of Texas. It excludes, of course, the Columbia Basin and northern California."

Quality considered, there is already a shortage of water in the Colorado River, and also in many other streams, eastern as well as western, in the United States. The environment of large populations dependent on the Colorado River is being degraded at this time.

Difficult alternatives are presented. A crisis is upon the Colorado River Basin. The battle has been spread to include the Columbia River Basin as well. A fight may rage for decades unless facts are faced and cool heads gain control.

NEW JERSEY

The State of New Jersey built two reservoirs to provide needed water supplies for the multitude of local public agencies and water companies that distribute domestic supplies in the northeastern part of the state. The state was not authorized by the Legislature to construct the canals and aqueducts required to deliver the conserved waters to the local systems because of pressures exerted by local authorities. The local interests, however, have not built the aqueducts. Several local agencies meanwhile have been rationing water to their users, despite plentiful rains since 1966, because their sources are inadequate. Sensitivity to outgrown precepts of local option among jurisdictions with limited responsibilities has caused the Legislature to refrain from correcting the mistake it made.

In an increasing number of streams—specifically in the Sacramento-San Joaquin Delta and the Colorado River, but in others as well—water quality deterioration cannot be held above tolerable health, esthetic and agricultural limits except through augmentation of low-flow. In New Jersey and in other urbanized areas as well, supplemental water projects of regional scope are required. Under these circumstances, it is the more to be regretted that local and regional chauvinism may delay forthright action, for time is not on the side of preservation of good environments.

There may be a temptation to think the water quality people cry "wolf" when no real threat is in sight. After all, people are drinking water that does not meet the recommended Public Health Service standards in hundreds of communities in the United States. The waters will continue to degrade with intensified use brought about by increasing population. Although the standards may with impunity be blinked at for a time, there is a limit of tolerance.

Read what Dr. M. G. Candau, Director-General of the World Health Organization, said about water quality at the Water For Peace Conference in Washington, D.C. He had reviewed the situation with regard to water-borne diseases.)

"In addition to all these is the growing threat to health due to the degradation of our water sources by man's own action. Expanding populations, industrialization and urbanization make it continuously more difficult to separate our wastes from our drinking water . . . Wastes from increasingly sophisticated chemical processes are discharged from factories, and find their way into rivers, lakes, underground reservoirs and marine coastal waters, causing grave concern as to the public health, economic and aesthetic consequences of these pollutants.

"Major efforts are required to prevent man's environment from becoming hostile to his well-being and, indeed, to his survival. Conversely, well conceived planning for the optimum development of that environment will redound to man's physical, economic and social well-being. Of all the environmental factors, I believe that his water supply has the greatest and most immediate effect on his health, comfort and general well-being."

SANTA ANA RIVER

"Peace has finally come to the Santa Ana," James J. Doody, Southern District Engineer of California Department of Water Resources, informed the California Water Commission meeting in Los Angeles, June 6, 1969. He referred to a stipulated judgment entered in the Orange County Superior Court in settlement of litigation that involved more than 2,500 defendants and the water supply of the rapidly growing megalopolis in Orange, Riverside and San Bernardino Counties. The suit, among water agencies and users, had been begun in 1963. It was only the most recent in the series of legal actions among various groupings of litigants that began in the 1870's when the Irvine Ranch, situated near the sea in Orange County, sued upper basin interests regarding the flow of the Santa Ana River. The Irvine Ranch decree and many others were lifted in the new master settlement. There is some reason to hope that the decree has ended water rights litigation in the Santa Ana Basin and introduced an era of cooperation to take its place.

Some quite remarkable steps were taken in reaching the settlement and in the decree, itself. The physical solution, as the participants choose to call it, includes provisions for increasing or decreasing the amounts of water that are required to pass two fixed points in the basin by reason of the quality of the water reaching those points. Specifically, also, upstream water users in meeting their obligations to downstream interests are given credit for and are required to deliver to the river the effluent from their sewage treatment plants. The decree contemplates the management of all waters of the basin, surface and subsurface, whether pristine or often-used, and whether of local origin or imported from distant streams through the Colorado River Aqueduct and the California State Water Project. The quality controls are placed at two natural subdivisions in the basin. At the upper one, any increase in dissolved solids above 700 parts per million will require the delivery of 11 acre-feet of water in addition to the normal entitlements for each excessive part per million. Any decrease below 600 parts per million will earn a credit to the upper water users of 11 acre-feet per part per million, a bonus which they may withhold for themselves. Since the upper users will be buying imported water at more than $40 an acre-foot to supplement their diversions and uses from the Santa Ana Basin, their ability to manage the quality of the water will be of economic importance to them. At the second measuring point the penalty will begin at 800 parts per million of dissolved solids. The quality bonus will be for delivering water better than 700 parts per million. The penalty and the bonus at the lower division point both will be at the rate of 35 acre-feet per part per million. The objective, at each control point, will be to maintain the quality of water delivered within a range of 100 parts per million of dissolved solids.

Another significant development in the settlement was the use of a California statute allowing local agencies with similar authorities jointly to exercise those powers. The four major water districts that, among them, cover the whole basin except for a mountainous fringe, created the Santa Ana Watershed Planning Agency and initiated water quality management of the watershed. They thus provided the metropolitan region of which they are parts with a comprehensive government for the management of one of the major natural resources that will contribute to the excellence or the degradation of the environment.

OTHER AREAS

A metropolitan sewer district was created a few years ago to serve the urbanized area around St. Louis. San Diego has a county water authority for water supply, and a metropolitan sewage collection agency to eliminate discharges into its bay. The San Francisco Bay and the Hudson River are still polluted, though in each instance the state is moving to help local jurisdictions to meet their responsibilities to improve the quality of their waters.

WATER IS ONLY A PART

Frequently, the water resources problem is cited as the exclusive contributor to environmental decline in situations where the causes are complex. Ronald B. Robie's comment on Lake Tahoe is to the point. He said:

"There is no reason why local government cannot effectively encourage economic development consistent with enhancement of the environment. We have heard so much in recent years over the 'pollution' of Lake Tahoe. Utilizing federal and state funds and a significant amount of local funds, the South Tahoe Public Utility District developed an export plan and is now exporting reclaimed water to Alpine County. It has both protected the Lake and has provided irrigation and recreation opportunities in Alpine County. Similarly, export facilities are being developed at the north and west

sides of the Lake and in Nevada. Recently, I had the opportunity of talking with several people from the eastern Unitd States who had visited Lake Tahoe last summer for the first time in a decade. They were disappointed with what they saw. But it was not pollution, but rather land use which troubled them and which is the greatest problem at Lake Tahoe. The water is still beautiful and blue, but the Alpine setting around the lake has become a hodgepodge of neon signs, and construction which has scarred, not enhanced, the area."

FEAR OF MISTAKES

Some of those who are responsible for public programs designed to enhance the environment hold back because of a fear of false starts.

Intensive education of the people along lines later discovered to be erroneous has marked national campaigns of conservation. These have led later to emotional resistance to introduction of sound conservation programs such as permitting the hunting of does in order to thin deer herds that increase beyond the carrying capacities of their ranges. The United States Forest Service is now trying to turn around the popular attitude toward clearcutting of forests, a practice that it has found to have conservation advantages over selective cutting among many types of trees. Generations of former school children, who think of Smokey the Bear as a friend, retain an implanted horror of clearcutting that the word itself recalls.

In his paper on the state of water planning, Dr. Nace observed that water projects of great magnitude made it possible for great mistakes to be made through constructing them. In a race for survival, if that is what is involved in man's treatment of his environment, doubts must be resolved in favor of action. One observer has said, "Pollution of air, waters and land must be arrested, even eliminated, if our genus is to 'make it' in this environment."

PIE-IN-THE SKY SOLUTIONS

Frequently, when faced with realities in an environmental situation, popular response is given to pie-in-the-sky proposals. The success to date of California in meeting her water resources requirements, under natural conditions that are more difficult to overcome than those faced in any other rapidly urbanizing area, has stemmed from the support of a strong water planning agency since early days of statehood. The California Department of Water Resources pioneered in studies of desalting the sea, and from the first has cooperated with the Federal Government's desalination programs, participating in the cost of constructing Point Loma Plant No. 1. William R. Gianelli, Director of the Department, said recently:

"Many factors that will influence the cost of desalted water in the future cannot be determined with certainty. Expectations, however, appear to be sufficiently attractive to warrant continued consideration of desalting as an alternative for further augmentation or supplementation of water supply.

"Our long-range planning will maintain its broad inquiry into the conventional reservoir and canal method of water conservation and transportation and into the possibilities of desalination, waste water reclamation, watershed management, weather modification and every other new technology that may offer promise."

Economists, political scientists, or environmentalists who offer "study the alternatives" as a solution provide small comfort to the planners unless they help to develop alternatives for study. Those who would set "zero growth" as an objective and pit it against forward planning by water agencies and others charged with meeting estimated future needs, may read, as I do, that the Bureau of the Census still estimates an increase of 66,000,000 people in the United States in the next generation, even if it uses the 1969 rate of increase, which was the lowest in our national history and may be a poor base for that reason for its projections. The population continues to shift to urban centers and, apparently, more particularly to those in California and the West. These facts cannot safely be ignored. I am, however, growing increasingly wary of specific plans that are built to meet estimates of needs in the distant future. There are too many instances in my experience of unpredicted alterations in trends that have been brought on by unforeseeable developments, technological and otherwise, to warrant confidence in any blueprint of the 50-year future. This note of caution, however, is as significant to the environmentalist, and the economist as it is to the engineer. The environment can be damaged by lack of planning, as has been seen in the deteriorating central cities as well as through construction of projects that did not have in advance the benefit of full, comprehensive planning. The development of goals and continuous planning; the evaluation and reevaluation at intervals of objectives and appraisal and reappraisal from time to time of means of reaching them, will be required. The professional disciplines each will have a part to play in the process. The critics will have to drop their shield of criticism and become participating actors in this drama. The denouement will limit the range of choices of our grandchildren half a century hence, and perhaps disastrously so.

Within the welter of problems that are being recognized with respect to maintenance of a suitable environment, there is present a crisis in water. This crisis is engendering conflicts that, unless they are resolved through timely action, will break out into increasingly bitter contests as the population swells. We have placed men on the moon through establishing a goal and organizing an adequate program to achieve it, one that required technological advances and cooperation among agencies and disciplines. Astronauts may not cavort freely in the waters of the Potomac, as they did in the brown lunar dust for all to see, until some of the spirit and energy of the Lunar Project are applied to comprehensive water resources programs, and unless resources comparable to the task are put into the work of restoring clean water in the earth's environment.

RECOMPUTATION—A SOLDIER'S VIEW

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. WALDIE. Mr. Speaker, I recently received a very impressive letter from a retired Army colonel regarding the issue of recomputation of retirement pay for military personnel.

The points he raises are highly important and are eloquently told. I include them in the RECORD for the benefit of the Members of the Congress:

EUGENE, OREG.,
August 8, 1970.

Hon. JEROME R. WALDIE,
Cannon House Office Building,
Washington, D.C.

DEAR MR. WALDIE: Thank you sincerely for your thoughtful kindness in sending to me your letter of August 4 enclosing a comment by Honorable L. Mendel Rivers, Chairman of the House Armed Services Committee concerning the Administration's failure to support Recomputation.

I understand and appreciate the effort you made toward restoration of the recomputation principle, and for this I am most grateful.

As I am sure you know, those of us who were most affected, while young, chose to serve the nation through the military profession. We knew it would not lead to wealth, yet it was a good life, and had its recompenses, for most of us were motivated by ideals of service and efficiency. Happily, that motivation paid off in our performance and success in World War II, of which my contemporaries are justifiably quite proud, as I am.

To me the great pity is that our lack of success, militarily, in Korea and Vietnam, coupled with the body blows the armed services have received in the failure of recomputation, the unpopularity of the draft, and the futility of operations in Vietnam; not to mention the peace marches and the anti-ROTC riots; have so weakened our national military spirit and morale that I seriously wonder how we shall be able to restore it.

Looked at in that light recomputation seems to be a delightful dream we once had—gone now—but remembered as a dream.

I have so very greatly appreciated my brief contacts with you, sir, even though you have just about changed me to a democrat, I am very sorry to have to inform you that Mrs. Bixy and I have left Rossmoor and Walnut Creek and returned to Eugene, Oregon, where I first retired from the army and where our daughter and grandchildren clamor for our return.

Best wishes for your continued success in your career go along with this letter.

Sincerely yours,

LAWRENCE B. BIXBY.

"NATION'S GOVERNORS UNITE ON POW PROBLEM"

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. ADAIR. Mr. Speaker, the 45th national convention of the American National Red Cross was held in Chicago, Ill., in May this year. Attending this conference were 3,800 delegates. A resolution was adopted on May 20 to urge fair and just treatment of our prisoners of war in North Vietnam in accordance with accepted international standards. Messages of support and endorsement for this resolution were received from the President of the United States, the Governors of each of the 50 States, the Governors of the territories, as well as messages from several other organizations. Further, Governor Ogilvie of Illinois officially proclaimed a day of dedication for the relief of American prisoners of war and their families. Therefore, I commend to the attention of my colleagues the text of this resolution, copies of telegrams and messages of support as well as an editorial of support from the Chicago Sun-Times relative to Governor Ogilvie's "day of dedication." Texts of the aforementioned documents follow:

RESOLUTION II

PRISONERS OF WAR

Whereas, civilized decency and international law embodied in the Geneva Conven-

tion for the Protection of Prisoners of War demand that captives in armed conflicts be identified and accounted for, humanely treated, permitted to communicate and, if seriously sick or wounded, repatriated or placed in neutral hands, and

Whereas, the fate of hundreds of American servicemen captured in the Southeast Asian war is unknown except to their captors, and

Whereas, some of these helpless men have been held captive more than five years, some may be seriously sick, wounded or deceased, without the knowledge of their loved ones, and

Whereas, this cruel, intolerable and prohibited secrecy serves no purpose but to increase the revulsion felt for it by millions of people the world over who understand the grief of parents, wives and children of those imprisoned or whose fate is unknown, and

Whereas, the XXIst International Conference of the Red Cross at Istanbul in September 1969 after noting the historic role of the Red Cross as a protector of victims of war, adopted, without dissent, a resolution calling upon all countries involved in armed conflict to ensure that all prisoners of war be afforded the treatment and full measure of protection prescribed by the Geneva Convention Relative to the Treatment of Prisoners of War, and

Whereas, in the realization that the Red Cross has the potential to arouse the conscience of humanity on behalf of these prisoners, the Board of Governors on February 16, 1970 reaffirmed the resolve of The American National Red Cross to pursue every effort to assure their humane treatment and has urged similar action by every other member of the International Red Cross.

Now, therefore, be it resolved that the chapters of The American National Red Cross, united in the resolve to do all in their power to promote respect for the rights of prisoners of war, do hereby endorse the February 16, 1970 resolution of the Board of Governors. and

Be it further resolved: That each chapter should accept the continuing commitment within its own community to mobilize ever-increasing support in the demand for the identification and humane treatment of the prisoners, the fulfillment of their right to communicate, the repatriation of the sick and wounded, the accounting for any who may be deceased and ultimately the freedom of all of the prisoners.

MESSAGES RECEIVED FROM THE FOLLOWING INDIVIDUALS, CHAPTERS, TERRITORIES, AND ORGANIZATIONS

President Richard M. Nixon—Along with all other Americans I have noted with pride and with confidence the dedication of your Convention to unremitting efforts to obtain for American prisoners of war in Southeast Asia the humane treatment of which they are entitled under the dictates of decency and which their captors are obligated to provide under the Geneva Conventions. You have the support and the prayerful hopes for success from all men of goodwill.

Eastern area Governor of *Connecticut*—John Dempsey—Continued efforts by American Red Cross to secure improved treatment our prisoners of war in North Vietnam heartening and commendable. People of this State one of whose citizens interned many years in Red China, keenly aware protection given him and his family by adherence to articles of Geneva Conventions. Speaking their behalf and my own, I urge delegates to annual meeting of American National Red Cross now in session, take every appropriate step to demand the adherence signified by Government of Democratic Republic of Vietnam when signing these Conventions. All future actions initiated by your organization to bring about humane treatment of prisoners of war have my full support.

Governor of *Delaware*—Russell W. Peterson—I am writing to commend the American Red Cross and its efforts in encouraging Americans to write to the President of North Vietnam on behalf of American prisoners of war. These efforts are proving effective, and I urge the American Red Cross to continue supporting this program. On behalf of all Delawareans, especially those who have kin and friends in POW camps, I thank the American Red Cross for its work to promote humane treatment of those prisoners.

Governor of *Maine*—Kenneth M. Curtis—I strongly endorse the "Write Hanoi" Campaign of the American Red Cross. We must do everything possible to insure the humane treatment of United States prisoners of war in North Vietnam. I share your hope that letters from thousands of concerned citizens in this country will touch the conscience of Hanoi and move them to honor the provisions of the Geneva Convention.

Governor of *Maryland*—Marvin Mandel—As Governor of the free State of Maryland, may I commend the American National Red Cross for its continuing efforts to obtain more humane treatment for U.S. prisoners held by North Vietnam, it is my hope that every citizen of Maryland will participate in the Red Cross "White Hanoi" Campaign by letters calling upon the President of North Vietnam to adhere to the Geneva POW Treaty. Best wishes to you and Convention delegates for success in this humanitarian endeavor.

Governor of *Massachusetts*—Francis W. Sargent—As Governor of the Commonwealth of Massachusetts, I am pleased to endorse the American National Red Cross "Write Hanoi Campaign" and urge the people of Massachusetts and all Americans to cooperate in this effort to write the North Vietnamese Government regarding the treatment of prisoners of war in accordance with the Geneva Conventions. My hopes for the success of this project.

Governor of *New Hampshire*—Walter R. Peterson—Strongly endorse continuing efforts of American National Red Cross to obtain humane treatment of the United States prisoners of war held by Government of North Vietnam; am encouraging citizens of New Hampshire to support the Red Cross "Write North Vietnam" Program to prevail on the President, Democratic Republic of Vietnam to honor his nation's signature to the 1949 Geneva Convention.

Governor of *New Jersey*—William T. Cahill—On behalf of the citizens of the State of New Jersey, I want to express deep concern and wholehearted support for the humanitarian efforts of the American Red Cross in its campaign to impress upon the Government of North Vietnam its responsibility for the welfare and treatment of American servicemen held prisoner by Hanoi. In your role as a non-partisan organization, committed to the service of all in need, we sincerely hope that Red Cross will succeed in arousing the world's conscience and stirring it into action so that sensitive, justice seeking people of every race will influence the North Vietnamese to abide by the Geneva Conventions.

Governor of *New York*—Nelson A. Rockefeller—The American National Red Cross drive to urge Americans to write to Hanoi to secure humane treatment of prisoners of war as guaranteed by the 1949 Geneva Convention has my wholehearted support. I am pleased to join in endorsing this all-out effort to assure that war prisoners in North Vietnam receive all rights and privileges to which they are entitled. The commendable work you and your associates are doing in behalf of prisoners of war and their families merits the widest appreciation.

Governor of *Ohio*—James A. Rhodes—As Governor of Ohio, I endorse the "Write Hanoi" Campaign being sponsored by the American Red Cross.

Governor of *Pennsylvania*—Raymond P. Shafer—Strongly endorse efforts of American Red Cross in attempting to encourage expressions to Hanoi urging their compliance with Geneva Conventions with respect to persons held as prisoners of war. I am urging local citizens and groups in the Commonwealth of Pennsylvania to join in this effort being promoted by the 94 local Red Cross Chapters in Pennsylvania and implore your continued efforts.

Governor of *Rhode Island*—Frank Licht—I heartily support the efforts of the ARC in its activities in behalf of American prisoners of war. As a result of ARC initiative, coordinated attempts to increase communication to and from prisoners, and to encourage adherence by the Hanoi Government to the terms of the Geneva Convention have been effective. It is my hope that during these difficult days, the ARC will continue its actions, will receive the support of all the people, and will be successful in achieving positive results.

Governor of *Vermont*—Deane C. Davis—I wish to voice my strong endorsement of the continuing efforts of the American Red Cross in opening the channels of communications regarding the treatment of the POW's held by North Vietnam. I share with you the humane concern for the welfare of the men and urge intensified efforts to prevail upon North Vietnam to honor its signature to the Geneva Conventions.

Governor of *Virginia*—Linwood Holton—As Governor of the Commonwealth of Virginia, I wish to express my support of the efforts being made by the American National Red Cross to effect compliance of the Geneva Conventions, in the treatment of prisoners of war in North Vietnam. Regardless of political views, all Virginians are united in concern for humane treatment of American captives in Southeast Asia. Our wholehearted support goes to the efforts of all concerned citizens and to the endeavors of the American Red Cross in your "Write Hanoi" Campaign.

Governor of *West Virginia*—Arch A. Moore, Jr.—I have issued an official proclamation requesting West Virginians to write North Vietnam urging Hanoi to comply with the Geneva Convention pertaining to the treatment of prisoners of war. I commend the Red Cross for its stand in this matter and assure you I am solidly behind your efforts to gain humane treatment for Americans being held as prisoners of war by North Vietnam and to gain entry for ICRC representatives to inspect prisoner of war facilities and prompt repatriation of sick and wounded prisoners.

Southeastern area. Governor of *Alabama*—Albert P. Brewer—Please be assured of my deepest appreciation of your actions to secure humane treatment for American prisoners of war in North Vietnam. I am personally urging the citizens of Alabama to join in the Red Cross "Write Hanoi" Campaign to show North Vietnam that Americans are united in their efforts to insure that their sons and husbands in North Vietnam prisons will be treated like human beings and their families here at home will be able to hear from them.

Governor of *Arkansas*—Winthrop Rockefeller—Please be assured of my deepest appreciation of your actions to secure humane treatment for American prisoners of war in North Vietnam. I am personally urging the citizens of Arkansas to join in the Red Cross "Write Hanoi" Campaign to show North Vietnam that Americans are united in their efforts to insure that their sons and husbands in North Vietnam prisons will be treated like human beings and that their families here at home will be able to hear from them.

Governor of *Florida*—Claude R. Kirk, Jr.—Floridians appreciate your efforts to secure humane treatment for American pris-

oners of war in North Vietnam. I am urging the people of Florida to join in the Red Cross "Write Hanoi" Campaign to demonstrate to the North Vietnam that we are united in our efforts to insure that our fighting men in North Vietnam prisons will be treated like human beings and that their families here at home will be able to hear from them.

Governor of *Georgia*—Lester Maddox—This is to assure you that I sincerely endorse the actions taken by the American Red Cross in support of Humane treatment of American prisoners of war in North Vietnam. As Governor of the State of Georgia, I am personally urging all citizens of this State, irrespective of individual feelings regarding the conflict in Southeast Asia, to join together unanimously in the "Write Hanoi" Campaign. This effort is to let North Vietnam know that Americans are united in their plea to treat their sons and husbands in North Vietnam like human beings and to live up to the Geneva Conventions signed by that Government.

Governor of *North Carolina*—Bob Scott—I express my appreciation to American Red Cross for its actions to secure humane treatment for American prisoners of war in North Vietnam. I urged citizens of North Carolina to join the Red Cross "Write Hanoi" Campaign to show North Vietnam Americans are united in their efforts seeking treatment for their sons and husbands that is consistent with the Geneva Conventions and seeking contact with them.

Governor of *Kentucky*—Louis B. Nunn—Please be assured of my deepest sympathy of your actions to secure humane treatment for American prisoners of war in North Vietnam. I am personally urging the citizens of Kentucky to join in the Red Cross "Write Hanoi" Campaign to show North Vietnam that Americans are united in their efforts to insure that their sons and husbands in North Vietnam prisons will be treated like human beings and that their families here at home will be able to hear from them.

Governor of *Louisiana*—John J. McKeithen—As a Veteran of World War II, I can sincerely appreciate the actions of the American Red Cross in their efforts to secure humane treatment for American prisoners of war in North Vietnam. The results to date on this campaign are worth the effort put forth thus far, and to attempt to obtain further results, I am urging the citizens of Louisiana to join the Red Cross "Write Hanoi" Campaign to show North Vietnam that our people from Louisiana and America are united in our efforts to insure that our fellow Americans being held prisoners in North Vietnam are treated like human being and that their families here at home will be able to hear from them. Two young ladies here in Baton Rouge just received letters from their husbands who are prisoners of war. This campaign is picking up momentum and seems to be reaping the desired results. Keep up the good work.

Governor of *Mississippi*—John Bell Williams—I wish to express my appreciation for and support of your efforts in attempting to secure humane treatment for American prisoners of war being held captive in North Vietnam. I have personally appealed to the people of Mississippi to participate in a letter writing campaign to convince North Vietnam that the American people stand united in their determination that their husbands and sons be treated as human beings while held as prisoners in North Vietnam and that these Americans be accorded the privilege to communicate with their loved ones.

Governor of *South Carolina*—Robert E. McNair—I am pleased to indicate by this correspondence that I am personally urging all South Carolina residents to join in the project of the American Red Cross, "Write Hanoi". We feel it is necessary for the Government of North Vietnam to know that all Americans are of war and that we stand firm in our insistence that they be allowed to communicate with their families at home.

Governor of *Tennessee*—Buford Ellington—Please be assured that we in Tennessee are deeply appreciative of the Red Cross actions to secure humane treatment for American prisoners of war in North Vietnam. I am personally urging the citizens of Tennessee to continue their support in the Red Cross "Write Hanoi" Campaign to show North Vietnam that Americans are united in their efforts to insure that their sons and husbands in North Vietnam prisons will be treated like human beings and that their families here at home will be able to communicate with them.

Midwestern area. Proclamation by Governor Richard Ogilvie of *Illinois*—More than 1,700 United States servicemen are missing in action or detained as prisoners of war as a result of the armed conflict in Southeast Asia.

Each of the governments with armed forces involved in the conflict are signatories to the Geneva Convention Relative to the Treatment of Prisoners of War of August 12, 1949.

Nevertheless, the government of the Democratic Republic of Vietnam has refused to observed the terms of the Convention and abrogated its obligation under the agreement

The American Red Cross, which has been striving to ensure that the government of North Vietnam affords prisoners of war the protection and benefits to which they are entitled under international law and the dictates of human decency, is meeting in Chicago May 18–20.

Therefore, I, Richard B. Ogilvie, Governor of the State of Illinois, proclaim May 20, 1970, as a Day of Dedication for the relief of American prisoners of war and their families, and urge all Illinoisans to join in the humanitarian efforts to guarantee our imprisoned servicemen and their families the protection and the benefits to which they are entitled under international law and the dictates of human decency.

In witness whereof I have hereunto set my hand and caused the Great Seal of the State of Illinois to be affixed.

Done at the Capitol in the City of Springfield this Thirteenth day of May, in the Year of Our Lord one thousand nine hundred and seventy and of the State of Illinois the one hundred and fifty-second.

Governor of *Indiana*—Edgar D. Whitcomb—I wholeheartedly endorse the actions of the American Red Cross in behalf of the American prisoners of war being held captive by the North Vietnamese. I commend your organization for its efforts in this regard and urge that you continue despite whatever roadblocks may be encountered. In accordance with the Red Cross "Write Hanoi" Program, I call upon Hoosiers to send a letter to the President of the Democratic Republic of North Vietnam and urge to: (1) Identify the prisoners being held, (2) allow regular mail between prisoners and their families and (3) admit International Committee Red Cross representatives to inspect prisoner of war facilities and allow prompt repatriation of sick and wounded prisoners. I believe as do all Americans that prisoners should be afforded the treatment and protection that North Vietnam is obligated to extend under the prisoners of war Convention. I realize the urgency of this effort and its importance not only to the captured American soldier, but also to his family.

Governor of *Iowa*—Robert D. Ray—As Governor of the State of Iowa, I am especially concerned about Iowans presently being held captive by the forces of the Democratic Republic of North Vietnam and would encourage the efforts of the American National Red Cross in its letter writing campaign to encourage the other side to observe the Geneva Conventions concerning the treatment of prisoners of war.

Governor of *Kansas*—Robert Knocking—In behalf of all Kansans and personally, I join those governors of all States and all Americans in urging the Government of North Vietnam to adhere to the Geneva Conference in their treatment of American men who have become prisoners of the war in Southeast Asia, we pray they will be treated fairly and humanely.

Governor of *Michigan*—William G. Milliken—As Governor of the State of Michigan I endorse the efforts of the American National Red Cross to influence the Hanoi Government to identify the American prisoners. To accept an exchange of mail between the prisoners and their families and to accept representatives of the International Red Cross into their prison camps.

Governor of *Minnesota*—Harold Levander—I respectfully request you to continue expending maximum effort on behalf of the American prisoners of war being held in North Vietnam and commend you for your past efforts in this regard.

Governor of *Missouri*—Warren E. Hearnes—I am pleased to urge public support for the Red Cross program of having individual Americans write letters to the officials of North Vietnam requesting humane treatment of prisoners. The release of names of prisoners and the granting of permission for them to receive mail and parcels from their families. Such a campaign at least offers hope of obtaining more information about American prisoners and better treatment for them as was promised by North Vietnam in signing the Geneva Accords.

Governor of *Nebraska*—Norbert T. Tiemann—I hereby endorse the actions taken by the American Red Cross in their effort to encourage expressions to Hanoi, urging their compliance with the Geneva Convention with respect to persons held as prisoners of war. We in Nebraska are taking up this campaign and I will personally be encouraging Nebraska citizens and groups within our state to white the President of the Democratic Republic of North Vietnam, urging compliance.

Governor of *North Dakota*—William L. Guy—I heartily endorse the "Write Hanoi" Campaign of the American National Red Cross and your organization efforts to secure more humane treatment for the U.S. prisoners of war in Vietnam. North Dakota citizens will make a concerted effort through letter writing to assist you in this current drive to persuade the Democratic Republic of North Vietnam to adhere to the Geneva Prisoner of War Convention which they signed in 1949.

Governor of *Oklahoma*—Dewey F. Bartlett—Dear Mr. Harriman: As Governor of Oklahoma, I endorse actions taken by the American Red Cross in calling on all Americans and all nations to write Hanoi and demand that prisoners of war be afforded the treatment and protection as agreed to at the Geneva Conventions. Regardless of a persons feelings about the war, the treatment of prisoners of war should be uniform as provided for under the Prisoners of War Convention.

Governor of *South Dakota*—Frank L. Farrar—Mr. Harriman: I endorse your "Write Hanoi" Campaign for the benefit to not only our men who are prisoners of war, but for all their loved ones in the free world. It is time that North Vietnam Government identify all prisoners of war; allow mail between families and prisoners, allow the International Red Cross to inspect the prisoners of war facilities; and allow the sick and injured prisoners to return to their families. Let us all pray for humane treatment of American prisoners of war and for peace.

Governor of *Texas*—Preston Smith—As

Governor of Texas I congratulate the American Red Cross for undertaking another "Write Hanoi" in continuation of your outright efforts to gain more humane treatment for the United States prisoners of war and the missing in action in Southeast Asia. All Americans are concerned about the failure of the North Vietnamese to honor the provisions of the Geneva POW Conventions. I know citizens of Texas will join in support of your campaign.

Governor of *Wisconsin*—Warren P. Knowles—Urge strongly continuing all-out effort to gain more humane treatment for United States prisoners of war in Vietnam and "Write Hanoi" Campaign.

Western area—Governor of *Alaska*—I would like to take this means of expressing my wholehearted support of American Red Cross efforts to obtain humane treatment of American personnel imprisoned by the North Vietnamese. Americans are unified in their belief that prisoners held in North Vietnam should be afforded the treatment and protection that North Vietnam is obligated to extend under the Geneva Convention provisions and the American Red Cross to continue its splendid efforts.

Governor of *Arizona*—Jack Williams—A number of Arizonians are being held prisoner by North Vietnam. Please accept my thanks and congratulations for your efforts to get North Vietnam to observe the Geneva Conventions. We endorse your actions and urge you to continue your efforts which seem to be having some impact.

Governor of *California*—Ronald Reagan—Early this month I urged all Californians to join in the observance of a national day of prayer on Sunday, May 3, for the humane treatment and safe return of American prisoners of war and servicemen missing in action in the Southeast Asia. I heartily commend the American Red Cross for its actions to encourage all Americans to write Hanoi to express indignation at their failure to adhere to the Geneva Conventions. I am hopeful your efforts on behalf of our men being held prisoner will provide the impetus that is needed to focus worldwide attention on this matter.

Governor of *Colorado*—John Love—Governor John Love, State of Colorado, wholeheartedly endorses the American Red Cross resolution and urges the leaders of Hanoi abide by the Geneva Convention.

Governor of *Idaho*—Don Samuelson—I am vigorously in support of the American Red Cross effort to encourage Hanoi to comply with the Geneva Convention with respect to persons held as prisoners of war. We are deeply concerned about the treatment of these persons who include Idahoans in the military service. My office extends strongest hopes for your early success in this endeavor. Best wishes for a productive Convention.

Governor of *Montana*—Forrest H. Anderson—I fully support the humanitarian objectives of the "Write Hanoi" Campaign being sponsored presently by the American Red Cross. Humane treatment of American prisoners in Vietnam under the provisions of the Geneva Convention is something that all Americans must work to achieve. Moral pressure must be brought to bear upon the leaders of North Vietnam to convince them of their responsibilities under the Convention. Americans must not forget these men. I only hope that this campaign is successful in easing some of the hardships these men and their families are enduring.

Governor of *Nevada*—Paul Laxalt—I would like to commend the American National Red Cross for their program in calling upon all nations to treat prisoners of war in accordance with the Geneva Convention. We must continue to encourage everyone to subscribe to your efforts by participating in the "Write Hanoi" Campaign. The success of this endeavor rests with the American people.

Governor of *New Mexico*—David F. Cargo—Please add my endorsement to the American National Red Cross effort toward freeing American prisoners of war in Vietnam.

Governor of *Oregon*—Tom McCall—Greetings to you from the State of Oregon. On the occasion of your National Convention, I commend the American National Red Cross on their efforts they have made toward asking Americans to protest to Hanoi on the treatment of U.S. prisoners held by North Vietnam. As you map your reactions for the ensuing year, may I encourage continuation of such efforts. Irrespective of individual feelings about the Vietnamese conflict, I believe there is an absolutely unanimous opinion in Oregon, as there must be throughout the nation, that prisoners should be afforded the treatment and protection that North Vietnam is obligated to extend under the Geneva Prisoner of War Convention. Evidence of such unanimity of opinion, as can be accomplished by a massive compliance with your "Write Hanoi" Campaign, may influence North Vietnam. Last month, Captain James Sehorn of Forest Grove, Oregon, who was shot down in Northern North Vietnam 16 months ago, was finally identified as a prisoner of war. Mrs. Sehorn attributes this notification to the efforts made by fellow Oregonians and others who "Write Hanoi."

Governor of the State of *Washington*—Daniel J. Evans—I support the efforts of the American National Red Cross to gain more humane treatment for the release of the U.S. prisoners in Vietnam. These prisoners of war are entitled to humane treatment under the statutes of international law and the dictates of moral decency. I hope that the following provision of prisoner of war Convention will be honored by North Vietnam: Prompt identification of prisoners; adequate food and clothing and medical care, communication with other prisoners and their families at home. Prompt repatriation of seriously sick or wounded prisoners; protection from abuse or reprisals and free access to prisoners and their place of detention, by such a neutral intermediary as the All-Swiss International Committee of Red Cross.

Governor of *Utah*—Calvin L. Rampton—Please accept my endorsement of ARC efforts to obtain humane treatment of American prisoners of war in North Vietnam. I add my voice to those urging Hanoi to follow strictly the standards set by the Geneva Convention.

State of *Wyoming*—Governor Stanley K. Hathaway — Proclamation — Whereas, Red Cross has become the traditional neutral intermediary in time of conflict; and

Whereas, the American Red Cross has asked the world Red Cross Societies and the American people to form a solid front in demanding that the North Vietnamese meet humanitarian standards in the treatment of American prisoners; and

Whereas, the United States Senate and House of Representatives have passed a resolution demanding compliance with the Geneva Conventions on treatment of prisoners of war and calling for the United Nations and the International Red Cross to obtain humane treatment and release of American prisoners; and

Whereas, the American Red Cross is asking the American people to exert more pressure on the North Vietnamese by increasing participation in its "Write Hanoi" campaign;

Now, therefore, I, Stanley K. Hathaway, Governor of the State of Wyoming, do hereby proclaim the month beginning May 17, 1970, as Support Our Prisoners in Vietnam Month, and urge the citizens of the state to participate in the "Write Hanoi" campaign to demand that the North Vietnamese honor the Prisoner of War provisions of the Geneva Conventions.

State of *Hawaii*—From the Governor—As Governor of the State of Hawaii, whose spirit of aloha is often the last contact that our servicemen have with their country before giving honorable military service in Southeast Asia, and which, through its vast military resources gives support to those operations, I offer my full endorsement of the efforts of the American Red Cross in seeking humane treatment for American prisoners of war held by North Vietnam, the Viet Cong and Laotian forces. Irrespective of any personal feeling about the Vietnam conflict, it is God's will and the heartfelt desire of all Americans that prisoners of war be afforded the treatment and protection that North Vietnam is obligated to extend under the Geneva Prisoner of War Convention. In Hawaii, Sunday, May 24 will be recognized in churches throughout the State as Prisoner of War Prayer Day with the attendant request that our citizens participate in the National Write Hanoi Campaign initiated by the American Red Cross. With our previous similar effort having its effect with some easing by North Vietnam of its stand, I support your continued dedication of this worthy task. May God be with you in your earnest endeavors in behalf of all American prisoners of War. John A. Burns, Governor.

Territories—Mr. Leber, Governor of the *Canal Zone*—I sincerely endorse the resolution adopted at the 21st International Conference of the Red Cross calling on all nations to ensure humane treatment of prisoners of war and fully support the American Red Cross in its continuing world-wide efforts to encourage compliance with the Geneva Conventions extending protection to such prisoners.

Governor of *Puerto Rico*—Luis A. Ferre—The people of Puerto Rico join me to express our support of the action taken by the American Red Cross on behalf of prisoners of war in North Vietnam and willfully cooperate with the Write Hanoi Campaign the continuation of these efforts is the responsibility of all nations.

Governor of *American Samoa*, John M. Haydon—Please be advised that I as Governor and the people of American Samoa wholeheartedly support and appreciate Red Cross efforts to encourage humane treatment of Prisoners of War. A good number of our young men are involved in the Vietnam conflict, and several have lost their lives in support of our countries' principles. We recognize diversification of nationalities, cultures, and customs in the world, but we believe that kindness and decency unite or should unite all men and it is incumbent on the United States and Allied countries and likewise the Government of North Vietman to treat their prisoners of war with humane decency. Your efforts toward the accomplishment of this objective will continue to encourage better treatment of prisoners regardless of race, color, or creed and will in the long run help to bring all men together in a spirit of harmony and love. Again our sincere appreciation.

Governor of *Virgin Islands*, Melvin H. Evans—People in government of Virgin Islands highly endorse the role and activities of the American Red Cross on behalf of prisoners of war. Your write Hanoi campaign carried out by via Red Cross Chapters. Sincere wish for success this and similar projects.

ORGANIZATIONS

Mrs. James B. Stockdale, *National Coordinator for the National League of Families of American Prisoners in Southeast Asia*—Please extend to every delegate at your Convention the heartfelt gratitude of the wives and families of captured and missing American servicemen for the help you have given our men in the past. We deeply appreciate your continuing interest and efforts toward insuring humane treatment for our loved ones and wholeheartedly support and encourage renewed appeals for your "Write

Hanoi" campaign. Our burden seems lighter knowing you are continually increasing your efforts to get help to our men. We thank you most sincerely.

Mrs. Erwin Frees Seimes, President General, *National Society Daughters of the American Revolution*—Dear Mr. Collins: Your letter of May 13 has been read with interest and appreciation. We are enclosing a copy of the resolution adopted at the 79th Continental Congress entitled "Prisoners of War," which we feel is in line with your "Concurrent Resolution."

Also, for your information, the following paragraph appeared in the last Circular Letter sent by me to my National Board: "We have been asked by the Committee of United We Stand, Inc. (H. Ross Perot's Mission to bring relief to POW's in Vietnam) to write as individuals to express their concern to 'H. Ross Perot, Post Office Box 100,000, Dallas, Texas 75222.' Please transmit this word to your Chapters in order that they may express their feelings on this subject."

Best wishes for a most successful Convention.

Prisoners of war resolution, 79th Continental Congress, April 1970.

Whereas unknown numbers of servicemen have suffered long terms of imprisonment or the ambiguous status of "missing in action" in North Viet Nam; and

Whereas apparently nothing stronger than the usual words and platitudes from responsible United States officials and United Nations headquarters have led Hanoi to the belief that they have nothing to fear from the United States of America in their treatment of American prisoners; and

Whereas it is known that numbers of the Armed Forces of the United States of America have been murdered or allowed to die from malnutrition, disease or wounds; and

Whereas the North Vietnamese have stated that all captured Americans are regarded as war criminals and they will be tried by the "People's Court"; and

Resolved, that the National Society Daughters of the American Revolution express grave concern for the treatment and fate of United States prisoners of war and other Americans wrongfully held;

Resolved, that the National Society Daughters of the American Revolution believe that we must take all necessary steps to obtain the release of these American prisoners of war and in no circumstances abandon these brave men.

The American Legion, National Headquarters.

The American Legion shares your concern for the well being of American prisoners of war held by North Vietnam. Our Resolution No. 8, adopted May 6–7, 1970, joins with you in assuring the compliance with the Geneva Convention regarding the treatment of prisoners of war and cooperates with you in your "Write Hanoi" campaign.

J. MILTON PATRICK,
National Commander, The American Legion.

Ex Prisoners of War—Stalag Luft III.

Strongly applaud your Red Cross National Convention's commitment unrelentingly to pursue every possible course to ensure that American prisoners of war in Southeast Asia be afforded all the protection and benefits to which they are entitled and their captors are obligated to extend under the Geneva convention. Our organization which consists exclusively of former American prisoners of war, many of whose lives were saved by Red Cross efforts on their behalf, has unanimously endorsed your efforts and assures you of our unqualified support.

EX PRISONERS OF WAR,
Stalag Luft III.

[From the Chicago (Ill.) Sun-Times, May 20, 1970]

"DAY OF DEDICATION"

The lot of a prisoner of war is always grim, even in a war where the adversaries recognize the rules of the Geneva Conventions for the treatment of prisoners. In the Vietnam conflict, an undeclared war with an enemy that considers those it takes prisoner to be "war criminals," the fate of the prisoners themselves is uncertain, the suffering of their families great.

Gov. Ogilvie has proclaimed today to be a "day of dedication" for those Americans who are prisoners of war of North Vietnam and to recognize the special agonies their families endure.

North Vietnam is holding 450 American prisoners of war. There may be more. Another 955 Americans are listed as missing in action. Some of these may be prisoners.

Gov. Ogilvie is supporting the nationwide effort of the American Red Cross to bring pressure to bear on North Vietnam's leaders to treat their prisoners fairly and humanely.

The power of moral suasion is difficult to measure. But in dealing with an enemy that has closed the normal international channels of access to prisoners of war it could be a considerable factor in gaining better treatment for the prisoners. We urge all Illinois members of Congress to join Gov. Ogilvie and the Red Cross in this effort.

ATTACKS ON VICE PRESIDENT HYPOCRITICAL

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. BROWN of Ohio. Mr. Speaker, I was disturbed to read in yesterday's papers that a Member of the other body has accused Vice President AGNEW of trying to silence dissenters and repeal the rules of democracy. This is a most ridiculous and absurd charge and yet one which is being used with increasing frequency in some quarters. It never ceases to amaze me when I hear the administration's most caustic critics cry "foul" when someone dares to challenge their reckless rhetoric and atrocious attacks. For some reason, these critics think that only they should have the right to dissent and any counterdissent is immediately labeled by them as repressive and undemocratic.

Mr. Speaker, this is blatant political hypocrisy at its worst. There are those who would like to muzzle the Vice President so they can continue their one-sided debates unchallenged. They should know that there is no such thing as a one-sided debate in a democracy and that administration spokesmen have every right to defend their record and respond to their critics.

The Vice President has never asked for either conforming consensus or submissive silence from anyone; rather, he has urged a free and open debate on all issues and has forcefully presented his views on these issues. Apparently the administration's Democratic critics are not up to this challenge or they wouldn't be trying so desperately to silence their most worthy debating opponent.

JUDICIAL ETHICS NEED REFORM

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. BENNETT. Mr. Speaker, for the first time in history, Federal judges, including some members of the U.S. Supreme Court, have made a public disclosure of their outside earned income, investments, and gifts.

I applaud this action, which follows a March 1970 order by the Judicial Conference of the United States. But what has been required of Federal judges in the field of financial disclosure falls far short of what is needed to uphold the high traditions of the judiciary and the bar in the United States.

While the Judicial Conference requirements are a step in the right direction, I believe a stronger measure is necessary.

I have a bill, H.R. 12237, pending in the House Judiciary Committee, which would establish a code of ethics for Federal judges, including Supreme Court Justices. The legislation would ban outside fees and require disclosure by all judges, including Justices. Earlier this year I testified in support of my bill before the Senate Judiciary Committee hearing proposals in this field.

The people of America have been shocked with the disclosure of outside interests by Supreme Court Justices and judges. One Justice resigned under attack; and great concern has been expressed by the public over the outside affairs of Justices of the U.S. Supreme Court.

The Supreme Court, as an institution, has suffered in recent years in public opinion polls. In a recent Gallup Poll, almost one-fourth of those responding rated the Court as "poor." The personal and nonjudicial involvement of Justices has had a negative effect on public ratings of the Court.

It is my opinion that all Federal officials, including Members of Congress and judges, should have no earned income, especially when the salaries are as high as they are now.

I am pleased that the American Bar Association through its special Committee on Standards of Judicial Conduct has taken action in the area of judicial ethics. The recommendation as outlined in the interim report of the committee which was released in June of this year clearly reflects the concern of the American Bar Association. The committee sought the views of all major bar associations, all Federal judges, and many others. Replies were received from a large number of the groups and individuals consulted and the committee carefully considered the replies. The committee's proposals are in the form of brief statements of conclusions which hopefully after extensive hearings will be adopted as new judicial canons.

The committee's recommendations in regard to the financial activities of judges are as follows:

Financial Activities. A judge should refrain from financial and business dealings that tend to reflect adversely upon his impartiality or integrity, or which interfere with fulfillment of his judicial duties.

(a) He should not engage in business or serve as an officer, director, or advisor of any business organization.

(b) He should not hold any investment or other financial interest in an enterprise that is likely to be involved in proceedings in his court.

(c) He should not accept gifts or loans from lawyers or litigants, or any gift of a value in excess of $100 unless it is from a member of his family or is reported by him in the same manner as receipt of outside compensation.

(d) He should not use information obtained by him in his judicial capacity for the purpose of financial dealings or any other purpose not related to his judicial duties.

(e) Except in connection with his being disqualified in a particular proceedings, a judge is not required to disclose the identity or extent of his investments or his income therefrom.

The committee further considered the problem of outside compensation and reimbursement of expenses for Federal judges. The views of the committee in this area are as follows:

Compensation and Expenses. A judge may receive compensation and reimbursement of expenses for the quasi-judicial and extrajudicial activities permitted by these standards, subject to the following limitations:

(a) Compensation should be no more than reasonable in amount, no more than a nonjudge would be paid for the same activity, and from a proper source.

(b) Expense reimbursement is limited to travel, food, and lodging expenses reasonably incurred by the judge and his spouse.

(c) A judge should report the compensation received from a person or organization other than the governmental agency paying his salary, indicating the name of each such person or organization making the payment, the amount or value, the date and place of the activity, and the purpose or event for which it was made.

(d) He should report the name of each such person or organization paying or reimbursing his expenses, and those of his wife if she accompanies him, the date and place of the activity, the purpose or event for which it was made, and, if the payment exceeds actual expenses, the amount of the excess.

(e) The reports should be made regularly, within not more than six months after payments are received, and should be filed as public documents with the clerk of his court or in such other place as is designated by rule of court.

I believe that the action taken by the Judicial Conduct Committee of the American Bar Association on judicial ethics is an important step in the right direction. I continue to feel that legislation such as my bill, H.R. 12237, would better protect the public by enforcing judicial ethics. My bill would also provide criminal penalties for violations whereas judicial cannons can bring about only administrative action. I have asked for departmental reports and hearings in House Judiciary Committee on H.R. 12237 and I hope for speedy action.

A SUGGESTION FOR AIDING AMERICAN RAILROADS

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. McCLORY. Mr. Speaker, my constituent, Mrs. W. C. Block, of Barrington, Ill., has brought to my attention a novel suggestion for aiding America's railroads. She has suggested the possibility of permitting the Federal Government to purchase railroad rights-of-way by the issuance of Government bonds having a 40-year maturity.

While the proposal may seem novel and startling, it should be pointed out that trucking lines do not own the highways, and airlines do not own the airfields. By payment of use taxes to the Government, the railroads would seem to be placed on a similar footing with these competing transportation agencies.

It is my hope and expectation that the Nation's railroads will continue in business and will, indeed, expand. An article which appeared in the August 19, 1970, issue of the Christian Science Monitor has been called to my attention by Mrs. Block and reads as follows:

SHOULD RAILROADS OWN RIGHT-OF-WAY?

Suggestions of how to revitalize the nation's railroads have been stacking up in Washington since the shocking bankruptcy of the Penn Central.

There is general agreement that the status quo cannot be maintained and that, if it is, more railroads may go broke.

Suggestions range from total nationalization of all railroads to merely authorizing U.S. backing or guarantees of additional private bank loans to the ailing lines.

Nationalization—absolute government ownership and control of the railroads—is not considered a likely solution. It goes against the American grain. And simply loaning the railroads more money is not apt to do more than postpone disaster.

The railroads suggest part of the answer themselves—the elimination of government regulation of rates plus doing away with the ban on railroad ownership of other forms of transportation, such as trucking companies and airlines.

Unregulated rates, the railroads claim, would allow them to compete more effectively with truckers and airlines. Ownership of that sort would give them profitable subsidiaries and allow them to offer a shipper a full range of transportation services.

But the railroads also would accompany such changes with infusions of government money to finance modernization programs. The money would be in the form of direct subsidies. . . .

We agree that dropping rate regulations and eliminating the ban on the ownership of other forms of transportation are vital. But we shy away from government subsidies or loan guarantees.

Subsidies have a way of continuing after their justification has ended—witness the farm program—and loan guarantees would simply be risking public money for the benefit of railroad stockholders with no assurance that railroad users would gain by it.

We suggest another alternative to the subsidies and loan guarantees. Why not have the government purchase all railroad right-of-way and track? Payment could be made to the railroads by selling government bonds which would, in turn, be paid off over, say 40 years, with track use fees levied on the railroads.

This would give every railroad the immediate and massive infusion of money which they sorely need for modernization and operating capital. The government itself would risk no money; purchasers of the bonds would. And the government would not be involved in operating the railroads.

Airlines don't own airports and trucking companies don't own highways. They pay use fees. Why not put railroads on the same footing?—Enquirer and News (Battle Creek, Mich.)

OPEN LETTER TO THE SILENT MAJORITY

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. SCHMITZ. Mr. Speaker, the column "Straight Talk" by Tom Anderson is always worth reading. However, I believe that his recent "Open Letter to the 'Silent Majority' " is especially moving and should receive wide attention. I include it in the RECORD:

OPEN LETTER TO THE "SILENT MAJORITY"

DEAR S.M., wherever you are. (And I can't imagine there being many among regular Straight Talk readers! So pass this along to your S.M. friends.)

As you of the great Silent Majority may have heard, there are prophets of doom amongst us who are predicting civil war, dictatorship and disaster. Don't worry about a thing! The same thing happened to Rome and Rome recovered. A thousand years later.

If some of these fanatical alarmists had been in Rome the night Nero was doing his famous violin solo, they would have run amuck shouting fire! fire! instead of listening to the beautiful music.

Why be a patriot when you can more easily be a non-person? As Alexander Pope said long ago: "A patriot is a fool in every age. Patriots are like sheep penned and milling, annoying the slumbering countryside with their bleatings." Why be smeared, reviled, bled and destroyed as a patriot when you can be neutral?

Whatever you do, don't join patriotic organizations! You "can do more good on the outside." Like the woman's club where one member is designated to stay away from each meeting so she can give those attending something to talk about.

Look on the Bright Side!

Sixty-four percent of American wives and 50% of American husbands do *not* have sex outside marriage. Only three of the current non-fiction "Best-Sellers" are sex books and two or three of the best-read fiction books in the past five years have *not* been pornographic.

Thirty-eight percent of girls graduating from college *are* virgins. Two-thirds of our 18–25 age group do *not* have any venereal disease. At the present rate of takeover, we will *not* become a communist dictatorship until about 1976. Seventy-eight percent of our colleges did *not* have riots last year. And 85% of the students and faculty members at riot-ridden colleges did *not* participate. Forty-one percent of our college students *still* believe in capitalism!

There are probably fewer Marxists in our country than there are in Russia, and Rus-

sia is not even close to civil war. They don't even have riots. (They have firing squads.)

We kooks have upset the Communists so much that they might hasten the take-over, worried lest the American people wake up. They might even bomb us, since some experts say they will soon possess greater missile and anti-missile capabilities than we do. In other words, we saviors may be the death of you yet. Candidate Nixon campaigned on a "unity" program, which was as genuine as Teddy Kennedy's Chappaquiddick testimony.

Lenin, too, talked about "The silent majority." He said: "The cultured classes of the capitalist countries of Western Europe and America, i.e., the ruling classes, the financial aristocracy, the bourgeoisie and the idealistic democrats should be regarded as deaf-mutes and treated accordingly . . . they close their eyes to the above mentioned truth and so become blind, deaf and dumb. They will grant us credits, which will fill the coffers of the communist organizations in their countries while they enlarge and improve our armaments industry by supplying all kinds of wares, which we shall need for future and successful attacks against our suppliers."

What will the dedicated "deaf-mutes" do? Get on their knees and pray? The Communists have slaughtered millions of people, shooting them in the back of their necks while they were on their knees praying. I am not knocking prayer. I believe in it. But I wonder how Jesus rates prayer which comes only at the end of a gun barrel? I wonder how Jesus rates *silence?* Jesus told us to *testify,* to *witness,* to stand up and be counted.

Britain's Lord McCaulay forecast in 1857: "Your Republic will be as fearfully plundered and laid waste by barbarians in the 20th Century as the Roman Empire was in the 5th, with the difference that the Huns and Vandals that ravaged the Roman Empire will have come from without and that your Huns and Vandals will have been engendered within your own country by your own institutions."

And the National Council of Churches wasn't even born yet!

But don't worry about a thing: As president Johnson told you, "We never had it so good!" And as President Nixon says, "Let me just say this."

"Silent Majority!" If you (pardon the expression) *segregate* those words and analyze them separately, you learn that "*silence* is the wisdom of the stupid," and that the *majority* is usually wrong. And has been throughout history. Could the great silent majority be merely a great glob of slob? They had a "silent majority" in Germany in 1938. They have a "silent majority" in Russia now. Recently a German woman said: "We Christians in Germany often ask ourselves at what point we made our mistake (i.e., permitting the Nazis to enslave our country and most of Europe)." We now say it was at the *beginning.* Never let any violation of human rights go unchallenged—not even one. After you have kept silent two or three times it is too late to speak out.

An old Hungarian poem puts it like this: "If you are among the brigands and you are silent, you are a brigand yourself."

As I have remarked before, brigands, when freedom is at stake, silence is not golden, it's yellow. When wrong is rampant in the land, silence is unChristian. When God is mocked on all sides, silence is sinful.

History, good and bad, has been made not by silent majorities, but by vociferous, dedicated minorities. Whether we win or lose this titanic struggle for freedom depends on whether the dedicated minority working for what is right and good is more powerful and more effective than the dedicated minority working for what is wrong and evil.

How did we get to the brink of disaster, revolution and dictatorship? The so-called "liberals," aided and abetted by the silent, stupid, yellow, short-sighted, ignorant majority *brought* us here.

The Silent Majority is not really silent of course. It prattles constantly, about the weather, food, sex, which channel to watch and Jackie and Onassis.

What can *you* do? Break silence! Get noisy. Get informed. Get involved. Get ready. Do the best you *can,* where you *are,* with what you've got. Work—in your church, PTA, political party. Join an effective pro-American, anti-Communist organization. And, instead of golf, take up another beneficial, invigorating and more relevant sport—target practice.

The term "silent majority" is far from new. It was used more than a century ago. It meant those who were dead. And, after a fashion, it still does. The Silent Majority won't save us from war, dictatorship and slavery! The Silent Majority has never saved any nation.

The Silent Majority sat by and saw Him crucified. The Silent Majority permitted the reign of terror in the French Revolution. The Silent Majority watched as the Christians were burned at the stake. The Silent Majority sneered when Patrick Henry pled: "Is life so dear or peace so sweet as to be purchased at the price of chains and slavery?" The Silent Majority watched as the street demonstrations in Germany were taken over by a little unknown paper-hanger and corporal named Adolf Hitler.

The Silent Majority is yellow, and always has been. History is determined by dedicated minorities. And even by inspired individuals. Only a *few* proclaimed: "He is the risen Lord!" Only a *few* defended the bridge at Concord. Only a *few* signed the Declaration of Independence.

Enough dedicated ants can destroy an elephant.

"There's a clever young fellow named Somebody Else,
There's nothing that fellow can't do.
He's busy from morning till late at night
Just substituting for you.
You're asked to do this, or asked to do that
And what is your reply?
Oh, why pick on me, Get Somebody Else
He'll do it much better than I.
You've a worn-out excuse on the tip of your tongue
Too busy, too something-or-other.
When the truth of the matter is
You simply don't want to bother.
So much to do in this weary old world,
So much, and the workers so few;
And Somebody Else is all tired and worn
Just substituting for you.
'Tis time that this faithful old Somebody Else
Gets a much-needed vacation—
Suppose you start substituting for him and
Building up your own reputation."

You of the famed Silent Majority, when will *you* come down out of the grandstand and get into the game? When will *you* rebel? When it's too late? Thousands of American youths have trained in Cuba to become efficient revolutionaries who, when the time comes, can take over *our* country and *your* children.

What are you going to do, if in 1972 you hear a radio alert saying that a mob of 700,000 people are milling around the White House and will soon sack it? That the President and the Congress are virtual prisoners and have signed a bill "nationalizing" all essential means of production? That Congress later passed an "Equal Property Act" making all citizens equal owners of all property? That United Nations forces have taken over to "restore order?"

What will you tell your children—if they're still alive?

Some head-burlers are still saying: "But protest is necessary and healthy! We are just going through a phase. It won't last."

They refuse to believe it. Like the drunk on the Titanic who said, as he heard the crunch: "I ordered ice—but this is ridiculous!"

Sincerely,

TOM ANDERSON.

AN UNDERRATED GENERATION

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. KLUCZYNSKI. Mr. Speaker, recently I received a copy of an address which was delivered by Eric A. Walker, president, Pennsylvania State University, to a graduating class. It is without a doubt one of the best speeches that I have read or heard. I recommend it to all my colleagues, and his remarks follow:

AN UNDERRATED GENERATION

Ladies and gentlemen of the graduating class and those who got advanced degrees. Let me extend to each of you my personal congratulations and those of the entire University on the degree you have earned today.

This ceremony marks the completion of an important phase of your life. It is an occasion in which all who know you can share in your sense of pride and accomplishment. But no one has more pride in your accomplishment than the older generation. But I am not going to tell that older generation how bright you are. Nor am I going to say we have made a mess of things and you—the younger ones—are the hope of mankind. I would like to reverse that process. For if you of the graduating class will look over into the bleachers to your left or right, I will introduce you to representatives of some of the most remarkable people ever to walk the earth. People you might want to thank on this graduation day. These are people you already know—your parents and grandparents. And, if you will bear with me for five minutes, I think you will agree that a remarkable people they are indeed. Let me tell you about them.

Not long ago an educator from Northwestern University by the name of Bergen Evans, a radio performer known to your parents, got together some facts about these two generations—your parents and grandparents. I'd like to share some of these facts with you.

These—your parents and grandparents—are the people who within just the last five decades—have by their work increased your life expectancy by approximately 50 percent—who while cutting the working day by a third, have more than doubled per capita output.

These are the people who have given you a healthier world than they found. And because of this you no longer have to fear epidemics of flue, typhus, diptheria, smallpox, scarlet fever, measles or mumps that they knew in their youth. And the dreaded polio is no longer a medical factor, while TB is almost unheard of.

Let me remind you that these remarkable people lived through history's greatest depression. Many of these people know what it is to be poor, what it is to be hungry and cold. And because of this, they determined that it would not happen to you, that you would have a better life, you would have food to eat, milk to drink, vitamins to nourish you, a warm home, better schools and greater opportunities to succeeed than they had.

Because they gave you the best, you are the tallest, healthiest, brightest, and probably best looking generation to inhabit the land.

And because they were materialist, you will work fewer hours, learn more, have more leisure time, travel to more distant places, and have more of a chance to follow your life's ambition.

These are also the people who fought man's grisliest war. They are the people who defeated the tyranny of Hitler, and who when it was all over, had the compassion to spend billions of dollars to help their former enemies rebuild their homelands. And these are the people who had the sense to begin the United Nations.

It was representatives of these two generations, who through the highest court of the land, fought racial discrimination at every turn to begin a new era in civil rights.

They built thousands of high schools, trained and hired tens of thousands of better teachers, and at the same time made higher education a very real possibility for millions of youngsters—where once it was only the dream of a wealthy few.

And they made a start—although a late one—in healing the scars of the earth and in fighting pollution and the destruction of our natural environment. They set into motion new laws giving conservation new meaning, and setting aside land for you and your children to enjoy for generations to come.

They also hold the dubious record for paying taxes—although you will probably exceed them in this.

While they have done all these things, they have had some failures. They have not yet found an alternative for war, nor for racial hatred. Perhaps you, the members of this graduating class, will perfect the social mechanisms by which all men may follow their ambitions without the threat of force—so that the earth will no longer need police to enforce the laws, nor armies to prevent some men from trespassing against others. But they—those generations—made more progress by the sweat of their brows than in any previous era, and don't you forget it. And, if your generations can make as much progress in as many areas as these two generations have, you should be able to solve a good many of the world's remaining ills.

It is my hope, and I know the hope of these two generations, that you find the answers to many of these problems that plague mankind.

But it won't be easy. And you won't do it by negative thoughts, nor by tearing down or belittling. You may and can do it by hard work, humility, hope, and faith in mankind. Try it.

Good-by and good luck to all of you.

NIXON AND SCHOOL INTEGRATION

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. MORSE. Mr. Speaker, a constant complaint of some so-called liberal columnists is that the Nixon administration has been less than avid in furthering school integration, particularly in the South. However, the Boston Herald Traveler points out in its editorial "Good News from the South" that more southern schools will be integrated this fall than ever before. That almost all of the 500 southern school districts, will have been integrated by now is particularly important in view of the fact that only 5 percent of Negro children in the South were attending integrated schools in 1968.

In his column "Nixon Doing Prime Job of Desegregation," on which the Herald Traveler editorial was based, George Minot questions what happened to the Emergency School Aid Act of 1970, proposed by President Nixon. This act would make funds available to aid in the dismantling of dual school systems where they exist and would assist in reversing the course of de facto segregation elsewhere.

I believe both the editorial and Mr. Minot's column will be beneficial to my colleagues, and I therefore insert them in the RECORD:

GOOD NEWS FROM THE SOUTH

This week more schools were integrated below the Mason-Dixon line than ever before in history. And the fact that, though they may not have liked it, Southerners generally accepted this latest round of desegregation peacefully is most encouraging. For it proves that, given time and patience, changes once resisted as impossible can be accepted as inevitable, and that after their appeals and challenges have been exhausted, those who oppose a law will generally obey it without further resistance.

Although nearly all of the dual school systems in the South outlawed by the Supreme Court 16 years ago have now been dismantled, the problem of integration has by no means been completely solved. Within their new unitary school districts, there still remains a good deal of de facto segregation in the South—although, ironically, the separation of black and white students as a result of residential housing patterns and neighborhood schools is more glaring now North of the Mason-Dixon line.

But if some of the problems and difficult issues pertinent to integration continue to confront Americans, Northern and Southern, it is also encourageing to note that the Supreme Court hopes to resolve them as soon as possible. Chief Justice Warren E. Burger announced on Monday that the court will begin hearings on the opening day of its new term to listen to appeals in six cases involving busing, racial balance laws and other issues which have yet to be settled.

Many people, of course, believe that these issues should have been resolved years ago. And while it is true that the process of desegretation seems to have been painfully slow since the Warren Court handed down its landmark Brown vs. Board of Education decision in 1954, it is also astonishing how much progress has been made in the last two years.

This seems especially noteworthy, in view of the frequent charges that have been made that the Nixon administration is dragging in feet on integration and employing a "Southern strategy" in a blatant appeal for the votes of segregationists.

As George Minot points out in his column in the Herald Traveler today, only five percent of the South's black children were attending desegregated school systems in September 1968. Now, two years later and thanks in large measure to the efforts of Mr. Nixon—and Attorney General John Mitchell almost all of the 500 school districts in the 11 Southern states have been desegregated and more than a quarter of a million Negro children are going to school with white classmates for the first time this year.

More progress undoubtedly can and will come. But when such solid accomplishments have been made, when we have come so far that the Governor of Virginia has enrolled his own children in predominantly black, integrated schools in a city which once served as the capital of the Confederacy, perhaps the time has come for more applause and optimism than we've been getting lately.

NIXON DOING PRIME JOB OF DESEGREGATION

(By George Minot)

The Nixon administration has had a "bad press" in many of its efforts during the last 20 months or so, and in its attempts to bring about an almost 100 percent desegregation of Southern schools this September, it either has been belittled or ignored by a great majority of the editorialists and professional commentators.

Next to solving the poverty problems in the United States, these attempts to bring about a peaceful desegregation of schools in the south is a tremendous undertaking that has eluded federal, state and local school officials ever since it was ordered by the Supreme Court more than 16 years ago.

This year the Nixon administration expects that almost all of 500-odd school districts in 11 Southern states will desegregate for the first time.

A dozen or two districts were desegregated when schools opened this last week, but the major test of the administration's pledge to end the dual school system in 1970 will come this week and next, when the bulk of Southern schools start classes.

Although everything has moved smoothly thus far, the big tests are still ahead. If there is to be trouble it is certain to come in metropolitan districts that will operate under recent court orders to desegregate by using extensive busing of children to integrate schools in city slum areas.

Whites opposed to such busing—an issue that has not yet been settled by the Supreme Court which is on a three-month vacation—have threatened to boycott schools in Richmond and Norfolk, Va., and in Miami and Fort Lauderdale, Fla., all of which are getting underway this week. A similar threat to stage a massive boycott of schools in Atlanta never got started despite a threat by its leaders to take 50,000 children out of the schools.

When the protesters held their widely advertised rally last Thursday only 50 housewives and as many children, most of them too young to go to school, showed up. The demonstrators wound up by singing "God Bless America" and "Onward Christian Soldiers."

Although the South has faced the greatest challenge to the reshaping of its school system—even its way of life—you never would know what was happening if you relied on most of the fast talkers on TV or read the reports—or noted the lack of them—in big liberal newspapers of the East.

Think of it! In September, 1968, 14 years after the Supreme Court had declared the dual school system to be unconstitutional, only 5 per cent of the black children in the South attended unitary systems. Where were the great liberals of the nation during this persistent failure to observe or to enforce the law of the land?

Then along came Mr. Nixon. He had no mandate as a social reformer, so they said. He wasn't elected to bring about drastic changes. Nonetheless, and with aid and cooperation of that drastic conservative, Atty. Gen. Mitchell, Nixon has done more to bring about school desegregation in the South than anybody who has occupied the White House in this generation.

And he has been belittled, discouraged or ignored all along the way. How much publicity have you noticed that the Emergency School Aid Act of 1970 has received? Nixon proposed this message to Congress and it has lain dormant there ever since.

If any of the dedicated liberals in the House or Senate have taken it up and fought for its passage their names do not readily come to mind. Yet this act would make

available $1.5 billion in the next two years to facilitate the dismantling of dual school systems where they exist, and would go far toward reversing the course of de facto separation elsewhere.

Southerners who met with the President on his trip to the South last month expressed great interest in how this money was to be distributed and spent, but among representatives in the North and West there wasn't the slightest interest. Even the big spenders who lick their chops every time they see a chance of spending a million or so of the taxpayer's money didn't move to get the legislation off the floor.

Finally, Daniel P. Moynihan, from the inner White House circle, sent a letter to newspaper editors across the country urging them to help the President get support for his school bill, but you haven't noticed any action yet, nor are you likely to. Liberals running for Congress apparently don't see any votes there.

Indeed, the most remarkable thing about the apparent breakdown of resistance to the reshaping of Southern schools has been the fact that this September, unlike past years, there has been no consistent strategy of opposition. State leaders, perhaps with the exception of noisy Gov. Maddox of Georgia, have been silent. Candidates for the House and Senate in Virginia, Georgia and Florida have hardly opened their mouths.

One reason, of course, is that many are confused. Hardly a day passes that some Southern district court judge doesn't reverse himself or another judge.

White Southerners seem resigned in 1970 to do as little as possible to satisfy the law. Many of them undoubtedly are sick and tired of the struggle that has been going on for so many years. Others are willing to sit back and watch to see if President Nixon can obey the Supreme Court without alienating Strom Thurmond. It will at least be interesting to see if he can.

A TRIBUTE TO RONALD REAGAN: THEY SAID IT COULD NOT BE DONE

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. LANGEN. Mr. Speaker, just a few years ago the experts ridiculed the thought that an actor turned politician could ever govern the Nation's most populous State, especially a man who believed in such archaic concepts as a balanced budget, respect for the law, and responsibility of the individual. But in the 4 years of his first term as Governor of California, Ronald Reagan has astounded both critics and friends alike for the extreme ability with which he has conducted his office. Bringing to the governorship a no-nonsense approach which has attempted to grapple directly with the pressing problems of this microcosm of American society, Mr. Reagan has accomplished something rarely found in the political world—he has lived up to his promises.

I for one believe Ronald Reagan is deserving of commendation for a job well done. In this I am joined by the San Francisco Examiner, a one time critic turned supporter of the Governor. In a recent editorial the newspaper reflected thoughtfully:

THE EXAMINER ENDORSES REAGAN

Four years ago this newspaper opposed Ronald Reagan's candidacy for Governor of California. We did not believe a man lacking prior experience in public office could govern this most populous of states.

We were wrong.

Today, as Gov. Reagon prepares to open his autumn campaign for a second four-year term, The Examiner endorses him without reservation. We intend to support him vigorously. We intend to support the team of Gov. Reagan and Lieut. Gov. Ed Reinecke.

The chief issues of the campaign currently are the costs of state government including that biggest of all costs, education, and the problem of campus disorder including the radical drive to politicize California's institutions of higher learning.

Gov. Reagan in his approach to these overriding issues has done exactly what he said four years ago that he would do. He has been the responsible conservative, giving to state government the tone of firmness and integrity that the times demanded. Everyone in California knows exactly where he stands.

In fiscal affairs Mr. Reagan has been the constant and unyielding practitioner of economy. No governor for a generation has faced spending and taxing problems as difficult as his. No governor has worked as hard to contain them. We exaggerate very little when we say he has saved the state from bankruptcy.

He faced a critical deficit upon entering office. In his first year he dealt with it by a combination of higher taxes and cost-cutting. In every year since, he has maintained a balance without higher taxes.

It is important to understand the nature of the fiscal dilemma that confronted him. In the years just before he took office, Congress and the state legislature had passed laws greatly expanding health and welfare programs. These became built-in expenditures, beyond the Governor's control, that increased the state budget very rapidly. State health and welfare costs climbed an incredible 80 percent in four years. This year they total $1.3 billion.

Faced with this threat of bankruptcy, Mr. Reagan took three decisive steps. He compelled the utmost economy in the only health-welfare area where he did have control: administration. He turned down all new social programs (environmental controls excepted) that would increase the state budget. And he instituted strict economy in every state office under his budget control.

Those offices had 102,465 employes the day he became Governor. Today, despite population growth and a bigger volume of day-to-day state business, those offices have 102,441 employes. That, we submit, is a remarkable record.

Critics accuse the Governor of balancing the budget at the expense of higher education. They are wrong. In the last year of the Brown Administration the state spent $3028 per University of California student and $1265 per state college student. The figures were $3114 and $1500 under Reagan in the fiscal year just ended. Enrollment had gone up 35 percent; budgets had gone up 43.5 percent.

Mr. Reagan hasn't starved higher education. He just hasn't allowed it all the goodies it asked for. The educational complex, no less than the military-industrial complex, must be required to live within the public's means.

The era of campus disorder began at Berkeley in September, 1964. When Mr. Reagan took office more than two years later in January, 1967, it had grown to a national phenomenon. It still is. But it has begun to diminish in California's state-owned institutions of higher learning.

We consider it significant that, after Mr. Reagan's three years of uncompromising opposition to campus violence, the most serious disorder on a California campus last year occurred not at a state institution but at privately owned Stanford University.

Mr. Reagan has respected university autonomy. He has never sent police or the military to an institution in turmoil until the administrator of that institution asked for help. At the same time, in his roles as Governor, regent and trustee he has never ceased to insist that administrators act more firmly and faculties more responsibly.

That is exactly what the great majority of the public wanted him to do.

We view with regret the loss of authority by administrators and faculty over their academic communities, and their consequent loss of public respect. It is a tragedy of our times. But this loss of authority created a campus vacuum into which anarchy flowed. This required the intervention of the civil power of a strong governor.

Ronald Reagan supplied it, and stands ready to do so again.

That is but one of the many sound reasons the people should reelect him as Governor.

LESSONS FROM THE VIETNAM WAR

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. SCHMITZ. Mr. Speaker, the recent victory of a Communist organized and dominated popular front candidate in Chile reminds me of a statement made by English historian and scholar P. J. Honey during a seminar at the Royal United Service Institution in February of 1969. Although his remarks are directed toward the Communist program for the subjugation of the Republic of Vietnam, many facets of enemy popular or united front strategy are so clearly drawn it would seem to be worthwhile to include this summary in relation to the recent election in Chile. One wonders if the South American being counseled by Hoang Quoc Viet might not have been the General Secretary of the Chilean Communist Party Luis Corvalan.

Mr. Honey begins by talking about some of the major difficulties which the United States has encountered in Vietnam:

LESSONS FROM THE VIETNAM WAR

(Report of a Seminar Held at the Royal United Service Institution on Wednesday, February 12, 1969)

The first and to my mind the most important is the strategy which the Communists employed in Vietnam, firstly against the French and secondly against the United States and South Vietnam. This is the strategy of the 'United National Front', though my description of it will necessarily be oversimplified.

A South American Communist revolutionary paid a visit last year to North Vietnam and had a long series of interviews with Hoang Quoc Viet, one of the senior North Vietnamese leaders. Among the questions he was asked was this: You have run a successful revolution in Vietnam: We have tried many

times in South America, but we failed on every occasion. Why? What is the basis of your success?

Viet's answers are summarized in copious notes which I have in my possession and which are extremely illuminating. He said: In the first place, in order to conduct a successful revolution, you have got to involve the entire people. It is no use trying to run a revolution with the Communist Party alone. In order to involve the entire people you must devise a revolutionary programme embodying objectives which will appeal to the entire people. This necessitates the division of the populace into classes, the study of the interests of each class, and the building of a programme from those which are common to all classes.

The resulting programme contains little if any Marxism/Leninism and you may not like this as a revolutionary Communist, but you have to do it if you are to have any hope of success. This will be known as the "Minimum Programme".

During the French domination of Vietnam the construction of a programme was not difficult. Our "Minimum Programme" called for the ending of French rule and the establishment of national independence, which appealed to everybody.

The "Minimum Programme" wins mass support and the revolution may then begin, under the clandestine direction and control of the Communist Party but ostensibly a spontaneous national uprising. When the revolution has progressed to a certain stage, according to Hoang Quoc Viet, then it is essential for the Communist Party to assume overt control of the movement. It does so by moving from this "Minimum Programme" to the "Maximum Programme" which simply means adding the unmistakably Communist goals to the original "Minimum Programme."

By this time a large proportion of the people have become irrevocably committed to the revolution, but others may be unwilling to fight for Communist goals. To maintain their support, the original objectives of the revolution have to be retained. Some who are opposed to Communism will inevitably abandon the movement, but the damage can be minimised by pointing out that the revolution still tries to accomplish its original objectives and by appealing to them not to help the enemy.

When the military victory is achieved, as against the French at Dien Bien Phu, the united national front is still in existence. Its constituent parts have already been assessed in terms of social class, and the aspirations of each class are already known to the controlling Community Party. The united national front is then purged of potentially hostile elements by stages. Firstly, the whole front is turned against the most dangerous class, which in North Vietnam was the exploiting landlords. Though they have fought loyally throughout the whole revolution, they are now denigrated and cast in the role of the enemy. The rest of the united front is deployed against them. In North Vietnam this first stage was accomplished through an agrarian reform campaign, and the whole landlord class was eliminated.

The next class to go are the exploiting capitalists, the owners of big shops and factories. These successive purges are carried out by the national united front until all the classes which might oppose Communist rule have been removed from the population. When that point is reached the purges end and the Communist regime remains in control of a docile people.

I do not think this technique is even today appreciated in the United States, or indeed, elsewhere in the West. Even those who have written at length about the two Vietnam wars remain ignorant of it. Yet this technique is fundamental, and without a knowledge of it this type of war cannot be understood. Had it been studied and then explained earlier, a lot of criticism that has gone on and has been such an obstacle to the United States might have been avoided.

Moving on to point two, I would criticize the Americans for never actually declaring war in South Vietnam. Consequently the United States has never been able to impose the sort of information security censorship in Vietnam which existed during World War II and the Korean War, and any other war one can think of.

Secondly, since the Korean war, television has come of age. Television in this country, in the United States, and most other countries is concerned with profits, if it is commercial, or with TAM ratings if it is non-commercial. It is not primarily concerned with presenting a truthful picture, but with presenting a picture which will get a maximum audience. This leads the television reporters into sensation seeking above all else. Television teams have never been able to get into North Vietnam unless they are in the charge of someone who the Communists feel assured will present their case sympathetically, therefore most of the television has been restricted, not only to South Vietnam, but to the South Vietnamese Government and American controlled areas. Television which depicts its own side's successes may be truthful but it is not sensational. What is sensational is when the enemy is successful. The result has been that the viewing world is subjected to partial, misleading and dishonest reporting of the war.

To a large extent, the same is true of the Press. The inevitable result has been the protest movement and criticism which has limited the freedom of the tactics and strategy they have employed.

BRAZILIAN GOVERNMENT HONORS CAREY JOHNSON, OF LAWTON, OKLA.

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. STEED. Mr. Speaker, an unusual and outstanding honor was conferred last month on a citizen of my district, Mr. W. Carey Johnson, of Lawton, Okla., by the Government of Brazil.

Brazil recognized his work over a period of many years in behalf of Brazilian students in Oklahoma by conferring on him the degree of Officer of the Order of Rio Branco.

The Ambassador of the Republic of Brazil, Mr. Mozart Gurgel Valente, made the formal presentation August 12 at a ceremonial luncheon at the Embassy in Washington.

Carey Johnson is a native of Brazil, where he was born at Recife, while his parents, the Reverend and Mrs. L. L. Johnson, were serving as missionaries. After graduating from Shawnee, Okla., High School and the University of Oklahoma, Carey Johnson returned to Brazil and lived at Rio de Janeiro from 1954 to 1963. He served as a member of the American school board there.

For a long time he has acted as sponsor of many Portuguese-speaking students in this country. He is fluent in their language, and acts as translator and interpreter.

The Order of Rio Branco, established in 1963, is named in honor of a renowned foreign minister of Brazil, Jose Maria da Silva Paranhos, Baron of Rio Branco. During his 10 years in office early in this century Rio Branco negotiated boundary settlements that ended disputes between his country and several of its neighbors, He concluded arbitration agreements and conventions with all the other American republics.

The Order rewards those whose outstanding service or exceptional merit have made them deserving of the gratitude of the Brazilian Government. Emblem of the Order is a four-armed cross with eight white-enameled points, at the center of which is a gold sphere.

Carey Johnson is president-elect of the Oklahoma Oil Marketers Association and represents the State on the National Oil Jobbers Council in Washington, serving as a member of the gasoline marketing committee. He recently became Democratic chairman of Comanche County, Okla.

On his visit to Washington to receive the citation he was accompanied by his wife, Mary Lou, and son, Chris.

His civic work typifies the kind of spirit that motivates constructive international relations, and I am proud to join in paying tribute to him.

HARDSHIP FOR MILITARY WIDOWS

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. BENNETT. Mr. Speaker, a subcommittee of the House Committee on Armed Services is investigating the inadequacy of survivor benefits for all military personnel, active duty and retired. On July 23, 1970, I was privileged to appear before that subcommittee to state my full support for legislation which I introduced in the form of H.R. 19013 to establish an equitable survivor benefits program for our men and women in uniform and those who have served in a career status. This subject is receiving the attention of many news publications throughout our Nation. The Fleet Reserve Association has been the leading proponent of corrective legislation and has brought to my attention an excellent editorial from the July 21, 1970, Jacksonville, Fla. Times Union which I insert in the RECORD at this point:

HARDSHIP FOR MILITARY WIDOWS

It is assumed by the public that, after a lifetime of service in the armed forces of this nation, adequate provision is made for the retirement years of the military.

And, while even ranking officers do not normally receive the kind of compensation vast portfolio of stocks and become independently wealthy, they are given retirement pay and accompanying benefits which afford an adequate standard of living.

A retired admiral, in other words, doesn't have to do yard work to eke out a living. But—the catch is—no such provision is made for the admiral's widow.

This was dramatically brought out at hearings of a House subcommittee headed by Rep. Otis Pike, D-N.Y. Among those testifying was an admiral's widow; indeed the wife of a rear admiral who served as chief of staff to Adm. "Bull' Halsey in World War II.

As long as the admiral was alive, all was fine. But widows have no rights to their spouse's retirement pay after his death.

Accordingly, the admiral's widow found herself with a $50 a month pension, a house she couldn't pay for, a seriously ill mother to look after, a lack of training for any kind of employment—and then she fell ill with cancer.

Eventually, this wife of an admiral who had once commanded the aircraft carrier Hornet wound up doing housework in return for her room and board.

This particular case offered an especially sharp contrast in the material well being and social standing of a military wife and a military widow. But it was by no means the most extreme case of hardship among military widows brought out at the hearing.

The military retirement provisions, for the ex-officer or enlisted man, do constitute a carefully prepared package—for the man himself. As such they doubtlessly contribute to the decisions of many individuals to become career men. If this "widow gap" were closed, the package would appeal to many more.

The overriding consideration, however, is to correct a simple injustice. The widows of the nation's military, whose ranks include the widows of heroes, deserve much better.

IS PORNOGRAPHY FIGHT LOST CAUSE?

HON. THOMAS S. KLEPPE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. KLEPPE. Mr. Speaker, I would like to share with my colleagues the following editorial which recently appeared in the Jamestown Sun, entitled "Is Pornography Fight Lost Cause?"

In view of the fact that so much has already been said about the report of the Commission on Obscenity and Pornography—a report which is not to be issued until late this month—I think the editorial puts the entire report and the Commission itself in the proper perspective.

IS PORNOGRAPHY FIGHT LOST CAUSE?

The Federal Commission on Obscenity and Pornography, authorized by Congress in 1967 and appointed by President Johnson in 1968, will shortly make its official report.

But there have been so many leaks, intentional or otherwise, about what the committee has been doing over the past two years with its $2 million appropriation, what it has discovered and what it will recommend about the problem of pornography that the report may be anticlimactic.

Then again it may spark the biggest controversy since the Supreme Court gave its imprimatur to Lady Chatterly's Lover a few years ago, a book which by today's fast-changing standards seems only slightly racier than the Bobbsey Twins on the Farm.

As far back as last March, the only Nixon appointee to the commission, lawyer Charles H. Keating Jr., founder of the Los Angeles-based Citizens for Decent Literature, warned the President that unless he fired 12 of the 18 members of the commission, "your administration will be tarred with the failure of a presidential commission which you did not appoint and over which you have absolutely no control."

The President's press secretary has since taken pains to make it clear that the commission was established by Nixon's predecessor.

By failure, Keating means the failure of the commission to come up with the conclusion which he, and perhaps a majority of Americans, intended it should—that pornography is an unmitigated social evil and a menace that should be stamped out.

The commission has, in fact, reached exactly the opposite conclusion, as testified to by a tentative draft statement that has been circulating around Washington like a straw in the wind:

"The exising empirical scientific evidence indicates that exposure to explicit sexual material is not a cause of antisocial behavior in either youth or adults."

The draft actually goes on to recommend the repealing of all laws against pornography for consenting adults—laws which court decisions have weakened to the vanishing point but which many people feel must remain on the books.

The commission's finding, if this is what it is, will have been based on the most thorough investigation of pornography ever made in this country or any other.

It involved interviews with thousands of individuals around the nation, studies of sex offenders in prisons and hospitals, examination of the characteristics of habitual buyers of erotica, studies of the relationship between availability of pornography and sex crimes, studies of the effects of viewing or reading pornography on individuals, polling the opinions of all state attorneys general and local prosecution and police officials, and much more.

The conclusion, whether one likes it or not, will be as solidly grounded on fact as it is possible to get in this subject.

And that conclusion, and accompanying recommendation, after causing a brief uproar, will likely be entirely ignored: If letters to congressmen are any guide, Americans are not prepared to follow the example of Denmark, which abolished all restrictions on pornography for those over 16.

"There is no single subject on which we have consistently received more mail," says Rep. Durward Hall, R-Mo., to the seconding of his colleagues. The mail is overwhelmingly anti.

So the laws will remain—may even be beefed up—and the problem will continue. So, too, will the still-unanswered question: Just what is it that the law should ban?

A significant revolution in attitudes toward sex has taken place in this country, and is taking place. Literature which even the most dedicated smut-hunter considers fairly mild today would have outraged his parents. Today's miniskirts would have led to wholesale arrests not too many years ago.

King Canute, ordering the tide to go back, had it easy compared to what faces the pornography fighters.

TRIBUTE TO MRS. JAYNE SPAIN

HON. ROBERT TAFT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. TAFT. Mr. Speaker, a constituent of mine, Mrs. Jayne Spain, has been named to the board of directors of Litton Industries on August 26, 1970. Mrs. Spain is the second woman to be named to a board of directors of American industrial firms.

For the past several years, Mrs. Spain has been president of Litton Industries' Alvey-Ferguson unit and has served as executive vice chairman of the President's Committee on Employment of the Handicapped. In 1961, the U.S. Government recognized her work with the handicapped and, with its urging, she began to appear at international trade exhibitions. In 1963, Mrs. Spain was appointed to the President's Committee on Employment of the Handicapped. For the past 7 years, she has been a world emissary in the cause of training physically impaired people and developing them as an employment resource. In her own company, Alvey-Ferguson, she had maintained a ratio of one physically handicapped employee in every 10 on her payroll.

Mrs. Spain's record of honors and awards includes:

1963: Citation for meritorious service, from the President's Committee on Employment of the Handicapped Merit Award, National Employ the Handicapped Week, State of Ohio.

1964: Outstanding Employer of the Year Award, Ohio Rehabilitation Association, for vision, leadership accomplishment.

1965: Selected as the only woman member, Department of Commerce Trade and Investment Mission to India. Citation for leadership and meritorious service, Purdue University.

1966: People to People Award, President's Committee on Employment of the Handicapped and selection to be its Vice Chairman.

Citation for service and leadership in the field of the blind by Savez Slijepih Hrvatske Republicki Obdor Yugoslavia, League of the Blind.

Citation for service and leadership in the field of the blind by Polskiego Zwiasku Niewidomch, Poland, Polish Association of the Blind.

Migell Medal, top award, American Foundation for the Blind.

1967: Golden Plate Award from the American Academy of Achievement, Dallas, Tex.

Top Hat Award, Business and Professional Women's Clubs, Inc., as one of the seven women that year making outstanding contributions in business and industry.

Elected to membership, Advisory Committee to the Secretary of Labor on sheltered workshops and vocational training of the mentally retarded.

Invited as a mission of one to Yugoslavia, to outline a training and employment program for the retarded in Yugoslavian industry.

1968: Invited by Great Britain's Lady Hamilton and Lady Hoare to assist in their national planning for aid of thalidimide children.

1969: Selected as the only woman

member, Department of Commerce business seminar to Iran and Turkey.

Awarded degree of doctor of laws, Edgecliff College, Cincinnati, Ohio, for her humanitarian work with all peoples.

1970: Awarded degree of doctor of public service by George Washington University, Washington, D.C.

Made a member of the board of trustees, Edgecliff College, Cincinnati, Ohio.

Made executive vice chairman, President's Committee on Employment of the Handicapped.

Mrs. Spain is an alumnus of the University of California, Berkeley, and the University of Cincinnati. She is married to Cincinnati Lawyer John A. Spain, of Lindhorst and Dreidame. They have two sons, Jeff, 17, and Kim, 14.

BLACK PANTHERS AND BLIND KITTENS

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. SIKES. Mr. Speaker, the American Rifleman is a courageous publication which speaks out for law-abiding sportsmen.

On more than one occasion, it has set the record straight when this was badly needed. In the September issue of the Rifleman, the record is set straight on the efforts of some to identify the Black Panthers and the National Rifle Association as having common interests. They do not. They should not even be mentioned in the same breath. The Black Panther organization is shot through with treason.

I submit for publication in the RECORD an editorial on the subject:

A NATION OF ARMED CITIZENS

(By Jac Weller)

Imagine a school picnic with teachers carrying submachine guns and the boys clutching Mauser rifles as they munch their lunches.

I saw just such a picnic on a recent tour of Israel, where terrorism by Arab guerrillas has made the Israelis truly a nation of armed citizens.

A Jewish bus driver who works in Gaza told me that as he stopped his bus one day to let off a passenger, a dozen Arabs drew guns from under their robes and blazed away at the bus. He fired back, killing one terrorist. The rest fled.

In the Golan Heights, territory taken from Syria in the 1967 Six-Day War, an Israeli couple and their five children were sightseeing by car. Suddenly a score of Arab terrorists opened fire from 25 yds. The father grabbed his Uzi submachine gun, firing as he scrambled from the car. His wife was killed and one child wounded, but his quick action routed the guerrillas and prevented probable annihilation of his entire family.

To survive in the face of constant Arab attacks, the Israelis use more firearms daily in proportion to population than any other nation ever has. I travelled about Israel from the Suez Canal to the Golan Heights, from the Mediterranean to below the Dead Sea, both with and without escort from the Israeli Defense Forces (IDF). I found that the most powerful single deterrent to low-level Arab violence is the fact that most Israelis are armed and know how to use the guns they carry. Wherever there is real danger, they go about their daily lives ready to fight.

All young Israelis of both sexes who can qualify serve for three years in the IDF and are then in reserve units. The latter are normally called on for 40 days active duty each year, and some reserve officers and sergeants serve an additional month. Israelis who fail to meet the relatively low IDF physical and mental qualifications often leave Israel or even commit suicide. But most males between 18 and 55 are in the IDF in some capacity. Those who have not served in the IDF—middle-aged immigrants, for example—are issued arms and taught to shoot if they live in exposed places.

This doesn't mean that Tel Aviv and Jerusalem businessmen and shopkeepers go about their daily tasks with Uzis slung from their shoulders.

Though they are heavily outnumbered by hostile Arabs, the Israelis are likely to survive because a nation in arms is hard to destroy.

BLACK PANTHERS AND BLIND KITTENS

On several recent nationwide broadcasts, persons identified as spokesmen for the Black Panthers have cited the Second Amendment in support of the right to bear arms.

Because of this, certain shallow-minded antigun politicians have seized the seeming opportunity to bracket the Black Panthers and the National Rifle Association as if they were similar organizations.

There are some definite differences between the NRA and the Black Panthers that deserve to be pointed out.

On the basis of performance, the Black Panthers are an activist political organization with a strong partisan slant.

The NRA is non-political and non-partisan.

The Black Panthers are, as their name connotes, primarily racist.

The NRA makes no race distinction and its membership is open to all reputable Americans who pay allegiance to our country.

The Black Panthers, or persons identified with the organization, have published pamphlets on how to make bombs, how to assault police, how to wreak terrorism.

The NRA has refrained, in this magazine and generally, from disseminating any information which could be used in making bombs or other illegal devices for violence.

The Black Panther organization consists primarily of militants.

The NRA consists principally of sportsmen.

At least some of the Black Panthers appear willing to use violence to revolutionize America for their own ends.

The NRA seeks to preserve America by peaceful means for the sake of all good Americans.

There is yet another way to tell the NRA apart from the Black Panthers. As long ago as Aug. 15, 1964, the NRA went on record publicly as saying that it "does not approve or support any group which advocates or condones activities of violence" nor "any group that by force, violence or subversion seeks to overthrow the Government and take the law into its own hands." (THE AMERICAN RIFLEMAN, Oct., 1964, pp. 72–73.) We know of no such declaration from the Black Panthers.

And so we say:

Anyone whose judgment is so feeble that he cannot distinguish between the NRA and the Black Panthers does not deserve to hold public office.

To place confidence in any such person is contrary to the public welfare, for he has no more vision than a blind kitten.

CONGRESSIONAL QUESTIONNAIRE RESULTS OF REPRESENTATIVE JAMES J. HOWARD

HON. JAMES J. HOWARD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. HOWARD. Mr. Speaker, the residents of the Third Congressional District of New Jersey have responded overwhelmingly to my most recent Congressional Questionnaire and I strongly support their message. The people I have the privilege of representing in the House want to cut down on unnecessary Federal spending and, at the same time, they correctly want to spend that money on cleaning up our environment, improving our commuter mess through a realistic program of mass transportation, and improving our quality of life.

After reviewing the results of the Congressional Questionnaire in great depth, I am confident that the residents of the Third Congressional District support the actions by the Congress which in fiscal 1970 cut the President's budget requests by $6.4 billion.

A great concern of the residents of the Third Congressional District of New Jersey is evidenced by the fact that almost 19,000 questionnaires were returned, which is an extremely high rate. Each question listed separate "His" and "Hers" spaces resulting in more than 29,000 individual responses.

The first question listed asked my constituents where they would cut the budget if they had the responsibility. I listed 12 separate areas, and despite the wide choice given, a total of 15,929 of the some 29,000 persons responding listed the Department of Defense budget as the place to cut unnecessary spending. This was followed by 13,366 persons who also wanted the space budget cut.

Mr. Speaker, the results of the Congressional Questionnaire follow:

	Number	Percent
THE FEDERAL BUDGET		
Percent inflationary pressures require restraint in Federal spending. If you were required to make the choice as to where the budget should be cut, which areas would you select? (Figures in parentheses indicate percentage of 1969 budget allocated to each area.)		
Defense (44 percent)	15,929	54.6
International affairs, including economic assistance, Peace Corps, Food for Freedom, USIA (2 percent)	10,930	37.4
Space (2.3 percent)	13,366	45.8
Agriculture (3 percent)	6,852	23.8
Natural resources, including pollution, recreation, flood control, conservation (1 percent)	462	1.5
Commerce and transportation, including highways, airports, postal services, business assistance (4.4 percent)	2,854	9.8
Community development and housing (1.3 percent)	3,461	11.9
Education and manpower (3.9 percent)	2,225	7.6
Social security (21.8 percent)	2,087	7.1
Health and welfare, including medicare, health research and manpower, food stamps, child nutrition, vocational rehabilitation (4.8 percent)	3,965	13.6
Veterans benefits (4.2 percent)	2,240	7.7
General government, including law enforcement, crime reduction, civil rights, Congress, and the courts (1.6 percent)	2,369	8.1

	Number	Percent
VIETNAM		
Which of the following do you consider to be the most preferable course in Vietnam at the present time?		
Immediate withdrawal of all combat forces, while continuing economic and social assistance and maintaining military advisers	6,324	21.7
Continued phased withdrawal of American combat forces as South Vietnamese Army assumes more responsibility for conducting the war	13,922	47.9
Complete immediate removal of any American presence in Vietnam	5,344	18.4
Resumption of full scale attacks on the North with any necessary increase in American men and material	3,504	12.0
FOREIGN COMMITMENTS		
Would you favor a congressional resolution requiring the President to obtain approval of Congress before U.S. troops are committed to fight in foreign countries?		
Yes	21,028	74.6
No	5,486	19.5
Undecided	1,655	5.9
NATIONAL SECURITY		
Which one of the following do you feel poses the most immediate and serious threat to the security of the United States?		
Foreign Communist aggression	4,773	15.5
Instability in the developing nations of Asia, Africa, and Latin America	1,648	5.3
Radicals in this country	12,675	41.2
Unmet domestic human needs which give rise to internal tensions	11,705	38.0
SOCIAL SECURITY		
Do you favor legislation which would provide an automatic cost-of-living increase for social security recipients?		
Favor	22,386	76.0
Oppose	4,355	14.8
Undecided	2,695	9.2
CONSUMERS		
Would you favor legislation establishing a separate federal agency, either as a full Cabinet-level department or a statutory office, to consolidate and direct current consumer programs and serve as a spokesman for consumer interests?		
Favor	17,752	61.3
Oppose	6,752	23.3
Undecided	4,472	15.4
ABM SYSTEM		
Are you in favor of the multibillion-dollar anti-ballistic missile system as proposed by President Nixon?		
Favor	10,230	35.5
Oppose	13,180	45.7
Undecided	5,432	18.8
SPACE PROGRAM		
It has been suggested that we begin to cut down on our expenditures for our space program and direct that money for use on various domestic programs. What is your reaction to this?		
Favor	18,284	62.4
Oppose	8,273	28.2
Undecided	2,759	9.4

CONGRESSMAN DUNCAN SUMMARIZES LEGISLATIVE QUESTIONNAIRE

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. DUNCAN. Mr. Speaker, the results of my 1970 legislative questionnaire proved to be quite interesting. Basically, I believe they showed that young people in my district are in general agreement with the adults. For example, 80.9 percent of the students who responded to my questionnaire agreed with the President's position on Cambodia while 89.6 percent of the adults expressed agreement.

In regard to air and water pollution control programs 92.7 percent of the students and 93.6 percent of the adults approved of the President's proposals to clean up the environment.

I was very pleased with my constituents' cooperation in responding to the questionnaire. I believe this is a very effective way to gather the views of the people I represent in the Congress, and knowing their views helps me to do a better job.

Following are the results in percentages of both student and adult responses to the 12-question poll:

	Non-students		Students	
	Yes	No	Yes	No
1. Do you believe the television networks and newspapers give you an accurate picture of national events?	16.0	84.0	18.6	81.4
2. Do you favor abolishing the present military draft system for an all volunteer Army?	38.5	61.5	56.0	44.0
3. Should Federal funds be withheld from colleges and universities who fail to dispel students who participate in campus disorders?	85.5	14.5	67.7	32.3
4. Do you believe enemy supply and manpower sanctuaries should be allowed to function in Cambodia while we have American boys in nearby Vietnam?	6.0	94.0	10.6	89.4
5. Do you agree with the President's position on Cambodia?	89.6	10.4	80.9	19.1
6. Do you approve of President Nixon's proposals to clean up our environment by national air and water pollution control programs?	93.6	6.4	92.7	07.3
7. Do you think more tax dollars should be spent for the above programs, and if so would you be willing to pay additional taxes for this purpose?	55.3	44.7	63.1	36.9
8. Do you favor elimination of tax exempt status for nonprofit foundations?	61.4	38.6	56.8	43.2
9. Do you favor the busing of school children to achieve racial balance?	5.2	94.8	10.6	89.4
10. Generally, do you approve of President Nixon's performance in his 1st year in office?	83.0	17.0	79.8	20.2
11. Do you believe we could cut down on crime by giving our police more authority?	85.8	14.2	72.5	27.5
12. Should Congress limit farm subsidy payments to no more than $20,000 per family farm?	93.4	6.6	86.1	13.9

SOUTH VIETNAMESE MOTHERS SEEK ANSWERS FROM VICE PRESIDENT AGNEW

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. HAWKINS. Mr. Speaker, it is apparent that on his recent visit to Southeast Asia, Vice President AGNEW talked only to certain friends of U.S. policy and not always to the people of the countries he visited.

Among those unable to speak to their distinguished visitor were the mothers of young political prisoners who were the victims of an oppressive government identified with the United States.

In order that their voices may be heard, I have been requested to release their letter so that world opinion may better judge what is happening. Perhaps this is expecting too much from our feeble efforts.

Personally, I can at least express the hope we here in America who have dear ones held in oppression by the North Vietnamese can appreciate the feelings that these mothers must have for their loved ones. Perhaps in this common understanding most of us can act to end the tragedy now occurring in Southeast Asia.

A letter from Don Luce accompanying the letter from South Vietnam mothers to Vice President AGNEW follows:

SAN FRANCISCO, CALIF.,
August 30, 1970.

DEAR FRIENDS: Attached is a letter written by Vietnamese women whose children are in jail. I have met and talked with these women. They are mostly very poor, supplementing their family's meager income by selling things at the marketplace or working as laborers. They want to know what has happened to their children since they were arrested.

"Please help me to find out if my child is alive or dead," one old woman asked me, tears running down her cheeks. "I must know what happened to him before I die."

Eighty women, all who have children in jail as political prisoners, met from 6 p.m. to 9 p.m. on August 27 to try to find a way to get decent treatment for their children. With them was Mrs. Ngo Ba Thanh, an internationally known lawyer with a PhD from Columbia who has herself spent over two years in jail for speaking out for peace. The women decided to take advantage of Vice President Spiro Agnew's visit to write him a letter asking for basic prison reforms. "The United States must share the responsibility for the torture and injustice within the Vietnamese prison system," the women said. After all, their children had been arrested by policemen paid by the U.S. (the U.S. spends more than twice as much on "Public Safety" as on Education in its economic aid program to Vietnam), the tear gas and other tools of repression are "made in USA." the U.S.-financed Phoenix Operation and U.S. military operations are responsible for the arrest of many of those imprisoned. When the women have talked with the few who have been released from the prisons, they are told of the American advisors in the prisons. They wrote Vice President Agnew: "The role of the American advisors should be to improve the prisoners' conditions, not merely to watch the tortures done to our children who suffer from hunger, thirst, disease and survive in agony in jail."

But they could not meet Vice President Agnew—or even get their letter to him before he left Vietnam. When they went to the U.S. Embassy at 8:00 a.m. on Friday morning, the American MPs would not let them into the embassy. No one could enter the embassy because of Agnew's trip. The MPs would not telephone anyone inside the embassy to come out and meet the women. Nor would they accept the letter and take it inside for the women. "No is No," one of the MPs told Mrs. Thanh.

"Whenever the U.S. officials come to Vietnam, they talk only to the government officials and not to the people," said Mrs. Thanh. "If the U.S. wants to understand the aspirations of the Vietnamese it must talk to the people."

At three p.m. an officer at the U.S. Embassy received the attached letter from the women whose children are in jail. But the Vice President had left four hours earlier. When I met the women at 7 p.m. that night after they had learned that their letter did not reach Vice President Agnew before he left, they were sad and angered. They do not believe Agnew will ever read the letter.

They had tried to tell the story of what was happening to their children, but failed. I promised them that I would let my friends in the U.S. and Europe know about their letter. Now I ask you to let as many people as you can know about the day the mothers whose children are imprisoned could not meet the Vice President.

Sincerely,

DON LUCE.

COMMITTEE OF WOMEN ACTION FOR THE RIGHT TO LIVE.

Mr. SPIRO AGNEW,

Vice President of the United States of America, c/o the U.S. Embassy, Saigon.

DEAR MR. VICE PRESIDENT: We know that your visit to Vietnam is connected with the making of important decisions. We also know that you are a father, the head of a family. As a father, you have deep love towards your children and you have experienced moments of anxiety when your children are in danger. As a leader of your country, you have many concerns on the South Vietnamese Government action. It is with this knowledge that we are taking the liberty to write to you this letter.

We are the Mothers of the political prisoners detained in the various prisons of South Vietnam. None of our children is convicted of crime or robbery. All of them are being imprisoned because they have dared spoken of Peace and Independence, a most profound desire of all the Vietnamese People after years and years of war. Our children were arrested and barbarously tortured. They have been denied food and drink, even medicine when they are sick. The limited amount of medicine provided to the prisoners by the American aid have been continously smuggled or stolen by the prisons' authorities. We only learn about the terrible living conditions of our children through statements by recently released prisoners and report made by the U.S. Representatives Anderson and Hawkins after their investigation of Con Son Tiger Cages and the living conditions of the prisoners.

However, up to the present time, we still have not been allowed to visit or keep in touch with our children despite renewed requests. We have no means to send food to them at all. Only one exception has been given to those mothers who were allowed to visit their children once on August 25th, 1970 at the Chi Hoa prison. We have witnessed our children's health situation. After continous beatings, their bodies were swollen; when they were allowed to see us, they could not even walk and had to be helped by two guards. Such is the actual result of our govvernment system of repression.

Most of our children were tried by the Military Field Court, a Court which was held unconstitutional by the Supreme Court. Yet. our children have not been released. Some of them have never been tried at all.

As a father, as a leader, you are coming to Vietnam to understand our people's aspirations for Peace and Justice. We, the Vietnamese Mothers, want to speak out the terrible sufferings of thousands of mothers who have their children being tortured and ill-treated in jail. We wish to directly inform you about the crimes committed under the prison system of South Vietnam. *We hope to have privilege of meeting you while you are here.*

You would have to agree that the U.S. Government somehow has to be held jointly responsible for the prison system in South Vietnam, since:

The police forces which arrest and repress our children are being paid by the Americans.

The equipment used by the Police to repress, torture and jail our children are part of the U.S. aid. The tear gas, the rockets used to repress them are "made in U.S.A." We actually witnessed the terrible repression being carried out right in front of the U.S. Embassy when we and our foreign friends demonstrated against the prison system on July 11th, 1970.

The Phoenix operation, the result of which a great number of "suspected" Vietnamese people have been arbitrarily arrested and imprisoned directly by American authorities in Saigon.

In the military operations, U.S. and Allied Forces have arrested and tortured many innocent Vietnamese farmers at the Intelligence Agencies or turned them to the South Vietnamese government for further detention without any "due process of law".

Our children witness the presence of American Advisors at the prisons. They know that more aid is being given to build more and bigger prisons.

Before such evidence it would be hard to deny and just say that the U.S. is not responsible for the prison system of South Vietnam. The roll of the American advisors should be to improve the prisoners conditions, not merely watch the tortures done to our children who suffer from hunger, thirst, disease, and survive in agony in jail.

We wish to meet you and let you know more specifically about our concern. May we ask you to convey to President Nixon, the American Government and the U.S. Congress our requests that urgent improvement on the prison system can be done. Our requests are primarily the following:

1. No citizen shall be arrested without lawful ground.

2. All prisoners should be provided with proper food and drink, and should be given appropriate care when they are sick.

3. The prisoners relatives should be allowed to correspond, visit and send extra supply to the prisoners.

4. The prisoners should be allowed to write to their families.

5. Relatives of prisoners should be immediately reported when the prisoners are arrested.

6. Corruption practice in prison should be immediately abolished so that our children's food rations are not taken away.

7. The present policy of using non-political prisoners (criminals, thieves . . .) to watch political prisoners should be immediately abolished.

8. Our children should be allowed to do some reading in jail for their own culture.

9. The prisoners whose jail terms have expired must be immediately released.

10. Those prisoners who have not been tried should be released or put on further trial by a constitutional, civil court.

11. Those prisoners who were tried by the Military Field Courts should be released or retried by a civil court if they are supposed to be guilty.

12. The old, sick and under-age prisoners should be released.

13. There should be a change in the jail staff system.

14. Tiger cages, Cattle cages, mysterious caves, separate cells, discipline cells and rooms used for inhumane tortures should be abolished, not only at Con Son but also in all the prisons throughout South Vietnam.

15. The "Coolies of the Battle-fields" system used for military prisoners and "released" political prisoners should be abolished.

16. When a prisoner dies, his body should be returned to his family for proper burial.

We also ask you to urge the American authorities to immediately end their acts of cruelty toward political prisoners and instruct them about our above mentioned requests.

In short, we want our children to have enough food, drink and medicine; their physical as well as moral life to be decently dealt with. They are not criminals but young courageous people who dared to stand up and voice for Peace. Peace is the deepest aspiration of all the Vietnamese people. Therefore, our children who are struggling for the cause of Peace and have been arrested and barbarously tortured should be considered as "Peace Heroes."

Hoping that thanks to your responsible and efficient intervention, our children will soon be removed from the present inhuman prison system of South Vietnam, may we convey to your family our best wishes of luck and happiness.

Respectfully yours,

Representatives of the Mothers whose children are being detained in the various prisons throughout South Vietnam, in the Tiger Cages, in the Disciplinary Cells . . . without trial or tried by unconstitutional Courts, or have served their jail-term or have been arrested during military operations (US, V.N. Allied).

THE PROBLEM OF ADEQUATE NUTRITION

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. COHELAN. Mr. Speaker, the problem of adequate nutrition continues to be one of the most pressing problems for many of the nations of the world.

As a member of the Appropriations Foreign Operations Subcommittee, I have been intimately involved with United States and multilateral programs that assist other nations in food production and distribution. In my service on this subcommittee, I have been interested in new methods and approaches to lessen the food gap.

At the recent Second World Food Congress at The Hague, Mr. Russell Baum, vice president of Foremost Food Co., presented a provocative paper on this problem. This paper outlined a multifaceted approach to solving the food problem.

I commend this paper to my colleagues:

TALK GIVEN BY RUSSELL H. BAUM

I am Mr. Baum, U.S.A. Private Industry. Mr. Chairman, Ladies and Gentlemen:

We have heard time and time again the developing countries' justifiable statements that their agriculture and industry must be built without undue exhaustion of their capital or an exploitation of their resources. We also realize that the necessities of food and shelter must be supplied at a minimum cost. These conditions are not suited to private commercial investment but, Mr. Chairman, there is another way in which private business can, with the cooperation of a host government, develop and harness the resources of a country to improve its standards and maintain its sovereignty over these resources.

Private business can participate with its management know-how and technical skills; these can be offered without need of venture capital investment.

I suggest this Commission consider the following as a program to harness all available resources:

1. The host country government accept the desirability and necessity of an agribusiness project and the investment responsibility for such a project, their sources for funds to be determined by them with assistance as necessary by one or more public sector agencies, foundations, or multilateral organizations.

2. The assignment of the responsibility for the economic and efficient determination and design of the project facilities as well as the manufacture, distribution, management, and marketing of the finished product would be through contract with an agribusiness company in cooperation with private local enterprise.

This could result in the following:

1. The host country government, in accepting the responsibility for the project and the requisite funds, would furnish land improvements thereto and access to the manufacturing site as well as buildings to house processing and storage facilities plus all available utilities. The country would further accept the responsibility for the organization of the agricultural community, product subsidy support, and regulations as necessary to promote development of basic indigenous raw materials.

2. As previously determined, the public sector agencies or multilateral organizations—

a. Would provide funds for surveys and project feasibility studies.

b. Would provide surplus raw materials and/or funds for such during the early project years to supplement local supplies until production from local sources is adequate.

c. Would loan or assist in finding funds for processing equipment and agricultural implements necessary.

d. Would provide or assist in obtaining loans for distribution equipment and for working capital requirements on a long-term, low-interest basis.

e. Would assist local agriculture in developing an adequate supply of raw materials needed through the loan of funds and through providing technical expertise.

3. Private industry—

a. Would conduct the surveys to determine the appropriate food products to be processed and distributed.

b. Would develop finished product formulae and processing technology in accordance with survey specifications.

c. Would design, engineer, plan and procure, ship and install processing and other equipment to accommodate finished product technology.

d. Would plan, organize, and supervise construction of site and buildings.

e. Would provide engineering, technical, and plant operating personnel to start up and *to train local staff* and manage and operate the plant on a fee basis.

f. Would plan and organize a system of distribution with local distributors and *to train local staff* and manage and operate finished product distribution.

Mr. Chairman, this concept is intended to cover instances in the developing countries in which private enterprise cannot justify investment on the basis of a return on its investment, either for the short or medium term.

This concept is compatible with free enterprise since private companies will provide the know-how in technical, management, and distribution services so that the projects are successfully conceived, installed, and operated, and will be compensated for such services on a fee basis.

Finally, provision can readily be made for the eventual equity participation by private enterprise and the local public by offering the equity to private investors at any point in time when the project is in effective operation and when its economics warrant such investment by private capital.

DEFENSE DESERVES HIGH PRIORITY RATING

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Fort Worth Star Telegram for September 7, 1970 entitled "Defense Deserves High Priority Rating." I commend its reading to all who want and desire peace:

DEFENSE DESERVES HIGH PRIORITY RATING

To a large extent the arguments over spending by the federal government are disputes over priorities. Some members of the House and Senate who have sought more costly programs for domestic assistance programs such as urban development, education and welfare have defended their positions by saying they sought no increase in budgeted spending totals but hoped to reduce the spending for defense and space programs.

There would be much more agreement on the overall aim of economic soundness if there could be more on the questions of where to spend money and where to try to save money. Some unrealistic arguments are heard when the question of defense spending vs. financing of domestic programs comes up.

The idea that war is bad and peace and prosperity are good, an idea that is so obviously correct that there is no argument against it, is used with some strange twists to make points in cases where it has no proper application.

There is no valid application, for example, in using this to make dangerous restrictions in the nation's defense capability. The defenses of America are maintained not to make war but to preserve peace. When we are unable to make aggression too costly for a conquest-minded opponent to undertake, we will become victims of conquest.

The maintenance of peace at home and the making of better lives for our people will not be aided by neglect of our defenses. The maintenance of an adequate defense is a necessity if any domestic programs are to have any value. Without a country they would be worthless.

There can, of course, be arguments about the country's foreign policies. There can be genuine disagreement about whether they do or do not contribute to the most peaceful prospects for the future. There can be arguments about the efficiency of defense programs. There is no good argument to be made that it is safe to neglect the nation's defense.

A report by the British Institute for Strategic Studies notes that the Soviet Union now is approaching parity with the United States in nuclear arms. For a long time our superiority has caused Moscow to be cautious enough to avoid a real confrontation. Our superiority has meant safety for ourselves and for Western Europe.

We have seen in places like Czechoslovakia and Hungary what little respect Moscow has for countries unable to protect themselves.

The report also shows that the Soviets have built up the Arab defenses so that they have great superiority in quantity, if not in quality, over the Israelis. Cuba, it finds, has more combat aircraft than any other Latin American country and more men under arms than all except Brazil and Argentina.

The Soviet Union has recently become a world naval power, now equipped with new and modern vessels. Our naval power is not being maintained in comparison.

The idea that war is bad is not a valid argument against being prepared for it. Proper preparation is the best way to avoid the necessity of defending ourselves. It is not a valid argument to put defense in a low position on the nation's priority list.

RENT SUBSIDIES DISCOURAGES WORKING NEIGHBORS

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. COLLINS. Mr. Speaker, let me read you a letter I received from a fine young mother down in Grand Prairie, Tex. There is no way to explain why people who work pay $1,200 down on their mortgage while the welfare family pays only $200 down on their house. The welfare neighbor with the bigger home has an $88 monthly payment whereas the young couple who both work have to pay $166 monthly payment. Can you understand the logic of this system. Are we discouraging the hard-working, ambitious, middle-class folks who are the base of our country:

The people in this neighborhood and myself would like you to explain something to us.

We are all young couples with children who own a home in a new housing development. My husband and I have worked for four years to save the money for the down payment on this house, $1200. Our payments are $166 a month at 8½% interest. We like the other couples in this neighborhood are almost starving just to make our house payment. We were informed a couple of weeks ago that the rest of the homes in our neighborhood are going to be on the new government loan 235. $200 and you move in with $88 house payments. Their home is larger and more expensive than ours! Like the other couples in this area we saved for years to buy this home and stay out of slums and

low class areas because of our children. The government then gives the [Welfare] a free ride, at half the price and moves the low class and slums to us. This has also dropped our property value a considerable amount.

I met the couple next door that has this new type of loan. They drive two cars and one is new. They both work, so they have a larger income than we do. They asked us if we would pay half on a new fence they are going to install, but of course we don't have $88 house payments, so we can't afford to even pay part.

Now, they are the welfare case and we're supposedly the middle class. I'll ask you, who lives better the welfare or the middle class?

If the government keeps treating the middle class the way they are now, they're not going to have just a few riots they're going to have the whole country in a riot. Wouldn't it be a change for the middle class to riot? Or we might all decide to go on welfare since they live better than we do."

ROSENTHAL INTRODUCES BILL TO BAN ALL SALES PROMOTIONAL GAMES

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. ROSENTHAL. Mr. Speaker, the sales promotional games which we see so often in supermarkets, grocery stores, and magazines, are deceptive "come-ons" designed to build consumer patronage through the use of spurious advertising which bears no relation to the quality or price of the product advertised. These games attempt to entice the consumer into thinking he stands an excellent chance of winning some fabulous prize. But the facts show that there are very few winners. An average contest has anywhere from 100,000 to 100 million entrants or potential entrants. Only a small percentage of the prizes promised are ever given out, and even if these sales promotional games were honestly run, the odds against winning would still be remote.

Sales promotional games are an abuse of the consumer's confidence. Everywhere he turns he is confronted by pleas to enter a contest and win a prize. Often the consumer buys the advertised product merely to enter the contest, or to improve his chances of winning the contest.

This is a questionable advertising practice which obscures the considerations of price and quality in competition.

The element of chance is already far too prevalent in the marketplace, due to the uneven quality of the products sold. In addition, the cost of these games is passed on to the consumer whether he wins the contest or not.

For these reasons, I have introduced a bill yesterday that would prohibit sales promotional games by designating them as a deceptive trade practice. Similar action has already been taken by Nebraska, Wisconsin, and Virginia. By amending the Federal Trade Communication Act to make these games unlawful, we shall eliminate some of the exploitive practices of advertisers which distract the consumer from the primary considerations of quality and price, and add to the cost of every consumer item.

JAMES C. STAHLMAN, PUBLISHER, PRESENTED LEGION'S FOURTH ESTATE AWARD

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. QUILLEN. Mr. Speaker, down through the years while serving in publice office, I have become acquainted with thousands of persons from every walk of life, and I feel fortunate that I have made friends with many of them.

One of these persons I consider as a personal acquaintance is Mr. James C. Stahlman, owner and publisher of the Nashville Banner, one of the outstanding newspapers in Tennessee and the South.

In addition to his friendship, Mr. Stahlman has gained my utmost respect down through the years for his untiring and unceasing efforts to promote the cause of freedom and democracy in America.

Mr. Stahlman also has been an inspiration to others, who, like himself, have stood up and fought for the principles of good government and Americanism.

Recently, Mr. Stahlman was presented the American Legion's coveted Fourth Estate Award in recognition of his "distinguished public service and for furthering the principles of Americanism."

An article concerning the presentation appeared in the Banner, along with Mr. Stahlman's remarks in accepting the award and the remarks of American Legion National Commander J. Milton Patrick as he presented the award to Mr. Stahlman.

For readers of the RECORD, I am submitting the newspaper article and the remarks of Mr. Stahlman and Mr. Patrick:

[From the Nashville Banner, Sept. 3, 1970]

AMERICAN LEGION HONORS STAHLMAN—BANNER PUBLISHER RECEIVES HIGHEST AWARD AT NATIONAL CONVENTION IN PORTLAND

(By Ken Morrell)

PORTLAND, OREG.—James G. Stahlman, owner and publisher of the Nashville Banner, today was presented the American Legion's coveted Fourth Estate Award, one of the highest national honors it can bestow, in recognition of "distinguished public service and for furthering the principles of Americanism."

Stahlman received the award from American Legion National Commander J. Milton Patrick in colorful ceremonies before 25,000 Legionnaires and guests attending the Legion's 52nd annual convention in Portland's Memorial Coliseum.

The 60-pound bronze-on-wood plague bore the signatures of the national commander and C. D. (Deke) DeLoach, chairman of the National Public Relations Commission and retired operating chief of the Federal Bureau of Investigation.

TENNESSEE LEADERS

Joining Patrick for the presentation were Commander Percy C. Miller of Nashville, Adjutant Barney Greene of Nashville and Roscoe D. Curtiss of Columbia, a member of the Legion's national public relations commission which selected Stahlman as one of the two newspaper publishers to receive the high tribute.

fin of Nashville, a member of the Legion's

Others participating were Walton D. Griffnational finance committee; Jay Harville, Rogersville, the Tennessee Department's alternate national executive committeeman; Sam L. Latimer Jr., editor emeritus of the Columbia State of Columbia, S.C., vice chairman of the national public relations commission of the Legion; James C. Watkins, national public relations director of the Legion; William B. Cain of Columbia, immediate past department commander; Joe F. Hudgens, Nashville, Tennessee director of veterans affairs; and Ollie T. Frith, Nashville, a past department commander. Curtiss, Griffin, Harville and Hulgens are also past department commanders.

Also receiving the Fourth Estate Award was Jenkin Lloyd Jones, editor and publisher of the Tulsa, Okla., Tribune.

His syndicated column appears in about 150 newspapers including the Banner.

Patrick, whose home is in Skiatook, Okla., described Stahlman and Jones as "two of the nation's most distinguished publishers" and commended their untiring efforts to advance the principles of Americanism.

The national commander noted that Stahlman is in his 40th year as publisher of the Banner, which he praised as "one of the South's most distinguished newspapers." Stahlman has been associated with the Banner for 58 years, beginning his newspaper career as a cub reporter, and has served in every reportorial, editorial and managerial capacity. He became publisher in 1930, and sole owner in 1955.

In remarks preceding the presentation ceremonies, Patrick told the Legionnaires and guests that the Legion established the Fourth Estate Award because of the "importance of the role of the press in our society" to recognize those who have made outstanding contributions in the mass communication field.

"All that America has achieved throughout her nearly two centuries of nationhood," Patrick declared, "has depended on the emphasis that we as a people have placed on freedom. And for that matter, all that we can hope to achieve in the future as a society will depend on how we handle freedom . . . our integrity of purpose . . . and in how we maintain the basic condition to all freedom—freedom of the press."

Both Stahlman and Jones, he said, have played leading roles in preserving that freedom which the commander asserted is needed "as we seek light in these troubled times."

Both of the recipients of the Fourth Estate Award, he said, have several parallel accomplishments in their careers. "Both have been honored by their profession by being elected head of important professional groups, both have been honored for their professional competence and both served as Navy officers during World War II," he added.

Stahlman, a Legionnaire for 52 years, said in his response that the American Legion and its 2.7 million members represents "the greatest, most influential group of American patriots on the face of this badly muddled earth."

"Your Legion button, your Legion membership are evidences of your devotion to the United States of America whose uniform you have worn with honor and distinction in time of war and whose Flag you respect and saluate with pride in time of peace," he said.

Expressing his own gratitude "from an overflowing heart," Stahlman commended Jones for his "dynamic, courageous forthright" service to his country. The immediate

past president of the United States Chamber of Commerce, Jones has been associated with the Tulsa Tribune since 1933 and is a former president of the American Society of Newspaper Editors.

The Banner publisher, closed his response by reading the inspiring tribute to The Flag, entitled "Old Glory Speaks," written by the late Amos Hurley of Montclair, Calif.

Stahlman noted that it was "a gallant old seaman," the late Capt. William Driver, a native of Nashville, who gave The Flag its name of "Old Glory," more than 100 years ago.

He also paid tribute to the memory of the late Mr. Hurley, past commander Sunshine Post of the American Legion in Montclair, Calif., who died on Aug. 17. The late Mr. Hurley's classic essay, "Old Glory Speaks," appeared on the front page of the Banner on June 13 in observance of Flag Day in Nashville.

The Banner publisher, accompanied by Mrs. Stahlman, also was a headtable guest Tuesday night during the National Commander's Banquet for distinguished guests. Red Skelton, the famed television comedian and the recipient of the 1970 American Legion National Commander's Award, delivered his impressive version of the Pledge of Allegiance at the dinner.

Elsewhere in the city, thousands of so-called antiwar demonstrators have been gathered all week, in sharp contrast to the atmosphere of patriotism which has filled Memorial Coliseum. But Gov. Tom McCall alerted 6,000 National Guardsmen in event they were needed to maintain law and order.

A delegation of nearly 80 Legionnaires from Tennessee was in the audience in the huge coliseum for the presentation of the awards to Stahlman and Jones.

The presentation highlighted the closing session of the Legion's weeklong convention along with an address by Sen. Henry M. Jackson, D–Wash., a member of the Senate Armed Forces Committee. Holding its convention in Portland, the "City of Roses," for the third time, the Legion Wednesday honored Rep. Olin E. Teague, D–Tex., a member of Congress since 1946 and chairman of the House Committee on Veterans Affairs, by conferring upon him its national Distinguished Service Award for 1970.

Because of his long service to the Legion and programs it fosters, Stahlman previously has been honored by the organization at the state and national levels.

In 1949, he received the Legion's national editorial trophy and the Tennessee Department presented him its Andrew Jackson Award "for outstanding patriotic service" in 1966. He was selected as the keynote speaker for the Tennessee Department's convention in Memphis in 1968.

The publisher also has received two George Washington honor medals from the Freedoms Foundation.

The Legion convention including about 13,000 delegates plus auxiliary members and guests for a total of about 25,000 in attendance, brought Legionnaires from the 50 states, the District of Columbia, Mexico, Canada, France, Italy, Puerto Rico, Panama Canal Zone and the Philippines.

Dozens of other prominent speakers included Gov. Luis Ferre of Puerto Rico, Portland Mayor Terry Schrunk, Gov. McCall, Maj. Gen. James F. Cantwell, president of the National Guard Association of the United States; Irving Feist, president, Boy Scouts of America, A. Boyd Hines, national director, Boys Club of America and numerous military and veterans affairs leaders.

Also on the program were Thomas A. Miller, president of the Society of American Legion Founders; Robert H. Hazen, president of the 1970 American Legion National Convention Corps.; Loren Kuske, immediate past commander of the American Legion of Oregon; Donald E. Johnson, administrator of veterans affairs and H. Ross Perot, the Texas businessman who has used part of his personal fortune in efforts to establish contact with American prisoners of war held by the North Vietnamese.

INCREASING TAX BURDENS

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. WALDIE. Mr. Speaker, increasing tax burdens have been an increasing concern to Americans in all economic brackets. It is even a greater concern to them that, seemingly, large money interests are able to insulate themselves from their proportionate share of the tax burden.

Mr. Max Schlegel of San Pablo, Calif., a constituent of mine, calls attention to this fact and assesses the problem very articulately.

His remarks follow:

Mr. JEROME R. WALDIE,
Congress of the United States, House of Representatives, Cannon House Office Building, Washington, D.C.

DEAR MR. WALDIE: I read your newsletters with interest. With these letters you reach individuals of all classes. In your work you are exposed to lobby forces. These forces, by the large, represent money interests.

As you know money interests have a tendency to grow and human interests to decline.

During the past five years, I have worked (semi-retired) as a tax accountant. Prior to retirement I worked for the Internal Revenue Service—as field auditor and as Appellate Conferee.

Within the range of this experience I have worked with wealth and with poverty from a tax point of view.

The more I work with tax law, the more it is brought to my attention the lobby force of money interests in its enactment and modifications.

I set up depreciation schedules for money investments. And, I set up depletion schedules for natural resources such as oil and timber. But, I do not set up either depreciation or depletion schedules for the individual wage-earner. He has quite a bit invested in natural resource and living costs. Apparently, however, he had little to say about the tax law.

I watch with interest the way inflation is to be controlled. The rate of interest is increased. This puts more wealth in the hands of the wealthy. Unemployment is increased. This makes the poor more poor. We are told that the mass are buying too many groceries and too many luxuries. We are not told how many groceries or how much luxury indulgence the wealthy few have. It apparently is not the expenditure that is important. Rather, it is who does it.

I have no reason to complain personally. And, I am sure you have no reason to complain personally.

Solely for the purpose of considering a point of view and solely for the purpose of stimulating your thoughts within the framework of that point of view; suppose, the President of the U.S., Congressmen and others in our National leadership lived within and were economically tied into a poverty environment. This, of course, would be substandard in all respects—food stamps, and not enough to eat and the rest of it. And, with no prospects of anything else.

Under these conditions and within this framework of experience and prospects for the future; would the judgments made by our leaders be the same as they have been? Would you decide to check inflation by increasing the interest rate and increasing the unemployment rate? Would you decide to do the many things in the way you have—or, would there be another point of view? I speak of "you" as consensus of leadership that influences the lives of U.S. population, generally.

It is sometimes difficult to reconcile judgments made by our national leaders with the proposition that our government is by the people and for the people. It would be easier to support a position that these judgments are on the proposition that our nation is founded on money and for money for the benefit of a limited few who are permitted to control it.

I take no position; and I have no answers. Questions do come to mind—and I pass them on to you.

Respectively,

MAX J. SCHLEGEL,
Tax Accountant.

WGN EDITORIAL

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. DERWINSKI. Mr. Speaker, politics is in the air and it is necessary for us to appreciate the lighter moments that arise in political commentary. One of the genuinely human political editorials that has come to my attention was the WGN Radio TV editorial Tuesday, August 11, commenting on a personal adjunct to the Michigan senatorial campaign:

WGN EDITORIAL

Michigan Republicans have voted for another Romney. Mrs. George Romney, wife of the former Governor and present Secretary of Housing and Urban Development, has been nominated for a race against Democrat Philip Hart in his bid for re-election to the United States Senate. We don't know how it will come out in November, but, it's interesting to speculate on a Romney victory.

Let's say a man in Flint or Lansing is unhappy about a federally-financed housing project in his community. He writes to his Senator, Mrs. Romney. Being new to her job, she may not know all about the project, so she checks with the appropriate agency, the Department of Housing and Urban Development.

And she gets an answer that she doesn't like, one that won't satisfy her constituent. At dinner that evening, *Senator* Romney says to *Secretary* Romney:

"George, dear, what about this development in Flint? My staff got some evasive answers from your staff today."

And the Secretary says:

"Well, Lenore, you know how it is with bureaucracy. I'll see what I can do when I get to the office in the morning."

"All right, George, but if I don't get the right sort of answer, I may have to suggest that my committee look into the entire operation of your department."

"Darling, is that a threat?"

As we said before, we don't know whether Mrs. Romney will be elected, but it's certainly interesting to conjecture on what might happen if she were.

CAMPUS UNREST COMMISSION CREATING UNREST

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. ASHBROOK. Mr. Speaker, as time draws near for issuance of its report, the President's Commission on Campus Unrest is receiving a generous amount of criticism from various sources. Although a product of the Nixon administration, the Commission was attacked last Saturday by the chairman of the Senate Republican Policy Committee, Senator GORDON ALLOTT, as being "flamboyant, inflammatory, prejudged, and irresponsible," whose efforts might well turn out to be a "flaccid whitewash" of campus radicals' disruptions and possibly "pour kerosene on the flames" of new campus violence this fall.

An Evans-Novak column on the Commission appearing in the Washington Post of September 2 reports on the possibility that the Commission's pro-student bias might prevent a hard, objective appraisal of this serious problem of campus violence.

It will be recalled that a number of recent witnesses before the Commission was more preoccupied with attacking the Nixon administration than with appraising objectively the campus situation and the role of extremists in the violent disruptions, with one student body president calling for the impeachment of President Nixon. From the tone and content of some of the statements, one might well have wondered if he was listening to the usual oratory at a National Democratic Convention.

The August 22 issue of Human Events offered a possible explanation as to why a Republican-appointed Commission investigating such a serious national issue could at times be used as a political football. In reviewing the backgrounds of some of the staff members of the Commission, Human Events has found that a goodly number of liberal Democrats are ensconsed in Commission positions, explaining possibly why President Nixon and not student radicals is labeled as the culprit.

At this point in the RECORD I include the above-cited Evans-Novak column and the August 22 item from Human Events.

CAMPUS PANEL'S PREDICAMENT

The predicament now facing the President's Commission on campus unrest was pointed up last week when a worried young public official paid a quiet visit to the commission's offices in Washington.

The visitor was Mayor William D. Dyke of Madison, Wis., a 40-year-old Republican who has confronted carefully escalated violence pouring out of the University of Wisconsin in his city of 260,000 ever since his election in 1969. Without fanfare, Dyke conferred with the commission, former Gov. William W. Scranton of Pennsylvania, and top commission staffers.

Dyke's story, backed up by stacks of documentary evidence simply could not have been believed a few years ago. The bombing of the Army Mathematics Research Center on the Wisconsin campus Aug. 24 was no isolated incident but the culmination of a full year of guerrilla warfare on the university by a radical army—armed and trained—of students, non-student "street people," teaching assistants, and some full-fledged faculty members. Futhermore, there is hard intelligence of rising violence ahead when the university resumes classes this month.

What made the mayor's visit so significant was the commission's de-emphasis of this well-planned student revolution in its public hearings. Whether or not those hearings displayed a pro-student bias (vigorously denied by Scranton), it is undeniable that they did not probe deeply into campus revolutionary activities.

Actually, preliminary drafts of the commission's report take a hard line against nihilistic violence. But that raises the commission's real predicament: can it credibly oppose such violence while being sympathetic generally to student dissent and protest.

It was just such apprehension of a permissive line by the commission that led Mayor Dyke, in Washington ostensibly to confer with Justice Department officials about the crisis of law-and-order in Madison, to slip over to the commission for a visit with Scranton.

According to commission sources, Scranton and Dyke discussed only the Wisconsin situation and not the question of commission recommendations. If they had been discussed, however, it is doubtful that Scranton would have been congenial to Dyke's proposed recommendations: new legal authority for police to deal with campus mobs; the restoration of the now politicized university as an educational center; return of university-imposed discipline on students, even to the point of reestablishing curfews and dormitory regulations.

Such a hard line could scarcely be further removed from the commission's tone until now. The portion of the Washington hearings reproduced on television had such a strong pro-student tone that the commission received a pleasant feedback from the campus. That, say some commission staffers privately, was the commission's undoing.

Since then, the commission has seemed to play for cheers from the campus. The hard-boiled investigation of quick-triggered law enforcement officials at Kent State and Jackson State was not balanced by similar investigation of the organized student terror growing on the nation's great universities.

Commission hearings in Los Angeles particularly galled some state officials there. The commission heard at length from representatives of the University of California, whose many campuses have been hives of student agitation. But neither the state college system, relatively free from violence, nor the junior college network, almost entirely trouble-free, were heard from. The shock of blood and debris at Madison hit commission members hard. A two-man investigating team left Washington for Madison the same day that Dyke arrived here. Nevertheless, all signs point to the commission's attempting to separate violence of the Wisconsin variety from supposedly legitimate dissent.

Contradicting the commission's point of view is a poignant letter to a public official written last May by a 19-year-old Wisconsin coed. Contending that "this university is in real danger of falling apart because of lax discipline," she added: "I really feel that the lawmakers and the university officials have let down the students who are here to learn. My rights are infringed upon often".

Such thoughts constitute virgin territory for the Scranton commission, as it hurries to conclude its report. Yet, to critics of the commission, responsibility of permissive university administrators for the mounting wave of campus violence is at the heart of the great crisis of liberal education in America and must be examined.

SCRANTON PANEL STACKED WITH LIBERAL DEMOS

Republican lawmakers are worried that the free-wheeling President's Commission on Campus Unrest, set up to probe the causes of college disturbances in the wake of the bloody riots at Kent State, is now being carefully crafted into an exploding booby trap, designed to blow up in the face of the Nixon Administration just a few weeks before the November elections. The commission, or at least some of its key staffers, is also said to be engaged in a possible plot to undermine the re-election bid in California of Gov. Ronald Reagan as well as those of other conservative Republican candidates.

This strong suspicion, alarmist though it may seem, has been reached not only by a number of GOP congressmen but also by important administration officials. So worried have several White House staffers become about the situation that they are working to delay publication of the panel's report—due to be issued October 1 at the latest—until after the elections.

Concern that the panel report might wind up an a major indictment of the Nixon Administration has existed ever since the commission opened public hearings in the Nation's Capital in mid-July.

Headed by former Gov. William Scranton, the nine-man panel paraded before it a steady stream of strident anti-Administration witnesses, many of whom harshly condemned both the President and vice president. Typical of the testimony was that delivered by Northwestern University student body President Eva Jefferson, whose suggestion that the President be impeached met with cheers from the standing-room-only crowd.

Yet even more disturbing, so far as the Administration is concerned, is the discovery that the panel, under the clever guidance of William (Matt) Byrne, its executive director, is turning into a haven for ambitious Democratic politicos, none of whom would be particularly opposed to having the commission come up with a major anti-Administration document.

Indeed, so cluttered is the commission with Democrats and their liberal camp followers that one newsman has labeled the panel "the most audacious fifth column" operating in Washington. Reasons for this pungent description are not difficult to see. For instance:

William Byrne, the commission's executive director, is described by one of his admirers as a "moderately liberal Democrat." Named to a U.S. attorney's post by President Lyndon Johnson in 1967, Byrne is known to have been working behind the scenes on behalf of Charles O'Brien, a liberal Democrat who is running for attorney general this year in California.

John Van de Kamp, a special assistant in charge of administration, was Rep. Barry Goldwater Jr.'s Democratic opponent in 1969. Once slated for a top post with Sen. Alan Cranston (D.-Calif.), Van de Kamp has been prominent in his support of Jesse Unruh's bid this year to unhorse Gov. Ronald Reagan.

Special investigator Douglas Dalton is a long-time liberal Democrat, active in California politics. Dalton, moreover, is a partner in the law firm of former Democratic Gov. Edmund (Pat) Brown, whom Reagan defeated in 1966.

Rep. Goldwater, who has been digging

deeply into the commission's operations, broke the news last week that of seven special investigators appointed on August 3, five of the attorneys served with the extremely liberal Civil Rights Division of the Justice Department under JFK and/or LBJ. A sixth was Dalton. The seventh, Peter Nickles, is associated with the prestigious Washington law firm of Covington and Burling, long associated with the Democratic party.

Nor is this all. Owen Fiss, an official with the Justice Department's Civil Rights Division under both Kennedy and Johnson, has been selected as a top research consultant. John Kirby, the deputy director, who actually served in Nixon's law firm, is described by a former classmate as philosophically "a liberal Democrat." Also interesting is that Jim Arthur is in the crucial position of administration officer. Arthur, a political independent, helped staff the Kerner commission, whose report in 1968 on racial disorders resembled the platform of any liberal Democrat.

Not only is the staff packed with liberal Democrats and their ideological allies, but the panel has clearly slanted its hearings against the Administration in favor of student radicals. Out of dozens of student witnesses appearing before the panel thus far, only one, Young Americans for Freedom Chairman David Keene, has expressed a right-of-center viewpoint. Keene, moreover, apparently would not have been permitted to testify except as a result of pressure from the office of Vice President Agnew. A number of student conservatives, furthermore, have asked to testify but have so far been ignored or deliberately frozen out.

Commission members, who include militant firebrand Joseph Rhodes, have been bombarded with the radical point of view.

The panel, for instance, recently invited testimony from Dr. Richard Flacks, an associate professor of sociology at the University of California at Santa Barbara. Flacks assailed the police and suggested that the Nixon Administration had given rise to the campus disorders by providing no "promising alternatives" to "war, racial inequality, squalor and environmental destruction."

While most of the commission members may have believed Flacks to be an objective scholar, the staffers had actually palmed off on the panel a full-blown radical (see *Human Events*, August 15, page 3). An SDS founder and Viet Cong sympathizer, Flacks has been a long-time promoter of the New Left. The panel's tolerance for such characters may be partially traced to the fact that Charles Hamilton, who with Stokely Carmichael coauthored *Black Power: The Politics of Liberation in America*, is a panel consultant.

Despite this appalling situation, however, there is a slim sliver of hope that the final report may actually be something more than just a deadly time bomb aimed at the Administration.

The hope does not lie with the panel members, who, save for Gen. Ben Davis and Martha Derthick, are considered liberal or rather naive about the student situation, but with Paul Weaver, a Harvard professor who heads up the writing team that will draft the commission report. Weaver, by all accounts, is a level-headed intellectual with a conservative bent. But many observers feel that Weaver will find it almost impossible to draft a reasonable report in the face of some of the key liberal Democratic staffers who run the commission.

Thus the belief still holds that the public report issued by the Campus Unrest commission will be the liberal Democratic campaign platform—not only for 1970 but also 1972.

RAVAGED SUMMER

HON. THOMAS S. KLEPPE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. KLEPPE. Mr. Speaker, the highly emotional character of the pesticide issue has alarmed many citizens into believing that nothing has been done to regulate and encourage the safe use of pesticides. Quite to the contrary, pesticides have a long history of strict Federal and State control.

Pesticide policy for the past 23 years has been governed by the Federal Insecticide, Fungicide, an Rodenticide Act of 1947. The FIFRA, as it is often abbreviated, requires that all pesticides shipped in interstate commerce be registered with the USDA Pesticides Regulation Division. Registry is not a simple matter. Each new pesticide that comes on the market must first go through rigorous tests and a public hearing to insure its safety.

National organizations concerned with pesticide regulation which have been in existence for years include the Federal Commission on Pest Control, the President's Science Advisory Committee, the National Technical Advisory Committee on Water Quality, the Federal Air Quality Advisory Board, the Federal Interagency Committee on the Use of Herbicides.

In addition to the basic pesticide control agencies and laws, new groups have been born since the recent pesticide controversies. The White House announced in November 1969 that a new committee on pesticides of the Environmental Quality Council was to be established and chaired by the Secretary of Agriculture. Members include the Secretaries of Health, Education, and Welfare and the Interior, the executive secretary of the Environmental Quality Council, representatives from the Departments of Defense, Transportation, and State, the Agency for International Development, and the Atomic Energy Commission. The new committee replaced the Federal Commission on Pest Control.

In July 1970 President Nixon asked Congress to approve the creation of an Environmental Protection Agency which would take over and coordinate the Department of Agriculture's authority on pesticides, the Food and Drug Administration's Pesticides Research and Standard-setting Program, and the Department of the Interior's Federal Water Quality Administration, among other agencies.

Pesticides are presenting challenges, not a disaster. However, the overreaction of the American people to a pesticide scare could cause a food shortage disaster. Most people have little knowledge about chemical and pharmacological action and, through misunderstanding, have become afraid. Let us take a look at the facts.

During the first half of 1970, Secretary of Agriculture Clifford Hardin put a ban on all uses of DDT, finalizing action which was begun in 1969 to phase out the use of the insecticide because of its total accumulative effect upon the environment. On the positive side, let's not forget that DDT helped keep the following insect-borne diseases to a minimum in the United States and the world: malaria, typhus, encephalitis, yellow fever, tick fever, bubonic plague, cholera, and dengue fever. The yield per acre of farm crops increased, crop quality improved, and production costs steadily decreased as results of the use of DDT.

At the time of its ban, DDT usage had decreased due to development of resistence to DDT in many insect pest species, development of more effective alternate pesticides, and substitution of non-persistent pesticides.

Another recent outcry has centered around the herbicide 2,4,5-T which has now been banned on more than 500 million acres of Federal lands; eliminated from use in household, aquatic and recreational areas; and canceled from use on food crops and limited on range and pastureland.

Pesticide pollution in our Nation's waterways and the poisoning of our wildlife is also of concern today. Nationwide pesticide monitoring programs carried on by the Federal Government and the States have found that environmental pesticide residues have reached a static balance between continued degradation of the pesticide and the annual input.

Wildlife populations are increasing every year. Pesticides have been used as important tools in maintaining Federal wildlife refuges and to improve the aquatic habitat of fish by removing trash fish and controlling disease.

The safest way to kill pests would, of course, be without chemicals, and researchers are moving in this direction. During the fiscal year 1969, the USDA spent about $40 million for research to develop pest control weapons which would minimize the use of chemicals. Such research has been going on for years discovering, for example, the insect sterilization technique which has curtailed the screwworm parasite in the South. Unique approaches still in the laboratory include virus insecticides, ultraviolet light and ultra-sonic sound, hormones that interfere with normal insect growth, and manipulation of insect genes. Some of these methods are years away from practical use, so judicious use of manageable pesticides must continue to be our main weapon against pests at the present. A future goal may be to aim for 90 percent insect control by other means and 10 percent by chemicals.

Agriculture simply does not have the labor and machinery available to immediately replace all herbicides. Additional cultivation, rotation changes, and farming of more land would add about $1 billion to direct production costs. If all herbicides and insecticides were banned, consumers might have to spend 40 percent of the budget for food, as is the case in some countries. Only 1 hour of farm labor last year produced 7½ times as

much food and fiber as it did 50 years ago, 4 times as much as it did 25 years ago, and 2½ times as much as it did 15 years ago.

Quality and quantity of food would decrease if all herbicides and insecticides were banned. Would the Nation be willing to put up with sub-quality foods in decreasing amounts and at higher prices to satisfy people who would ban all pesticides?

Flourishing insects are enjoying the effects of Eastern insecticide bans. An invasion of red and blue polka-dotted gypsy moth caterpillars into Long Island has been described by agriculturalists as the worst of a century. Connecticut is concerned because of a double invasion of gypsy moths and canker-worms which has stripped trees and driven away picnickers and campers. Many Eastern trees are in their second leafless summer, and by the third summer, they will probably be permanently damaged. The disaster thus described is man-made. Despite bitter opposition by conservationists, New York and Connecticut have sprayed 14,000 low population density acres from a total of 25,000 acres which are severely infested and in danger of defoliation. Sevin, a less effective and shorter-lived insecticide than DDT, was used.

As the issue stands today, prudent use of pesticides is still a necessary ingredient for the survival of agriculture. Researchers are hopeful that the future may hold discoveries of biological control measures as alternatives to chemicals. Meanwhile, today's crops must be protected through use of proper pesticides. Pesticides are on trial. Public and producer awareness of their danger has been one valuable contribution of the pesticide controversy.

As proof of what can happen should we allow emotionalism to gain the upper hand over reasoning, I submit and commend to my colleagues an article which appeared in Barron's Weekly of July 6 titled "Ravaged Summer; It's the Natural Sequel to 'Silent Spring' ":

RAVAGED SUMMER—IT'S THE NATURAL SEQUEL TO "SILENT SPRING"

The New York Times, which devotes countless columns of space to chronicling air and water pollution, noisy jets and fish kills recently and with some reluctance—the story appeared on page 59—saw fit to print a different kind of tale. Headlined "Suffolk Legislature to Fight an Infestation of Gypsy Moths," the dispatch provided a graphic account of "Long Island's invasion by red and blue polka-dotted gypsy moth caterpillars," which agricultural experts describe as the worst in a century. "We are in a state of emergency," cried one resident of Shirley. "Our children cannot go out. Our pools are finished for the summer. It's a question of survival—the caterpillars or us." Last week came word—on page 37 this time, in greater detail and with pictures—of "a double invasion by gypsy moths and canker-worms (which) has stripped trees, driven away picnickers and campers, and caused widespread concern in upper Westchester County and Western Connecticut." Many of the trees, the story continued, "are in their second leafless summer;" by the third year, "most will probably begin to show signs of permanent damage."

* * *

While the active agents are creatures of Mother Nature, the disaster that has befallen widespread areas of New York and Connecticut is strictly man-made. Thus, from The Times' story on Suffolk County, we learn—if we read far enough—that of the 25,000 acres "severely infested and in danger of defoliation," the state, against the bitter opposition of conservationists, has sprayed only "14,000 acres in areas of low population density," not with DDT, which it shuns, but with Sevin, a less effective, short-lived insecticide. In the northern part of New Jersey, which stopped the aerial spraying of DDT over half-a-decade ago, the gypsy moth for the second straight year has damaged thousands of acres of woodland, and, to the consternation of local inhabitants, caused a mass migration of copperheads and rattlesnakes to lower, shadier ground. In one state after another to ban the pesticide—at least a dozen now have made the move—strange things, ranging from the slaughter of honeybees to the accidental loss of human life from highly toxic substitutes, have been happening. Indeed, throughout the U.S., which once could boast of stamping out the anopheles mosquito and its cargo of disease and death, lately have come reports of frightening outbreaks of malaria.

Though fragmentary and scattered, the evidence should give reasonable men pause. On far less convincing claims of damage to the environment and threats to heredity—for the most part, on little more than sweeping, unproved assertions—conservationists and ecologists have made great headway in persuading or coercing Federal and State agencies, legislatures and courts to limit or prohibit the use of DDT and similar pesticides. Now, despite the alarming proliferation of signs that all is not well—that perhaps in their own way, they have upset the so-called balance of nature—such pressure groups are fanatically redoubling their efforts. Not content with what they have wrought, the Environmental Defense Fund, National Audubon Society, Sierra Club and other soulmates of the late Rachel Carson have filed suit to compel the U.S. Department of Agriculture to suspend immediately the shipment of DDT in interstate commerce. If they succeed, their triumph will be shared not only by the gypsy moth, but also by the red-necked cane borer, climbing cutworm, carrot weevil, cabbage looper, onion maggot, dakling beattle, white grub and the rest of the estimated 210 insect pests for which, in most cases, DDT is the sole known means of control. The Nation's farm and wood lands and food supply, not to mention health and welfare, contrariwise, might not recover. Win or lose on the issue, the nature-lovers already have left their mark on the landscape. In less than a decade, "Silent Spring" has spawned ravaged summer.

The mouse, to change the metaphor, has labored and brought forth a mountain. Since 1962, when the book appeared, its influence has spread far and wide. In 1966 a lawyer in Patchogue, L.I. (a stone's throw away from afflicted Shirley) sued to prevent the Suffolk County Mosquito Control Commission from employing DDT. The agency was enjoined from using the pesticide for two years, and, to the pleasure and profit of the gypsy moth, it has not done so since. A number of States, including California, Connecticut, New Jersey, New York, and Wisconsin, have forbidden the use of DDT in whole or in part; the Labour Government in Britain and Socialist Sweden have done the same. Last fall, pursuant to recommendations of the Commission on Pesticides and Their Relation to Environmental Health, that DDT and DDD be eliminated within two years except "where essential to the preservation of human health and welfare . . .," the Department of Agriculture moved to end its use on tobacco, shade trees, in aquatic environments and in and around the home. Too little and too late, cried the Environmentalists; led by the successful litigant cited above, they have gone to court to seek an immediate nationwide ban.

The enormity of this demand—echoed editorially by The New York Times in disregard of its own news columns—must be viewed against the proper background. Since "Silent Spring," Barron's time and again has sought to debunk the extravagant charges and wild alarmism over DDT, which have gained spurious circulation in a "largely rigged market for ideas, where anti-capitalism is the rage and anything that smacks of it, no matter how outrageous or absurd, can count on an incredible longevity." Once a voice crying in the wilderness, we now have lots of company. Thus, the U.S. Department of Agriculture, in defending its moderate stand on DDT, cites such authorities as The President's Science Advisory Committee, the National Research Council-National Academy of Sciences, the aforementioned Commission on Pesticides and the Council on Environmental and Public Health of the American Medical Association.

Despite loud claims to the contrary, USDA flatly makes the following points. There have been instances in which DDT in lakes and streams has contributed to fish mortality; however, "we know of no report of any endangerment of any species of fish as a result of the use of DDT." The same holds true of birds whose numbers (according to the Audubon Society's own count, and including the supposedly endangered robin) are constantly increasing. As to the alleged threat to mankind, USDA quotes a recent AMA finding that "the claim that DDT has a carcinogenic effect upon humans constitutes an unproved speculation." Moreover, there has been "no increase in the levels of DDT in human beings during the past decade," while "comprehensive studies of workers in DDT factories show no impairment of health attributable to occupational exposure to DDT."

Similar views have been expressed by the World Health Organization, which last summer stated: "DDT has been the main agent in eradicating malaria in countries whose populations total 550 million people, of having saved about five million lives and prevented 100 million illnesses in the first eight years of its use, of having recently reduced the annual malaria death-rate in India from 750,000 down to 1,500, and of having served at least two billion people in the world without causing the loss of a single life by poisoning from DDT alone." . . . "It is so safe that no symptoms have been observed among the spraymen or among the inhabitants of the spray areas, which numbered respectively 130,000 and 535 million at the peak of the campaign."

The perils of the substance are thus largely illustory; however, the dangers of a ban, even limited in scope, are frighteningly real. In California and Arizona, bee-keepers complain that toxic substitutes for DDT are wiping out their hives. Maine gave up DDT years ago; in 1967, when the spruce bud worm threatened to destroy its forests, the state hastily changed its mind. (At the urging of the Swedish Board of Private Forestry, the National Poisons and Pesticides Board has granted forestry a one-year exemption from the general ban. Without DDT, officials feared, the large pine weevil would cause $20 million worth of damage to trees and seedlings.) The alarming spread of the gypsy moth—which Harold Porter, president of the National Plant Board (an organization of state plant pest-control officials) blames squarely on the lack of DDT—lately has made headlines, not only in New York State but also in New Jersey, where the number of defoliated acres is mounting geometrically from 5,000 in 1968 to well over 100,000 this year, Pennsylvania and Virginia. All told, according to the Department of Agriculture, the gypsy moth in 1969 defoliated 260,000 acres of wood-

land, triple the number destroyed in 1968. This year's toll will be far worse.

Here, in official but graphic terms, is what's involved: "In their caterpillar form, gypsy moths strip the leaves from forest, shade and fruit trees, as well as ornamental shrubs. By defoliating forests, they increase fire and erosion hazards, adversely affect stream flow, reduce land and recreational values, and destroy wildlife habitats. Plant protection officials point out that a single defoliation has been known to kill white pines, spruce and hemlock. Two defoliations can kill most hardwoods."

What the Environmentalists are seeking would be a major disaster, both at home and abroad. To deny the product to such nations as India would constitute, in the words of one scientist, "an act of genocide." To ban DDT in this country as too dangerous, while permitting its export, would be a flagrant piece of hypocrisy, which could only trigger global ill-will. The physical dangers, finally, are frightening to behold. Thus, the World Health Organization points out that in Ceylon, which discontinued the spraying of DDT several years ago, "more than a million cases of malaria have reappeared." In this country, which thought it had wiped out the disease long ago, 1,559 cases were reported in the first 24 weeks of 1970, up 25% from 1969. As to food and fiber, a Special Review Group, comprising four noted entomologists, after a thoroughgoing scrutiny of current practices, concluded last month that DDT remains essential for most domestic crops; perhaps as a wry postscript, it added that there is no satisfactory substitute for DDT in the control of rattlesnakes in the Southwest U.S. "If we had to depend on nature," an eloquent lawmaker once said, "we would probably die of disease at a fairly early age, if we did not starve first."

By their fruits ye shall know them. Through their unbridled recklessness with facts and sheer irrationality—a triumph of superstition over science, one scholarly critic has averred—so-called conservationists and ecologists have poisoned the climate of opinion. Now willy-nilly they are threatening to unleash famine and pestilence upon their fellow citizens. ("It's a question of survival," cried the resident of Shirley, "the caterpillars or us.") They profess to preserve wildlife, defend the environment, befriend the earth. Their natural prey is civilized man.

WITH THE VOLUNTEER ARMY DEFEAT, DRAFT REFORM MORE ESSENTIAL THAN EVER

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. BINGHAM. Mr. Speaker, the New York Times carried an editorial on August 28 concerning the Senate defeat of the Goldwater-Hatfield amendment, which would have provided for an all-volunteer army. The editorial quite rightly stresses the urgent need for draft reform.

The National Service Act of 1970 which I have introduced with a large number of cosponsors—H.R. 18025 and H.R. 18578—would implement just the sort of reforms the New York Times is suggesting. The editorial follows:

NO AMERICAN MERCENARIES

Defeat of the Senate proposal to increase substantially the financial rewards for military service has removed the threat of a "reform" that would have made a bad situation worse. The obvious intent of the legislation, co-sponsored by Senators Barry Goldwater and Mark Hatfield, was to let an all-volunteer army in through the back door.

The nature of the incentives left little doubt that the bill's aim was to attract men to long-term military service. What was being described as a volunteer army would in reality soon have become indistinguishable from a professional army.

The Nixon Administration and its spokesman in the debate, Senator John Stennis of Mississippi, opposed the proposal only on such technical grounds as its high cost and the uncertainties in the military manpower supply. Such objections ignore far more serious risks, particularly that of a dangerous, militaristic shift in the relationship between the uniformed and civilian sectors of American society.

The immediate effect of the pay incentive offered to create an all-volunteer army would almost certainly be to induce the poor and racial minorities to liberate more privileged youths of an unpleasant obligation—a condition already much too prevalent under the inequities of present draft rules. In the long run, such an arrangement would supply the professional military establishment with a large, permanent force of men, easily manipulated to serve special military interests. This is a fundamental departure from the concept of the militia and from the traditional safeguards aimed at preventing the military from developing a life of its own, apart from the civilian society.

But defeat of the Goldwater-Hatfield proposal is no substitute for reform of the present Selective Service system's built-in imbalances. The most promising answers ought to be sought in a broader concept of national service. Young Americans deserve a variety of options—to volunteer either for the military or for demanding civilian service in hardship areas of critical need, with the draft lottery still facing those who fail to volunteer for either option.

JUSTICE DEPARTMENT IGNORES POLLUTION LAW

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the CONGRESSIONAL RECORD, an excellent article appearing in the August 21, 1970, issue of the Outdoor News Bulletin, the official biweekly newsletter of the Wildlife National Institute. The article tells how our Attorney General, Mr. Mitchell, refuses to proceed under the Refuse Act of 1899 against industrial polluters.

One wonders how an attorney general can be for law and order where the target is crime in the streets and not for law and order where major industrial polluters are involved.

This situation rather reminds one of the old story of how the English law punished the man who stole the goose from the common, but not the man who stole the common from the goose.

The text of the article follows:

JUSTICE DEPARTMENT IGNORES POLLUTION LAW

Congressman Richard L. Ottinger (N.Y.) has taken sharp issue with U.S. Attorney General John Mitchell's recent decision not to enforce a 71-year-old law prohibiting pollution of the nation's waterways, the Wildlife Management Institute reports. At a press conference in Washington, Ottinger promised to go to court, if necessary, to compel the U.S. Attorney General to enforce the Refuse Act of 1899 against industrial polluters.

The action came in response to testimony by Shiro Kashiwa, Assistant Attorney General for Lands and National Resources, that the Department would not seek indictments under the law which forbids the discharge of refuse in navigable waters unless the discharge is "accidental or infrequent." Kashiwa told a Senate committee that U.S. Attorneys throughout the nation have been ordered not to bring action to "prevent or punish industrial discharges of a continuing nature."

Ottinger accused U.S. Attorney General Mitchell of applying a double standard of law enforcement. "On the one hand, Mr. Mitchell calls for maximum enforcement of laws against individuals," the Congressman charged, "while on the other, he says he will not enforce the law against corporate polluters."

Apparently in response to widespread criticism, both from the general public and Members of the Congress, the Army Corps of Engineers has announced new permit requirements under the 1899 Refuse Act which is supposed to help curtail discharges of pollutants into navigable waters. According to a Corps of Engineers release, permits will be required for all industrial discharges into navigable waters and their tributaries. New permits will be required where existing OK's were granted without adequate consideration of the quality of the effluent. Permits also will be required for current discharges into navigable waters where none have been granted. In essence, industry will be given a license to pollute, but only to the extent that state water quality standards allow.

While permission will be required for all future discharges into navigable waters and their tributaries, the Corps of Engineers says it will concentrate initially on major sources of industrial pollution not covered by existing permits.

POPULARITY OF SPACE PROGRAM

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. FULTON of Pennsylvania. Mr. Speaker, in these days of criticism and doubt on everything from the Bible, the U.S. Constitution, the President, the Congress, and even the rules the average U.S. citizen lives by, it is heartening to find the popularity of the science, research, and development space program.

As the ranking minority member of the House Science and Astronautics Committee, during the past several weeks I have checked through the large Pittsburgh metropolitan and industrial area and find our citizens uniformly favor keeping the United States foremost in science, research, development, space and technology. In fact, most of our citizens feel that the progress in science, research, development, and technology have been major contributory elements to the high standard of living which we Americans now enjoy.

In order to keep ahead for the future, the average western Pennsylvania citizen feels that we must continue to emphasize education, and keep the Federal Government, as well as the Pennsylvania government cooperating with our corporations in business and the develop-

ment of new practices, new products, and new horizons.

Our Allegheny County—Pittsburgh—Fair, which runs 5 days through Labor Day each year, exhibits everything from farm products to advanced technology and engineering and draws crowds by the hundreds of thousands. The total attendance this year from western Pennsylvania, northern West Virginia, and eastern Ohio exceeded 750,000 people who viewed exhibits and took part in projects. This is America at its best.

Our Allegheny County commissioners, Commissioner Staisey, Commissioner Foerster, and Commissioner William Hunt are to be complimented on this fine success of the fair this year for the benefit of our citizens.

At my request, in cooperation with the Allegheny County commissioners, the National Aeronautics and Space Administration lent a moon rock specimen brought back by the Apollo 12 crew. This moon rock exhibit of NASA was placed in a small room in the basement of the Park Administration Building. As a member of the House Science and Astronautics Committee, my office and I arranged for the display and we had five people and myself, as well as an Allegheny County Police Officer as guard assist in handling the surprising number of people who crowded in every day to view the Apollo 12 moon rock exhibit.

We gave to those people specially interested in further information on the moon rock a statement on this particular moon rock, which I am enclosing for the CONGRESSIONAL RECORD.

Therefore, I recommend to the Members of the U.S. House of Representatives and the Members of the U.S. Senate that strong support be given to science, research, development, technology, and education to insure the future success of the United States, to maintain U.S. industry as first in research and technology, and to fund adequately our educational institutions, which is the greatest and goodly heritage this generation can give to our young people and the coming generations of American citizens.

The statement on the moon rock follows:

ALL ABOUT THE MOON ROCK!

DEAR FRIENDS: This excellent moon rock was brought back to Earth by the Apollo 12 Astronauts from their trip to the Moon in November 1969, a journey which carried them 953,000 miles and lasted over ten days.

Soon after the completion of the Apollo 12 flight, one scientist described the mission as "maybe a million times more important to science than Apollo 11," the first flight to put men on the Moon. The Apollo 12 mission yielded much more in the way of scientific samples for study.

This particular sample on display here was collected by Astronauts Conrad and Bean during their first moon walk outside their landing craft. Scientists have speculated that it is a chunk of bed rock that was ejected from a crater close to where it was found.

It weighs 151 grams—about one-third of a pound. Actually, it is only part of a larger rock of over four pounds which was discovered embedded beneath the lunar surface.

Because this rock has been sawed through, it is one of the best lunar samples available for public viewing. From its cross-section it is possible to distinguish its "shatter crust" on the surface, which is slightly lighter in color than the dark grey interior. This crust was formed by the crushing of crystals by micro-meteorite bombardment.

According to its scientific designation, this rock is an "olivine dolerite." It could be from 3.5 to 4.5 billion years old, older than the oldest known rocks on Earth.

Over 150 scientific groups in the United States and abroad are cooperating in the detailed analysis of samples such as this. Through their research we will gain a greater knowledge of not only the Moon, but the Earth, the Sun, and indeed our entire universe as well.

Best wishes,

JIM FULTON.

CAPT. C. GERY BOWEN

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. TEAGUE of Texas. Mr. Speaker, on Thursday, August 6, the body of Marine Corps Capt. C. Gery Bowen was laid to rest with full military honors in Dallas. Captain Bowen was a career officer and one of Texas' many heroes of the Vietnam war. He flew some 311 combat missions and came through all of them unscathed, only to fall ill while serving as a flight instructor at the Naval Air Station in Beeville, Tex. He was a much decorated individual and under leave to extend my remarks, I include the text of the two most important decorations which were accorded to Captain Bowen:

U.S. MARINE CORPS,
San Francisco, Calif.

The President of the United States takes pleasure in presenting the Distinguished Flying Cross to Captain Charles Gery Bowen, United States Marine Corps, for service as set forth in the following citation:

"For heroism and extraordinary achievement in aerial flight while serving as a Pilot with Marine Attack Squadron 211, Marine Aircraft Group Twelve, First Marine Aircraft Wing in connnection with operations against the enemy in the Republic of Vietnam. On the morning of 1 February 1968, Captain BOWEN launched as Wingman in a flight of two A-4 Skyhawk aircraft assigned a landing zone preparation mission in support of a Marine reconnaissance team inserting nine miles southwest of DaNang. Enroute to the designated area, he contacted the Tactical Air Controller (Airborne) and was instructed to make bombing runs against suspected enemy position on the high ground overlooking the helicopter landing zone. After making several attack runs, Captain BOWEN was informed that the CH-46 helicopter transporting the reconnaissance team had been hit by enemy fire and had crashed over 500 meters away from the intended landing zone. While orbiting the area, he received a briefing from the Tactical Air Controller (Airborne), who reported that 200 to 300 North Vietnamese soldiers were observed in the area and were firing on the downed aircraft. With complete disregard for his own safety, Captain BOWEN unhesitatingly commenced a low level simulated strafing run toward a tree line adjacent to the Marines' position in an effort to draw the attention and the fire of the enemy away from the burning CH-46. In coordination with the approach of the extraction helicopter, he commenced his second run. Although his aircraft was struck by enemy ground fire, damaging an aileron and the tail section, Captain BOWEN made two bombing runs against the hostile force, which enabled the extraction aircraft to land and successfully lift out the crew and passengers of the CH-46. His exceptional aeronautical ability and determined efforts were an inspiration to all who served with him and contributed significantly to the safe extraction of thirteen Marines. Captain BOWEN's courage, superb airmanship and steadfast devotion to duty in the face of great personal danger were in keeping with the highest traditions of the Marine Corps and of the United States Naval Service."

For the President,

V. H. KRULAK,
Lieutenant General, U.S. Marine Corps, Commanding General, Fleet Marine Force, Pacific.

U.S. MARINE CORPS,
San Francisco, Calif.

The President of the United States takes pleasure in presenting a gold star in lieu of the second Distinguished Flying Cross to Captain Charles Gery Bowen, United States Marine Corps, for service as set forth in the following citation:

"For heroism and extraordinary achievement in aerial flight while serving with Marine Attack Squadron 211, Marine Aircraft Group Twelve, First Marine Aircraft Wing in connection with operations against the enemy in the Republic of Vietnam. On 21 February 1968, Captain Bowen launched as Flight Leader of a section of two A-4 Skyhawk aircraft assigned a close air support mission for Marine units heavily engaged with a numerically superior North Vietnamese Army force in the city of Hue. Despite rapidly deteriorating weather conditions, extremely limited visibility and intense enemy ground fire, he skillfully maneuvered his aircraft over the target area and quickly located the enemy positions. With complete disregard for his own safety, Captain Bowen commenced his attack and executed four bombing runs through the heavy enemy fire, delivering all ordnance with pinpoint accuracy to within 100 meters of friendly positions. As a result of his exceptional ordnance delivery, the flight was credited with the destruction or damage of numerous structures, two secondary fires and one secondary explosion and inflicted heavy casualties on the enemy. Captain Bowen's courage, outstanding aeronautical skill and unwavering devotion to duty at great personal risk contributed significantly to the success of Operation Hue City and were in keeping with the highest traditions of the Marine Corps and of the United States Naval Service."

For the President,

V. H. KRULAK,
Lieutenant General, U.S. Marine Corps, Commanding General, Fleet Marine Force, Pacific.

A GOLD RECORD AWARD

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. WALDIE. Mr. Speaker, the Antioch Environmental Council recently initiated a worthwhile program of "honoring" the top water polluters of the month by presenting them with a Gold Record Award.

Occasionally, this dubious distinction is presented a national agency whose activities are deserving of such recognition.

Such a "distinction" was merited in the council's view—and in my own—by the U.S. Army for its remarkable decision to dispose of its undisposable accumulation of deadly nerve gas by dumping it into the Atlantic Ocean. Surely, such innovative action is worthy of attention—if not acclaim—and the Antioch Environmental Council has properly given the U.S. Army that attention.

I include their letter on this matter for your attention:

ANTIOCH ENVIRONMENTAL COUNCIL,
Antioch, Calif., August 14, 1970.

J. S. GRYGIEL,
Colonel, G. S., Deputy Director of Installation, Department of the Army, Pentagon, Washington, D.C.

Colonel GRYGIEL: Congratulations! The Antioch Environmental Council has selected the Department of the Army as the recipient of our special Gold Record Award for contributions in the field of water pollution. Each month the AEC awards gold records to the top ten air and water polluters in our country, which is Contra Costa. However, gold records also are awarded to a state and a federal agency that has made a major contribution to the pollution problems of our country.

We feel that the Department of the Army has earned the Gold Record Pollution Award for its plan to dump potentially-deadly nerve gas rockets in the Atlantic Ocean. The Army has met our qualifications for this award in that it creates excessive amounts of waste material that must eventually be disposed of in the environment.

Your department is the first to receive the National Award, and it is now a member of a not-so-exclusive group called "Polluter of the Month Club." Keep up the work and your efforts will not go unrecognized.

Regards,

MRS. THAYER JOHNSON, *Chairman,*
Antioch Environmental Council.

NEW PROTECTIONISM

HON. SAM GIBBONS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. GIBBONS. Mr. Speaker, Mr. Hobart Rowen, business editor of the Washington Post, has ably analyzed some of the fallacies in the now pending foreign trade bill in his column of Sunday, September 6.

His cogent appraisal of this legislation as it relates to jobs of American workingmen, and its open invitation to quotas for many American industries, not just two, and a consequent international trade war should be read by every Member of this House.

I, therefore, submit for inclusion in the RECORD the article, as follows:

LABOR LEADERS RESENT "PROTECTIONISM" LABEL

Labor leaders appear to resent the charge that their new policy in support of import quotas amounts to "protectionism."

When they argue that the expansion of trade must be "regulated" to protect jobs, "that's not 'protectionism,' that's realism," AFL–CIO Research Director Nat Goldfinger said in a letter to The Washington Post.

The essence of Goldfinger's argument is that the U.S. export surplus has vanished (after discounting government-financed shipments), eliminating job opportunities here. Moreover, the fast-growing multinational corporation can "juggle" jobs and production from one country to another (typically to low-cost economies outside of the United States). To cap it all, expanding imports don't necessarily result in price benefits to the consumer.

"Confronted by reality," Goldfinger says, "the AFL–CIO insists that the needed expansion of trade must be regulated. The AFL–CIO has proposed restrictions on the foreign investment outflows of U.S. companies, the end of U.S. government subsidies to companies setting up foreign subsidiaries, government regulation of U.S.-based multi-national corporations and the development of international fair labor standards in world trade.

"In addition, the AFL–CIO has recommended, as a stopgap, an orderly marketing approach to imports—with a trigger mechanism for the establishment of quotas to stem the tide of imports of a product, when such expanding imports threaten to disrupt the U.S. market."

That's the policy Mr. Goldfinger says is not protectionist. Interestingly enough, a Latin-American trade delegation which visited Washington Aug. 5 to 7, hoping to pave the way for exemptions from the threatened restrictions of the Mills bill, reported to the Council of Americas organization:

"The only strongly protectionist note which the delegation heard came from representatives of the AFL–CIO. The AFL–CIO representatives expressed firm opposition to what they called 'the export of jobs' from the U.S."

The AFL–CIO's main concern is jobs; but it is simply not true to suggest that American labor is threatened by a flood of imports. Both exports and imports have grown over the years, which means that some domestic industries (and their workers) have been faced with greater competition. By the same token, the export industries (and their workers) have gained from increasing sales.

ECONOMIC IMPACT

What the labor leaders seem to be saying is that everything should be frozen, with everybody keeping the same job in the same industry he started out in. As Council of Economic Advisers chairman Hendrik Houthakker said in a courageous speech last month, "This line of argument recalls the guild system of the Middle Ages and is hardly appropriate in a modern dynamic society."

As Houthakker suggested, if the textile and shoe industries that the AFL–CIO is so worried about can't meet the competition, it shows only that American workers can be more productively employed elsewhere. But in countries like Korea, the textile industry provides the most productive employment available.

"It is therefore to the advantage of both countries," Houthakker argued, "if more American workers get out of textiles and more Korean workers get into them. This shift also benefits American consumers, who can buy textiles more cheaply."

The multi-national corporation argument also doesn't really wash. There is nothing much new there. Big corporations have always tried to locate where their costs of production are the cheapest; this was true also while the AFL–CIO, years ago, backed a liberal free trade policy.

Paul Jennings, president of the International Union of Electrical, Radio and Machine Workers, makes the point that an electronics worker in Taiwan makes only 1/20th of the U.S. worker's wage. But as Houthakker notes, even though wages in the U.S. aircraft industry are much higher than similar wages elsewhere, the U.S. industry dominates world markets. Why? Because of the high level of productivity for aircraft workers.

What is dangerous today is that the House Ways and Means Committee quota bill is likely to pass, which could result in a reduction of both imports and exports because of the undoubted retaliation in kind that will result.

The U.S. economy is powerful enough to share in growing world trade, dealing with the initial problems of industry and labor impacted by any really serious import competition.

But the approach of the House bill, notably the "general relief" provision sponsored by Rep. John W. Byrnes (R-Wis.) opens the quota door to a host of industries.

The Byrnes' formula makes eligible those industries which demonstrate that imports exceed 15 per cent of the U.S. market, have increased 3 per cent in the previous year and 5 per cent in the prior two years.

A Tariff Commission study shows that literally scores of industries would be eligible for quotas under the Byrnes formula, including many electronic products; passenger cars; bicycles; many metal ores; pottery; sporting goods; leather goods; many fish and seafood products; many agricultural products; clocks; antibiotics; umbrellas; radioactive isotopes and wigs.

Moreover, the "national interest" clause which allows the President to exempt designated countries from quotas is a reversion from the principle of multilateral trade to a narrower and discriminatory bilateral basis. (The Latin American delegation, by the way, got promises of special treatment.)

But other countries are not planning to remain idle. If they merely ape the Byrnes "basket" technique, U.S. exports will run smack into increasing protectionism abroad.

Despite assurance to the contrary by Commerce Secretary Maurice Stans, the threat of reprisals is strong. There are many clues. German Economic Minister Karl Schiller, for example, says that if U.S. quotas are slapped on, "there would be a great peril that a wave of protectionism would circle the globe in a chain reaction." German industrialist Fritz Berg more bluntly says a "trade war" is imminent.

The Italian Minister of Foreign Trade, Mario Zagari, echoing the same sentiment, adds that the return to protectionism "will mean the beginning of the end of American leadership in the world . . ."

Thus, it doesn't really matter what the AFL–CIO calls its policy; the essential point is that the industries and unions that are backing quota legislation are taking a serious backward step that threatens the total economic well-being of this country.

CONCERN OVER TERRORIST HIJACKINGS—A NEW WEAPON OF INTERNATIONAL WARFARE

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. MICHEL. Mr. Speaker, all of us in Congress share concern over the wave of terrorist hijackings which has emerged as a new weapon of international warfare. Our hearts go out to the victims and their anxious relatives. I feel that the Government of this Nation has a clear and definite responsibility to act to meet this new threat to safety and peace of mind. Various solutions have been suggested. Some innovations have been tried—all have been found want-

ing. Inspection of passengers, various screening devices and even "frisking" of suspected hijackers has failed to protect the traveling public. The apparent only recourse is to place military armed guards on international and coastal flights originating in the United States. This is a serious step and an encroachment on traditional separation of military and civil functions. However, these are unusual and trying times. The problem we are dealing with is extremely serious—as right now 300 lives hang in the balance, depending on the decisions of fanatical Palestinian guerrillas. I would hope that other nations would follow suit, since international cooperation on return of hijackers seems beyond the realm of cooperative agreement at the present time. I urge the President to take this step with all due care to preservation of public rights, but with full-scale protection for the flying public in mind. Eventually we will undoubtedly find other ways, but today's answer must be applied to today's emergency.

EDUCATION IS THE KEY

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. DERWINSKI. Mr. Speaker, as we return after the House recess, schools across the country are beginning the fall term. A very pertinent editorial emphasizing the value of a well-rounded education was carried in the Thursday, August 20 Worth-Palos, Ill., Reporter. I feel that it is an exceptionally pertinent commentary on the subject and ask to insert the editorial at this point:

EDUCATION IS THE KEY

(By Pat Bouchard)

The beginning of the new school year is fast approaching and one fact becomes increasingly clear. The future of American society depends to a large degree on how effective our educational system is.

Education is in an era of unrest. Schools and children are faced with social problems the community has not been able to solve. School administrators are tied up with issues of integration, sex education, drug abuse, aid to private schools, and these issues, along with the everyday striving to keeping up with knowledge that is increasing at a fantastic rate, is going to require patience, diligence, and cooperation. The patience, diligence and cooperation will be required of students and parents as well as school officials.

This cooperation is an absolute must if our educational system is to grow and succeed. Educational growth and success is an absolute must if the future of America is to be assured.

A combination of student knowledge and compassion can be the insurance policy that will guarantee the survival of our society, maybe not as it is, but even better, as it should be.

The premiums on that insurance policy must be paid by all of us. The education of our children cannot be relegated merely to those hours they spend in school. Book learning alone is not enough.

If the citizens of tomorrow are to cope with the world they must develop sound and creative habits of mind. This can be done within the classroom. Further, the institutions of learning can fulfill society's need for professionals and technicians. The teachers can do this job with the cooperation of the students in developing their intellectual resources.

However, knowledge alone will not give our young people all the necessary tools to deal with increasing social and political ills. Knowing and understanding other humans is necessary, and this is an around-the-clock project. The student's success in this area depends greatly upon the most influential teacher—the parent.

Thus we see it will take the combined efforts of educators and parents to forge the key that will unlock the force capable of solving all the problems of war, hunger, damaged environment, and the general atmosphere of violence in which we live.

That key, of course, is a well rounded education.

ABRIDGED HISTORY OF BIERSTADT PAINTINGS IN SPEAKER'S LOBBY

HON. BURT L. TALCOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. TALCOTT. Mr. Speaker, it is a pity that more visitors to our Capitol do not have an opportunity to see and appreciate the works of art located here.

Only two of the paintings which hang in the Speaker's lobby of the House of Representatives are not portraits. These are the pair of landscapes by Albert Bierstadt, prominent artist of Western America during the 19th century.

The House, in 1867, adopted by unanimous consent the resolution of Mr. Banks:

Resolved: That the Committee on the Library be authorized to contract with Albert Bierstadt for two paintings thoroughly American in character, representing some prominent feature of scenery or important event in the discovery or history of America to fill 2 unoccupied panels in the chamber of the House of Representatives.

Bierstadt, when contacted by the committee, asked for $40,000 for each painting. The discussions ended there, but not permanently, for, on March 3, 1875, the chairman—of the Joint Committee on the Library—was authorized to purchase of Mr. A. Bierstadt his painting of the landing of Hendrik Hudson now on exhibition in the hall of the House of Representatives at a price not exceeding $10,000.

This purchase was made, and, in 1878, a companion painting, "Entrance Into Monterey," was purchased from the artist, also, for $10,000. They were 10 feet 6 inches by 6 feet each, and hung on either side of the Speaker's desk in the Chamber. Early in the 20th century—before 1910—the paintings were removed to a retiring room connected with the Speaker's lobby. They were moved again during the 1920's, and the paintings have since hung above the Members' staircases at either end of the Speaker's lobby.

The painter, Albert Bierstadt, was born in Dusseldorf, Germany, January 7, 1830. He was brought to America at an early age, but returned to Dusseldorf in 1853 and entered the academy, afterward studying in Italy and Germany. He was elected national academician in 1860, chevalier of the Legion of Honor of France in 1867, and received medals and various orders from Austria, Germany, Bavaria, and Belgium. He was at one time a pupil of Emmanuel Leutze. He died in New York, February 18, 1902. Charles E. Fairman, Art and Artists of the Capitol of the United States of America, USGPO, Washington, 1927, p. 177.

Bierstadt was acclaimed in America and Europe for his landscapes, particularly those of the Sierras and the Rockies. He achieved national recognition following his first trip West with Gen. Frederick Lander's 1858 mapping expedition. He made a second trip in 1863, reaching California and Oregon for the first time. Following an extended European trip to make studies for the painting of Hendrik Hudson's landing, Bierstadt returned again to San Francisco in 1872, from where he visited Yosemite and Hetch Hetchie Canyon—two of his most famous subjects.

Because one of the Bierstadt paintings portrays an historic and scenic place in the congressional district which I have the honor to represent, I have researched and discovered some pertinent information which I believe will interest Members and visitors who enjoy the variety of art which adorns our Capitol.

ENTRANCE INTO MONTEREY

Hanging above the Members' staircase at the west end of the Speaker's Lobby in the House of Representatives is Albert Bierstadt's painting of Monterey Bay. Finished in 1878 and sold directly to the Government for $10,000, it originally hung to the left of the Speaker's desk in the House Chamber, next to the portrait of George Washington. It was moved in the early 1900's, and again in the 1920's, when it was placed over the staircase. It has been known both as "Entrance into Monterey"—this title has been used by the Architect of the Capitol ever since the painting was acquired—and as "Viscaino Landing at Monterey, 1601." The latter title appears on the titleplate attached to the painting's frame.

There is even some doubt as to the intended subject matter of the painting. In 1897, George Hazelton wrote in his guide to the Capitol, the National Capitol, Its Architecture, Art and History, that "(m)any think it represents what might be styled the natal day of the Upper California mission"—the December, 1601 landing at Monterey by the explorer Viscaino—while "(o)thers, however, ably contend that Bierstadt intended here to celebrate with his brush the spot where Spanish tradition says Junipero Serra, the 'Father of California,' surrounded by his disciples, first said mass at Monterey in 1769, under an oak by the shores of the beautiful bay."

Sebastian Viscaino, exploring the coast of California for the King of Spain, came upon Monterey Bay in December 1602. He reported it as a wonderful harbor of refuge—thereby confusing later explorers when they happened upon this open roadstead—and named it for the then Viceroy of New Spain, the Conde de

Monterrey. Viscaino, with his fleet of four small ships, was the first to accurately map the California coast; the names he gave landmarks endure to the present day.

Father Serra landed at Monterey on June 1, 1770, after sailing up from San Diego on the San Antonio. Meeting Portola—who had come by land—they celebrated mass under a live oak close to the beach. At this time, formal possession, first claimed by Cabrillo in 1542, was reconfirmed in the name of the King of Spain.

The painting has been cleaned and restored once, in 1953 by Francis Sullivan of the National Gallery.

I BELIEVE IN AMERICA

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. JOHNSON of California. Mr. Speaker, an example of what I consider to be the responsibility and dedication of the majority of our young people was recently called to my attention. Miss Wendy Morony of Chico, Calif., recently wrote an essay entitled "I Believe in America," winning first place in the American Legion's essay contest held annually. Because this expression of patriotism and concern so thoroughly examines both the ills plaguing our country as well as the constructive and orderly processes for rectifying these ills, as well as demonstrating the high degree of maturity and responsibility of so many of our young people, I proudly and respectfully submit Miss Morony's essay for the CONGRESSIONAL RECORD:

I BELIEVE IN AMERICA

Today our country seems to be at a turning point. America is facing dark days which threaten her very existence. All around us are problems, many of a natural variety and others wholly manmade. Among us are those who live daily with poverty and hunger. The air we breathe, the water we drink, the cities we live in, are all fouled by dirt and pollution. Overpopulation threatens to outstrip our food supply in a few short decades. Our involvement in Vietnam has divided our country into two separate camps. A desire by minority groups to be afforded the same opportunities and privileges as all Americans has resulted in serious racial strife, particularly in our larger cities. Our educational system is at a crossroads where the authority of our universities and colleges is being challenged by campus rebels who sit-in, demonstrate, riot, burn, bomb, and destroy; and these unfortunate conditions are now, in some cases, even spreading to our high schools and grammar schools. Many believe that family life in the United States is deteriorating and that marriage and the family, as we know it today, will soon be outmoded and obsolete. The influence and prestige of the church is declining and the structure of religious belief is undergoing great change. We are in the midst of a sexual revolution, heightened by the advent of "the pill," which is reshaping codes and morals which have been in existence for centuries. The degree of alcoholism in the United States is alarmingly high. Drug abuse, especially among young people, is increasing every day, and threatens to run beyond the limits of control. Patriotism is "square;" avoiding the draft by any possible means is the prime objective of many young male Americans. Law, order, and our system of justice in the courts are being undermined by thugs and revolutionaries who seek to destroy these three basic cornerstones of a free society. They denounce the police and call them pigs, storm troopers, and racists. The police are stoned, clubbed, jeered, and spat upon. They are charged with brutality if they raise their clubs against those who riot and create disorder. They are charged with condoning violence if they fail to raise their clubs against the disrupters. Contempt for the courts and personal verbal attacks upon judges in obscene gutter language are the deliberate patterns of behavior of those who believe that the law must not prevail. Recently Vice President Agnew declared his belief that the overriding and compelling issue of the day is not inflation or the Vietnam War, but is the question of whether the government of this country will remain in the hands of its elected officials or will descend to the streets.

Although the problems and social ills of today are among the most serious ever to face our nation, I am confident that the strength and will of a majority of the American people will see us through these perilous times. I say this because I believe in America.

"I pledge allegiance to the Flag of the United States of America and to the Republic for which it stands . . ." These words ring with meaning in the hearts of all true Americans. They do not ask us to follow blindly laws that are unjust, nor do they deny the right to dissent. To good Americans, these words mean that through the orderly rule of the majority we seek to promote the good of all people, finding unity and progress in the differences that exist among us.

A minority of Americans is trying to destroy our country by violence and discord. Much has been said in recent years about individual rights. Some have used this appeal to justify rioting, looting, and killing. Those who thus openly defy the law invade the rights of others, the same rights that the violators claim to seek for themselves.

Liberty can exist only in an orderly society. The so-called "silent majority" simply will not permit its liberty to be lost to those who openly attack our country. They will use every lawful means at their disposal to assure that America will survive.

America *is* her people. Most of her people are good Americans. I believe in them. Therefore, I believe in America.

WAGE-PRICE CONTROLS NOT THE ONLY ANSWER

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. DERWINSKI. Mr. Speaker, my mail has reflected the views of many constituents concerning the situation of the economy, specifically the battle against inflation. An editorial in the Thursday, August 20 Tribune of Harvey, Ill., effectively discusses the subject and is, I believe, an objective commentary on the economic situation:

WAGE-PRICE CONTROLS NOT THE ONLY ANSWER

The Nixon Administration's fight on inflation continues, but the outcome appears still very much in the balance and leaning towards the critical side of the scale.

Not encouraging are the latest monthly figures which show inflation continuing, at a slightly faster pace, in the past month. Also, the Ford Motor company has just announced automobile price hikes of about five per cent for 1971 models and other car dealers are sure to follow. This means that most new cars are likely to be from $100 to $200 higher—some even more.

In this connection, the failure of the government to check inflation recently led George Meany to hint that price and wage controls may be necessary to halt the upward spiral. Meany, president of the AFL–CIO, says he isn't yet in favor of such controls but that they might be the only remedy to a "dangerous situation."

Others—some members of Congress—have also recently expressed the view that wage and price controls are the answer. It's probably accurate to say that at no other time in the nation's post-war history have more prominent economists, labor leaders and politicians leaned toward such controls.

Personally, we do not believe that wage and price controls are the answer to inflation, although they may be needed temporarily to halt both pay and price hikes. We would lean toward a complete and immediate withdrawal from Southeast Asia as a more expedient method of halting inflation.

Other government actions could include the raising of interest rates for savings; an expanded government bond program; fewer costly and wasteful projects such as the SST aircraft plan; a lessening of trade restrictions, both import and export, to lower prices; ceiling levels on farm subsidies. We would rather hear Mr. Meany and the Congressmen discuss the pros and cons of these alternatives before turning to wage and price controls as the only answer to the continuing spiral.

Basically, we believe that a whole new set of economic priorities should be established based on domestic needs. Curing our problems at home could be the biggest step in cutting an inflationary spiral that has been created, for the most part, by the one-way spending for the Viet Nam war, during the past 10 years.

PROCESS TO SAVE MERCURY FROM WASTE IS DEVELOPED

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. MORSE. Mr. Speaker, earlier this summer, the Evening Star published an article describing the process being used by Ray J. Donlan, a chemist and chief of the water laboratory at the Public Health Department experimental station in Lawrence, Mass., to remove mercury from liquid chemical wastes.

The recent reports of dangerous levels of mercury content in many of our Nation's rivers and lakes make close attention to Mr. Donlan's efforts of critical importance. The process now being used in Lawrence appears to be a highly effective but relatively simple procedure, commonly known to chemists, and it offers the possibility of recovering costs through the reclamation and sale of the precipitated mercury.

I am indeed hopeful that this method has the potential for widespread application, and am deeply grateful to Mr. Don-

lan for his contribution to the battle against mercury pollution.

It is, therefore, with a particular sense of urgency, as one who is deeply concerned about the dangers to human health from mercury pollution, and it is with an especial sense of pride, as one who has the privilege of representing Lawrence, Mass., that I recall, for the careful reading of my colleagues, the text of the article:

[From the Washington Star, July 28, 1970]

PROCESS TO SAVE MERCURY FROM WASTE IS DEVELOPED

LAWRENCE, MASS.—A state chemist says he has developed a simple process to screen out 99 percent of the mercury from chemical wastes—and make money too.

Chemist Ray J. Donlan, chief of the water laboratory at the Public Health Department experiment station here, said yesterday the process has been used successfully at the station for more than four months.

Donlan's comments came three days after the U.S. Justice Department announced it will file suits to require 10 companies to end discharge of mercury into navigable lakes and rivers.

Donlan said the process he developed involves placing a few scraps of aluminum into a mercury bearing solution and leaving them there overnight.

The mercury precipitates out and can be recovered and sold, in impure form, for about $4.50 a pound, he said. Purified, it is worth around $30 a pound.

Donlan said he thinks "every chemist is aware of the process," but he believes his laboratory is the first to make use of it.

"We discharge our wastes into the Lawrence sewage system, which flows into the Merrimac River, so we thought we should do a little housekeeping ourselves."

Donlan said the Lawrence laboratory began trying the process months ago, long before the discovery of potentially dangerous mercury concentrations in some fish.

PRODUCT SAFETY COMMISSION

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. ROSENTHAL. Mr. Speaker, I introduced yesterday legislation which incorporates the legislative recommendations of the National Commission on Product Safety which recently completed its work.

The striking conclusion from the excellent and detailed studies made by the commission is that its work must not cease. The commission proved, in less than 2 years, that product safety is the proper concern of a permanent Government agency, not a temporary commission no matter how well organized nor how energetic. The commission's principal recommendation, therefore, is that Congress establish a permanent product safety commission. The legislation I introduce today would achieve that purpose.

This legislation would also authorize the new commission to establish standards for safety in consumer products; to create a consumer safety advocate who would represent the consumer before the commission and, in appealing the commission's decisions, before Federal courts as well; to collect information on injuries and to serve as a national clearinghouse of such information; to conduct research and to make inspections of facilities manufacturing consumer products to insure that safety responsibilities are carried out.

Passage of this legislation, Mr. Speaker, would be generous evidence of the seriousness with which Congress regards the outstanding work of the National Commission on Product Safety and of the understanding which that commission engendered for programs to give consumers the permanent product safety they need and deserve.

MADISON, WIS., COMMON COUNCIL OPPOSES SST

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. KASTENMEIER. Mr. Speaker, many citizens, including a large portion of the scientific community, have issued warnings about the excessive noise pollution the SST will cause. Now, the scientific community is concerned that the exhaust pollution the SST will create will never dissipate. The SST will fly at a high level where the atmosphere is basically stable. The effect, many believe, will be that its exhaust emissions will generate great expanses of clouds which will remain there indefinitely, reducing markedly the sunlight reaching the surface of the earth. Dr. Reid Bryson, who heads the University of Wisconsin Institute for Environmental Studies, has speculated that we may see a striking result as soon as there are several hundred supersonic jet transports in the air at the same time. They may well produce 100 percent cirrus cover over those regions where most of them will operate, and Dr. Bryson believes that such cloud cover would definitely cause climatic changes.

Another objection to the SST centers on the fact that the continued Federal subsidy for its development is a prime example of misallocation of priorities, and the American people should not be asked to contribute more of their tax money to such a nonessential frill program.

On August 5, 1970, the common council of the city of Madison, Wis., the State capital and the largest municipality in my congressional district, adopted a resolution opposing the development of the SST and prohibiting its flying within or the air space above the city limits, or using the municipal airport facilities.

I applaud this action taken by the Madison common council, and I call its resolution to the attention of my colleagues:

RESOLUTION

Whereas the SST is an environmental monster causing noise pollution equivalent to the sound of 50 subsonic jets taking off simultaneously and causing upper atmospheric pollution, and

Whereas, the development of the SST is a classic case of misplaced national priorities in that United States Senate approval of H.R. 17755 appropriating $290 million for the project would bring the total allocated to this project so far to $1 billion—this at a time when we face the worst housing shortage in 20 years, when federal funds are being cut from mass transportation, education, anti-poverty programs, dental research, arthritis, child health, mental health Council go on record as urging the United States Senate to adopt Amendment No. 665 to the Department of Transportation appropriations bill, H.R. 17755 which would strike all funds for SST development for the coming fiscal year.

Be it further resolved that it be the policy of the City of Madison that the SST should be prohibited from flying within or the air space above the city limits or using municipal airport facilities.

Be it still further resolved that the City Clerk of the City of Madison officially communicate this decision and resolution to appropriate Federal authorities including the United States Senate so they are aware of our position.

Be it still further resolved that the Madison Common Council go on record as urging that the Wis. State Legislature adopt similar legislation on a state-wide basis to protect and define the environmental and social rights of all Wisconsin residents.

HAIL THE WORLD CHAMPS—WAYNE, N.J., LITTLE LEAGUE

HON. ROBERT A. ROE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. ROE. Mr. Speaker, I am indeed privileged to bring to the attention of my colleagues the great pride we all share in the outstanding achievement of the Wayne American Little League Team of Wayne, N.J., in winning the 1970 Little League World Championship. They are truly exceptional young men of outstanding character and ability and serve as a shining example and inspiration to the youth of our Nation in portraying, by their diligence and perseverance, the opportunities and achievements that are possible and available to all of our young people under the principles of sportsmanship and fair play in our American system and way of life—or, for that matter, epitomize the American Dream.

National recognition and the heartiest congratulations are in order for the members of the team who are as follows:

Thomas (Tom) Olsen, William (Bill) Lees, Mark Epstein, Leonard (Len) Fruci, Craig Kornfeld, Michael Fantau, James (Jim) Kinney, Ronald (Ron) Webb, Anthony (Bud) Perrelli, Steven (Steve) O'Neil, Robert (Bob) Houghton, David (Dave) Shaver, Brian Hurtt, and Glen Otte.

Special commendation and plaudits are extended to Mr. Gene Cancellieri, manager of the team and 21 years old, together with Coach Tom De Angelis, 19 years old, who, as the two youngest officials ever to lead a Little League team to World Championship victory, manifest

all of those qualities of the highest standards of leadership, dedication and youthful vigor personifying the excellence of the youth of America.

I join with my colleagues here in the House, the members of the team and all other citizens of Wayne in extending our grateful appreciation to the president of the Wayne Little League, Mr. John Choka, to Commissioner James McNicholas and to all of the other participants, sponsors and supporters of the "Wayne Americans" for their great service and contribution in establishing a true communion among the youth and parents of our community.

I know you would agree with me that it is refreshing to see the national news media and television extolling the virtues of the young people of our Nation which is so poignantly characterized in the Monday, August 31, 1970, lead editorial of one of New Jersey's prestigious newspapers, The Paterson News, as follows:

HAIL THE CHAMPS

What does one say about the thrilling victory of Wayne's Little Leaguers in winning the World's Championship of all Little Leaguers?

For the jubilant townsfolk of Wayne, the Champs' achievement was better than a cut in the tax rate, sweeter than the sweetest nectar ever served up in Passaic County's top suburban town, a gift from the gods carved out by as fine a bunch of youngsters any community has ever boasted.

It's not only the victory that sets the Wayne kids apart as Champs. It was their coolness under fire throughout the title series. While young Steve O'Neil was getting great fielding and a winning two-base hit by Davey Shaver, the rest of the team played together like a little Mets combo as they turned back their California opposition for the third victory of the World Series.

The champs will be honored at a White House lunch today.

This is America and American boys at their finest, and in a day when one of the major problems of the nation is the devastating problem of a narcotics-gripped teenaged youth, Wayne Township—yes, and all of us as its neighbors—can hold high its collective head.

This is the America of old, and may the lengthened shadow of these wonderful boys cast its glow across the country as an example of fine, promising leaders of tomorrow.

So, hats off, all of us, to the Wayne Little Leaguers, their manager, Gene Cancellieri, and his aides, the parents of the championship kids, and to all the delirious residents and officials of Wayne who deservedly turned the town inside out in delirious celebration.

Dinners, parades, celebrations! Give 'em anything, Wayne. These kids deserve it.

And while we're at it, we'd like to point out a lesson the Wayne champions have posed for the governing officials of Wayne.

A little over a week ago, we urged Mayor Miller and the town councilmen to bury their political axes, forget their rivalries and get together for the good of the town.

We suggest now that they have an inspiring example of team play from their shining youngsters. It wasn't Steve O'Neil's pitching alone that did it. It wasn't Shaver's timely hit, nor the sparkling series play of Craig Kornfeld, Len Fruci, Mark Epstein, Mike Fantau and the other boys. It was their one-for-all, all-for-one, keep punching team play that made them champs.

Can the grown men who run the town do less? And will they learn the lesson?

NO ONE IS PROPOSING OUTLAWING DETECTIVE AGENCIES

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mrs. SULLIVAN. Mr. Speaker, the tremendous number of letters I am getting from detective agencies throughout the country, and the volume of telephone calls my Subcommitee on Consumer Affairs is receiving from the offices of other Members of Congress inquiring about similar letters, lead me to take this means of reassuring the Congress—and the detective business—that we are not about to outlaw private investigators by any language in the proposed fair credit reporting bill.

Somehow—I do not know how—a staff draft of alternate language for sections of H.R. 16340 was passed along to a trade association in the private investigating field. It was described as "Working Draft of August 5." Two sections of it were singled out for a vast letter barrage to the Congress denouncing the "viciousness" of the whole idea of putting detective agencies out of business.

The so-called Working Draft of August 5 was never even considered in the subcommittee. It was one of a series of different staff drafts of language intended to solve some of the technical drafting problems we had encountered in our discussions on the bill—but the "Working Draft of August 5" was obsolete before it even appeared as a confidential subcommittee print because we had decided on August 5 to use a "Working Draft of August 4" for discussion and proposed changes, and that, too, has been superseded several times. So how the August 5 print ever got out I cannot imagine.

Apparently, after seeing or hearing about proposed language dealing with detective bureaus, the detective agencies became alarmed over the thought that we were trying to regulate them in work which has nothing to do with investigations into individuals' eligibility for credit, insurance, or employment. Obviously, if we are going to require credit bureaus to follow certain procedures in giving consumers an opportunity to find out the nature of adverse information in their credit files which might be erroneous but which could nevertheless lead to rejection of an application for credit, or for insurance, or for a job, then it would not be fair to the credit bureaus for us to permit detective agencies to do exactly the same work without similar regulation.

NOT A NEW EXTENSION OF THE BILL'S COVERAGE, BUT AN ATTEMPT AT CLARIFICATION

I think the alarm which has been spread among the detective agencies over the far-reaching consequences of these proposals has been rather mischievous. So far as I know, the trade association which circulated this material, and summoned all of the detective agencies to write to Congress in great distress over the proposed language, never contacted us directly to find out what the bill-drafting problem was.

It is simply this: To make clear that the customary investigative work done by detective agencies for lawyers in court cases, or into insurance claims, or into thefts by employees, and so on, would not be covered by the fair credit reporting bill as long as this work was not intended to develop information for a credit grantor, or insurer, or prospective employer on the eligibility of an individual for credit, insurance, or employment, which is work normally done by credit reporting firms.

It was not the "Working Draft of August 5" that first posed this problem. Rather, that draft contained language—which also appears in previous and later drafts—designed to try to solve the jurisdictional problem as it relates to traditional detective agency work. We are interested in detective agency activities only insofar as they duplicate the work of a credit bureau in certain restricted fields of investigation. The problem has been present from the very start of our consideration of legislation dealing with the regulation of credit bureaus.

SUBCOMMITTEE SEEKING TO LEGISLATE RESPONSIBILITY

My Subcommittee on Consumer Affairs of the House Committee on Banking and Currency, which has been working diligently for many months on H.R. 16340, the fair credit reporting bill which I call the Good Name Protection Act, certainly recognizes the essential nature of credit bureaus in checking into the worthiness of individuals for credit, insurance or employment, and also recognizes the essential nature of detective agencies in making a wide variety of investigations into the backgrounds of individuals or into the circumstances which provide evidence for innumerable types of court cases and other matters.

So I would say to the Members of Congress who are receiving these anguished letters from detective agencies in their districts: credit our subcommittee, please, with the degree of responsibility with which we are trying to write a very important and very technical piece of legislation. We are not out to destroy or harm any legitimate business in the investigative field. We do want, however, to give the public the protections our citizens deserve as individuals in preventing—or correcting or challenging—erroneous information being circulated about them by businesses which charge a fee for obtaining personal data to be used in determining one's eligibility for a mortgage or consumer credit, a job, an insurance policy, or similar necessities.

As of the moment, the subcommittee has not reached firm conclusions or decisions on any provision of H.R. 16340, or of any of the drafts containing alternate language. Our executive sessions have been devoted to discussing concepts rather than specific language—the language is constantly being restudied.

Perhaps we need an investigative agency to find out how "Working Draft of August 5" happened to receive such

wide distribution among detective agencies when this particular staff paper was never even presented to the members of the subcommittee for consideration.

NO CAPITULATION TO AIR SAFETY

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. ROSENTHAL. Mr. Speaker, the world community can no longer delay decisive action against aerial hijacking. To do so not only would invite fanatics of every bent to emulate the Arab terrorists but also could lead to a breakdown of international air travel. Airplane traffic is extremely important to the Arab nations which so far have harbored and refused to prosecute the skyjackers. The United Arab Republic has already shown signs it would be susceptible to any international pressure against air piracy. I am convinced, Mr. Speaker, that a boycott of the air terminals of those countries abetting the hijackers would result in the necessary international cooperation to curb skyjacking, if respect for law and order and revulsion at barbarism should not be sufficient motivation. The September 10 New York Times editorial concerning the hijackings provides thoughtful recommendations on the problem:

BOYCOTT NEEDED

The continuing ordeal of an augmented company of international air travelers held captive on the Jordanian desert by Palestinian desperadoes is the savage consequence of the failure of the community of nations to have acted decisively long ago on the crime of aerial hijacking.

This latest and most barbaric wave of hijackings should never have been possible if interested nations, airlines and crews had moved urgently and forcefully to strengthen security arrangements—which remain pathetically primitive—and to forge binding international agreements for dealing with hijackers and with those who abet air piracy.

We have long advocated action, now so tragically overdue, to impose boycotts on the air terminals of nations which in any way offer aid or encouragement to air piracy, and to deny landing privileges to planes of such countries. This should be done on an international basis for maximum effect and because all civilized countries have a stake in curbing this threat to their citizens' safety. Belated efforts to tighten security at airports and on planes must also be accelerated on a worldwide basis, regardless of any temporary inconvenience.

The United States should be prepared to take the lead and impose boycotts unilaterally, if necessary, as Senator Goodell and others have suggested. Failing such national or international action, the hesitant airline pilots have the right and duty to impose their own boycott in the interest of the passengers for whom they are responsible.

The immediate concern of everyone must be for the safety of the desert hostages. The appeal issued by the U.N. Security Council yesterday is a limited first step toward bringing the force of world opinion to bear against the pirates and anyone who might be tempted to condone their actions. The temptation to move at once to more forceful action is great, but where so many innocent lives are at stake diplomacy must be given every chance.

It must not be forgotten that the desperate aim of the Palestinian extremists is to wreck the revived Middle East peace talks which they have hysterically opposed. Unless this objective is frustrated, there will be diminishing security for everyone in the Middle East, and for many outside the area, for years to come.

With this larger issue in mind, it is essential that the current situation be met with restraint and the closest cooperation of all parties, including the Arab states whose vital interests are as directly threatened by the guerrilla action as are those of Israel and the rest of the civilized world.

JEFFERSONIAN DEMOCRAT TELLS WHAT HE BELIEVES IN

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. DERWINSKI. Mr. Speaker, an interesting article in the Friday, August 21, New World, the official publication of the Catholic Archdiocese of Chicago, in which columnist Rev. Andrew M. Greeley frankly discusses his political views with the self-designated description of "Jeffersonian Democrat," I believe merits thoughtful reading by serious students of government. The article follows:

"JEFFERSONIAN DEMOCRAT" TELLS WHAT HE BELIEVES IN

(By Father Andrew M. Greeley)

The author of a column like this ought to make explicit periodically the context of convictions and commitments within which he is writing. While the reader may, if he is patient enough, be able to deduce over the long run where a columnist stands, he ought not to be required to engage in such an exercise of "form criticism."

Further, when a columnist manages to be viewed with dismay both by his own religious superiors and by the paragons of official Catholic liberalism, the reader has some right to know what philosophical principles have led the columnist to his marginal position.

At a recent meeting of a number of social scientists who were discussing ways in which the Peace Movement might communicate with the various segments of middle America I was arguing with considerable vigor that the Peace Movement, to begin with, must shed its contempt for middle America. Finally, one of my colleagues pointed a finger at me and observed, "I know what you are. You're a Populist!" He meant it is a compliment, and I took it as such, for Populism is perhaps the most powerful and elemental political movement in the whole of the American tradition.

It has at times produced rather bizarre leaders, and it can be a violent, bigoted, and destructive force, though it has also produced some of America's most creative political leadership: the Roosevelts, the LaFollettes, Hubert Humphrey (a quarter of a century ago and perhaps even today), Eugene McCarthy and, in his last years, Robert Kennedy.

I think I might have preferred even more the title of Jeffersonian Democrat because this would have cleared me of the anti-intellectual and chauvinist strain which is latent in the Populist spirit, but I'll settle for title Populist, so long as it is understood that my Populism is more of the variety of Thomas Jefferson than it is of Andrew Jackson (or Hubert Humphrey in 1948 rather than George Wallace in 1968).

But what do I mean when I claim to be a Jeffersonian Democrat? There are three convictions which are at the root of this philosophy (at least for me), and which affect not only my political but also my religious attitudes:

1. I believe in the fundamental dignity and decency of the people; not merely intellectuals, not merely those who have Ph. D.'s, not merely those who live in certain sections of the country, but of the people; not all of the people all the time, but enough of the people enough of the time so that with the proper leadership the people will in the long run be more likely to make the correct decision rather than the incorrect one.

Indeed, they will be more likely to make the correct decision or at least support the correct decision than will be a self-anointed elite which has decided to make the people's decision for them. (I am not altogether out of sympathy with William Buckley's claim that he would rather be governed by the first 2,000 names in the Boston phone book than by the faculty of Harvard University.)

I would therefore agree with Winston Churchill that while democracy may very well be a terribly inefficient way of running a society (or a church), it looks very good indeed when compared to all other available methods.

2. I believe in the ability of men of good will to work out their differences with other men of good will so that situations can be created in which men of different backgrounds and different cultures can live with each other, if not exactly in amity, at least in some kind of peace. I do not think social conflict can ever be eliminated from society; I am convinced that there are in all social groups substantial majorities which are favorably disposed to settling conflict by dialogue, discussion, growth of mutual understanding, and compromise rather than by violence which tears a society apart.

3. I believe, finally, in the dignity, integrity, and uniqueness of people and, hence, reject any attempts to manipulate them, violate their dignity, and integrity, reduce their freedom, turn them into objects or categories, or make judgments on whole classes of people. Therefore, I view as mortal enemies of the people those demagogues of whatever color or of whatever social class who appeal to the hatred, the fear, and the resentment that smolders in the people. I further deplore those moralistic zealots who denounce the people.

I do not approve of those enthusiasts who would attempt to make feelings of guilt the beginning of social action or social reforms programs. I denounce those bigots who generalize about categories of people whatever their race, or nationality background, or religion, or economic class. I further denounce those bigots—even, and, indeed especially, when they are ministers of religion—who wish to hold whole certain classes of people today guilty for things that were done in the past.

I abhor those self-satisfied "missionaries" who are so convinced of their own rightness and righteousness that they manipulate people, thus violating their integrity and dignity so that they may do that which is "right." Hence, my profound suspicions of the forms of manipulation that go on in the abuses of group dynamics. Finally, I despise those snobs who despise the people, particularly the strutting mosquitoes of the official liberal journals, whether they be the clearly first-rate mosquitoes of the New York Review of Books or the clearly third-rate mosquitoes of such Catholic journals as Commonweal.

FACTS ABOUT AMERICAN PRISONERS OF WAR IN SOUTHEAST ASIA

HON. OLIN E. TEAGUE
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. TEAGUE of Texas. Mr. Speaker, the wives and families of prisoners of war in Southeast Asia have been working for the past several years very diligently in their quest to bring their sons and husbands home. Many of the veteran organizations of this country are assisting in every way they know how, particularly the Veterans of Foreign Wars. A nationwide effort has been launched by these wives and families, and I wish to include a sample of a fact sheet which they are distributing to clubs and organizations all over the country:

THE FACTS ABOUT AMERICAN PRISONERS OF WAR IN SOUTHEAST ASIA

We want the world to know the truth about the treatment of American Prisoners-of-War in Southeast Asia.

STATISTICS

Almost 1,600 U.S. Servicemen are now listed as "Missing-in-Action" or "Prisoner-of-War."

Over 1,100 are listed just as "Missing-in-Action."

Slightly over 400 U.S. Servicemen are known to be "Prisoners-of-War."

More than 200 Americans have now been held by the North Vietnamese for more than 5 years.

Less than 300 imprisoned Americans have ever been allowed to send mail to, or receive mail from their families.

THE TRUTH ABOUT NORTH VIETNAMESE TREATMENT OF AMERICAN PRISONERS-OF-WAR

The North Vietnamese have refused to abide by a single one of the articles of the Geneva Convention Agreement regarding treatment of prisoners-of-war—an agreement which they signed in 1957. That document requires that there be the immediate release of names of those being detained, that there be neutral inspections of the prison camps, that there be allowed the free flow of mail between the prisoners and their families, that there be given adequate food and health care, and that the seriously sick and wounded be returned to their homeland promptly. The Geneva Convention Agreement calls for nothing more than what any civilized people would consider minimum with regard to prisoner treatment. And although they gave their solemn pledge to abide by those standards, the North Vietnamese have blatantly violated every one of the stipulations to which they pledged themselves.

The treatment of prisoners by the North Vietnamese is the most unconscionable in history. More than 200 Americans have been detained by the North Vietnamese for more than 5 years—the longest any American has ever been detained during an American conflict. The tortures inflicted upon the defenseless Americans by the Asian Communists include, being kept in solitary confinement, the pulling of fingernails, starvation, and being subjected to public harassment, to name only a few. Propaganda photographs disclose that prisoners, after months of captivity, still suffer from wounds incurred at the time of capture. Some are pictured with badly set bones, shrunken arms or legs from inadequate medical aid, while many are known to suffer from dysentery and stomach ailments. Pumpkin soup with pig fat in it and some bread twice a day is the typical food that is provided. Reports include the rebreaking of broken bones, being dragged along the ground with a broken leg, being hung from a ceiling, forced statements, living in cages for literally years, and the suffering from heat rashes and fungus over 90 percent of their bodies. Men are beaten brutally for no reason. Some are known for their savage killing of captives rather than being bothered to transport them to a camp. Less than 300 of the American prisoners-of-war have ever been allowed to write to their families or to receive a letter from their families.

These men have fought for freedom and, in the process, have lost their own. It is our firm belief that it is now our turn to fight for them and their freedom. We urge you to take action now and join the thousands of deeply concerned, patriotic Americans and allies in this effort. Imagine yourself and your family in this situation and let your conscience be your guide!

NO SUCCESS WITH POLITICAL AND MILITARY EFFORTS

There have been countless behind-the-scenes overtures made in hopes that the North Vietnamese could be reasoned with and that a rational solution to the prisoner dilemma could be achieved. All attempts to reason have fallen upon deaf ears where the North Vietnamese are concerned. We know that the Asian Communists have no concept of the value of human life. They have said that the lives of the American prisoners-of-war are not important—that it is the issues that count. The North Vietnamese say that a country of 200 million people (the US) cannot be concerned about "just 1600 men." They are not concerned about their own 8,000 men who are now being detained in South Vietnam. Innumerable attempts to effect a prisoner exchange have been made. The North Vietnamese are simply not interested in a prisoner exchange. Quiet diplomacy simply has not brought results with the North Vietnamese.

IT IS NOT LIKELY THAT AMERICAN PRISONERS OF WAR WILL BE RELEASED THROUGH MILITARY PRESSURE

For the first time in American history the United States is disengaging from a war without first obtaining a settlement for the prisoners-of-war. The bombing of North Vietnam has been stopped, and is likely never to be resumed again. This was a unilateral action on the part of the United States, and the release of the prisoners-of-war was not a consideration when the decision to halt the bombing was made.

American troops are now being withdrawn from Vietnam, and this too is a unilateral gesture, with no provisions made for the of return of the prisoners-of-war. Of course, it is hoped that the prisoners will be returned before all of the American combat troops are withdrawn, but as the number of troops withdrawn increases, the possibility diminishes of an American demand that the prisoners-of-war be released on the basis of troop withdrawals.

HOW TO BRING HOME THE AMERICAN PRISONERS-OF-WAR

Public opinion! It must be admitted that North Vietnam has done a superlative job during this war in promoting world opinion in her favor. The indisputable fact is that North Vietnam has fought just as hard in the area of obtaining public sympathy for her cause, as on the battlefield. The reason for this "dual war" on the part of the North Vietnamese should be quite evident. North Vietnam must rely upon world sympathy in order to survive. North Vietnam is a non-industrial country. North Vietnam is also a non-agricultural country. The North Vietnamese would find it impossible to survive or even to exist without the help of other people throughout the world. Whether in war or out of war, North Vietnam must rely upon supplies from other countries in order to endure. Daily, ships from countries from literally all over the world carry their life sustaining cargoes of goods, and supplies into Haiphong Harbor in North Vietnam. The goods going into North Vietnam come from Hong Kong, England, France, Japan, Italy, India, Sweden, Canada, and Scandanavia not to mention the more obvious sources for aid to the North Vietnamese such as the Soviet Union, Poland, Czechoslovakia, Romania and the other Communist bloc countries. Last year, Sweden alone gave the North Vietnamese 43-million dollars! If Americans stop purchasing goods from the neutral and allied countries that are trading with North Vietnam, the economic pinch would soon be felt, resulting in much greater pressure upon North Vietnam to release prisoners-of-war. The North Vietnamese must be made to understand that they stand to lose everything through world opinion by keeping their hold on the American prisoners-of-war. During this past year since the issue became public, almost miraculous results have been brought about by the display of public concern. Over 200 families have been allowed to know for the first time that their loved ones are alive. The increase of mail coming from POW's to their families is now 10 times what it was a year ago. America holds the purse strings of the world. The day that all Americans let it be known that they will not tolerate the detention and torturing of American servicemen, will be the day that the American Prisoners-of-War will be released.

Yes, America holds the pursestrings of the world. And yes, the world responds to the outcry of American opinion. Every voice is needed. For every example of silence on this issue only proves to tell Hanoi that Americans don't care about those who have served them. If there is anything that has helped American servicemen to survive their years of anguish, it is their faith in America. These are the men who would do anything, suffer anything, and sacrifice all for America, because these are the men who know that the American people will never let them down. America through her concern for the 87 men of the Pueblo crew brought them home after 11 months of captivity in North Korea. America has brought her men home from the moon. If America in all her greatness can achieve these things, America too can bring home her languishing prisoners from Southeast Asia.

Although the terms North Vietnam and North Vietnamese have been used throughout these papers, let it be understood that we are just as concerned about the men being held by the Viet Cong and Pathet Lao. However North Vietnam has jurisdiction over all American prisoners in Southeast Asia.

BELOW ARE WAYS YOU CAN HELP THE PRISONERS OF WAR IN SOUTHEAST ASIA

1. Organize local boycotts, urging your community not to buy goods from countries that trade with both North Vietnam and the United States, until our prisoners are released.

2. Set a goal for yourself and send a letter of concern as often as possible. Write to:

Ton Duc Thang, Office of the President, Democratic Republic of Vietnam, Hanoi, North Vietnam; and

Pham Van Dong, Office of the President, Democratic Republic of Vietnam, Hanoi, North Vietnam; Airmail Postage 25 cents or Air-O-Gram form letter 13 cents.

3. Clip every POW story you see in print and mail it to North Vietnam. Include a hand-written note showing circulation and audience size of publication.

4. Urge all local and national news media to take editorial positions on the POW issue.

5. Contact churches in your community and ask them to include the prisoners and their families in prayer each Sunday until the men have safely returned.

6. Ask the Company you work for to print this information in their Company Newspaper.

7. Send a public opinion message telegram (15 words for $1.00) to your two Senators and Representatives in Congress urging them to make the release of the POW's the highest priority item during their campaigns and during the next session of Congress.

8. Pass this information on to as many people as possible.

9. Write U.S. Senators and Representatives who favor unilateral withdrawal from Vietnam urging them to be even more aggressive in using their position to gain the release for POW's.

All the wives and families of the prisoners thank you most sincerely.

CAMPUS RIGHTS AND RESPONSIBILITIES: A ROLE FOR LAWYERS?

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. COHELAN. Mr. Speaker, as this Nation prepares for a new academic year, we are faced with the possibility of continued strife on our campuses. This situation is caused by many factors—the war in Southeast Asia, the glaring inequities of our society, traditional student discontent with the status quo, and so forth.

There are many suggestions concerning the means that may be taken to remedy campus unrest. Recently, I read a provocative article in the American Scholar by Prof. Nathan Glazer, a former professor at Berkeley and now at Harvard.

Professor Glazer correctly points out that the principal role of the university has been and continues to be a place for critical inquiry—a place of intellectual freedom. Given this mission of the university, all activity on our Nation's campuses should be directed to preserving this most valuable condition. Authoritarian demands from the left or the right should be rejected as being incompatible with the goals of the university.

Professor Glazer illuminates some of the contradictions in the pursuit of intellectual freedom and student rights which can be used to deny intellectual freedom in this article entitled, "Campus Rights and Responsibilities: A Role for Lawyers?" This article should be read by all who are concerned with the independence of the university and its proper role and function in a free society. At this point, Mr. Speaker, I would like to have this article inserted in the RECORD:

CAMPUS RIGHTS AND RESPONSIBILITIES: A ROLE FOR LAWYERS?

(By Nathan Glazer)

(NOTE.—Nathan Glazer, professor of education and social structure at the Harvard Graduate School of Education, was formerly professor of sociology at the University of California at Berkeley. His books include *American Judaism, The Social Basis of American Communism,* and *Beyond the Melting Pot* (with Daniel P. Moynihan). This essay is from a forthcoming collection of his writings on the student crisis, *Remembering the Answers,* to be published by Basic Books late this summer.)

On every major campus today, law school professors play an increasingly important role in university affairs. This is true at Berkeley, Chicago, Columbia, and Harvard. In the present circumstances—with powerful demands for reform in the governance of institutions, for new mechanisms for the discipline of students and faculty engaged in acts not previously envisaged in university rules and statutes, and with growing concern for individual and group rights—it is inevitable and desirable that lawyers should play an expanded role. And yet I look upon this new role with some caution, with some wariness, indeed with a certain skepticism.

My experiences with lawyers on this question go back to Berkeley in 1964. Until the beginning in that year of the disturbances that have become epidemic, professors from Boalt Hall, the Law School at Berkeley, did not play a particularly active role in most of the meetings of the Academic Senate. Once the Free Speech issue exploded, however, lawyers became central figures in its affairs.

First of all, they knew a great deal about the history of free speech and the interpretation of the First Amendment, so they were the first experts to be consulted on the issue of Free Speech itself.

Second, they knew a great deal about the responsibilities and privileges of such organizations as public universities. A great deal depended on whether these were considered organs of the state, voluntary organizations, or something else in between, and we had to count on our faculty colleagues, the lawyers, for clarification of such issues.

Third, the lawyers began to serve as counselors to students who were called up before disciplinary bodies. In the past, these disciplinary bodies had generally acted, if not actually in secret, away from the eye of campus public opinion. But since political issues were now involved, those charged very often insisted on legal counsel, and Boalt Hall lawyers and students found themselves in the difficult position of representing students and chairing the bodies that exercised, or rather attempted to exercise, discipline. They also helped develop procedures for these hearings.

Finally, as the feeling spread that a new system of government (or, as it came to be called when the matter became more serious, governance) was needed on the campus, lawyers again played a leading role, and a student-faculty commission headed by Caleb Foote of the Law School helped propose for Berkeley the most elaborate system of panels, courts, appeals and the like to ensure due process for students that I have ever seen proposed anywhere. Fortunately—and here I display my bias—it was never taken too seriously, and the report of the Commission on Goverance at Berkeley has been, I believe, quite forgotten.

Nor is it only at Berkeley that lawyers have taken a leading role in campus disturbances. Michael Sovern played an important part in the events at Columbia. At Harvard, where the Law School is quite separate from the Faculty of Arts and Sciences and never meets with it, a distinguished professor of law, Milton Katz, was called in by the Faculty to chair the important special disciplinary body set up after the disturbances in the spring of 1969. A professor of law is president of the University of Chicago, and other lawyers there have also played leading roles in the response to student disturbances.

I appreciate, as does every faculty member, the guidance of lawyers on such matters as free speech, trespass, double jeopardy, due process. But on the whole I take the position that the introduction into the university of legal principles and practices drawn from the operations of the body politic and civil society would hurt rather than help the universities and colleges.

I rest this position on two main grounds. The first is that universities and colleges have distinct objectives, objectives that would be hampered by deploying, in the university and college setting, the full range of procedures and rights that we have developed to protect people against the state and its agencies. This is not an easy position to defend. The rights of consultation, participation, due process and formal voting are now being extended into more and more areas that most of us never thought of as suitable for democratic rules and procedures. Thus, in some of the community health clinics set up by the Office of Economic Opportunity, patients as well as doctors play an important role. In welfare, there is a demand that clients be consulted, and there are such consultative bodies in New York City and elsewhere. Certainly, if patients and welfare clients have expanded their power—even if not to a point of equality with doctors and welfare officials—there seems to be argument enough for more power for graduate and undergraduate students and junior faculty.

Yet there is no escaping the reality that the chief purpose of universities and colleges is the advancement of knowledge through research and teaching. This is no justification for arbitrary and irrational authority, but the advancement of knowledge seems to demand its own settings and its own rules, and these are not the same as those that the democratic process requires. When a lawyer whose principal concern is the defense of individual rights against local police departments, vigilante groups, local and state governments, the F.B.I. and a misguided Congress, comes into such a situation, both his model and his reflexes are wrong. His model is that of a conservative or reactionary or puritanical public body that imposes its will on defenseless individuals, using all the power of the state, and his reflex is to move heaven and earth to defend the individual. When one deals with state action, this is on the whole, I think, quite right, because against the power of the state, which can wreak such injustice on single individuals and groups, we must be eternally vigilant.

When we come to institutions with subtle and complex purposes, which require certain environments for attainment, I think the lawyers' orientation is inappropriate. The full array of individual rights, which should be paramount in the state, must be limited so that institutions with specific functions can carry them out. I think this is true in any distinctive institution with distinctive ends—a church, a business, a university. The university does *not* have state sanction, and even the argument that it can do terrible harm to an individual is exaggerated. I know of many students expelled from one university who gained entrance to another. I know of none who have been drafted because of expulsion, although some may have been. I have sat on various admissions committees in two universities, and any fragment of merit, in the present circumstances when there are so many universities and colleges and so many kinds of fellowships, is generally rewarded, even if an applicant has been expelled. Actually, only a few score of students in the entire country have been expelled for politically inspired disruption, and most of these by a single university, the University of Chicago.

This is not to say that, because universities have distinct and complex ends, they

should be allowed to act with absolute and arbitrary power, with no intervention by the courts, or by individual lawyers defending an individual's rights. But I have seen very few examples of the exercise of such power; and what the case actually is must affect our judgment of the scale of action necessary to defend individual rights in the university. Very few students have been expelled, even though there have certainly been many actions by students that once justified such a response. After all, classes have been disrupted, many buildings on campuses have been burned and bombed, libraries have been intentionally damaged, and research notes destroyed. Academic punishments have been few and far between. The problem of arbitrary action by university authorities does not seem to me a serious one.

On the other hand, the effort to protect individuals, in the ways with which lawyers are familiar, from university authority can be harmful. It can mean, for example, that in many cases courts and open hearings, with all the paraphernalia that due process requires, would be substituted for the complex relationship between teacher and student.

Consider one area, the employment of graduate students as teaching and research assistants. At Berkeley I have engaged in negotiations with graduate students over the procedures by which they should be hired as teaching assistants. The choice of a teaching assistant, just as of a law clerk, is a subtle matter and not to be determined by negotiations that would lead to the establishment of superficially objective but really inadequate and arbitrary qualifications. It depends not only on grades and performance in class, but on a professor's judgment of how a student will handle certain material, how he will relate to undergraduates, whether he has problems with authority, how his political biases might affect his work in the course and the like. One can well see that if one let loose lawyers—that is, some lawyers—on such a problem they would come up with an ingenious Rube Goldberg solution involving panels, selections, appeals, arbitrations, *et cetera;* but I submit it would not be a better approach, and indeed I believe it would be much worse than the simple procedures we now use.

We can extend the example to other areas: examining graduate students, forming committees for theses, approving theses, recruiting faculty and granting of tenure and full professorships. In all these areas, a good deal of informality and even secrecy prevails. There are rules and determinations, but they are made by faculty, sometimes by tenured faculty alone or even by department chairmen (but in the leading universities this would only be done because the tenured faculty had decided not to exercise its rights in the area in question). One can think of many alternatives to these arrangements. For example, in various European universities, openings are publicly advertised; in some, appointments are preceded by formal public examination rather than, as is common in this country, by an informal meeting with the department faculty, and perhaps a presentation to the faculty and graduate students. Students are now being introduced, both in various West European countries and in this country, into various stages in these procedures. But I believe it is a great exaggeration to think that universities will be much improved by these changes—that is, that they will turn out better students, do better research, get better faculty, become more alert to current problems, less conservative and more flexible.

Do then professors in their wisdom always make the right choice? Of course not. But I don't know a better way to conduct the work of an educational and research institution than through the free choices of men qualified by their professional peers as members of a scholarly and academic fraternity. In Orthodox Judaism, rabbis are qualified when three rabbis say, You are a rabbi. In scholarship, Ph.D.'s are made when a certain number of Ph.D.'s, having set certain tests and qualifications that have been satisfied—and having the power, just as the three rabbis do, to waive whatever they feel is unnecessary—say, You are a scholar. I would not want lawyers and legal principles to interfere in that process. I think they would worsen it. My position is similar to Winston Churchill's on democracy: it's a terrible system of government, but it happens to be better than the others.

The weaknesses of the present system of university government are well understood—conservatism, slowness or inability to recognize the new and important, self-satisfaction and smugness, patronage and personal bias. And yet, despite this bias toward the known and against the new, there are academic changes and even revolutions that occur without the pressure of student disruption. Men measure themselves against their colleagues, in the present and the past, and institutions measure themselves, too. Everything of any merit, and a good deal without merit, in the social sciences gets recognized, and fairly fast—if not at Berkeley or Harvard, then at Santa Cruz or Buffalo, or some other aspiring institution.

Thus I do not see that the introduction of elaborate processes of selection, appeal, final determination and so forth would improve the selection of faculty. Nor am I convinced that one major change in universities that a number of critics favor, the elimination of tenure, would do much to change them. Would eliminating tenure actually change the reality that it is very hard to remove a man who has been in a position, with or without formal protection, for a number of years? This is, of course, as true in business or government as in universities and colleges.

There is one possibily important point that those who argue for the elimination of tenure often don't recognize. It is one thing for a new administrator to have the power to hire his own staff, and fire those who would stand in his way. Civil service restrictions on whom a new mayor or superintendent of education can hire or fire are generally too restrictive. But it is quite another matter when hiring or firing are in the hands of a colleagual group, as is the case with faculty appointments. Then inevitably the responsibility for action is a group responsibility, and the power to remove an individual would certainly introduce an additional element of distrust and suspicion into groups that even today are often torn by faction. On the other hand, who would be for introducing hierarchical principle, in which the superior alone selects his staff? For a group of faculty members is not a staff, but ideally—and often actually—a body of men of independent reputation and power.

Thus it is not easy to think of decisively better ways of faculty selection and promotion. Nor is it at all clear that the relationship between faculty and undergraduates, specifically in undergraduate education, needs new legal machinery, and a new distribution of rights and responsibilities. This is not to say that change should not take place, but a good deal of change has taken place, and I do not see at this point that an expansion of student power in this area would lead to a better process of change. Just as I have seen, during the twelve years or so in which I have been in colleges and universities, a good deal of change in graduate study, and in the bases of faculty selection, I have seen also a good deal of change in undergraduate education.

One of the explanations given for student disturbances at American universities is that there is a failure in undergraduate education and in the relationship between faculty and students. And it is often argued that what change we have seen in undergraduate education has occurred as a result of these disturbances. I would agree that a good deal of the change in recent years has been inspired by student disturbances, in actuality or in prospect. But I do not think that the failure of education or student-faculty relations plays much role in the student disturbances. If we look at the actual events, we find that political causes and issues lead to the disturbances. Indeed, there is not a single major disturbance, so far as I know, that can be ascribed to any *educational* issue. (I would consider the battle over Eldridge Cleaver's course at Berkeley primarily a political matter.) Robert Somers' recurrent surveys of student opinion at Berkeley show a still substantial, although declining, majority of students who think they get a good education at Berkeley (presumably even more would think so at Columbia or Harvard). The decline in the proportions of those who think they can get a good education has paralleled the introduction of various experiments and changes that were intended to improve education, such as a new experimental undergraduate two-year program, student-initiated courses, student-conducted courses, and the like. This decline in the number of students satisfied with education at Berkeley is clearly owing not to any "objective" decline in education, but rather to the steady heightening of political sensitivity, in the course of which students are taught to see administrators and faculty more and more as political enemies. Thus it is not the poor education that leads to the political revolt; *it is the political revolt that leads more and more students to see the education as poor.*

I have left aside the question of whether undergraduate education is good or adequate or responsive to change. Of course, it is not good enough or responsive enough. But it is surprising how often this is seen as the failure of a faculty that is too conservative or too involved in research, rather than as the result of enormously difficult and conflicting demands. For instance, it is not clear whether undergraduate education should be a "liberal" education for an "educated" man (in which case it is not at all clear what this should be), or training and education for a profession, or the induction of values that support a democratic society, or preparation for a more advanced level of education, et cetera, et cetera. Faculty must shoulder a good part of the responsibility for the failure of undergraduate education. (While I find the failure impossible to define, I am willing to accept that it has failed.) But so too must everyone else—students with conflicting expectations and demands, parents with the same, institutions that are unclear about what part of undergraduate education, if any, they should support or reward, and a society in which these confusions and uncertainties are projected on a larger scale.

American universities and colleges probably fail least in undergraduate education. When universities around the world have their uprisings and disturbances, one of the first things that most parties agree on is instituting something like the American university and college system—organization by departments, distribution requirements, major requirements, and undergraduate core, a relatively free choice of courses, smaller classes, more discussion. A bad system—just like democracy—but it's difficult to think of decisive improvements, and we do keep on making changes and experiments even without the pressure of student disorder.

One of the myths we have to fight against is that *no* changes occur without student disorder. This is simply not so. The innovative new campuses of the University of California were planned before the onset of university disorder. The plan for Hampshire

College, the experimental Monteith College at Wayne State University, and other new colleges preceded student disorders, as did the program of freshman seminars at Harvard, credit in many places for advanced work done as an undergraduate, and numerous other changes. Admittedly, considerably more change has occurred since the onset of student disorder, less because students demanded it than because this was the one area in which response was possible. The university could not end the war in Vietnam, but it could introduce educational changes and give a greater voice to students in making these changes. Many of these changes are available. Some of them conceivably would have been instituted without student disorders. There was already considerable discontent with undergraduate education, even though there was no major constituency, student or faculty, that could force change. But many other changes were made simply to facilitate political activity of students on the campus. Whether this is a necessary or desirable change in undergraduate education depends in part on one's judgment about the desirability of the political viewpoint that radical students propagate as a result of these changes. Other changes, to my mind, involve an adaptation to the reality that many students are not interested in intellectual discipline, in any field, and want in their college years experiences of a different sort—they may be more interested in political organization and social action, in sensitivity training and intense personal relations. To make such experiences possible may be a valuable and necessary change, if we are to accommodate many thousands of students who are now in colleges and universities, although I think we could more efficiently provide for these experiences in other kinds of institutions. But it is hardly likely that these changes would have taken place as rapidly and on the same scale without the student disturbances.

Thus my first major ground for viewing with skepticism the entry of lawyers into the university on a large scale to define and protect rights and responsibilities is that I do not think universities will be improved thereby.

But there is a second major reason why I am unenthusiastic about proposals to change the distribution of rights and responsibilities on the campus, and this is the heart of the matter as far as I am concerned. What we have in the universities is not, as so many public figures are fond of saying, archaic and sclerotic institutions that are incapable of understanding what the youth are saying and of changing in response to their demands. What we have rather is a political struggle—one that on the whole pits students against faculty and administration, but that also pits faculty against faculty and student against student, even if the latter struggles are somewhat more muted and less sensational.

Lawyers understand that in a political struggle the issues are not only legal ones—issues of rights and responsibilities—but also issues on the distribution of power among certain interests and, even more, of the substitution of one ideological outlook for another. Many lawyers now seek to expand the rights of the poor, of welfare clients and of Negroes. In doing so, some operate within a traditional legal framework, and some more imaginatively and daringly outside it, trying, instead of only implementing and asserting established rights, to lay a foundation for new rights. Many such lawyers think of students as part of this complex of the underprivileged whose rights must be established, expanded and fixed in law. I think this is fundamentally in error.

The issue of student rights has come up not primarily because of defects in the institutions (although they do have defects) but because of a political revolution among young people in the way that they see the world, the role of capitalism and the military, the effectiveness of democracy and the character of America's place in the world. Views on these have undergone incredibly rapid and astounding changes in the last six or seven years. Two years ago, to wave the "Little Red Book" was a put-on, a year ago a dare, and today it is waved in dead seriousness. Five years ago, all the talk of participatory democracy, and participation was really open to all. At the last convention of the S.D.S., it was pretty much back to "democratic centralism" again, and those of us with long memories know that has nothing to do with democracy. Five years ago, to use words like "imperialism" and "capitalism" marked you as a square, even if a left square. Today it is all the rage. I have referred, I know, to some rather far-out developments. As we know, more young people worked for Senator Eugene McCarthy and Representative Lowenstein than are concerned with the rehabilitation of Joseph Stalin, and yet . . . don't underestimate the number of importance of the latter.

In such a situation demands are often purely tactical. Issues are sought for and created because of an initial conviction that society is rotten; the university is implicated by being associated with society; the faculty is corrupt because it works in the university; and the whole thing must be brought down. Even the Free Speech Movement, pure, innocent and fresh as it was, compared with many things that followed, thought very much this way. By the time the Movement got to Harvard, the issues hardly mattered, and the revolutionizing of potential cadres was everything. So, for example, when at Harvard students urged that the issue of R.O.T.C. be determined by a majority vote of the students, this was denounced by the radicals as "counterrevolutionary"—in just those terms. Following the antiparliamentary position in Marxism (which all the major leaders of the Movement fully avow), they naturally consider elections purely tactical maneuvers. If they advance the revolution, one is for them; and if they do not, one is against them.

It is an unfortunate thing when the truth sounds extravagant and hysterical; one is almost embarrassed to refer to it. But I believe we must overcome that embarrassment.

Now the civil rights and liberties lawyer, finding himself in this rather extreme situation and proposing elaborate approaches to due process and rights as a means of dealing with it, is not very helpful. In responding to a political movement, one must decide what the aims of the movement are, whether one wants to advance those aims, and what the effects of those aims will be. If one is convinced that those aims are to destroy the freedom of scholarship and teaching, this should certainly affect one's conclusions. Of course, in fighting those who wish to destroy freedon, one of the major constraints must be that one does not destroy freedom oneself. Here lawyers are helpful in explaining how the principles of due process are necessary to defend freedom. But when student radicals are quite explicit about their intention to make it impossible for those who disagree with them to teach, or to turn the campus into a recruiting ground for revolutionaries, then I think a primary emphasis on defining and protecting a new legal status for students is somewhat beside the point. The issues are, does one agree with the political revolution, has the university really served capitalism and imperialism, should it now serve revolutionary socialism, do objective knowledge and scholarship exist in the university, can they exist, should they be protected, do they matter, and so on.

I believe the issue is political, and of the kind I have described; but, unfortunately, most students do not. One reason is that, along with the political revolution, another revolution is taking place, a cultural one that cuts off young people from older people makes them sympathetic with other young people who participate in this cultural revolution, and makes them open to the leadership and influence of radical students. This cultural revolution involves sex, drugs, music, hair and dress. Many students confuse their demands for freedom in these new cultural styles with the political demands of radical students. On the whole, the better-known universities and colleges are quite tolerant of these new cultural styles, even if parents, the police, and the outside communities are not, and they do their best to ignore the sex, drug and dress habits of their students. But very often they are not allowed to do this, and, as quasi-public bodies, they are forced to cooperate with the public authorities. These are complicated questions, but if one looks at the actual practices of universities in this respect, one cannot say that they have not changed to move along fast enough with student practice and demands. There are now almost no parietal rules in the best-known colleges and universities, and the case of Linda Le Clair—the girl at Barnard who was censured for living with a male student—reads as if it were in another century.

There is another reason why the appeal of radical students to liberal students is so powerful, and that is that there are terrible things wrong with the world, and American government and society, and a good part of American enlightened opinion is responsible for just about the worst of these things, the Vietnam war. I understand the feelings aroused by these horrors. But I don't think the universities are responsible for the war—although they share in the blame, as citizens all do in a democracy; nor do I think the destruction of objective research, scholarship and teaching, and of the conditions that have developed to protect them, will do anything to end the war or atone for our crimes; it will only destroy something that is generally found to be of value in all kinds of societies. Nor do I think that our complex social problems, about which undoubtedly we could have done more, are sufficient justification for the attacks of radical students on the universities. It is a serious failure of logic to argue that because we are in Vietnam or Negroes are poor or policemen are brutal, classrooms should be disrupted, buildings occupied, and libraries destroyed. President Plimpton of Amherst, in a letter to President Nixon on student disorder, seemed to say that as long as we did not solve the problems of war and poverty, there would be disorder in the universities. Yet when those problems are solved, there will be other problems. To say that until social problems are solved there will be student disorder is to say there will be student disorder forever.

There is one other argument raised to explain student disorder and to justify it. This is that the universities are filled with conservatives, that there are no radical professors, and that it is necessary that the radical perspective be present in the classrooms and the research activity of the university.

First of all, it is a substantial exaggeration to say that there are no radicals in the universities. The agitation against the Vietnam war, the revision of the established view of the origin of the Cold War, the claim that America is dominated by a small elite committed to imperial expansion and to military adventure—all these owe a good deal to the universities. In fact, it is there

that these positions have been formulated and argued in books, lectures and discussions.

Second, if radical positions do not achieve their proper share of attention in the university (and what is a "proper" share?), it is less because there is discrimination against radicals—there is rather more discrimination I would guess in the better-known universities and colleges against conservatives and reactionaries—than because the processes of selection, which place scholarship at the top of the necessary qualifications, do not turn up as many radical faculty as radical students would wish.

Third, it would be a disaster to replace the present criteria for selection, already sufficiently flexible in response to public demand (many faculties today are looking for radicals, just as many are looking for Negroes), with even more sharply political criteria. In the 1950s, William Buckley and others argued that there were too many liberals in universities, and not enough conservatives, and professors were horror-struck to think that anyone could propose political representativeness as a criterion. Governor Ronald Reagan has also recently pointed to the dearth of conservatives, and the professors again resisted the idea that they should appoint conservatives to balance the scales. I am not so rigid. I think in the social sciences Buckley and Governor Reagan have a point. But only a small point. In the social sciences—particularly in such fields as sociology and political science, where the scientific component stretches only so far, and where social and political philosophy must play a large role—it seems reasonable to me that the representation of major different outlooks, philosophical as well as scientific, should be one basis, although not the most important, for making faculty appointments. While to select faculty on the basis of truly partisan positions (Democratic, Republican, S.D.S.) would be a disaster, I think most reasonable men would agree that it would strengthen departments of political science and sociology if they had strong advocates of the general outlook underlying conservative, liberal and radical positions. The fact that some faculties do not reflect the strong place of radical thinking among intellectuals and students stems from a time lag. How long, after all, have radical positions had intelligent and articulate defenders? The scarcity of radicals among older faculty members would not have been changed by strong student representation in the appointment of faculty in the fifties or early sixties. In the end, the position that faculty should be appointed by faculty, their qualifications judged by the qualified, still seems to me better than any alternative.

If, as I have argued, the issue is primarily a political one, in which various discontents are mobilized and exacerbated by a committed core of radical students in order to transform the university and society, what should our response in the universities be? I do not believe that student rights are ignored in the present situation, and I do believe that there is a role for an institution in which some people come to do research and teach and others to be taught and to learn how to do research. I do believe, moreover, that these institutions now have some flexibility and capacity for change, and I doubt that they could be much more flexible and responsive without harm to other objectives. My major response, therefore, to the political attack on the structure and character of present-day American universities is also political—that is, I think of what is necessary to protect these institutions and their distinctive functions.

I do not believe for an instant that universities need any special assistance or legislation from government to deal with student disorders. It would only be damaging by encouraging the false opinion of student radicals that universities are not autonomous but simply arms of American imperialism and the military-industrial complex. The chief task in the defense of the universities must fall on the faculties and on the administrations, which so largely reflect faculty views. Thus, when students engage in attacks on other students and prevent them from attending class, or professors from teaching them; when they destroy books and notes and research materials, the *universities* should deal with them quite independently from the state. It is an unpardonable withdrawal from responsibility for universities to leave all questions of discipline and punishment to the civilian authorities. Universities may have to call on the police to defend students, faculty and property from militant students. Beyond that, however, they themselves must determine proper standards of conduct that make it possible for a university to continue. They must find ways to assert and maintain these standards without turning the university into a police state or into a parody of the court system. If they cannot, if they fail to reach and educate enough students and faculty so that a university can be maintained without these conditions, then I think the proper response is to close the university and to set up a new one with faculty and students who do accept the common code of conduct required in an academic research and teaching institution.

It may well come to that, and I do not think that it would be a disaster if it did. We may well come to a situation in which some universities will be molded to the present desires of radical students, with students playing a key role in the choice of faculty, the determination of curriculum, the selection of students and the granting of degrees, while other universities will maintain a more traditional style of government.

What should be the role of new organs of university government—the university-wide elected bodies with representatives of students and nonteaching staff, the student committees elected to play a role in faculty recruitment and departmental policy, and the other changes we see coming, not only in American but also in French, German and other universities? The demand for some change is strong, as is the demand for representation and participation. I think both demands can be met to some extent, and these new procedures are means of meeting them. I do not in all honesty expect that they will improve the universities—quite the contrary. My own expectation is that the universities will become somewhat worse. But I would expect and hope that these new participatory institutions would serve an educational role. By teaching students (and also faculty) something of the realities of university government and the complexities of the problems they deal with, participatory institutions might have a somewhat conservatizing effect on students. On the other hand, we also know from experience that the radical students will be interested in these institutions in order to use them as forums for further radicalization, or, if they decide that this is impossible, they will simply boycott and try to destroy the new institutions, as they are doing in France. In either case, my own feeling is that the universities would be well advised to set up systems of participation, although I realize all the dangers.

The variable and informal processes by which students have influenced universities will have to be made somewhat more formal in the future, and will involve elections, representation, formal notification of proposed faculty appointments and curriculum changes, some fixed voice in these decisions and the like. Inevitably, this will mean an additional degree of politicization in the university; there will be caucuses of professors and students, electoral campaigns, arguments over credentials and voting rights and efforts to expand the powers of student and other groups. In the varied patterns of representation now emerging, we see that the nonteaching staff is beginning to play a role. Recently a German professor told me that he was rather happy to see the nonacademic staff in his department have a vote, under their new statutes, because the janitors would vote with the professors. Similar calculations will prevail in this country—in fact, they already do. How this could improve the universities is unclear to me. But it is necessary because only through greater responsibility can we expect students to consider more seriously just what they want from universities and what they can hope to get from them, and in so doing we hope they will moderate behavior that at present is all too often irresponsible. While, then, I am not convinced by anything I see in universities that there is a need because of academic failure to expand student rights, I support the expansion because I believe it is the only way, at this point, with the loss of authority by so many institutions, including universities, that we can induce in students a greater measure of responsibility.

I am skeptical then of the effects of the new forms for re-structuring that universities are now establishing. If we think of them as expanding and transmitting learning, I do not see how a larger role for students or for community representatives will particularly advance these aims. But these larger roles may make it possible for universities to survive. Whatever the procedures that emerge from the present turmoil, the most valuable contribution of law school professors and lawyers, to my mind, will be to help make those procedures workable and to defend them from the attacks that we can be sure will be made upon them. I have emphasized attacks from the left, but there have been in the past equally serious attacks from the right, and these may become more serious in the near future than they have been in recent years. Lawyers have powerful tools with which to protect procedures. I would hope that their valuable energies could now be enlisted not only in the defense of individuals, but in the defense of a distinctive institution that needs to be in some measure set away from and protected from the pressures of society.

TWO VALUABLE BIBLIOGRAPHIES ON DRUG ABUSE AND THE ENVIRONMENT

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. WALDIE. Mr. Speaker, knowing of the interest of my colleagues in the extremely important issues of drug abuse and the environment, I would like to take this opportunity to recommend two bibliographies available from paperbound books in print, published by the R. R. Bowker Co., 1180 Avenue of the Americas, New York, N.Y.

The publications are the Drug Dilemma and the Environmental Crisis. Both, Mr. Speaker, would be worthy additions to the reference library, for every interested party.

PITTSBURGH JUDGE HOMER S. BROWN OUTSTANDING CIVIC LEADER

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a privilege for me, as a good longtime friend of Judge Homer Brown, to bring to the attention of the U.S. Congress and the American people the fine work and dedication of Judge Homer Brown through his years of service to the people of Pittsburgh, Allegheny County and our good Commonwealth of Pennsylvania.

I am offering for the CONGRESSIONAL RECORD the well written and excellent biography by Frank M. Matthews, which has appeared in the Pittsburgh Post Gazette daily magazine section for Tuesday, September 8, 1970:

JUDGE BROWN, 74, HAS WORN MANY HATS—JURIST, STATE REPRESENTATIVE, LAWYER, HUMANITARIAN

(By Frank M. Matthews)

Common Pleas Judge Homer S. Brown, will observe his 74th birthday on the 23rd of this month and the occasion creates problems for his friends.

Which Homer Brown should they congratulate? The distinguished jurist of 20 years? Former Rep. Brown, who served in the state House with unique honor from 1935 to 1950? The Constitutional lawyer? The humanitarian?

All are suitable. They add up to the Homer Brown who has been the participant in, and in part the beneficiary of, the civic and social progress of Pittsburgh over much of this century.

Turn back to 1923 when Judge Brown was graduated from the University of Pittsburgh Law School, and he and a classmate, Richard F. Jones, set up shop together.

"It was in a little place on Wylie Avenue, where the Civic Arena is now," Judge Brown recalled. "It wasn't much of a building, and in the winter we would heat the office with a little gas stove.

"At the time we finished school, it was a terrific job for a Negro to get office space. We couldn't get into the buildings Downtown. They would turn us down for one reason or another."

All wasn't bad in that period. It was during his struggle as a young lawyer that Brown met Wilhelmina Byrd, of Norfolk, Va., and married her in 1927. Like the Browns in Pittsburgh, the Byrds in Norfolk were prominent in Negro affairs and the new Mrs. Brown transferred her energies here. For years she has handled the annual Human Rights Dinner to raise funds for the National Association for the Advancement of Colored People.

Their son, Byrd, an attorney who was graduated from Yale, until recently served as president of the local branch of the NAACP and is a civil rights activist. He sought unsuccessfully last Spring to win the Democratic nomination to Congress in the 14th District.

After 15 years with the gas stove, Homer Brown and Jones made it from the site that no longer exists to the Bakewell building, Downtown, at Grant and Diamond. Now that building also is gone, and Diamond Street has become Forbes Avenue.

The young Homer Brown's father moved to Pittsburgh in 1911 in search of educational opportunity for his children. Homer had been born in Huntington, W. Va., and subsequently had lived in Knoxville, Tenn., and Roanoke, Va., as his father, a Baptist minister, moved from church to church.

"He moved here and took a smaller church," Judge Brown said. "We had a family of five children, and there was no high school for the Colored in Roanoke, so he was anxious to come North because it solved the problem of continued education.

"Two of us already were on the way to a private school at Richmond, which was very expensive for my father. He didn't have the funds to put us all through, so the family moved.

The church was the Metropolitan Baptist, on Samsonia Street, Northside, "not very far from the new stadium," as Judge Brown locates it.

Brown and one brother, Joseph, continued at Whalen Academy, at Richmond, Va., and went on through Virginia Union University, a Negro institution also at Richmond.

In that time another brother, W. Roderick Brown Jr., applied for admission to Pitt medical school and was refused. Subsequently he returned to Pittsburgh, as a physician specializing in tuberculosis, and became a lecturer at Pitt Med.

Homer Brown went on to Pitt Law and Joseph, who also became a lawyer, moved to Detroit to practice with an uncle. He later became a member of the State Senate in Michigan.

"Then, we had two sisters," Judge Brown related. "One died while she was attending the University of Pittsburgh, and another graduated. So, at one time, five of us were trying to get through college at the same time. And we did, all of us except our sister who died of pneumonia when she was a sophomore.

"We worked. All of us. One sister worked in the salad-making department down there at Camp Horne. That was a camp, I think it is discontinued now, where Joseph Horne Co. employes could go for a small amount of money and have a vacation.

"My brothers worked on the steamboats up on the Great Lakes. I worked on them as a waiter, on a run from Detroit to Buffalo.

"At that time it was fashionable to take your car to Buffalo, or Sault Ste. Marie or Duluth, or someplace like that. The roads weren't like they are now, and the passenger traffic on the Great Lakes was terrific.

"We worked at anything we could get to do. I was 19 years old when I went to work as a waiter on the B & O during the summertime, running from Pittsburgh to Detroit.

"At that time, a waiter going from here to Chicago would serve dinner out of Pittsburgh, and then he would just sit up all night in the dining car to serve breakfast in Chicago.

"One of the first bills I introduced in the state legislature was that railroads coming through Pennsylvania would have to make provisions for the waiters who were going to be on a car all night," Brown said.

Brown first ran for the Legislature in 1932 and was clobbered. He made the run again in 1934 and was successful, and began a career of remarkable service. For example:

He was the only Democrat to vote against and speak against a package of bills intended to block a grand jury investigation of the scandals of the Earle administration in the late 1930s.

He also fought against legislation that was intended to rip out the office of mayor of Pittsburgh during its occupancy by the late William J. McNair.

Young legislators, and young reporters, soon learned that he was recognized by both political parties as a Constitutional authority.

In 1947, as chairman of the Allegheny county Democratic delegation in the House, he worked with the Republican chairman, now Sen. Robert D. Fleming, to push through a package of 12 bills necessary to the Pittsburgh Renaissance and smoke control. This took some dancing through the Constitution, for which he was the choreographer.

He was twice voted the most valuable member of the House by the Pennsylvania Legislative Correspondents Association.

When Democrats were in the majority, which was not too often, he chaired the House Committee on Judiciary General. When Republicans were in the majority, and controlled the chairmanship, they made sure Brown was on the committee.

Throughout his legislative years he was the leader in the fight for passage of a Fair Employment Practices Act. It did not succeed during his tenure, but did later.

In this period Brown was national legal advisor to the National Association for Advancement of Colored People and head of the local NAACP, and became the first Negro member of the Pittsburgh Board of Education and an original member of the Pittsburgh Housing Authority.

He moved into the judiciary with election to the old Allegheny County Court in 1950, and was appointed to Common Pleas in 1956 by former Gov. George M. Leader. Since then he has been elected twice to full terms.

Since coming to the bench Judge Brown has made some rulings which have dismayed local government (against the "sick tax," for example) and churches (upholding condemnation, for another example) but for the most part they have been upheld if appealed.

Rarely, if ever, has Judge Brown been reversed solely upon the basis of Constitutional provisions.

So you ask him a question, in his 20th year on the bench and his 74th year of experience: Do you think there has been an improvement in race relations, or is it just superficial?

"I hesitate, because I don't know whether I should answer, not because I don't know how to answer," Judge Brown said.

"Let me try it this way.

"I have served on public and quasi-public bodies over the last 25 years when it was almost unthought of for a Negro to serve.

"When I went on the Board of Education, there was not a single Negro teacher in the City of Pittsburgh. I believe, when I was practicing law, there was not a Negro above the rank of patrolman on the police force.

"I was one of the first members appointed to the Housing Authority and there weren't any Negro employes that I can recall, not even a painter.

"When I went to the legislature in 1935, the only Negro who had anything to do with the House was the bootblack in the cloakroom. Now a Negro is majority leader.

"I was on the board of UNESCO (United Nations Educational, Scientific and Cultural Organization) and as such was on an ad hoc committee on human rights endeavoring to establish international recognition of equality.

"So I would answer your question yes. The question is, have we made enough progress? When progress is made in one field it shows up deficiencies in other fields."

AMERICAN-JEWISH HOSTAGES

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. LONG of Maryland. Mr. Speaker, yesterday the State Department expressed hesitation about guaranteeing negotiations to free American-Jewish hostages of the Palestinian hijackers.

An American is an American. Every American citizen is precious, and we fight equally hard for any American regardless of religion. I am concerned that the State Department would even consider any distinction between Americans of different religions.

POSTHUMOUS AWARD

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. LONG of Maryland. Mr. Speaker, in January of this year S. Sgt. Oliver Clifton Stamps, U.S. Marine Corps, was killed in Vietnam. On August 9 he was posthumously awarded the Silver Star Medal. That citation reads as follows:

The President of the United States takes pride in presenting the Silver Star Medal posthumously to Staff Sergeant Oliver C. Stamps, United States Marine Corps for service as set forth in the following Citation:

"For conspicuous gallantry and intrepidity in action while serving as a Platoon Sergeant with Company G, Second Battalion, Seventh Marines, First Marine Division in connection with combat operations against the enemy in the Republic of Vietnam. On the night of 7 January 1970, Staff Sergeant Stamps was leading his platoon during a combat patrol when one of the Marines alertly detected an unexploded enemy booby trap. After fearlessly examining the lethal device, Staff Sergeant Stamps determined that, because of its construction, it could not safely be disarmed. Unwilling to leave it in place and thus risk possible harm to other persons, he elected to detonate it in place. After carefully positioning his men in covered positions well away from the dangerous area, he valiantly approached the explosive device, but was mortally wounded when it prematurely exploded. His heroic and determined actions inspired all who observed him and saved several Marines from serious wounds or possible death. By his courage, selfless concern for his fellowmen, and steadfast devotion to duty, Staff Sergeant Stamps upheld the highest traditions of the Marine Corps and of the United States Naval Service. He gallantly gave his life in the service of his country."

For the President:

H. W. BUSE, JR.,
Lieutenant General, U.S. Marine Corps, Commanding General, Fleet Marine Force, Pacific.

In a recent letter to me, Mrs. Oliver Stamps quoted Cesar Chavez:

To be a man is to suffer for others. God help us to be men.

She continues:

He said those words in reference to his non-violent struggle for justice, and I use his now famous words in reference to the 40,000 plus men, including my husband, who have given their lives in the Vietnam struggle. May we all in this great country learn to ask God to help us to be men and women and not merely male and female.

My husband died protecting his fellow man. Most important, he died doing what he liked best, fulfilling his obligations as a leader to see his men safely out of a dangerous situation. His final act in life told the world of his overwhelming confidence in his own abilities, his love for his fellow man, and his tremendous faith in God. My husband loved life and he loved people and, in the final analysis, he gave his life for the people he loved.

TRIBUTE TO ART SHAMSKY OF THE NEW YORK METS

HON. DOMINICK V. DANIELS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. DANIELS of New Jersey. Mr. Speaker, I was privileged recently to take part in ceremonies honoring one of baseball's great players, Art Shamsky, of the New York Mets.

Art is one of those great ballplayers who recognizes the tremendous joy baseball brings to all of us, especially baseball-loving children. Youngsters all over America have always looked with awe upon ballplayers and Art has given freely of his time to visit, not only with Hudson County children, but with many residents of Hudson County who, because they are blind or crippled, can only experience America's oldest and greatest sport by way of radio or television.

Mr. Speaker, Art Shamsky has given generously of his own time to visit with children of the Jersey City Elks program and the Washington Park Little League as well as with residents of St. Joseph's Home for the Blind and other community service organizations.

At the recent ceremonies honoring Art Shamsky, freeholder William J. Wolfe and I were pleased to present him with a plaque expressing the community's gratitude for his outstanding service while over 1,000 inspired Jersey City youngsters looked on.

Mr. Speaker, the Board of Chosen Freeholders of Hudson County, in an outstanding resolution of appreciation and tribute, declared August 27, 1970, "Art Shamsky Day in Hudson County."

Because I know that my colleagues in the House are interested in the good works of all Americans, I am inserting into the CONGRESSIONAL RECORD a copy of the resolution of the Hudson County Board of Freeholders, as well as newspaper articles which reported this great day in honor of a great ballplayer:

RESOLUTION, BOARD OF CHOSEN FREEHOLDERS, COUNTY OF HUDSON

(Presented by William J. Wolfe)

Whereas, the fame, the personality and the humanitarian deeds of Art Shamsky, Mets baseball star, have become part of Hudson County's athletic history, and his legend part of the daily lives of so many individuals in our area; and

Whereas, Art Shamsky participated in the last hours of one of our young neighbors, Joseph Barbalinardo, as an inspiration to him and a source of comfort; visited the St. Joseph's Home for the Blind on many occasions to give the patients hope and solace; and aided the Elks in their crippled children's program; and has been part of the Washington Park Little League and Minor League scene by several appearances there; and

Whereas, one of our colleagues, Freeholder William J. Wolfe is emphasizing these contributions to our Hudson County life by sponsoring an ART SHAMSKY DAY at Shea Stadium on Thursday, August 27th, when Art Shamsky will be awarded a giant size trophy presented on behalf of Freeholder William J. Wolfe and his associates in Hudson City's section of our county by Congressman Dominick V. Daniels to express the giant size gratitude of our citizens for Art Shamsky's deeds here;

Resolved, by the Board of Chosen Freeholders of the County of Hudson:

1. That this Board add our own tribute to this award by declaring Thursday, August 27, 1970, as Art Shamsky Day in Hudson County.

COUNTY WILL HONOR SHAMSKY AT SHEA

Art Shamsky, outfielder-first baseman for the world champion New York Mets, will be honored by Hudson County residents Thursday prior to the New York Mets-Atlanta Braves afternoon Date at Shea Stadium.

Hudson County Freeholder William J. Wolfe will present the left hand hitting outfielder with a handsome trophy in a special pre-game ceremony conducted at home plate.

Both in the off season and while playing Shamsky has been a regular visitor to Hudson County. He has made several stops at St. Joseph's Home for the Blind and to the crippled children of the Jersey City Elks program.

In addition, he has spoken at the commencement exercises for the Washington Park Little Leaguers and has been active in various programs in Jersey City.

Congressman Dominick V. Daniels, Councilman Frank Quilty and scores of youngsters will accompany Wolfe to the stadium. The senior citizens will also be on hand for Hudson County's salute to Shamsky.

Everyone attending the game from Hudson County will be treated to a box lunch and soda.

A resolution has been passed by the Board of Freeholders officially declaring Thursday as Art Shamsky Day throughout Hudson County.

WOLFE, DANIELS, 1,000 KIDS GREET ART SHAMSKY AT SHEA

(By Nat Berg)

Some 1,000 Jersey City youngsters today are back at their normal summer play activities.

Little are they aware that their trip to Shea Stadium yesterday as guests of Freeholder William J. Wolfe for Hudson County Day for Mets' slugger Art Shamsky will be inscribed for posterity in the Congressional Record.

Rep. Dominick V. Daniels, when he returns to Washington, D.C., early next month, will have reported in the record an account of the presentation of the Freeholders' resolution, adopted two weeks ago, recognizing Shamsky for his "kindnesses, especially to the young, in Hudson County."

Daniels, who lives in Jersey City and represents most of Hudson in Congress, gave the laminated plaque to Shamsky in an on-field ceremony.

Shamsky, who contributed two of the Mets' runs in a 5–1 victory over the Atlanta Braves, is a personal friend of Wolfe.

After accepting the resolution together with a huge, gold-plated trophy, Shamsky confided to Wolfe that after the National League season is finished he "gladly will come over the Hudson and help you (in the campaign) any time you want me." Wolfe, a Democrat, is seeking to retain his seat.

Among the youngsters, transported in 14 buses and 25 private cars, was the Elks' Poster Boy. He is David Mazurowski, 7, who saw first live Mets' game.

He sat close enough in a right field box to make himself heard at times by Shamsky, covering his position nearby. David met Shamsky previously at the Elks Club in Jersey City Heights. The crippled lad and the others gobbled up 1,200 sandwiches and consumed as many containers of fruit juices.

ARAB VIOLATIONS OF THE MIDDLE EAST CEASE-FIRE

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1970

Mr. MINISH. Mr. Speaker, I was heartened to read a statement recently made by Dr. William A. Wexler, chairman of the Conference of Presidents of Major American Jewish Organizations.

I have felt, as Dr. Wexler does, about one of the major problems of the present Middle East cease-fire agreement. I am doubtful that a permanent and peaceful agreement can be reached when, as Dr. Wexler phrases it, "one side to the conflict deliberately and flagrantly violates the terms under which the negotiations are to begin."

Mr. Chairman, I do not believe that a lasting peaceful settlement can ever be reached if the Arabs intend to use the cease-fire to improve their battlements, rather than to arrive at any permanent Arab-Israeli agreement. Moreover, it would be foolhardy, to say the least, for Israel to stand by while her hard-earned military advantages are debilitated.

America, as Israel's major ally, cannot permit her to lose her position of strength, both militarily and economically, to pursue a fruitless quest for peace. The Arabs must be shown that their word will remain their bond; otherwise any agreement that may be reached will not be worth the paper on which it is recorded.

I wrote to President Nixon on August 17, concerning the movement of Egyptian missiles during the time the cease-fire was supposed to be effective. I believe that to permit this flagrant violation of the cease-fire terms is to invite future Arab transgressions. If there is no assurance that any Arab agreements will have future validity, why bother with them at all?

The letter that I have sent to the President follows Dr. Wexler's statement.

STATEMENT BY DR. WILLIAM A. WEXLER

(Chairman of the Conference of Presidents of Major American Jewish Organizations)

The hopes for peace that had been raised by the achievement of a standstill cease-fire along the Suez Canal have been severely impaired by the action of the Soviet and Egyptian forces in installing missile sites and batteries within prohibited zones along the west bank of the canal.

This defiance of the basic condition of the cease-fire agreement demonstrates the cynicism with which the Soviet and Egyptian governments have responded to the American peace initiative. By violating the fundamental principle of the cease-fire—that there shall be no change in the military position of the opposing forces—the Soviet-Egyptian axis has critically undermined the very basis for the negotiations under the auspices of Ambassador Gunnar Jarring called for by the American plan. There can hardly be productive negotiations toward a Middle East settlement if one side to the conflict deliberately and flagrantly violates the terms under which the negotiations are to begin.

In his statements to the American people and his assurances to the government of Israel, President Nixon has made clear that he will not permit the Soviet government to strengthen its bridgehead into the Middle East. The cause of world peace, the defense of American vital interests and the security of Israel's people all demand that prompt and vigorous steps be taken to remove the missile sites and other equipment brought into the Suez Canal area since the beginning of the cease-fire; that the United States expand economic and other aid to Israel essential to the maintenance of a balance of power in the Middle East; and that our government make clear to all concerned that there can be no progress toward a just and lasting peace in the Middle East unless all parties to the conflict scrupulously respect the terms of the American initiative.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 17, 1970.

RICHARD M. NIXON,
President of the United States, The White House, 1600 Pennsylvania Avenue, Washington, D.C.

DEAR MR. PRESIDENT: Israel has been reported to possess convincing evidence of a serious cease-fire violation on the part of the United Arab Republic. According to Israel, Egypt has violated the terms of the cease-fire agreement by moving missiles into the Suez Canal truce zone after the start of the cease-fire.

If Israel's contentions are true, the movement of Soviet SAM–2 and SAM–3 missile batteries toward the Canal presents some worrisome ramifications both as to the success of the peace negotiations and the eventual safety of the Israelis.

It is certainly not the intent of the United States to permit the cease-fire to become the vehicle whereby Israel can be destroyed, and I hope that you will therefore utilize the influence of your important office to gain the removal of the Soviet missiles from the Canal zone.

I realize the delicacy of the task, and your desire not to weaken the posture of the United States during the initial stages of the Middle East peace efforts. Nonetheless, it is absolutely necessary to insure that the peace negotiations are not used merely as a ruse to permit the Arabs to strengthen their military positions.

With kindest personal regards, I remain
Sincerely yours,

JOSEPH G. MINISH,
Member of Congress.

CONGRESSMAN ROONEY OF NEW YORK APPOINTED A REGENT OF THE SMITHSONIAN INSTITUTION

HON. WILLIAM T. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. MURPHY of Illinois. Mr. Speaker, on yesterday the distinguished gentleman from New York (Mr. ROONEY) was named a Regent of the Smithsonian Institution by the distinguished Speaker of the House of Representatives, the Honorable JOHN W. MCCORMACK.

The Board of Regents is the governing body of the Smithsonian Institution, the world's largest complex of museums. The Smithsonian is an independent establishment devoted to public education, basic research, and national service in the arts, sciences, and history. Congressman ROONEY is the first New York State Congressman appointed to the Board of Regents in at least 82 years.

Members of the Board of Regents are Vice President AGNEW, Senator CLINTON P. ANDERSON, Senator J. W. FULBRIGHT, Senator HUGH SCOTT, Representative FRANK T. BOW, Representative GEORGE H. MAHON, and John Nicholas Brown of Rhode Island, William A. M. Burden of New York, Crawford H. Greenwalt of Delaware, Caryl P. Haskins of Washington, D.C., and Thomas J. Watson, Jr., of Connecticut.

Since its founding in 1846 by Congress the Board of Regents has traditionally been composed of American political, cultural, and business leaders.

Centered on the Mall in Washington, D.C., the Smithsonian Institution also is concerned with facilities and activities elsewhere in Washington, across the country and overseas. These facilities and activities include: The National Museum of Natural History, the Smithsonian Astrophysical Observatory in Cambridge, Mass.; the National Zoological Park; the Smithsonian Tropical Research Institute in the Canal Zone; the Center for the Study of Man in Chicago; the Radiation Biology Laboratory; the National Museum of History and Technology; the National Collection of Fine Arts; the National Portrait Gallery; the Joseph H. Hirshhorn Museum and Sculpture Garden in New York; the Freer Gallery of Art; the Woodrow Wilson International Center for Scholars; the Cooper-Hewitt Museum of Decorative Arts and Design in New York; the National Air and Space Museum; the planned National Armed Forces Museum; the Anacostia Neighborhood Museum; the International Exchange Service; the Science Information Exchange; the National Gallery of Art, and the John F. Kennedy Center for the Performing Arts.

Congressman ROONEY represents New York's 14th Congressional District in Brooklyn and is a senior member of the House Committee on Appropriations.

THE 50TH ANNIVERSARY OF THE WARSAW BATTLE

HON. LOWELL P. WEICKER, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. WEICKER. Mr. Speaker, the following commemorates an anniversary very dear to the hearts of my constituents of Polish descent, and I am sure, those of Polish descent throughout the world:

CONNECTICUT COMMITTEE COMMEMORATING THE 50TH ANNIVERSARY OF THE WARSAW BATTLE

The 15th of August is traditionally the Polish Army Day. Banned in Communist ruled Poland it is observed in the Free World by Polish veterans of both World Wars.

In pre-1939 Poland this day was chosen to commemorate the Polish victory of 1920 over the invading Russian Communist armies.

The year 1920 was a fateful year for Poland. The Russian Bolshevik revolution having achieved victory at home, begun the

march toward the next goal, a Soviet conquest of Europe.

Nations standing in the way of the Red armies were crushed mercilessly. In the Spring of 1920 the newly independent Ukraine was trampled. Then Poland was invaded. Under the powerful onslaught of the Communist hordes Polish armies had to retreat to avoid annihilation. On the banks of the Vistula, the first natural barrier offered by the Polish flat countryside, the Poles decided to make their last stand. Mustering all her resources and entrusting the leadership to a great soldier and patriot Joseph Pilsudski, Poland fought back. A powerful Polish counteroffensive checked the advance of the invaders and turned into a rout their retreat. The battle of the Vistula became the Victory of the Vistula which saved Poland from defeat and Central Europe from Soviet invasion. We had to wait twenty-five years to 1945 and the outcome of the 2nd World War to see the return of the Russians and their expansion into the Mainland of Europe.

In this struggle against the Bolshviks Poland was alone. The Western European powers offered lip service and free advice. Everywhere in Europe public opinion mislead by Communist propaganda was hostile to Poland. In Britain the dockers struck refusing to load the ships for Poland. In France railway workers followed their example. In Central Europe, counting on Russian victory, the Communists were reaching for power. In Germany they were preparing a take-over. In Hungary a Communist revolution led by Bela Kuhn was raging. Polish neighbours resigned to a Russian victory and begun to help themselves to Polish border lands.

The Victory of the Vistula was termed by Lord E. V. d'Abernon, a British statesman and diplomat, the eighteenth decisive battle of World's history.

This year on the 15th of August we will observe the 50th anniversary of the Battle of the Vistula. Bowing to the past we will honor those who died in the struggle, looking forward to the future we will cheer the coming Polish generations. To them we will bequest the words of the Polish national anthem:

"Poland is not lost as long as we live";

and our sincere belief that Poland will be free and independent someday.

THE U.N.O. DEMANDS AGAIN—TRICK OR TREAT?

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. RARICK. Mr. Speaker, the United Nations Organization has now decided that it needs more room for its nefarious activities in New York City.

As usual, the United States, with one vote and recipient of no help from this oligarthic monster, has pledged $20 million of the $80 million cost, or 20 percent.

The New York City leaders who constantly cries of a shortage of taxpayers dollars for aid to the poor, garbage workers, and for city improvements are to fund $20 million in addition to the land estimated at $12 million on which the addition to the monstrosity is to be located. The regular United Nations Organization budget is to supply $25 million and the UNICEF children's fund, obtained from Halloween donations purportedly to help needy and destitute children, is to supply $5 million.

The Soviet Union and other debate leaders of the world are contributing nothing for their sanctuary away from home.

And as the fathers of New York City fund the U.N.O. and the U.N.O. budget can support bureaucratic building programs, the poorer members of the international community complain that they do not receive their fair share from affluent industrial nations.

The working people of America are aware of the frivolous misuse of their tax money to underwrite un-American projects like the U.N.O. The American people are becoming disenchanted at the loss of jobs and U.S. products from foreign imports and encouragement of American capital abroad under the guise of world peace efforts. They are becoming more incensed at the realization that our so-called poor tribal nations not only bloc vote against the United States in the U.N.O. but expect the American taxpayers to subsidize the welfare of their subjects.

The socialist theory of taking from those who work and giving to those who do not work is now undertaken on an international scale by the same socialist intellectuals who led the American people to believe that they were talking about Americans.

I include two related newsclippings:

[From the Washington Post, Sept. 10, 1969]

U.N. BUILDING PLAN FUNDED

UNITED NATIONS.—A $10 million investment by the United Nations Development Program has cleared the way for construction of a major addition to the U.N. headquarters building in New York.

Approval came in a 24–4 vote at a special meeting of the program's governing council on Tuesday. It had been strongly urged by the United States, which has pledged to provide $20 million of the estimated $80 million cost of the new building.

New York City will furnish $20 million for the project in addition to the $12 million value of the land on which the seven-story addition is to be located. The regular U.N. budget will supply $25 million of the cost and the U.N. Children's Fund $5 million.

In recent years the U.N. Secretariat has been increasingly cramped for space, and both the Development Program and UNICEF have had to rent quarters in private buildings. The new seven-story addition will cost more than the 38-story secretariat building, completed in 1951 for a little over $65 million.

[From the Evening Star, Sept. 10, 1970]

POOR NATIONS GAIN SLOWLY AS AID LAGS

(By Lee M. Cohn)

Poor countries are making slow progress on economic growth, and aid from the industrial nations is lagging, according to the World Bank.

Total output of the underdeveloped countries increased by 6.7 percent last year, compared with gains of 5.9 percent in 1968 and an average 5.1 percent annually in the 1961–65 period, the Bank estimated in its annual report yesterday.

Population growth held steady at 2.5 percent, the bank said, and output per capita advanced 4.1 percent, compared with 3.3 percent in 1968 and 2.5 percent a year in 1961–65.

However, much of the apparent gain reflected inflation rather than real increases in production. Discounting price rises, the bank estimated, real output last year rose 3.5 or 4 percent, and a little over 1 percent per capita.

A 113-NATION ORGANIZATION

The 113-nation, $23 billion bank, which makes loans for economic development, issued the report in advance of its annual joint meeting with the International Monetary Fund in Copenhagen later this month.

The net flow of money from industrial to underdeveloped countries increased to $13.3 billion in 1969 from $13.2 billion in 1968 and $9.1 billion in 1964, the report estimated.

Of the $13.3 billion total net flow of money last year, it said, $7.25 billion was from governments and $6.05 billion consisted of private investment and credit.

The governmental flow has declined as a share of the donor countries' gross national products—a measure of their capacity to provide aid—from 0.49 percent in 1964 to 0.43 percent in 1968 and 0.39 percent last year, the bank said.

If the 0.49 percent rate had been maintained, the bank said, the underdeveloped countries would have received $3.9 billion $1.8 billion in 1969.

RECORD LOANS REPORTED

The bank reported it made a record $1.68 billion of loans in the fiscal year ended June 30, up from $1.4 billion the year before.

In addition, the International Development Association—a bank affiliate which lends on "soft" terms to the poorest countries—provided $606 million of credits, an increase from $385 million.

The International Finance Corp., an affiliate working through private enterprise in underdeveloped countries, invested $112 million, up from $93 million.

Officials said the records show the Bank and the IDA are on course toward achieving a doubling of loans in the 1963–73 period over the preceding five years. That was the goal set by Robert S. McNamara, former U.S. secretary of defense, after he became president of the bank group.

But officials acknowledged by the bank have failed to rise parallel with the • • • loans. Money made available by loans is drawn upon only as needed by borrowing nations for approved projects.

Disbursements by the bank have remained between $762 million and $790 million during the last four years, while loans have risen from $877 million to $1.68 billion.

Analysis indicates that disbursements have lagged because loans increasingly have been made for new types of projects, which require more time to get off the drawing board, and in countries lacking experience with development programs officials said.

Recent trends indicate that disbursements will increase more rapidly this year and next, they said.

Borrowing by the bank to finance its lending declined to $735 million in the fiscal year ended June 30 from $1.22 billion the year before the report said. This drop apparently reflected tight conditions in world credit markets, which also raised the Bank's average borrowing cost from 6.46 to 7.69 percent.

Higher borrowing costs led the bank to raise the rate it charges on loans from 6.5 to 7.25 percent.

External debt of underdeveloped countries has approximately doubled to almost $60 billion since 1964, the report said, and their debt service obligations—payments on principal and interest—had risen rapidly to $4.7 billion by the end of 1968.

Debt and debt service payments have increased about twice as fast as the export earnings of underdeveloped countries during the past 10 years, the report said, noting that this has caused difficulties in some cases.

Major categories of bank loans and IDA credits last fiscal year included $661 million for transportation projects, $537 million for electric power and $413 million for agriculture. Asia led with $869 million, followed by Latin America and the Caribbean with $714 million and Africa with $443 million.

WHAT IS PATRIOTISM?

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. TEAGUE of Texas. Mr. Speaker, my good friend, Maj. Gen. A. R. Luedecke, U.S. Air Force, retired, presently serving as acting president of Texas A. & M. University, College Station, Tex., addressed the Rotary Club of Bryan, Bryan, Tex., on July 1, 1970. His theme was Patriotism. Under leave to extend my remarks in the RECORD, I include the text of his speech:

WHAT IS PATRIOTISM?

The dictionary defines patriotism as "love of country devotion to the welfare of one's country". What are the things that are implicit in love of country? It seems to me they are the same things that are implicit in love for another person. In love for another person or love for country, we would include, at least, the following emotions:

The desire and need to cherish.

An unswerving commitment to protect.

A need for pride and the ability to nurture it.

A strengthening of one's associations.

A commitment to be knowledgeable of strengths and weaknesses.

A compulsion to enjoy this love when things go right as well as to nurse it tenderly when the going is rough.

If all these things are inherent in patriotism—love of country—What are the characteristics of individual citizens who reflect patriotism in their relations with others?

The individual would have knowledge of his country, of its history, of its goals, and of how his country compares with other countries.

He would believe that his country was the best and was the greatest country it could be in his today's world or he would have faith that he could change it to make it the greatest.

He would be dedicated to his country's well-being and be willing to give his energies to sustaining and improving it.

He would have courage—the courage of his conviction. The courage to stand up, the courage to fight and the courage to die if necessary.

He would have strength—the strength that comes from conviction, dedication and understanding.

He would have faith—A faith born of knowledge and understanding of his fellowman.

He would have faith in himself as a participant in providing for the welfare of his country.

If the individual is to be effective in exemplifying his love of country in our Nation, his manifestation of this patriotism must be governed by many other characteristics. They are the characteristics which give him the stature to contribute effectively to love of country. They may be listed in the simple words of honesty, integrity, humility, truth and love of fellowman. I mention these important characteristics to indicate that, to me, patriotism is not some abstract word but that it is a real and living thing. Too many of us tend to think of patriotism as a display of flags, the marching of soldiers, the sound of guns. They are necessary elements, but patriotism is in fact a consistently present dynamic force in our lives. Our love for our country must have direction, spirit and stature. One might even say that patriotism is a way of life. True patriotism would, in any event, demand from us the very best of our way of life.

A citizen might well say "I am patriotic, I love my country, but what can I do to show my patriotism?" Let's take a look at a few examples which occur in our daily lives and ask ourselves whether the manner in which we deal with them really reflects our love of country. They are small things perhaps if compared to such heroic deeds as would normally merit the Congressional Medal of Honor. On the other hand, they may be just as important in the long run to the welfare of our country.

Right now our colleges and universities are torn by violence and plagued by militant actions of a number of minority groups. Some of the causes they espouse are just, no doubt, but many of them are not. Yet they go down this road of interruption, violence and destruction without regard to the rights of others and without even an indication that they wish to replace what they destroy with something better. There seems to be an overwhelming desire on the part of the students and other young people that their theories be accepted, in total, without compromise and without question. Those students and their leaders are the sons and daughters of Americans who, in many cases, consider themselves to be highly patriotic. Yet the parents would not think seriously of withholding the student's monthly allowance. Even though their conviction is that their offspring is wrong and that his actions are not in the best interests of the Nation, they appear to hope that someone else will convince the student that this is the case and will get them on the right path without the necessity for any action on their part. Are the parents patriotic in taking this stand? I seriously doubt it.

There has been so much said about the now generation being the most intelligent, the most highly educated, the most concerned of all previous generations. I believe this is true, but it still does not mean that they have the wisdom of Solomon. It seems entirely possible that their parents could be right about some things. It also seems to me that these parents would have the courage to say so, and to act accordingly.

Some of our long-haired boys or mini-mini-skirted girls are accompanied to college for their first day by one or both of their parents. At some point in the registration process, one of the parents will say, "I sure do hope you can get him to cut his hair." Or "I have tried to get her to lower her skirts—I hope you can make her see that she should." One could ask what this has to do with patriotism. Per se perhaps nothing; however, it certainly indicates that the parents in that case have lost control and have no influence, at least not a good influence, on their children. They are anxious to pass the buck to someone else when in fact the responsibility was one they incurred when they brought the offspring into the world. If the parents are so weak in this area, is it reasonable to expect that they have engendered into their children all those other necessary characteristics which would enable him or her to have real patriotism? Are they really able to understand love of country?

Parental love of one's children carries with it, as it should, the desire to protect those children. How far should this protection go in limiting their services to their country? Are they warranted in encouraging them to be draft dodgers? Are parents warranted in attempting to justify their children's actions when they burn their draft cards or burn down selective service headquarters? One could say, yes—this is a manifestation of courage. Perhaps it is a manifestation of courage. He had the courage to say publicly that he did not wish to fight for his country. Perhaps it is a kind of courage, but it certainly is not the kind of courage characteristic of patriots. Are such actions by parents manifestations of love *for* their children or are they pleading for love *from* their children?

We are reminded periodically that it is our patriotic duty to make ourselves available for jury duty in our courts. Yet one of the first reactions of many when called is to determine what best excuse can be given to be excused. We all know that under our system of government we have a patriotic duty to vote, yet our exercising of the privilege is many times dependent upon our personal interest in the issue at stake. It is sometimes easier to "forget" to go to the polls and then be free to be unhappy with the results. A well-known headline in many newspapers is, "bad weather, light turnout at the polls". A true love of country would motivate us all to discharge our obligations in these everyday matters.

There is a tendency on behalf of some for love of country for its privileges; but when the chips are down and it is appropriate to discharge some of the obligations, it is felt that this might well be done by others. This attitude can hold true for little things as well as big ones. He enjoys the benefits without the acceptance of the obligations which go with them. A citizen such as this may be a quiet middle of the roader, minding his own business, but one could hardly characterize him as a patriot.

It has become popular in certain circumstances to desecrate our flag. Some have been able to get by with public demonstrations of their disrespect for this symbol. Since it stands for our country and represents the liberty for which we stand, I cannot feel it patriotic to permit others to abuse it as a means of expressing their disbelief and disrespect for the country of which they are a part. Are we being patriotic to shrug and walk away? Are we being patriotic not to cause a commotion? Would such action reflect indifference, or would we be equally guilty in such abuse?

These are but a few examples of what I believe is involved in patriotism. Our love of country is not by any means as much expressed by marching bands, public demonstrations and waving of flags as it is by all the little things we do with each passing day to provide ourselves with that strength of character which we can manifest on behalf of our country. By manifesting our love for our country, we make it strong; we make it a way of life; we encourage others to join us. We are able to praise others for the things they do to demonstrate their love of country. If the time can come when all citizens take care of all of the little day-to-day obligations and can develop their own true patriotism—true love of country, the bigger issues facing our nation can be adequately taken care of by those charged with this responsibility.

BABCOCK & WILCOX PRODUCTS FIGHT POLLUTION

HON. ROGER H. ZION

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. ZION. Mr. Speaker, at a time when our Nation is deeply involved in the fight to save our environment, I am deeply gratified by the efforts of an industrial

concern with roots in my own congressional district.

Babcock & Wilcox, a major industrial employer at Mount Vernon, Ind., is a leading producer of boiler components. The company nationally is heavily committed to the fight against pollution of our environment. The July–August issue of the company's magazine, the Generator, outlines B. & W. progress in this battle. I commend the article to my colleagues:

BABCOCK AND WILCOX PRODUCTS FIGHT POLLUTION

Near Fernandina Beach, Fla., and around Halsey, Ore., a fresh approach to a sensitive area of community relations is being made—thanks to the installation at nearby paper mills of a Babcock & Wilcox system designed to minimize the odor that is a by-product of the kraft paper-making process.

The company has sold 11 of these systems in the United States and 4 in Canada in the past three years. The Halsey and Fernandina Beach installations were the first to go into operation. Among recent contracts for this latest-type of B&W kraft recovery odor reduction system is one from the Hoenner Waldorf Corporation for its Missoula, Mont., mill.

The Missoula mill was publicized in *Life* and *Sports Illustrated* as a major air contaminator in that community. Local housewives had picketed the mill and worked to get an air pollution control bill through the Montana legislature.

The contract there entails converting a four-year-old B&W 466-ton recovery boiler to the new kraft recovery odor reduction system. B&W also will build and install a 1,000-ton odor reduction system as part of the final $11-million Phase II of Hoenner Waldorf's program for odor emission control at its plant.

SYSTEM MEETS EXPECTATIONS

The first B&W kraft recovery odor reduction system went into operation at American Can Company's Halsey mill last fall. Performance testing by engineers representing American Can, B&W and the state of Oregon proved that the recovery unit does achieve the pollution control claimed for it in advance. And, this is substantiated by the sensitive monitor the housewives and children of Missoula will use—the human nose.

Although the sale of products specifically designed to curb or eliminate air and water pollution account for only a small fraction of B&W business, the company is pursuing this area of operation aggressively and hopes to expand it.

The company's interest in such products had its origin in the 1930s, when George Tomlinson Sr., of Howard Smith Paper Mills of Canada, together with B&W, developed the Tomlinson-Babcock & Wilcox kraft recovery boiler. This boiler made it possible for the pulp and paper industry to recover—and burn for process heat—chemicals that were previously dumped into nearby streams.

Later, Tomlinson, B&W and the Weyerhaeuser Company developed the magnesia base (MgO) pulping and recovery process. Weyerhaeuser installed the first commercial unit in 1946 at its Longview, Wash., paper mill.

Today, the MgO recovery process is covered by a B&W patent.

Recently, Great Northern Paper Co. dedicated the sixteenth MgO recovery system to be put in operation in this country and abroad. The magazine Paper Trade Journal described the B&W recovery boiler as "the largest of its kind in the world and only the second to use water-cooled walls."

The system allows chemical wastes previously discharged into the nearby Penobscot River to be reused for further plant operations. Up to 90 per cent of the spent pulping chemicals are recovered.

Describing the system, Great Northern stated that "more than ten million dollars were invested in the creation of a system that will guarantee clean water and allow the continuing profitable operation of manufacturing facilities that provide employment for over three thousand citizens of Maine.

". . . we offer Great Northern's experience as an example of how an individual industry can make important contributions to improving the environment."

IN THE STEEL INDUSTRY

B&W has also helped the steel industry in efforts to solve the problem of environmental pollution.

For example, the company designed and manufactures tubular membrane hoods used for heat recovery and gas cleanup for basic oxygen furnaces (BOFs). BOFs are considered the newest, fastest, most efficient steelmaking equipment. They produce high-quality steel ten times faster than conventional open hearth furnaces, but also generate tremendous quantities of dust-laden gas.

The B&W membrane hoods cope effectively with this problem. Two of the hoods recently were installed at Bethlehem Steel Corporation's new basic oxygen furnace facility at Burns Harbor, Ind. Gases are captured by the hoods, cooled to accommodate a dust collection process, and the heat energy is converted into usable steam energy for many plant needs. The hoods are part of a $3 million steam supply system fabricated by B&W.

At the first U.S. mill to produce stainless steel by the BOF process, a B&W gas cleanup system provides air pollution control. The mill is Crucible Steel Company's new Midland, Pa., facility. The wet gas cleanup system is designed to cut particulate stack emission to well below code requirements. The heart of the system—quenchers, wet venturi scrubber, cyclone separator, fans, ducts and stack—was designed and manufactured by B&W.

TOTAL AIR CONTROL SYSTEM INSTALLED

The Youngstown Sheet & Tube Co. recently installed its first BOF shop at its Indiana Harbor works, East Chicago, Ind. As part of a total air pollution control system, B&W built two evaporator chambers, which are tanks 30 feet in diameter by 130 feet high, lined with five inches of refractory, or heat-resistant material. Gases from the oxygen furnaces flow through these chambers after leaving the furnace hoods.

Two divisions of Babcock & Wilcox, Refractories and Power Generation, worked in close cooperation with the customer to develop proper heat resistants and to provide support design for the chambers themselves.

The Refractories division also is involved in other areas of pollution abatement. Its Kaowool, for example, has been used by Tenneco Corporation in its refinery cracker to reduce noise pollution. And, two companies which manufacture pollution-control products—Clean Air and Aqua Chem—use Kaowool in their products.

ELECTRIC POWER PLANTS ARE HELPED, TOO

Some B&W products and processes are also being used for pollution-control by electric power plants. The company is providing, for example, a unique combination of two-stage combustion, water cooling and gas recirculation that will enable some utility boilers to operate with sharply reduced nitrous oxide emissions.

B&W also is providing a unique combination of multiple burners, water cooling and gas recirculation at three different points in certain utility boilers, enabling them to operate with sharply reduced stack emissions.

Diamond Power Specialty Corporation, a B&W subsidiary, is also involved in pollution abatement in this area. It has already installed about 1,000 automatic duct blowers—a device which blows deposits of fly-ash out of the ducts into the hot air stream for collection in another part of the system. The system markedly improves dust-collection efficiency and also helps to reduce the amount of particulate matter discharged from stacks.

Diamond's sales department is confident that increasingly stringent air pollution codes will result in the installation of a substantial number of gas-cleanup systems requiring duct blowers—adaptable for both existing as well as new plants. This, Diamond people feel, represents a substantial market potential.

MEASURING AIR POLLUTION

In still another area of pollution control—measuring performance—Diamond Power sells many of its closed-circuit television cameras to utilities and industrial plants who use them to watch stack emissions.

Another method of measuring pollutants is manufactured by Bailey Meter Company, also a B&W subsidiary. Bailey Meter's Smoke/Dust Density Recorder "lets you know exactly how much is leaving your stack before someone else does," a Bailey ad reads. The system, in other words, lets a customer know precisely just how effective a pollution-control job he is doing.

Tampa Electric Company, for example, placed a series of Bailey's recorders in ducts and stacks throughout its three-station system.

Several years after the first installation, an official of the company wrote in the magazine *Electric Light and Power* that the use of the Bailey equipment resulted in more stringent control than the law required. Additionally, the stations' efficiencies increased with the tightened controls.

Once installed, the smoke-dust density recorders verified the obvious. The greatest cause of smoke and dust, the instruments showed, is incomplete combustion, improper filtering or a combination of the two.

The sensing elements of the recorder consist of a light source and a bolometer energy-sensing element. These are mounted on either side of a duct so that smoke in the duct must rise through the light beam.

The bolometer detects energy radiated from the light source and produces an electrical signal that is proportional to the energy detected. Signals from the bolometer are transmitted to a receiver-recorder located in the control room.

More than 8,000 Bailey Smoke/Dust Recorders have been installed.

A VAST EFFORT UNDERWAY

In all, a vast effort is underway throughout industry to improve the air and water that its production processes have helped to contaminate.

A survey by the National Industrial Conference Board disclosed that 248 of the 1,000 largest manufacturing companies in the country spent $238 million in 1968 for air and water pollution abatement.

Such spending is expected to rise substantially and rapidly. Within the next few years, some say, it could reach $10 billion a year.

It's a big job, to be sure. But Babcock & Wilcox Power Generation division, Diamond Power, Bailey Meter and B&W Canada expect to continue and strengthen their efforts to help get the job done.

A TRIBUTE TO FOUR GENTLEMEN FOR 200 YEARS OF OUTSTANDING SERVICE

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. BIAGGI. Mr. Speaker, history has traditionally recognized and recorded the contributions of great men who, through their individual and collective efforts, helped make our world a move livable, more progressive, and more enlightened community of men and nations. However, the making of a better total society involves, along with the achievements of the immortals of history, the accomplishments of those who devote their lives to the advancement of humanity in the microcosms of the world—the cities, towns, and counties of our Nation.

While the names of renowed explorers, scientists, theologians, and artisans are emblazoned in the annals of world history, the deeds of men who make significant contributions to the betterment of life in their communities should also be duly recognized, acknowledged, and honored.

Mr. Speaker, it is for this reason that I bring to the attention of my colleagues in the Congress of the United States the plans being made by grateful citizens in Yonkers, N.Y., who are paying tribute to four distinguished gentlemen of the Westchester County area on the night of September 26, 1970. I am proud to join the citizens of Yonkers in honoring these men.

This occasion will hail the dedication and accomplishments of Mr. Arthur Natella, Bishop Joseph M. Pernicone, Dr. Virginio Minervini, and Judge Albert L. Fiorillo and will indicate that their lifelong efforts in promoting the development of an enlightened, God-fearing, healthy, and just society have not gone unnoticed.

Their long years of unselfish devotion to their public have caused their names and accomplishments to be indelibly imprinted in the hearts and minds of neighbors as well as in the chronicles of their professions. The professions they represent—medicine, religion, education, and the judiciary—are as much honored by their service as are the men themselves by their community. And, it is in keeping with the occasion that the proceeds derived from this ceremony will be donated to the Enrico Fermi Scholarship Fund, a growing foundation dedicated to the education and development of the young in the area.

Mr. Speaker, may I summarize briefly the backgrounds of these four gentlemen?

DR. VIRGINIO MINERVINI, PHYSICIAN AND SURGEON

Dr. Virginio Minervini will be feted for his 57 years in the field of medicine. A 1913 graduate of the College of Physicians and Surgeons of Columbia University, he served as a U.S. Army orthopedic surgeon in France for 2 years during World War I, receiving the Silver Star for gallantry in action. In 1920, he entered medical practice in Yonkers and was affiliated with the Yonkers General Hospital in all positions of the department of surgery as well as Director of Surgery. He is president of the hospital's medical staff and is a fellow of the American College of Surgeons and a member of the International College of Surgeons. He also served as president of the Yonkers Academy of Medicine. Dr. Minervini was awarded a decoration as Cavalier of the Crown of Italy by the late King Victor Emanuel. He also received awards from the American Committee on Italian Migration and the Yonkers Academy of Medicine for humanitarian and community service. Dr. Minervini served in various public education and health offices as well as in several municipal and civic organizations.

THE MOST REVEREND JOSEPH M. PERNICONE, D.D., AUXILIARY BISHOP OF NEW YORK

Bishop Joseph M. Pernicone, Auxiliary Bishop of New York and titular bishop of Hadrianopolis, will be honored for 55 years of religious service. Bishop Pernicone studied at St. Joseph's Seminary in Dunwoodie, and was ordained to the priesthood on December 18, 1926, in the Church of the Annunciation, Manhattan, N.Y. He received a doctorate in canon law from Catholic University in Washington, D.C., and was elevated to Papal Chamberlain in May 1945. In May 1952 he was designated domestic prelate. He received the title of Titular Bishop of Hadrianopolis in honorarias and Auxiliary Bishop of New York in May 1954. Bishop Pernicone served in the Yonkers church from 1928 to 1932, the Church of Our Lady of Mount Carmel in Poughkeepsie from 1932 to 1944, and from 1944 to 1966, was pastor of the Church of Our Lady of Mount Carmel in the Bronx.

MR. ARTHUR NATELLA, EDUCATOR, ADMINISTRATOR AND AUTHOR

Mr. Arthur Natella, principal of Lincoln High School in the city of Yonkers is being honored for his contributions to education over a 36-year career as a teacher, administrator, and author. Mr. Natella is a graduate of the City College of New York with a masters degree from Columbia University where he also studied toward the doctorate. He joined the Yonkers Public School System in 1935. In addition to his public school affiliation, Mr. Natella has also been an examiner for the State department of education, and has served as educational staff editor of the Selecciones del Reader's Digest. Mr. Natella has written numerous articles on education as well as fine Spanish language texts for high school and college level instruction.

THE HONORABLE ALBERT L. FIORILLO, LAWYER AND JURIST

Former Westchester family court judge Albert L. Fiorillo will be honored for his 52 years of service in the field of law and judiciary. Judge Fiorillo was born in Caserta, Italy, in 1898 and came to the United States in 1904. He attended Fordham University School of Law and was admitted to the bar in 1922. He also served as justice of the peace, president of the board of aldermen, and city judge. In 1962 he was elected judge of the family court of Westchester County from which he retired as senior judge after reaching the compulsory retirement age of 70. A veteran of World War I, he has served in many veterans and civic organizations. Judge Fiorillo has been honored several times by fraternal, business, religious, and cultural groups during his long career in the judiciary.

Mr. Speaker, in recognition of the cumulative two centuries of outstanding public service rendered by these representatives of the Italo-American community, it is especially fitting that the sponsors have designated the ceremony "200 Years di Buon Servizio." That they are all of Italian extraction is no accident. Dr. Minervini, Bishop Pernicone, Judge Fiorillo and school principal Natella are collectively the product of a prolific fountainhead of Italian culture that has poured forth a steady stream of contributors to the arts, the sciences, and the general commonweal. Men of dedication, men of intellect, men of good will, the Minervinis, the Natellas, the Pernicones, and the Fiorillos of our country form a significant part of the substance that is America. Along with the greats of the world, they too shall be exempt from oblivion.

BAPTISTS, MORMONS, AND PROGRESS

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. COLLINS. Mr. Speaker, one of the most progressive editors in the South is Dick West. His stimulating editorials point up the reasons for the South's rapid development.

A few weeks ago West wrote an editorial in the Dallas Morning News that clearly defined our greatest strength in Texas. It is said my congressional district is in the Bible belt. When you drive through Oak Cliff, Duncanville, Irving, Grand Prairie, Farmers Branch, and Walnut Hill on Sunday morning, you can see the strength of dynamic Dallas.

When West speaks of fundamentalist preaching, he is talking about the message received every Sunday by our neighbors.

When West speaks of Dr. W. A. Criswell at the First Baptist, my wish is that every Congressman could have the opportunity to hear a Criswell evangelistic sermon for its inspiration.

The churches moving forward are the progressive churches. They believe stronger than ever in hard work, tithing, opportunity for each individual, and freedom of choice. You can see why my friends at my Park Cities Baptist Church were so impressed with the following statement by Dick West in the Dallas Morning News:

> If you are a doctor and a devoted member of your church, do you feel like kicking the pew on a Sunday morning when your preacher preaches socialized medicine from the pulpit?

Does the preacher have a right to do that and take your money in the collection plate—which means you are subsidizing your own destruction?

Does a man of God—or one who says he is—have a right to get up in the pulpit and advocate that America recognize atheistic Communist China whose only god is the communist state?

C. A. Tatum, one of Dallas' all-time greats who has spent a lifetime in the electrical power industry—how do you suppose he would feel if a preacher stood in the pulpit and praised the Tennessee Valley Authority, which is nothing but socialization of the power industry?

Does a minister have a right to take your money on a Sunday morning and pass part of it along to the Black Panthers who, in his opinion, are seeking "social justice"?

Does a preacher have a right to advocate that a known Russian spy, convicted in this country after a fair trial, be allowed to avoid the penitentiary and roam at will on the streets to destroy a country which permits said preacher to preach such garbage?

These are fair and pertinent questions for a newspaper column appearing every Sunday morning, because they lead to further comment on the nation's religious life in 1970.

Regular church attendance is way down, according to one of the nation's polls. Note that we said "regular."

More than 60 per cent of the American people belong, so they say, to some denomination—but less than 40 percent go regularly, and the latter figure is dropping alarmingly.

A recent survey disclosed that the only two denominations which are gaining consistently in both membership and attendance are the Southern Baptists and the Mormons.

Think that over, then ask yourself—why?

Because more than any other denominations in America, the Mormons and Southern Baptists stick to pure doses of religion without dilutions of politics.

The vast "silent majority" you hear so much about is tired of "social gospel." It wants to hear the real gospel.

The silent majority is fed up with un-American deviations, demonstrations, destruction and disputatious doctrines.

Some Sunday at noon drive up Ervay Street, and you will see hundreds of happy faces coming out of Dr. W. A. Criswell's First Baptist Church—the largest of its kind in the world.

They will have heard the old-time religion from a master. They will have sung "What a Friend We Have in Jesus."

You're not likely to hear Dr. Criswell tell the C. A. Tatums of this world that private power companies are no-good crooks robbing pockets of the poor. Dr. Criswell is not likely to say Christ died on the cross so we could have the Tennessee Valley Authority.

You will not hear him advocate destruction of private medicine—and take money at the same time from doctors in the sanctuary.

You will hear him preach the practical message of Christianity: That virtue triumphs over evil, that the Bible means what it says.

If you think he is square and his followers are cornballs, how else do you explain the dramatic rise in Southern Baptistdom—and the gradual decline in those churches which advocate socialism under the guise of the gospel?

Not long ago the Executive Council of the Episcopal Church, in a controversial resolution, advocated the following:

There should be a special collection on Sept. 20 to support student strike activities.

All American troops should withdraw from Vietnam—which means total surrender to godless communism in that part of the world.

Support of the national student strike against "oppressive actions by the government such as harassment of the Black Panthers and the killing of students on campuses by the National Guard."

The Rev. Dr. Beverely Madison Currin, noted Episcopalian rector in Pensacola, takes a dim view of such resolutions—adopted on high by a tiny minority who often lend the impression that they speak for every Episcopalian in America.

Dr. Currin challenged, as he should, the right of his church "to take a stand on issues where there is no clear-cut moral distinction."

Those who would have the church become an extension of the political arena, he added, "are simply avoiding the real issues of life and death, of sin and salvation."

It would be interesting if this same Episcopal council ever adopted a resolution in behalf of American boys defending the free world; or a resolution against mass murder and genocide by the Soviet Union and Communist China; or a resolution deploring black snipers in Chicago killing police trying to bring peace and order to the black ghetto.

Strange, isn't it, that so many resolutions by so many religious bodies (1) condemn America, (2) praise communism, (3) criticize free enterprise and (4) exalt Marxian socialism.

To conclude, no wonder the annual budgets of so many liberal, social-gospel denominations are almost in the red.

No wonder the National Council of Churches—worst offender of all—had an operating budget last year of $19,000,000 but expects only $14,000,000 this year.

In the meantime, evangelist Billy Graham has no trouble filling Madison Square Garden night after night with sermons on fundamentalism and Christian charity.

But the place would be bare if he tossed the Bible on the floor and preached on the glories of the United Nations.

HIJACKING

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. O'NEILL of Massachusetts. Mr. Speaker, the recent multiple hijacking by Palestinian terrorists is a vicious international crime that threatens every innocent traveler. The four planes that have recently been hijacked during international transit and the attempted hijacking of the El Al aircraft are probably the most serious dangers to peaceful world travel that we have seen.

Hijacking is an extremely heinous crime. The perpetrators of these actions cloak themselves in very righteous words and boldly state their lack of concern for world opinion. But they have demonstrated an utter disregard for human life and the innocence of their victims. I am very disturbed to see the glamor that has been attached to the actions of these terrorists. Their crime is no better than kidnaping and is really not different even though the kidnapers are known. Innocent people have been abducted and held against their will and a price has been demanded for their release. The kidnapers have threatened to murder these innocent people unless their demands are met. There is no glamor in this. It is a despicable crime and is abhorrent to all civilized people.

The victims, passengers on international flights, bear no relationship to the Palestinians' purpose of destroying Israel. They are civilians, citizens of many countries, young and old, and are traveling for business and for pleasure. They are being held until various nations agree to release Palestinian terrorists presently being held for the commission of certain similar and vicious crimes. The ransom is not the release of innocent parties but of people who have committed serious crimes against innocent victims and have been duly convicted in courts of law.

The countries of the Middle East that are harboring these criminals bear a large degree of responsibility for their actions. They cannot wring their hands and protest their innocence and lack of involvement in these crimes. The hijackers are harbored in these countries and I am sure are encouraged because they have not been in the past punished for these crimes. Egypt and Jordan are sovereign states. They must bear responsibility for that which occurs within their borders. They cannot continue to refuse responsibility for acts of terrorism and international crimes.

I am sure that if the recommendation of the International Federation of Airline Pilots Associations to boycott international flights to those countries which harbor hijackers was adopted, the nations involved would soon find it possible to end such crimes.

On September 16, 1969, I sponsored, along with 42 other Members of the House, a resolution urging the United States to seek bilateral agreements with as many nations as possible for mandatory extradiction of airplane hijackers to the flag country of the hijacked aircraft for prosecution. I still support such a move. But more serious steps must be taken. The Arab nations involved can control the terrorists and can no longer make solemn announcements of indignation while allowing criminals to retreat behind safe borders.

I am also disturbed by the terrorists' separation of Jewish and non-Jewish passengers. It is all too reminiscent of distinctions made another time in this century. All the terrorists' denial of anti-Jewishness is disproved by this callous separation according to religion. This is clearly true since women and children are being treated less severely, but not Jewish women and children. It is frightening that once again distinctions like these could occur after the tragic lessons of the Second World War.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadisti-

cally practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

TRIBUTE TO HOWARD HEIMBACH

HON. HERMAN T. SCHNEEBELI

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. SCHNEEBELI. Mr. Speaker, on July 27, our distinguished colleague, the Honorable JAMES G. FULTON, called the attention of the House of Representatives to the death of Howard Heimbach, of Pittsburgh. His thoughtful remarks are most meaningful to me, for Howard Heimbach was a close friend.

I first became associated with him as a fellow Pennsylvanian and classmate at Dartmouth College. My respect for him stemmed both from college and our later business association.

Ever since I have been a Member of Congress, he was most helpful in his advice regarding business reaction to proposed legislation, showing unusual awareness and insight. Indeed, he was a forceful and effective influence on both the State and National scenes, as exhibited through the chamber of commerce.

All of us who have had the privilege of knowing him shall miss his engaging and relaxed approach to his important assignments and many worthwhile voluntary activities.

It was with a great deal of sadness that I learned of his recent death. I join with our distinguished colleague and Howard Heimbach's many other friends in expressing my sincerest sympathy to his family.

IMPORTANT LEGISLATION PASSED

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. PICKLE. Mr. Speaker, because of a longstanding commitment in my home State, I was unable to be in the House Chamber today for several votes. I want, therefore, to register here my strong support for these measures and note that I saw that my vote was paired as in favor of all the bills that were considered today.

The first is H.R. 17795, the Emergency Community Facilities Act of 1970. This bill authorizes an additional $1 billion for grants for water and sewage facilities. In a time of growing population and pollution problems, I feel that this measure is one of high priority, and not an issue which can be shuttled aside or funded on a haphazard or token basis. This is particularly crucial in rural areas and small cities, many of which are currently in desperate need of help in dealing with a mounting shortage of water and sewage facilities.

From my committee have come H.R. 17982, extension of financing for Corporation for Public Broadcasting; and H.R. 11913, Communicable Disease Control Amendment of 1970. Though in widely different fields, these two measures are both vital. The first hopefully will encourage the administration to propose a plan of permanent financing for the Corporation for Public Broadcasting. The second will fill a gap in our public health services by strengthening communicable disease programs. Committee testimony showed that there was a dangerous absence of programs operating in this field and that this lack presented a serious public health hazard.

In addition, I was proud to be able to support the several conservation bills from the Interior Committee. With the deep concern for our environment now pervading our thoughts, it was good to see this action taken.

SENATE—*Friday, September 11, 1970*

The Senate met at 10 a.m. and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Reverend Jimmy O. Phifer, pastor, Wesley United Methodist Church, Sikeston, Mo., offered the following prayer:

O God, our Father, help us, we pray, to love our country and to give to it our very best that America might become a blessing to the world.

We thank You, O Lord, for these Senators who provide leadership for America at such an important time in its history. We pray Your blessings on them. Give them strength and courage, we pray, to discharge their responsibilities.

Today we pray for our President, and also for him who will preside over the Senate.

We pray today, our Father, for the blessing of peace. It is our prayer that peace will come soon to all the world.

O God, our Father, bless Your church. Make her strong. Remove her weaknesses. Give to us duty and honor when You forgive us. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication from the President pro tempore of the Senate (Mr. RUSSELL).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., September 11, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Thursday, September 10, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. BYRD of West Virginia. I ask unanimous consent that all committees may be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

THE CALENDAR

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendars Nos. 1178 and 1180.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

AMENDMENT OF THE NATIONAL AERONAUTICS AND SPACE ACT OF 1958

The bill (H.R. 16539) to amend the National Aeronautics and Space Act of 1958 to provide that the Secretary of Transportation shall be a member of the National Aeronautics and Space Council, was considered, ordered to a third reading, read the third time, and passed.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-1161), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to provide that the Secretary of Transportation shall be a member of the National Aeronautics and Space Council.

EXPLANATION OF THE BILL

Public Law 85-568, which was enacted on July 29, 1958, established the National Aeronautics and Space Administration and, in addition, established the National Aeronautics and Space Council. Public Law 87-26, passed April 25, 1961, amended section 201 of the Space Act of 1958 to provide that the National Aeronautics and Space Council (hereinafter called the Council) should be composed of:

(1) The Vice President, who shall be Chairman of the Council;

(2) The Secretary of State;

(3) The Secretary of Defense;

(4) The Administrator of the National Aeronautics and Space Administration; and

(5) The Chairman of the Atomic Energy Commission.

The Department of Transportation was created by Public Law 89-670 on October 15, 1966, and almost immediately the question arose as to whether or not the Secretary of Transportation should be a member of the Council. The desirability of such a move was explored in hearings on "Aeronautical Research and Development Policy" held by the

committee on January 25, 26, and February 27, 1967. Since the DOT did not officially begin business until April 1, 1967, it is understandable that witnesses to these hearings were divided and somewhat uncertain on this point. The general feeling seemed to be that this might be a desirable but not necessary move, in view of the fact that DOT could be invited to participate in Council deliberations whenever its interests were involved (as, in fact, it was on subsequent occasions). This issue was discussed, but no specific recommendations in this regard were made in the report filed by the committee (S. Rept. 957, "Aeronautical Research and Development Policy," Jan. 31, 1968).

The committee did make the following recommendations in that report:

2. An in-depth study should be made to analyze the relationship between benefits that accrue to the Nation from aviation and the level of aeronautical R. & D. effort. The study should try to determine—or at least develop criteria for such a determination—what level of R. & D. should be maintained in order to achieve the desired results. This study should be an in-house effort of NASA and the Department of Transportation or accomplished under contract by the private sector. The study might also include a detailed analysis of the divergence of military and civilian aeronautical requirements in order to assess better the diminishing benefits to civilian needs from military R. & D. The committee recommends that NASA and the Department of Transportation jointly sponsor such a study.

3. As soon as the results of the study are available, the National Aeronautics and Space Council, with the Department of Transportation and the Bureau of the Budget as participants, should determine the level of Federal Government involvement, and the relative effort of participating agencies.

It is clear, therefore, that the committee was anxious for the DOT to become involved in the highest levels of interaction with other interested agencies in the area of aeronautical R. & D.

While the study suggested in recommendation No. 2 above is now well underway and the Council has taken a sharp interest in the problems of aeronautics, the time for the execution of recommendation No. 3 has not yet arrived. It is now anticipated that results of the joint study may be available for such consideration by the Council in time for its recommendations to have an impact on the fiscal year 1973 budget. In view of the importance of these decisions on the future of aeronautical R. & D. and inasmuch as the Department of Transportation has principal responsibility for civil aviation, the committee believes that it would be appropriate to make the Secretary of Transportation a statutory member of the Council.

COMMITTEE RECOMMENDATIONS

The committee favorably reported the bill with no amendments and recommends its enactment.

COST AND BUDGET DATA

There is no cost associated with the bill.

VOLUNTARY ADMISSION OF PATIENTS TO DISTRICT INSTITUTION—FOREST HAVEN

The Senate proceeded to consider the bill (H.R. 4182) to authorize voluntary admission of patients to the District of Columbia institution providing care, education, and treatment of mentally retarded persons, which had been reported from the Committee on the District of Columbia with amendments, on page 2, at the beginning of line 2, strike out "mentally" and insert "substantially"; in line 9, after the word "term", strike out "mentally" and insert "substantially"; on page 3, at the beginning of line 6, strike out "mentally" and insert "substantially"; in line 16, after the word "sections", strike out "mentally" and insert "substantially"; on page 4, line 1, after the word "admit", insert "a person"; in line 2, after the word "Haven", strike out "as a patient any adult who has been a resident of the District of Columbia for one year next preceding the date of application or any child under the age of twenty-one whose parents or legal guardian has been a resident of the District of Columbia for one year next preceding the date of application. A person may be admitted to Forest Haven"; in line 10, after the word "be", strike out "mentally" and insert "substantially"; on page 5, line 4, after the word "the", where it appears the first time, strike out "mentally retarded"; at the top of page 6, strike out:

"(e) The Director, with the approval of the Commissioners of the District of Columbia, shall prescribe such rules and regulations as he may deem necessary to carry out the provisions of this section."

And, in lieu thereof, insert:

"(e) The District of Columbia Council is authorized to issue regulations to carry out the purposes of this section.

"(f) The authority contained in this section shall extend to January 1, 1975, unless repealed prior to that date."

At the beginning of line 19, strike out "mentally" and insert "substantially"; on page 7, line 24, after the word "inserting", strike out "mental" and insert "substantial"; on page 8, line 7, after the word "inserting", strike out "mentally" and insert "substantially"; in line 16, after the word "inserting", strike out "mentally" and insert "substantially"; on page 9, at the beginning of line 2, strike out "Mentally" and insert "Substantially"; in line 3, after the word "title", strike out "21e" and insert "21"; and at the beginning of line 6, strike out "Mentally" and insert "Substantially".

The amendments were considered and agreed to en bloc.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

The title was amended so as to read: "A bill to authorize voluntary admission of patients to the District of Columbia institution providing care, education, and treatment of substantially retarded persons."

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-1163), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of this bill is to accomplish the following:

1. To authorize voluntary admission of substantially retarded persons to the District Training School, whose name is changed to Forest Haven.

2. To require that a prerequisite to such voluntary admissions be a financial arrangement with the District of Columbia on behalf of such persons when they or their relatives are financially able to pay for all or a part of the expenses involved.

3. Delete certain archaic terminology in the present law and substitute modern terminology in its place.

BACKGROUND

The District Training School (Forest Haven) is an institution at Laurel, Maryland, operated by the District of Columbia Department of Public Welfare for certain mentally retarded citizens of the District, where such persons are cared for and given suitable education and training.

Under present law, admission to the District Training School (Forest Haven) can be accomplished only by court order, the issuance of which must be preceded by a petition to the court and a hearing. It is the opinion of this committee that families should be spared the emotional ordeal involved in bringing their mentally retarded relatives before the court, and that the time of the court could more profitably be used for other purposes. In this connection, we are informed that these petitions are nearly always uncontested.

H.R. 4182 would provide, in addition to this present system of admission to the District Training School (Forest Haven) by court order, for voluntary admission in cases where the District of Columbia Director of Public Health determines that the applicant is eligible for admission, and where the patient expresses no objection to being admitted.

A patient voluntarily admitted would have the privilege of petitioning for his own release, and would be discharged 5 days after filing his petition with the Superintendent of the Training School, unless during this period the Director of Public Welfare petitions the court to detain the patient for court hearing. In this event, the patient would be retained until the court has disposed of the case.

The bill provides further that where the term "District Training School" occurs in the present law, the more commonly used title "Forest Haven" shall be substituted. Similarly, the more humane term, "substantially retarded," would replace "feebleminded," and the word "patient" would be inserted in lieu of "inmate." This committee feels that these changes in terminology would serve to a degree to spare the feelings of the families of these retarded persons and thus lighten the burden upon them.

The various amendments to H.R. 4182 change the word "mentally" to "substantially" and reflect the similar change made in the District of Columbia Court Reform and Criminal Procedure Act of 1970, Public Law 91-358 (Sec. 150). The use of the term "substantially retarded" instead of simply "mentally retarded" was chosen in order not to reflect harshly upon the many independent and productive citizens in society who are to a lesser degree or at least educably mentally retarded.

Following passage of the bill by the House on April 24, 1969, this committee held a public hearing on July 31, 1969. The District of Columbia Government reported at that time that it no longer favored passage of H.R. 4182 but planned to submit more comprehensive legislation which was drafted by the Committee on Laws pertaining to Mental Disorders of the Judicial Conference of the District of Columbia Circuit.

Since that time, however, the District Government has advised the Committee that additional study will be needed before new legislation can be recommended to the Congress. In view of that development, it has recommended enactment of H.R. 4182 as an

interim measure to meet the need for improved admission procedures at Forest Haven.

Mr. BYRD of West Virginia. Mr. President, that concludes the call of the unobjected-to items on the legislative calendar at this time.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. At this time, pursuant to the previous order, the Chair now recognizes the distinguished Senator from Ohio (Mr. YOUNG) for not to exceed 20 minutes.

IS IT FOR THIS THAT AMERICANS ARE DYING?

Mr. YOUNG of Ohio. Mr. President, recently in a Saigon cabaret three South Vietnamese officers, Lt. Col. Nbuyen Viet Can, Capt. Do Ngoc Nuoi, and Capt. Pham Van Bach assaulted Sgt. Calvin T. Yates of Paintsville, Ky. Sergeant Yates defended himself vigorously, but the odds were too great. He called for help. Two U.S. military policemen responded. Immediately the three South Vietnamese army officers shot them down. Our MP's were killed before they had time to draw their revolvers. Sergeant Yates was badly bruised, but fortunately, though the Vietnamese officers fired at close range or point blank, he was not wounded.

Later he and others testified against the three defendants before a Saigon military tribunal. The tribunal composed of South Vietnamese army officers found the two captains guilty of murder and their lieutenant colonel guilty of manslaughter. The South Vietnamese military judges then gave all three suspended sentences. Their fellow officers and relatives jamming the courtroom applauded wildly when the suspended sentences were announced.

Is it for this that Americans are fighting and dying?

MURDER ON KENT STATE UNIVERSITY CAMPUS

Mr. YOUNG of Ohio. Mr. President, the Congress of the United States should make an appropriation of a very substantial sum of money to compensate those students—boys and girls—who on the campus of their university were victims of rifle fire shortly after high noon on Monday, May 4, and also the families of the two boys and two girls who were shot and killed by Ohio National Guardsmen on that day. There has been some talk of soliciting contributions and then giving that money to some of the victims and to the families of the boys and girls who were killed to compensate them to some extent for the medical expenses incurred.

I propose, Mr. President, that we in the Congress appropriate $5 million and that a board of five members including not less than two physicians and surgeons be authorized to determine the compensation that should be paid by the Federal Government to those boys and girls who were shot by National Guardsmen and injured, many of them permanently injured, and to determine adequate compensation for the families of the two girls and two boys who were killed by guardsmen's bullets. Then I will make the same proposal next January that the general assembly of Ohio consider the facts and determine what compensation the State of Ohio should pay.

It is astonishing to me that no public official in Ohio nor any member of the President's Commission on Campus Unrest has spoken out that the Congress of the United States has a moral and, no doubt, a legal obligation to compensate these young men and young women, nearly all of whom are minors, for the injuries they received and the pain they suffered due to being shot by National Guardsmen's rifle fire. Many of them suffered a disability that will continue as long as they live. Their fathers have been compelled to incur financial obligations for medical and hospital attention and treatment. As for the two boys and two girls who were killed by the National Guard, their fathers and mothers who sustained such great loss and sorrow and, in addition, paid out financially for funeral expenses, must be compensated as far as it is possible to accomplish this. In Ohio we lawyers have been taught that for every wrong there is a remedy.

Very definitely, due to the relationship of the National Guard in every State of the Union to the Federal Government and the fact that article I, section 8 of the Constitution of the United States provides:

> The Congress shall have the power to provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions.
>
> The Congress shall have the power . . . to provide for the organizing, arming, and disciplining, the Militia, and for governing such Part of them as may be employed in the Service of the United States, reserving to the States respectively, the Appointment of the Officers, the Authority of training the Militia according to the discipline prescribed by Congress.

An appropriation should be made and I am suggesting an appropriation of $5 million to provide compensation from the Federal Government. Also, I assert that the General Assembly of Ohio, which will convene next January, has an obligation to appropriate an additional and a very substantial sum of money for this same purpose.

It is crystal clear now that there was no riot whatever on the campus of Kent State University at any time on the morning of May 4 or around the noon hour up to the time of the shooting. Some 100 FBI agents following a most intensive investigation over a period of 2 weeks have reported their conclusions. In addition, seven investigative reporters of the Knight newspaper chain, including the Detroit Free Press, the Akron Beacon-Journal, and the Miami Herald, completed an intensive 2-week investigation at Kent State. Their report also proves that the students who were killed or wounded were innocent of any attacks or assaults on any National Guardsmen or of any rioting on the campus of their own university on this day when the university was functioning. Classes were being held and as a matter of fact, President Robert I. White of the university had not asked for National Guardsmen and did not want them on the campus.

Not one National Guardsman required first-aid treatment at any time on May 4 due to any act of any student. One fainted. One had an apparent heart attack and fell down, and a third in a frantic frenzy shouted:

> I shot two teenagers! I shot two teenagers!

Of the four students who were killed, Jeff Miller's body lay a distance of between 85 to 90 yards from the first line of guardsmen. Allison Krause fell some 110 yards distant. Sandy Scheuer, who was shot and killed, was 130 yards away from the frontline of guardsmen. She was on the university commons walking to her speech therapy class. Her schoolbooks lay on the ground beside her.

Joseph Lewis who was wounded made an obscene gesture toward the Ohio National Guardsmen. He was the closest of all the students to the frontline of the guardsmen. He had thrown no rocks. He had resorted to no violence whatever. He made an obscene gesture and a guardsman named Shaffer shot him.

John R. Cleary was more than 100 feet away standing by a metal sculpture near Taylor Hall. He was not facing the guardsmen. He was apparently standing laterally to the Guard as a guardsman's bullet entered his left upper chest and the main fragments exited from the right upper chest. The bullet that struck him was apparently a dumdum bullet or one cut by the guardsman to be more lethal.

Donald MacKenzie was seriously wounded at a distance of approximately 250 yards away from the Guard. He was running in the opposite direction from the Guard. The projectile entered the left rear of his neck.

James Dennis Russell was wounded while standing in an area 90 degrees removed from the locations of the other students who were shot. He was at a distance of 125 yards from the Guard.

Alan Canfora, according to the FBI, was in the parking lot when he was shot, a distance of 100 yards or more from the Guard.

Thomas Grace was shot in the back of his left ankle and the bullet penetrated downward and fragments from the projectile exited from the top of his foot. According to investigative reports and the FBI, Grace was at a distance of more than 20 yards from the National Guardsmen, perhaps as far as 100 yards. That is immaterial as it is evident he was not facing the Guard. In fact, of all those killed and wounded only Joseph Lewis and Jeff Miller were shot from the front.

Regarding seven of the boys and girls, the shots entered from the side and four had their backs turned to the guardsmen. The bullets entered their bodies from the rear.

William Schroeder, who was killed, was shot while apparently in a prone position facing away from the Guard.

Douglas Wrentmore was at least 110 yards from the Guard when he was shot. The bullet entered the left side of his right knee, caused a compound fracture

of the right tibia and exited on the right side of the knee.

Of all the Kent State University students killed and wounded not one was involved or even associated remotely with any disorder at any time in Kent on the preceding Friday night or with the burning of the ROTC building on the preceding Saturday night.

The conclusion of FBI and other investigators was that they were merely spectators on the campus of their own university in the middle of the day, Monday, May 4, at the time the university was functioning even though rough National Guardsmen had arrogantly taken over.

Robert Stamps was very seriously wounded and is no doubt permanently injured. He was hit by a National Guardsman's rifle bullet at a distance of 609 feet from the frontline of the National Guardsmen. Furthermore, the bullet struck him in the buttock about 3 inches below his belt, penetrated his body, missing his spinal column by about an inch and exited from the front part of the body.

Dean Kahler was shot down at a considerable distance from the National Guardsmen. He is hospitalized and is paralyzed from his waist down.

Mr. President, National Guard officers and men responsible for the killing and wounding of these students violated the law of the State of Ohio. They should be charged with second degree murder and also with a second count of shooting with intent to kill. This, in violation of the law of our State. I have no confidence whatever that the State authorities will prosecute such charges, this due to the political influence of Governor Rhodes and his attorney general. Next January there will be another Governor and attorney general of my State, I am glad to report.

Very definitely, later this year a Federal grand jury of the northern district of Ohio—and the shootings and killings occurred within this district—should be convened to investigate these killings and shootings. It is evident there is probable cause that the constitutional rights of Sandra Scheuer and others who were shot were violated. This in accord with U.S. Criminal Code 18, section 242, and is a violation of that code.

Maj. Gen. Winston P. Wilson, stationed in the Pentagon as commanding officer of the National Guard of the United States, has been proven guilty of making utterly false allegations. This fellow seeks to be beneficiary of a bill passed in the House of Representatives sponsored by the chairman of the Armed Services Committee of the other body. This bill, which I am glad to report is being held in the Senate Armed Services Committee, proposes to make the National Guard general, who is the commanding officer of the National Guard, a lieutenant general. General Wilson has been bucking to be promoted to lieutenant general. I report to him that officials of the Department of Defense have expressed opposition to the enactment of this bill.

In fact, it is stated on pages 4 and 5 of the committee report of the other body that "the Department of Defense recommends against enactment of H.R. 15143." In other words, top officials at the Pentagon have expressed their opposition to this bill.

Mr. President, I am not at all concerned that General Wilson be granted an additional star. What I am gravely concerned about is that he is permitted to continue in his present position at the Pentagon.

On May 7, 3 days after the tragedy on the campus of Kent State University, General Wilson had the unmitigated gall and astonishing effrontery to make outlandishly false allegations on this subject. He pontificated that the students who were fired upon, 14 of whom were killed or wounded, were lawbreakers in violation of the "Governor's ban, in violation of the Riot Act and the lawful order to disperse." He made the lying statement that a sniper fired at the guardsmen. He falsely asserted the Guard fired in self-defense.

This fellow expressed no sympathy whatever toward the families of two girl and two boy students who were killed nor for the 10 who were wounded. Then this arrogant general told the Senators of the Armed Services Committee that he had an unconfirmed report that a nonmilitary spent shell casing was picked up on the campus. Then he made the outstanding lying statement:

> I have an unconfirmed report that four shots were fired by a person in the dissident group.

The FBI agents who investigated and officers and members of the Ohio State Highway Patrol who were present on the campus all reported that no such incident occurred. Furthermore, he alleged that snipers were shooting at the guardsmen from the roof of a university building. He stated again that there was an unconfirmed report a "witness had seen a girl dashing out of the dormitory who fired a weapon at the guardsmen as they turned away." He was indulging in the big lie technique of Adolf Hitler that by making false statements repeatedly, in the end some credence is bound to be given them.

Following the time General Wilson made these outlandish and fantastic speculative, unconfirmed, and false statements, a newspaper in a small city in Ohio quoted the general. The next thing I knew I received a telephone call from a radio station in Toledo that what I had been saying in the Senate regarding the Kent State tragedy had been altogether different than the facts given out by General Wilson following his investigation.

This general, and no other person, told of an unconfirmed rumor that a witness had seen a girl dashing out of a dormitory and firing a weapon at the guardsmen as they turned away and they turned back and returned the fire. Statements given me by college students and a graduate Kent State College counselor and others are positive that no such incident occurred. One hundred FBI agents following their intensive investigation in their report refuted every allegation Wilson made. They were equally positive that the guardsmen were the only ones who fired guns early that fatal Monday afternoon.

I have said enough about this General Wilson and his testimony. Mr. President, I do say now that officials of our Government should dismiss him from the high position he holds in the Defense Department.

He has my contempt. I deem his testimony before the Armed Services Committee, of which I am a member, as being lying and arrogant testimony. He has been proved to be unfit to be commander of the National Guard of the United States.

I yield the floor.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order the Senator from Wisconsin (Mr. NELSON) is to be recognized at this time.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that there be a quorum call, without prejudice to the Senator from Wisconsin under the previous order.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Under the previous order, at this time the Chair recognizes the Senator from Wisconsin for not to exceed 20 minutes.

WAYNE STATE UNIVERSITY STUDENTS BEAT 1980 FEDERAL STANDARDS IN 1971 FORD WITH POLLUTION CONTROL DEVICES

Mr. NELSON. Mr. President, while the mighty auto industry has been loudly protesting its inability to meet proposed engine pollution standards, four Wayne State University students equipped a 1971 Ford with pollution control devices and beat the 1980 Federal standards.

It is nothing short of hilarious that the largest concentration of engineers and experts in the world cannot match the wits and creativity of a group of college students.

For 20 years the auto industry has been running a gigantic con game telling the public their autos were safe and the engines were clean. Finally Congress passed auto safety legislation over the strenuous objections of the industry. Now is the time to set engine pollution standards. Obviously, the industry is going to continue to filibuster, dissemble and delay the installation of pollution control devices. Industry engineers and corporate executives are swarming all over Washington telling the Congress they cannot meet Federal standards.

The fact is they can meet these standards and Congress should not let them get away with further delay.

Mr. President, I will read the letter I have sent this morning to members of the Committee on Public Works:

WASHINGTON, D.C.,
September 11, 1970.

U.S. Senate,
Washington, D.C.

DEAR SENATOR: You are no doubt aware of the 1970 Clean Air Car Race from Cambridge, Massachusetts to Pasadena, California during the last days of August. This is the second such event in which several hundred students from universities throughout the U.S. and Canada have made a great contribution of time and money to assist in resolving the major air pollution problem of today—contaminant emissions which result from the large population of autos powered by internal combustion engines and fueled by gasoline.

The 1970 Collegiate Clean Air Car Race was just concluded. The dramatic test results of that race have not yet been made public, but the auto industry knows the results and are deeply embarrassed by them.

Based upon a formula which took into account both performance characteristics as well as emissions control, the overall winner of the 1970 Clean Air Car Race was the entry from Wayne State University in Detroit, Michigan. What the giants of the automobile industry are claiming cannot be done, was demonstrated to the American public by a team of night students at Wayne State who are employed as technicians by Ford Motor Co. during the day. Without the financial or technical resources available to the auto industry, these students equipped a 1971 Ford Capri powered by a 302 cubic inch V8 engine with four platinum catalytic mufflers, an exhaust gas recirculation system, electric fuel pump, insulated fuel lines, and a temperature sensing carburetor and raced across the United States.

When the Wayne State University entry reached California it was tested for pollution control. The results after this 3,600 mile race showed that the student-modified internal combustion engine using non-leaded gasoline surpassed not only the proposed 1975 Federal Standards, but were far below the proposed 1980 Federal Standards which your subcommittee has recommended be advanced for 1975.

Emission from the student-modified Ford Capri at the end of the race were .19 grams per mile of hydrocarbons, 1.48 grams per mile of carbon monoxide, and .29 grams per mile of oxide of nitrogen. The proposed 1980 Federal Standards, advanced to 1975 in the legislation before the committee, would set a limit of .25 grams per mile of hydrocarbons, 4.7 grams per mile of carbon monoxide, and .45 grams per mile of oxides of nitrogen. The significance of these dramatic results perhaps can best be understood when compared with the emissions of the uncontrolled internal combustion engine of a few years ago which spewed 73.0 grams per mile of carbon monoxide, 11.2 grams per mile of hydrocarbons, and 4.0 grams per mile of oxides of nitrogen into the air.

The results of this student-initiated clean car race appear to me to be particularly significant to members of the Senate Public Works Committee and others who have an immediate interest in eliminating automobile emissions as the major source of air pollution and the largest single contributor to damages arising from contaminated air. This subject is currently the subject of heated debate and I am sure that you are well aware of the statements of the automobile industry which questions the possibility of controlling automobile air pollution in the next five years.

The 1970 Clean Air Car Race was a student-organized 3,600-mile transcontinental test of cars developed to meet both safety and performance requirements while reducing air pollution emissions to a minimum. Vehicles were to be entered and driven only by students, who were to do their own roadside repairs. Vehicles applying for entry included those powered by steam, electric batteries, liquefied natural gas, compressed natural gas, liquid petroleum gas, electric-hybrid combinations, diesel, propane, alcohol, liquid hydrogen-oxygen mixtures, and special gasolines.

To qualify to enter the race, the vehicles were required to have the potential for meeting the Federal air pollution emission standards which are proposed by the National Air Pollution Control Administration for 1975 cars. In actual competition, the cars were to be judged on such points as student participation in developing the vehicle with its control equipment, degree of innovation, car performance, thermal efficiency, maintenance of speed, practicality, cost, safety, mass production capability, and degree of contribution to resolving the air pollution problem.

Check points were established from Boston to Los Angeles which represented the mileage to be covered safely and reasonably for each day of a six-day driving period. Emissions tests were performed by qualified government or contract laboratories at Cambridge, Massachusetts, Ypsilanti, Michigan, and Los Angeles so that possible deterioration in performance could be evaluated.

Thirty-five cars finished the race. Nine of these vehicles did in fact meet the proposed 1975 U.S. emission standards. What is perhaps more significant is that two of these nine cars met the proposed U.S. emission standards for 1980, a goal which the auto manufacturers have contended to this committee that they cannot meet in 1975!

Of the nine which met or bettered the proposed 1975 emission standards six were powered by standard internal combustion engines using compressed (CNG), or liquefied natural gas (LNG), or liquefied petroleum gas (LPG).

The remaining three also utilized the standard internal combustion engine, but were fueled by alcohol. LNG combined with hydrogen, and, in the case of the one adjudged the overall winner, unleaded gasoline.

The latter car, the winner of the race, met the proposed U.S 1980 emission standards for all contaminants and deserves particular consideration for it utilized an internal combustion engine and unleaded gasoline.

It is a 1971 Ford Capri powered by a 302 cubic inch V8 engine supplied by Ford. It was entered and driven by four night students of Wayne State University at Detroit—Alden Raquepau, John S. Karol, Bryan Geraghty, and Mike Riley. The last two young men are employed as technicians in branches of the Ford Motor Co. They equipped the car with two platinum catalytic mufflers for control of hydrocarbons and carbon monoxide and two additional for control of oxides of nitrogen. They also equipped the vehicle with an exhaust gas recirculation system, electric fuel pump, insulated fuel lines, and a temperature sensing carburetor. As previously noted, the vehicle was operated exclusively on non-leaded gasoline.

The test results obtained at Cambridge and Los Angeles on the declared winner as compared to the proposed Federal emission standards for 1975 and 1980 are as follows:

Pollutant	Cambridge test (hot start)	Ypsilanti test (cold start)	Los Angeles test (Hot start)	Los Angeles test (Cold start)	Proposed Federal standards [1] 1975	Proposed Federal standards [1] 1980
Carbon monoxide	1 percent	[2]	1 percent	1.48 gr./mi	11.0 gr./mi	4.7 gr./mi.
Hydrocarbons	10 p.p.m	[2]	16 p.p.m	0.19 gr./mi	.5 gr./mi	.25 gr./mi.
Oxides of nitrogen	100 p.p.m	[2]	118 p.p.m	.29 gr./mi	.9 gr./mi	.45 gr./mi.

[1] Proposed Federal standards based on cold start.
[2] The Ypsilanti tests were ignored because of excusable fault.

The above results demonstrate the fact that a 1971 Ford internal combustion engine can meet the proposed 1980 standards today. They also show that deterioration in vehicle emissions performance between Cambridge and Los Angeles was negligible. This evidence supports those provisions of the legislation proposed by your Subcommittee on Air and Water Pollution which would require compliance with the proposed 1980 Federal emissions standards by 1975.

One can also conclude that the accomplishment of the Wayne State University students with a minimum of experience with a major manufacturer should be well within the expertise of all segments of the entire automobile industry.

However, I do not wish to arrive at this conclusion on the basis of one vehicle with one type of control operated by one team of students.

As I mentioned earlier, another entrant met the proposed 1980 standards. It was one of the six entrants in the race powered by internal combustion engines fueled by compressed or liquefied natural gas or liquefied petroleum gas.

The 1970 American Motors Hornet entered by students of the California Institute of Technology was operated entirely on compressed natural gas and was equipped with one catalytic muffler as against the four installed on the Capri. Its test data is as follows:

Pollutant	Cambridge test (hot start)	Ypsilanti test (cold start) (gr./mi.)	Los Angeles test (hot start)	Proposed Federal Standards (gr./mil.) 1975	Proposed Federal Standards (gr./mil.) 1980
Carbon monoxide	[1] 1	1.0	[1] 1	11.0	4.7
Hydrocarbons	[2] 11	[3] .21	[2] 26	.5	.25
Oxides of nitrogen	[2] 128	.47	[2] 100	.9	.45

[1] In percent.
[2] Parts per million.
[3] With 0.50 correction for nonreactive hydrocarbons which is allowed by State of California procedures and pending in Federal procedures. Hydrocarbon emission from vehicles using natural gas are largely methane which does not react in the atmosphere.

This vehicle, along with the other five operating on CNG, LNG, or LPG was placed in the same category as those with an internal combustion engine using gasoline because they shared the same basic power plant. Therefore, these vehicles did not place well in the final judging because of the official ruling on the accessibility of fuel. While natural gas is available in one form or another to the majority of stationary fuel users throughout the country, it is not yet possible for a motorist to drive into service stations and have his fuel cylinders filled with this fuel and the individual vehicle owner does not have low-cost compression equipment for home use.

However, present day vehicles powered by

internal combustion engines fueled with natural gas or LPG have a great potential for fleet operations in major urban areas. Fleet operators capable of providing their own gas refueling facilities can take advantage of this low-cost clean fuel and its attendant low-cost operation and maintenance factors. Both the General Services Administration and the Post Office Department are presently evaluating the desirability of utilizing this fuel in their large fleets.

Before concluding my discussion of individual entrants in the race, I would like to inject a note of local pride. Students of the University of Wisconsin qualified to enter two of the 43 vehicles which started the race. They were both powered by standard internal combustion engines, one fueled with LNG and the other with unleaded gasoline. They both performed very well. The vehicle powered by LNG met the 1980 standards for all contaminants except oxides of nitrogen.

In summation, it is apparent that the fuels used are as important to air pollution control as the power plants used in motor vehicles at the present time. The Clean Air Car Race demonstrates that an internal combustion engine can meet the proposed 1980 emission standards—with unleaded gasoline and maximum catalytic control, or with natural gas.

While steam powered vehicles did not finish the race and electric powered vehicles had difficulty meeting the speed requirements between check points, they cannot be ignored as having real potential over the long term. Both electricity and steam have been ignored for too long a period of time as a method for motor vehicle propulsion for the gap to be closed in a few short years.

The Clean Air Car Race of 1970 must be considered as an important contribution to the continuing effort to provide environmental quality for this nation. The initiative and efforts of several hundred students from campuses throughout the country have made a dramatic demonstration that automobile air pollution can be controlled and is a practical goal for 1975. This is certainly a constructive and responsible contribution of our youth that has been made for all our citizens.

Sincerely yours,

GAYLORD NELSON,
U.S. Senator.

Mr. President, I ask unanimous consent to have printed in the RECORD the announcement of the Clean Air Car Race winners, a comparison of emission standards, and a description of the entrant vehicles for the Clean Air Car Race.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CLEAN AIR CAR RACE WINNERS

SELECTION BY RACE COMMITTEE

Class and entry numbers

I: ICE, Gaseous; Worcester Polytechnic Institute, 18. ICE, Liquid; Standford, 41.

II: Brayton (Turbine) M.I.T., 90.

III: Electrics, Cornell, 65.

IV: Hybrids, Worcester Polytechnic Institute, 71 and University of Toronto, 75 (Tie).

Overall winner selected by the Judge: Entry No. 36, Wayne State University, Ford Capri, 302 cubic inches, V8 with 4 platinum catalyst mufflers, fuel injection, exhaust recirculator and unleaded gasoline.

JUDGES FOR CLEAN AIR CAR RACE

John Brogan, Director, Motor Vehicle R&D, National Air Pollution Control Administration.

Harry Barr, President, Society of Automotive Engineers and Vice President, Engineering, General Motors.

Dave Ragone, Dean, School of Engineering, Dartmouth.

William Gouse, Office of Science and Technology.

John Maga, Executive Officer, State of California Air Resources Board.

COMPARISON OF EMISSION STANDARDS

[In grams per mile]

	Hydrocarbons	Carbon monoxide	Oxides of nitrogen
Uncontrolled internal combustion engine	11.2	73.0	4.0
1970 Federal Standards	2.2	23.0	(1)
Actual achieved control	(4.6)	(47.0)	(2)
Projected Federal Standards for 1975 under Senate Clean Air Act (proposed for 1980 by NAPCA)	.25	4.7	.4
Alternate powerplants and fuels:			
Steam car [3]	.2	1.0	.4
Gas turbine [4]	.32	3.5	1.9
Natural gas fueled ICE [5]	.21	1.0	.47
Organic Rankine-cycle reciprocating [6]	.05	.35	.38
Modified ICE with non-leaded gas [7]	.19	1.48	.29

[1] None.

[2] The control of hydrocarbons and carbon monoxide for 1970 Federal standards has increased the emissions of oxides of nitrogen over the level of the uncontrolled internal combusion engine (4 grams per mile).

[3] Based upon the Williams Bros. steamcar tested by Mobil Oil Corp. in December 1966.

[4] Based upon Chrysler Corp. experimental gas turbine car.

[5] Based upon Cal Tech compressed natural gas ICE in 1970 Clean Air Race.

[6] Based upon projections from smaller scale burner tests of Thermo Electron Corp. engine.

[7] Based upon 1971 modified Ford Capri overall winner in 1970 Clean Air Car Race entered by Wayne State University.

ENTRANT VEHICLE DESCRIPTIONS

The following descriptive data were taken from the preliminary technical descriptions of CACR entrants. In some cases, items such as 'Transmission' are omitted, indicating that they were not mentioned in the report. In general, this means that the stock item was retained in the modified vehicle. Some vehicles are not list debecause technical data was not finalized by press time.

Entrant No. 1

From: California Institute of Technology.
Vehicle: 1970 American Motors Hornet.
Fuel: CNG.
Fuel system: dual fuel capability.
Emission controls: catalytic muffler.

Entrant No. 2

From: California Institute of Technology.
Vehicle: 1970 Ford Ranchero.
Engine: 351 cu. in.
Transmission: 4-speed manual.
Fuel: CNG.
Fuel system: dual fuel capability.
Emission controls: catalytic reactor.

Entrant No. 4

From: Worcester Polytechnic Institute.
Vehicle: 1970 Chevelle 4-door hardtop sedan.
Engine: 350 cu. in. V8, 300 hp., 10.25:1 compression ratio.
Transmission: 3-speed automatic, 2.56 rear end ratio.
Fuel: LNG.
Fuel system: Impco model 425 carburetor.
Emission controls: (1) Englehard model PTX–4D235 exhaust purifiers; (2) reduced spark plug gap; (3) timing 0° BTDC with no vacuum advance; (4) capacitive discharge ignition system.

Entrant No. 5

From: Northeastern University.
Vehicle: 1970 Ford Fairlane 4-door sedan.
Engine: 250 cu. in. 6 cylinder, 9.1:1 compression, 155 hp. at 4400 rpm.; Impco CA 125 air valve type carburetor.
Transmission: 3-speed automatic.
Fuel: LNG.
Emission controls: intrinsic.

Entrant No. 10

From: San Jose State College.
Vehicle: 1970 Toyoto Corona.
Engine: 1200 cc.
Fuel: LPG.
Fuel system: standard conversion and heat exchanger on input air.
Emission controls: (1) thermal reactor with air injection; (2) catalytic reactor; (3) cooling of input air.

Entrant No. 11

From: Stanford University.
Vehicle: 1971 Capri.
Fuel: LPG.
Fuel system: standard conversion.
Emission controls: (1) water injection; (2) exhaust gas recirculation; (3) thermal reactor; (4) catalytic reactor.

Entrant No. 12

From: University of California at Berkeley.
Vehicle: 1970 Plymouth Belvedere, 4-door sedan.
Engine: 318 cu. in.
Transmission: standard.
Fuel: LPG.
Fuel system: Impco propane carburetor model 225.
Emission control: (1) exhaust recirculation; (2) catalytic exhaust reactors for unburned HC and CO control; (3) heat risers to intake manifold have been blocked; (4) heat control valve in passenger-side exhaust has been removed; (5) capacitive discharge ignition system; (6) reground valves lapped into place in the cylinder head; (7) air for carburetion is collected by a scoop below the front bumper.

Entrant No. 15

From: University of South Florida.
Vehicle: 1970 Chevrolet El Camino.
Engine: 454 cu. in.
Transmission: 4-speed manual.
Fuel: LPG.
Fuel system: standard conversion.
Emission controls: intrinsic.

Entrant No. 16

From: University of Evansville.
Vehicle: 1969 Oldsmobile Cutlass 4-door.
Engine: 350 cu. in.
Fuel: LPG.
Fuel system: standard conversion.
Emission controls: intrinsic.

Entrant No. 17

From: Tufts University.
Vehicle: 4-door Chevelle Malibu.
Engine: 250 cu. in. 6 cylinder.
Transmission: standard.
Fuel: LPG.
Fuel system: standard conversion and static mixing tube between carburetor and intake manifold.
Emission controls: (1) air injection and catalytic reactor; (2) CuO plated exhaust static; (3) exhaust recirculation.

Entrant No. 18

From: Worcester Polytechnic Institute—"Propane Gasser" team.
Vehicle: 1970 Chevy II Nova 4-door sedan.
Engine: 350 cu. in.
Transmission: automatic 3-speed.
Fuel: LPG.
Fuel system: standard conversion.
Emission control: (1) 2 catalytic reactors; (2) lowered compression ratio.

Entrant No. 19

From: Buffalo State College.
Vehicle: 1961 Austin Healy Sprite.
Engine: rebuilt standard 948 cc. 4 cylinder engine; 8.3:1 compression; maximum output 50 hp.
Transmission: 4-speed manual; modified 3.70:1 gear train ratio.
Fuel: LPG.
Fuel system: Beam propane conversion unit with dual carburetor.

Emission control: (1) new cylinder with longer stellite valves; (2) lengthened pistons.

Entrant No. 21

From: South Methodist University.
Vehicle: 1970 Ford Mustang.
Engine: 302 cu. in. V8.
Fuel: LPG.
Fuel system: standard conversion.
Emission controls: (1) 2 catalytic reactors air injection; (2) exhaust recirculation.

Entrant No. 22

From: University of Wisconsin.
Vehicle: 1970 Opel GT.
Engine: 1900 cc.
Fuel: LPG.
Fuel system: Standard conversion.
Emission controls: (1) exhaust gas recirculation; (2) catalytic reactor and air injection.

Entrant No. 23

From: St. Clair College.
Vehicle: 1970 Dodge Coronet.
Engine: 315 cu. in.
Transmission: 3-speed automatic.
Fuel: LPG.
Fuel system: standard conversion.
Emission controls: 2 catalytic mufflers.

Entrant No. 30

From: University of California at Berkeley.
Vehicle: 1970 Plymouth Belvedere 4-door sedan.
Engine: 318 cu. in. V8.
Transmission: 3-speed automatic.
Fuel: unleaded gasoline.
Fuel system: standard.
Emission controls: (1) 2 thermal reactors with synchronous air injection; (2) 1 catalytic reactor; (3) exhaust recirculation.

Entrant No. 31

From: Louisiana State University.
Vehicle: 1970 Pontiac LeMans.
Fuel: leaded gas.
Emission controls: (1) lean fuel mixture; (2) retarded spark; (3) exhaust recirculation; (4) thermal reactor.

Entrant No. 32

From: Worcester Polytechnic Institute (Saab).
Vehicle: Saab 99E 2-door sedan.
Engine: 1.7 liter (modified to 1.851).
Transmission: mannual 4 speed.
Fuel: unleaded gasoline.
Fuel system: Bosch fuel injection.
Emission controls: (1) lowered compression ratio; (2) increased valve overlap; (3) spark retardation; (4) richer mixture; (5) thermal reactor with air injection.

Entrant No. 33

From: Worcester Polytechnic Institute—'Dark Horse' team.
Vehicle: 1970 Ford Mustang.
Engine: 302 cu. in. V8.
Transmission: 3-speed automatic.
Fuel: leaded gasoline.
Fuel system: fuel injection.
Emission controls: (1) decreased compression ratio; (2) retarded spark; (3) catalytic reactor; (4) particulate trap; (5) evaporative emission control.

Entrant No. 34

From: University of Michigan.
Engine: standard.
Transmission: standard.
Fuel: unleaded gasoline.
Fuel system: fuel injection.
Emission controls: (1) water injection; (2) 2 catalytic reactors and air injection.

Entrant No. 35

From: University of Michigan.
Engine: 350 cu. in. V8.
Transmission: Automatic.
Fuel: unleaded gasoline.
Fuel system: standard.
Emission controls: (1) 2 catalytic reactors for NO_x; (2) 2 catalytic reactors for CO and HC downstream of NO_x; (3) air injection in exhaust stream between NO_x reactors and HC/CO reactors.

Entrant No. 36

From: Wayne State University.
Vehicle: 1971 Ford Capri.
Engine: 302 cu. in. V8.
Transmission: automatic.
Fuel: unleaded gas.
Fuel system: electric fuel pump; insulated lines; temperature-sensing carburetor.
Emission controls: (1) exhaust gas recirculation; (2) catalytic reactors for NO_x; (3) air injection and 2 catalytic reactors for HC and CO.

Entrant No. 37

From: University of Wisconsin.
Vehicle: 1970 Lotus Europa.
Engine: Renault R–16.
Transmission:
Fuel: unleaded gas.
Fuel system: standard.
Emission controls: (1) spark retard; (2) exhaust gas recirculation; (3) catalytic reactor and air injection; (4) W.U. thermal reactor; (5) evaporative loss control.

Entrant No. 41

From: Stanford University.
Vehicle: American Motors Gremlin.
Fuel: methyl alcohol.
Emission controls: (1) exhaust gas recirculation; (2) water injection; (3) catalytic reactor.

Entrant No. 42

From: University of California at Los Angeles.
Vehicle: 1965 Mustang.
Engine: 4 cylinder 138 cu. in. diesel.
Transmission: 4-speed manual.
Fuel system: standard and model TO–4 Airesearch turbocharger.
Emission controls: intrinsic.

Entrant No. 51

From: University of Arizona.
Vehicle description: 1970 Plymouth Valiant Duster, 3500 lbs.
Engine: 318 cu. in. V8.
Transmission: 3-speed manual.
Fuel: liquid methane (90%) anw compressed H_2 (10%).
Fuel system: fuels mixed before being introduced into carburetor.
Emission controls: fuel cutoff on deceleration.

Entrant No. 52

From: Putnam City West High School.
Vehicle: 1970 Opel.
Engine: 1,875 cc. (115 cu. in.)
Transmission: 4-speed manual.
Fuel: LPG/CNG (dual).
Fuel system: standard conversion.
Emission controls: (1) catalytic reactor and air injection; (2) exhaust recirculation.

Entrant No. 61

From: Georgia Institute of Technology.
Vehicle: 1970 VW fastback sedan.
Engine: 25 hp. DC series field electric motor.
Transmission: fixed 2:1 drive ratio; control circuitry—variable pulse width constant voltage (144V) output from dual SCR switching network.
Power storage: 24 6V Prestolite batteries.
Charging: 25 kW 220V 3-phase 60 Hz input is rectified to 80 amps DC; trimming rheostats to compensate for battery impedance changes during charging; a reverse voltage pulse of 300 V for 25 ms. is applied every 5 sec. to repress gas accumulation and excess heating during recharging.

Entrant No. 65

From: Cornell University.
Vehicle: five-passenger four-door sedan with metal and fiberglass body.
Engine: 34 kW-hr. battery pack consisting of 24 6V lead-cobalt batteries with a 240 amp-hr. capacity at 4 hrs.
Transmission: dual chopper SCR circuit which controls the across-motor voltage by pulse width and repetition rate modulation of the battery voltage; a four pole DC series motor, rated at 20 hp. with an additional shunt winding for regenerative braking.

Entrant No. 70

From: Massachusetts Institute of Technology.
Vehicle: 2-door Corvair.
Engine: hybrid electric—dual piston ICE.
Transmission: 14 lead-acid batteries with total rating of 90 amp-hrs. at 163 V; power controller between batteries and motor; shunt wound DC electric traction motor; 4-speed manual transmission and axle assembly.
Fuel: gasoline.
Fuel system: standard.
Emission control: (1) lean fuel-air mixture; (2) catalytic reactor for HC and CO; (3) reduced compression ratio; (4) water injection.

Entrant No. 71

From: Worcester Polytechnic Institute.
Vehicle: 1970 Gremlin.
Engine: Jeep Corp. Dauntless V6 ICE.
Transmission: 20 Exide type 3EC–19 6V lead-acid batteries rated at 200 amp-hours (20 hrs.); G.E. type BY401 25 hp., 5150 rpm series wound traction motor, controlled by G.E. model 300 modifitd SCR controller; G.E. triclad brushless AC generator model SJ–286, which provides 25 kVA 3-phase power, rectified by 3 G.E. type A–90DB Schron Rectifiers.
Fuel: unleaded gas.
Fuel system: standard.
Emission control (1) air pumps supplying oxygen to the exhaust manifold; (2) 2 Englehart exhaust gas purifiers for unburned HC and CO reduction; (3) exhaust gas recirculation (5–10%); (4) constant air-fuel ratio by running engine at constant load.

Entrant No. 74

From: University of New Hampshire.
Engine: Hybrid.
Propane ICE: 4 cylinder, 4 cycle Bearcat–55 outboard motor engine, equipped with catalytic reactor.
Generator: 20 kW 120 VDC G.E. air force generator.
Battery buffer: 10 12V lead acid units.
Control circuitry: switches to form various series-parallel motor combinations, plus standard SCR chopper circuitry.
Motors: 2 20 kW motors, one for front wheels, one for rear wheels.
Vehicle: Saab sedan.

Entrant No. 75

From: University of Toronto.
Vehicle: 1970 Chevelle.
Engine: 302 cu. in. converted to LPG with catalytic mufflers. Engine can run generator and/or wheels. Electric motor connected to drive shaft.
Can run in 4 modes:
(1) pure electric; (2) ICE; (3) hybrid-electric; (4) ICE directly linked to drive shaft and electric motor directly linked to drive shaft. ICE runs at constant load; motor and generator act to keep that load constant.

Entrant No. 80

From: University of California at San Diego.
Vehicle: 1970 Javelin.
Engine: water storage tanks (formerly gas tanks); priming pump in series with an engine-driven feed water pump (a Vickers hydraulic oil pump) which leads to the boiler via 3/8 in. copper tubing; recirculating type boiler; steam generator controller is a pressure-actuated switch in header pipe which turns flame on and off; water level controller has also been incorporated; expander is converted Harley-Davidson 74 cu. in. motor cycle engine.

Transmission: 1962 Chevrolet 3-speed, 2.87:1 rear end ratio.

Electrical system: 24 V system consisting of 2–12 V lead-acid batteries and 3–24 V 35 amp alternators; wiring system controls the automatic control circuit, manual override circuit, the solenoids, the ignition, and the blowers.

Fuel: LPG.

Fuel system: 35 gallon tank containing a pressure regulating valve in series with a vaporizing coil through which the flame passes; vaporized propane enters a small combustion can where air mixing is effected; a propane nozzle shoots the mixture into a high voltage spark which runs at all times when the fuel system is activated.

Emission control: intrinsic.

Entrant No. 83

From: Worcester Polytechnic Institute.

Vehicle: 1970 Chevelle 4-door hardtop.

Engine: monotube steam generator; rotary steam distribution valve; 6 cyclinder uniflow expander.

Fuel: kerosene.

Fuel system: standard external combustion.

Transmission: fixed ratio.

Emission controls: intrinsic.

Entrant No. 90

TRANSACTION OF ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. At this time, under the previous order, the Senate will proceed to the transaction of routine morning business, with a 3-minute limitation on speeches.

Is there morning business to be transacted?

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will please call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Leonard, one of his secretaries.

REPORT OF THE AMERICAN REVOLUTION BICENTENNIAL COMMISSION—MESSAGE FROM THE PRESIDENT

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following message from the President of the United States, which, with the accompanying report, was referred to the Committee on the Judiciary:

To the Congress of the United States:

The report of the American Revolution Bicentennial Commission, which I am transmitting to the Congress today, presents cogent suggestions for commemoration of the 200th anniversary of the birth of our nation.

I strongly endorse the Commission's primary recommendations that:

—The commemoration be national in scope, seeking to involve every State, city and community;

—The Bicentennial be a focal point for a review and reaffirmation of the principles on which the nation was founded and for a new understanding of our heritage;

—This be the occasion for looking ahead, for defining and dedicating ourselves to our common purposes, and for speeding the accomplishment of specific local projects responsive to our changing national priorities.

The goal which the Commission has established is most appropriate for our nation at this time: "to forge a new national commitment, a new spirit for '76, a spirit which vitalizes the ideals for which the Revolution was fought; a spirit which will unite the nation in purpose and dedication to the advancement of human welfare as it moves into its third century."

I concur with the Commission's concept of a Bicentennial Era with its focal point in 1976.

The Commission is now moving from the planning to the development stage of the Bicentennial Era. To assist it in its task, I have these comments on some specific areas:

ON MAKING THE CELEBRATION NATIONAL IN SCOPE

1. I invite the Bicentennial Commissions now formed or forming in each of the fifty States, along with Puerto Rico, the District of Columbia, and the Territories, to share in a special effort to ensure active and nationwide participation in the celebration of America's 200th birthday. In the year preceding July 4, 1976, I invite each of those areas to accept the responsibility for a single week in which national focus would be on that area's local traditions and commemorative activities, in a way that would permit the nation and the world to observe both our historic development and our local activities to meet the challenges of the third American century.

2. The Commission urges a "multi-city exposition" and quite properly concludes "there should be no commercially-oriented world's fair in the traditional sense anywhere in the nation during the Bicentennial Era." I agree. There can be no single Bicentennial city. Nor is any traditional type of world's fair in one city adequate to the challenge of a national celebration.

However, since American civilization has drawn on the genius and traditions of nations throughout the world, and has contributed as well to their development, we should actively encourage international participation in our celebration. To do this in an orderly and well-planned way, we should select a principal site on which that international participation can focus. Philadelphia, site of the signing of the Declaration of Independence, and the creation of our Constitution, would be the natural place for this activity.

Accordingly, I am now instructing the Secretary of State to proceed officially with appropriate registration procedures with the Bureau of International Expositions for an international exposition in Philadelphia in 1976. Such an exposition, however, is to be primarily cultural, inspirational and non-commercial in character, with the emphasis on quality rather than size.

Pursuant to the provisions of Public Law 91–269, I am directing the Secretary of Commerce to review the financial and other support to be secured for the Philadelphia exposition from both government and private sources and, together with David J. Mahoney, Chairman of the Commission, and George P. Shultz, Director of the Office of Management and Budget, to report to me the result of this review.

If suitable financing arrangements can be worked out, Philadelphia can be an exciting focal point for international participation in a way that will carry forward the regard of our Founding Fathers for "the opinion of mankind" without in any way restricting the scope of the celebration to a single city. In fact I hope that foreign visitors and visiting groups, including artists and performers, will travel to every corner of the nation and participate in as many Bicentennial events as possible.

3. It would be appropriate for the nation's capital to play an important role in helping to set the tone for the national celebration. I have already made known my support for such long-range projects as a new rapid transit system, the Federal City Bicentennial Development Corporation, and an acceleration of urban renewal plans. I am directing Chairman Mahoney to begin a series of meetings with Mayor Washington, the National Capital Planning Commission, Chairman Mark Evans of the National Capital Historic Region Bicentennial Committee, Counsellor to the President Daniel P. Moynihan and Director Shultz to define specific plans and costs for my review and to recommend ways to achieve community participation in the planning and development process.

4. The Commission report asks the City of Boston "to develop a program to explore and examine the revolutionary roots of America through its great historical resources" and endorses the completion of Miami's permanent Trade and Cultural Center (Interama) "as a part of the Bicentennial observance." These plans, as well as others from cities in other sections of the country, are to be strongly encouraged.

5. The Commission pointed out that improved travel facilities would "contribute greatly to a successful Bicentennial celebration," and expressed particular interest in special urban corridor projects in the Northeast which would not only expedite the flow of visitors from one historical site to another, but would also provide permanent benefits for a significant percentage of the American population. I am instructing Secretary Volpe and Director Shultz to analyze these projects, including costs and timing, and to submit their recommendations to me.

ON FINANCE AND ORGANIZATION

1. I will refrain from making commitments to any particular project recommended by the Commission until timing and cost data are submitted and studied. As policy choices and costs become evident, Chairman Mahoney will resubmit some of these recommendations to the Commission and will inform me of the Commission's preferences.

2. The Commission will have important operational responsibilities: the Bicentennial Calendar, publications, films, the setting of standards and the coordination and monitoring of many projects closely tied to the national celebration. It may be advisable to enlarge the Commission and constitute it as the "Board of Directors" of a corporate structure equipped to deal with operating functions. I am asking Chairman Mahoney to meet with Director Shultz and to recommend to me a plan for future Commission organization and funding.

ON THE OVERALL THEME

A "Festival of Fredom" does not, in my opinion, grasp the unique character of the American experience. True, this event will be festive, colorful, and affirmative; yet it must also be thoughtful, profound, and searching.

There is a phrase in the Declaration of Independence that is based on English political philosopher John Locke's concept of "life, liberty and property" being the inalienable rights of man. Thomas Jefferson's dream for the new nation transcended the material; he saw property rights not as an end in itself, but as one means to human happiness.

For that reason, he substituted the phrase "the pursuit of happiness," and that ideal has constantly reasserted itself—most recently as a renewed concern for "the quality of life."

That thread is woven through the fabric of American life over two centuries. It keeps us from getting smug about our success; it reminds us of the need for the spiritual as we attain more of our material needs; it keeps us moving, growing, changing for the better.

Improving the quality of life is, in a sense, a more compelling concept in this era of advanced technology than it was in the time of Jefferson. I believe that this is the area in which we will find the fundamental theme for our anniversary observance of the continuing revolution that is the United States of America.

RICHARD NIXON.

THE WHITE HOUSE, *September 11, 1970.*

A CALL FOR COOPERATION—MESSAGE FROM THE PRESIDENT

Mr. BYRD of West Virginia. Mr. President, there is at the desk a message from the President of the United States on "A Call for Cooperation." I ask unanimous consent that the message be ordered to lie on the table and be printed.

The PRESIDING OFFICER (Mr. TALMADGE). Without objection, it is so ordered.

The message from the President is as follows:

To the Congress of the United States:

A CALL FOR COOPERATION

In the course of the past year and one-half I have sent more than 50 messages to the Congress proposing legislation to deal with certain problems, or to achieve certain national objectives. On two occasions I have sought to provide a comprehensive summation of these messages, thereby presenting an administration philosophy.

In the first of these, my message of October 13, 1969, I asserted that if ours is not to be an age of revolution it must be an age of reform, and declared that this would be the watchword of the Administration: REFORM. I listed then a series of such measures already proposed:

Reform of the Draft
Reform of the Welfare System
Reform of the Tax Code
Revenue-Sharing Reform
Postal Reform
Manpower Reform
Social Security Reform
Reform of the Grant-In-Aid System
Electoral Reform
D.C. Government Reform
OEO Reform

I spoke then of further issues for which the Administration proposed new initiatives: with respect to hunger and malnutrition; population; crime; narcotics and pornography; manpower facilities and unemployment insurance; public transportation and air facilities.

In my State of the Union Message of January 22, 1970, I returned to this theme, proposing that as we enter the seventies, we should enter also a great age of reform of the institutions of American government.

The first principle of reform is that Government programs and institutions should be effective. They should deliver what they promise. Too many promises of the 1960s have not been kept. The nation is now paying a price for this.

This principle is a cornerstone of the New Federalism. We seek to develop a new sense of partnership between the Federal government and State and local governments, to assign responsibility and authority for public functions to the level best qualified to carry them out. In the name of the "urban crisis," for example, the 1960s saw the Federal government increasingly caught in issues of municipal housekeeping that are most appropriately the business of a city council. But simultaneously the great fiscal power of the Federal government was never brought to play—through revenue sharing—to provide local governments with sufficient resources to enable them to solve their own problems in their own ways.

The second principle of reform is that America must find a way to direct its own growth. We have entered a decade in which our gross national product will increase by $500 billion, an amount greater than the entire growth of the American economy from 1790 to 1950. Out of this vast increase in wealth we can create a life of unprecedented achievement for ourselves, and for the Nation. Or we can choke on it. "Toward Balanced Growth: Quantity with Quality," the theme of the report of the National Goals Research Staff, could well be the theme of the 1970s.

In foreign affairs I have held out the hope that if our new policies succeed America may have the best chance since World War II to enjoy a generation of uninterrupted peace. More then is the reason to consider forthwith how we are to use the abundance of peace.

The great question of the seventies, as I pointed out in my State of the Union Message, is, shall we surrender to our surroundings, or shall we make our peace with nature and begin to make reparations for the damage we have done to our air, to our land and to our water? I promised a national growth policy, to bring balance and order to the great changes in population, industry, and patterns of education and training that would affect the quality of life in the three decades ahead.

In February I sent to the Congress the most comprehensive proposals in the area of environmental protection and enhancement ever set forth by any administration. Since then I have proposed the creation of the Environmental Protection Agency to establish a focal point for setting general environment pollutions standards affecting all media and forms of pollution.

I have now virtually completed the domestic legislative proposals I will make to the present Congress. I would like then to take one further opportunity to sum up. I would like to acknowledge the important achievements already behind us, and also to stress the very considerable amount of work which is still before the Congress and which must be done if we are to meet our responsibility to this new decade, much less to begin to fulfill its promise.

In my message of last October I stated that if a working partnership between men of differing philosophies and different parties is to continue, then candor on both sides is required.

Candor requires first that we acknowledge the exceptional circumstances which were thrust upon us by a relatively rare event in American history. For the first time in 120 years an incoming President of one party has faced a Congress dominated by another.

Given the system of "checks and balances" built into our government, it would be reasonable to predict that in such a situation the institutions of the Presidency and the Congress would thwart one another, and that stalemate would ensue. The American Constitution was devised in large measure to limit the exercise of power. We should not be surprised if on occasion it makes such exercise difficult.

Yet this need not be. It is not less a quality of our Constitution that by providing a voice to wide ranging and diverse interests it makes it possible from time to time to face up to issues of national importance, and to make genuinely national decisions about them. Some decisions can be reached only if both parties are willing to share responsibility; some programs can be enacted only if both parties share the credit.

This, then, is a time to face such issues. As President, I have sought to do so. I have proposed to Congress legislation dealing with issues about which there has been an unmistakable national judgment that something needs to be done. Revenue sharing, for example, was pledged by both parties in their 1968 platforms. We need it; the public supports it. Yet, until now, no President has felt it possible to propose revenue sharing, no Congress has made any move toward enacting it. Draft reform, welfare reform, crime control, environmental protection, are other issues that need urgent actions. I have felt it possible to approach these matters as national issues about which we could make national decisions in which both parties would participate, for which both would honorably accept responsibility and justly claim recognition.

Whatever will be the judgment of history, the record of this moment is that Congress has not responded. There are exceptions, of which all involved can and should be proud. But the larger fact is that Congress, in a mood of nostalgia and partisanship, has too much devoted its energies to tinkering with programs of the past while ignoring the realities of the present and the opportunities of the future.

Time now slips away. The Congress is coming to a close. Its work is not done. The issues I have asked to be considered have not been considered. And yet matters press. We cannot wait for politics. We must seek a record of achievement all can share.

As we build this record, we must not lose sight of the overriding need for fiscal responsibility. Year after year during the 1960s the Federal government incurred a deficit. In the early years of the decade there was a justification for this. The economy was operating at less than full employment capacity. In the later years there was no justification whatever: persistent deficits could lead only to a disorderly and punishing inflation. This was predictable; it was predicted; it came to pass.

It need not happen again, and it must not. This is why I have been forced to veto appropriation bills sent me by the Congress in amounts well above those requested. I understand full well the feeling for worthy purposes that inspires such action. But there is a higher national interest. Economics has taught us to think in terms of the entire economic system. To affect one part is to affect all parts. The Federal government must act in accordance with that knowledge and reality. Just as the President sends a unified Budget to the Congress, the Congress surely should devise some manner of unified response. I have suggested that Congress establish an overall spending ceiling, and adjust the various appropriation bills to accord with that ceiling. There may be other and better ways of attaining this goal. But we can no longer avoid the necessity of finding some means whereby the present fragmented and competitive legislative process that mandates and promotes Federal spending can be brought under control so that the impact of the total Federal budget is to sustain and encourage economic growth, rather than to disrupt it. This is the course of fiscal responsibility.

If restraint is one condition of fiscal responsibility, timeliness is surely another. In recent years Congress has more and more tended to put off the enactment of appropriations bills until months after the beginning of the fiscal year. It is now September. The fiscal year began July 1st. Yet only four out of fourteen appropriations bills have been enacted. This practice begins to threaten the very basis of orderly and effective government.

Fiscal restraint in no sense precludes a reordering of national priorities. To the contrary, it is only when such restraint is exercised that a purposeful direction of events can occur. In fiscal 1971, for example, for the first time in two decades, the expenditures of the Federal government on Human Resources are greater than the expenditure on Defense and Defense-related activities. We have reversed the trend of the 1960's. Our priorities *have* changed. But this change can be effective only in the context of disciplined and responsible fiscal policy. The matter may be put more strongly. Anyone who seriously wishes to see a reordering of priorities for the nation either must insist on doing so in a responsible and disciplined manner, or must be judged not to be serious.

REFORMING THE INSTITUTIONS OF THE PAST

Of the major items of reform which I have proposed to the Congress, and which I described in my message of October 13, 1969, some have been acted upon.

The Tax Reform Act of 1969, which had some troublesome features nevertheless did incorporate most of the measures reforming the Tax Code which I had proposed.

The Administration asked for and obtained the extension of the *Economic Opportunity Act* to permit the OEO to carry out its new role.

One of the most important measures of reform passed by this Congress so far is the *Postal Reorganization Act* establishing the United States Postal Service. It is a landmark bill demonstrating not only ability to respond to a complex and persisting problem with bold and creative measures, but demonstrating as well the power of bipartisan effort when it is exercised with determination and will. This Act will need to be improved upon as the new system is established, but we have a sound structure.

Last year the Congress passed legislation I recommended to permit a change from the oldest-first to a youngest-first order of call in Selective Service, to reduce the period of prime vulnerability to one year, and to select individuals through a lottery system.

Thus we have made a beginning. But our work is nowhere near ended. The other major reforms I listed last October still have not been enacted. Since that time I have proposed a wide range of measures of equal importance. In far the greater proportion there, too, await action by Congress.

REFORM OF THE DRAFT

As long as the draft is necessary to meet our military manpower needs, it must be made to operate as equitably and consistently as possible.

This year, by Executive Order, future occupational, agricultural, and paternity deferments were eliminated. At the same time, I requested the Congress to restore the discretionary authority of the President on undergraduate student deferments so that these deferments could also be eliminated in the future. I also proposed that legislation be enacted to improve the random selection system by permitting the establishment of a direct national call of inductees. The Congress has not acted on these proposals. But the only long range solution is to end our need to draft by attaining an all-volunteer armed force. On April 23, 1970, I proposed military pay legislation to the Congress as an important step toward achieving an objective of reducing draft calls to zero. Unfortunately, this legislation has not been enacted.

In the meantime—and for all time—America owes an obligation to the men who have fought in Vietnam, and not less to those who backed them in the Armed Forces elsewhere. The *Vietnam Veterans Assistance Act* which I have proposed to the Congress would provide important new GI Bill benefits relating to post-secondary school training, the provision of Small Business Administration loans to veterans from minority groups, and the provision of guaranteed loans for the purchase of mobile homes. This legislation has not been enacted; it should be.

REFORM OF THE WELFARE SYSTEM

The *Family Assistance Act* has been properly described as the most important piece of domestic legislation to go before the Congress in thirty-five years. It is one of the dozen or half-dozen most important pieces of domestic legislation in American history. The Act provides a basic national income supplement for all needy families with children. It abolishes the bankrupt welfare system of the past, which has so greatly contributed to our present crisis, and creates an altogether new system based upon work incentives (including support for child care services), job training and provision, and directed primarily to creating self-sufficient independent families. Where persons are genuinely dependent, as are the aged and disabled, or female headed families with young children, the bill provides national standards of benefits which will enormously improve the condition of the poor in many parts of the Nation.

In April of this year the *Family Assistance Act* passed the House of Representatives by a resounding and gratifying vote. Hearings are now taking place in the Senate. It would be tragic beyond words if this historic opportunity were to be allowed to slip away from us. I am confident that this will not happen, but to prevent it the Senate will, of course, have to move with some dispatch.

The Family Assistance Plan is the keystone of an income strategy for the elimination of poverty in the United

States. In 1969 the first move in this strategy was accomplished when Congress adopted the Administration's proposal to abolish income taxes for the poor. Reform of the Manpower Program and Unemployment Insurance are equally essential, and the latter has now also been enacted. But the strategy will be incomplete until the Family Assistance Plan is enacted as well.

On May 6, 1969, before the Family Assistance Plan was proposed, I sent to Congress a message on hunger and malnutrition, in which I declared that the moment is at hand to put an end to hunger in America itself for all time. Since then, major reforms have been carried through toward this goal. But legislation is required. The *Food Stamp Act Amendments*, which I recommended to the Congress, established the path-breaking principles that very poor families would receive free stamps, that for other families cash requirements would be limited to 30 percent of family income, that uniform minimum national eligibility standards would be established, and a range of similarly important reforms. This legislation still has not been enacted.

Family welfare is necessarily related to family size and the availability of health services. On July 18, 1969, I sent the first Message to Congress ever on the subject of population. At the time I proposed that we should establish as a national goal the provision of adequate family planning services within the next five years to all those who want but cannot afford them, adding that in no circumstances will the activities associated with our pursuit of this goal be allowed to infringe upon the religious convictions or personal wishes and freedom of any individual, nor will they be allowed to impair the absolute right of all individuals to have such matters of conscience respected by public authorities. Part of this program has gone forward, but in order to reach our goal of being able to serve the estimated five million women who are in need of subsidized, publicly assisted family planning services, family planning legislation should be enacted by the Congress this year.

On the broader question of the future course of population growth and its implications for our society, I am pleased to observe that the *Commission on Population Growth and the American Future* which I proposed in my Message has been approved by the Congress and is now in operation.

In February of this year this Administration sent to the Congress the *Health Services Improvement Act* dedicated to the creation of integrated, effective, consumer-oriented health care systems by the consolidation of four existing and overlapping programs in this field. The Act would "decategorize" certain aspects of these programs, provide "joint funding", authorize the transfer of funds among these programs and encourage experimentation in the delivery of health services. The Congress has not yet taken final action on this legislation.

REVENUE-SHARING REFORM

As I stated in October, for the first time in the history of this government, we have recommended a national policy of permanent sharing of the Federal income tax revenues with the States and lesser political units of the country. My proposal, the *Revenue Sharing Act of 1969*, would begin with $1 billion in its first full fiscal year, and rise to approximately $5 billion by FY 1976: It would be difficult to identify another proposal that has received such widespread endorsement. It is elemental economics, elemental good sense, elemental good government. Both parties endorsed Revenue Sharing in their 1968 platforms, and it has widespread public support. Yet neither the House nor the Senate has held hearings on this Administration's bill.

MANPOWER REFORM

Earlier in this message I stated that the first principle of reform is that government programs should be effective. With this object in view I have proposed a *Manpower Training Act* which would consolidate the major manpower training programs carried on by the Department of Labor into one funding authority, abolish categorical programs, provide that the administration of the programs be progressively decentralized to the States and metropolitan areas, and further provide an automatic increase of 10 percent in manpower funds when the national unemployment rate equals or exceeds 4.5 percent for three consecutive months.

Here is the New Federalism in action. Consolidate in the interests of flexibility. Decentralize where operations are best managed locally. Assert national standards of performance, and provide automatic adjustments to changes in the national economy. In the history of American Federalism there has been no comparable transfer of functions: a process that for more than a third of a century has taken responsibilities away from State and local governments and lodged them in Washington would now for the first time be reversed, not to re-establish an old arrangement, but to create a new one. Hearings have been held in both the House and Senate, but as yet neither body has responded to the essentials of this historic legislation.

One of the most important measures to pass either session of the Congress thus far is the recently enacted *Employment Security Amendments of 1970*, which I recommended July 8, 1969. This precedent-shattering legislation will not only cover 4.75 million additional jobs—in small businesses, nonprofit organizations, State hospitals, and State institutions of higher education among others—it will also provide an extension of the benefit period up to 13 weeks which is automatically triggered when the insured unemployment rate for the nation reaches 4.5 percent for three consecutive months, and would remain in operation until that rate drops below 4.5 percent for a corresponding three months. These provisions become effective January 1, 1972.

This is the most extensive reform of the unemployment insurance program ever enacted. Something of moment has occurred. This important income maintenance program has been made flexible, responsive, equilibrating. This is what modern government should be doing in a dozen such areas.

SOCIAL SECURITY REFORM

In the *Social Security Amendments* currently before the Congress, I requested an automatic cost-of-living adjustment in Social Security benefits to compensate elderly Americans, as I stated in October, for the losses they are suffering because of an inflation they could do nothing either to prevent or to avoid. This is an act of fairness which I proposed in my 1968 campaign for the Presidency and which the Congress should no longer deny to our senior citizens. In addition, I proposed several benefit liberalizations and reforms which would make social security a more equitable and effective instrument of income security for the aged. This measure has passed the House and awaits action in the Senate.

REFORM OF THE GRANT-IN-AID SYSTEM

The Congress consented to my reorganization plan which provided for the establisment of the new *Office of Management and Budget* and the *Domestic Council*. I am confident that these new entities will be major factors in improving the management of domestic affairs in the years ahead. However, there are other aspects of management reform which require legislation which has not been acted upon.

In the fourth month of the Administration I proposed to reform the increasingly chaotic and unmanageable grant-in-aid system of the national government by providing the President with power, subject to Congressional veto, to consolidate related assistance programs.

This is no small matter. It is one of the reforms that is absolutely necessary if our present governmental system is to be made to work. Again we face a familiar situation. We have made some improvements through action by the Executive Branch, but legislation is necessary. Hearings have been held on the *Grant Consolidation Act* in both the House and the Senate, but neither body has acted.

We have recently proposed dramatic changes in the manner in which Social Services are delivered to their intended beneficiaries. As an amendment to the Family Assistance Act, we proposed greater flexibility in the use of services money and related HEW programs—including permissive authority for State and local governments to transfer up to 20 percent from one appropriation to another under certain conditions. Moreover, we would launch a new Government Assistance Program to help Mayors and Governors strengthen their policy direction and management of important HEW services. The Senate Finance Committee was gratifyingly prompt in holding hearings on this important amendment, and I hope the Congress will enact it this year.

The *Federal Economy Act* is a related measure. Programs need to be consolidated; from time to time they need to be eliminated. This is an elemental principle of the decent management of public affairs. In February, 1970, I proposed program changes that would save $2.1 billion in Fiscal Year 1971—money urgently needed for other programs. More than half of those changes that require Congressional approval have not been put into effect. Further, the Congress is blocking over $170 million of the savings I proposed to achieve by executive action. In all, Congress is not acting on over $700 million in savings, or one-third of my proposals. In those areas where I have been left free to act I am accomplishing 100 percent of the savings planned.

ELECTORAL REFORM

No one subject more profoundly involves the issue of popular sovereignty than the method of electing the President. For almost two centuries the system of the Electoral College has somehow worked, albeit just barely at times, and at other times even doubtfully. Every four years the American democracy places a large, unacceptable, and unnecessary wager that it will work one more time, that somehow an institution that never in any event functioned the way the framers of the Constitution anticipated, will somehow confer the Presidency on that candidate who obtains the largest number of votes. The Electoral College need not do so. Indeed on occasion it has not done so. But far more importantly—whatever the popular vote—it need not confer the Presidency on any candidate, if none has a majority of the electoral vote.

Our ability to change this system in time for the 1972 elections is a touchstone of the impulse to reform in America today. It will be the measure of our ability to avert calamity by anticipating it.

As I stated in my October 1969 message, I originally favored other methods of reforming the electoral college system, but the passage by the House of a direct popular election plan indicated that this thoroughly acceptable reform could be achieved, and I accordingly supported it. Unfortunately, the Senate has not completed action. Time is running out. But it is still possible to pass the measure and to amend the Constitution in time for the 1972 elections.

D.C. GOVERNMENT REFORM

Last October I called to the attention of Congress one of the truly unacceptable facts of American life, and asked for the enactment of legislation I had proposed which would bring about the orderly transfer of political power to the people of the District of Columbia. I called for a Constitutional amendment giving the District at least one representative in the House and such additional representatives as Congress may approve, and providing for the possibility of two U.S. Senators. (We need to keep continually in mind that the population of the District is greater than that of at least 10 States.) I asked for an interim arrangement providing the District with a non-voting Congressional representative, and the creation of a Commission on Government for the District of Columbia to propose a permanent governmental arrangement. I have been heartened by progress toward the non-voting representative, but I share the chagrin that most Americans feel at the fact that Congress continues to deny self-government to the nation's capital. I would remind the Congress that the founding fathers did nothing of the sort. Home rule was taken from the District only after more than seventy years of self-government, and this was done on grounds that were either factually shaky or morally doubtful. Surely we cannot allow this inadmissible situation to persist as the American Bicentennial dawns.

FOREIGN TRADE

In a message to the Congress of November 18, 1969, I proposed the *Trade Act of 1969* which would significantly strengthen the trade agreements program of the United States, recognizing that ultimately it is rising world trade and production that must form the base for the prosperity of developing nations. At the same time, the bill would establish a viable program of tariff adjustments for industries and adjustment assistance for firms and workers affected by imports. It would also promote the reduction or elimination of non-tariff barriers to trade, by eliminating the American Selling Price System. While this legislation awaits enactment, I again express my concern about the growing tone of protectionism in the arguments being made in the Congress.

The *Merchant Marine Act Amendments* provide for a long-range merchant marine building program of 300 ships in the next ten years, with a lessening of dependence on operating-differential subsidy for liner carriers, and the buildup of the bulk commercial carrier fleet for the foreign commerce of the United States. This is a trade expansion measure of fundamental importance. The bill has passed the House of Representatives, but has not as yet passed the Senate.

CRIME

In my October, 1969 Message I declared that there is no greater need in this free society than the restoration of the individual American's freedom from violence in his home and on the streets of his city or town. These words were carefully chosen. The issue of crime is easily misunderstood, and on occasion deliberately so. The issue of crime is freedom. When individual citizens are the direct victims of violence, or the indirect victims when they are forced to restrict their own movements out of fear of violence, fundamental liberties are abridged. A government that fails to protect those liberties is not worthy of the name. At the time of my statement the issue had been the source of more legislative requests from the Administration than any other single subject. Today, not far from a year later, only two bills have passed. One was the *District of Columbia Court Reform and Criminal Procedure Act*—a measure of major importance. It provides for the expansion and strengthening of the entire system of law enforcement and criminal justice in the nation's capital. As I said in October, the Act provides more judges, new enforcement tools, reorganization of the archaic court system, a new public defender's office, and reform in the procedures for dealing with juvenile offenders.

The second was an amendment to the *Federal Youth Corrections Act* to provide more effective and improved methods for dealing with young people in the Federal criminal justice system.

Among the most important crime proposals that have been before the Congress for more than a year, and which have not been enacted, are these:

—*The Controlled Dangerous Substances Act.* This Act would substantially revise existing drug laws by providing new means for controlling dangerous drugs by establishing a new, comprehensive and realistic penalty structure designed to provide courts with guidance and flexibility in handling offenders, and by providing more effective enforcement tools for diminishing the availability of dangerous drugs.

—*Organized Crime Control Act.* This is an omnibus bill embodying recommendations of the President's Crime Commission, the National Commission on Reform of Federal Criminal Laws, and other groups. The ten titles codify and strengthen existing Federal laws relating to the prosecution of organized crime. Again, this is an issue easily misunderstood. The most important issues involved in organized crime are not those which are most commonly discussed. It has been estimated that as much as $50 billion a year passed through the hands of organized crime in illegal gambling alone. What is involved here is not the act of gambling by the individual citizen, but the corruption of government that invariably accompanies it. Similarly, the social consequences of the drug traffic controlled by organized crime spread far beyond the personal tragedy of the addict. They weaken the fabric of society itself.

This proposal would make large-scale gambling a federal offense and would make it a felony for large-scale gamblers and law enforcement officers or public officials to obstruct enforcement of State and local laws against gambling through bribery of government officials. And it would replace numerous disparate witness-immunity laws scattered throughout the United States Code with a single uniform provision. It is a long overdue reform. This bill provides, among other things, for increased sentences, up to 30 years, for dangerous adult special offenders—the recidivist, the professional offender, and the organized crime leader.

—*Wagering Tax Amendments.* This proposal would prohibit the use against the taxpayer of information obtained through his compliance with the wagering tax, while at the same time increasing the coverage and amount of the taxes, and authorizing a grant of immunity to essential witnesses.

—*The Bail Reform Act Amendments.* This proposal would authorize a judge to detain, after a hearing, a person charged with certain categories of Federal crimes who was found to pose a danger to another person or the community if released.

—*Protection of Minors from Obscenity Act and the Prohibition of Transportation of Salacious Advertising Act.* These two bills would prohibit the use of the mails for the distribution of matter harmful to minors or advertisements explicitly designed and intended to appeal to a prurient interest in sex.

—*Criminal Justice Act Amendments.* This proposal would institute fundamental and urgently needed reforms in the provision of legal defenders for poor persons. Crime involves the issue of freedom, and that includes freedom from unjust arrest and conviction. Vigorous and competent legal defense is fundamental to this freedom, and it results in justice for not only the accused but also the accuser.

These crime control measures have been before the Congress for more than a year. There are further measures of equal and as great urgency also before the Congress.

—*The Omnibus Crime Control and Safe Streets Amendments.* The Law Enforcement Assistance Administration was established in 1968 in the Department of Justice to assist, through a grant program, State and local governments in strengthening and improving law enforcement. These amendments now pending in Congress would authorize appropriations for this important program for fiscal year 1971 and beyond and would amend the basic authority to permit better utilization of the available funds.

—*Explosives Regulation Proposals and Amendments.* We have proposed legislation to regulate the business of importing, manufacturing or dealing in explosives through a system of licenses and permits as well as prohibiting the purchase of explosives by mail-order. In addition, we have proposed amendments to the U.S. Criminal Code which would provide urgently needed powers to control the epidemic of terrorist bombings and nihilist destruction which has suddenly become a feature of American life. Here again the object of crime control is not simply to deter people from breaking the law and to punish persons who have broken the law, but more importantly to maintain and protect the freedom of citizens to live their lives without fear and without injury. The stability of democratic society is what really is at stake.

EDUCATION REFORM

If the impulse to reform may be muted with respect to some areas of American life, there would seem to be near universal agreement that reform is overdue and urgent at every level in the field of education. There is a difference, however, between reform and retribution. If education has failed—*where* it has failed—the remedy is not to destroy it, but to restructure it. Moreover, failure as perceived by one group may be success in the eyes of another. Opinions about education must be informed by knowledge about the subject. From this it follows that the first thing to understand about education is that our understanding of the process is weak indeed. At most, it can be described as just beginning. This is a lesson we learned in the 1960s at no little cost.

During that decade, Congress was extraordinarily generous in its support of education, particularly in its enthusiasm for trying to compensate through education for the environmental disadvantages of our least fortunate children. Support for education comprised the fastest-growing segment of the Federal budget by the mid-point of that ten-year period. This support—regarded as long overdue by most Americans, and begrudged by almost no one—generated an extraordinary flurry of activity in American education at all levels.

Much of this activity was based on the familiar premise that if only the resources available for education were increased, the amount that youngsters learn would increase, too. Somehow, it seemed reasonable to assume that the amount of dollars invested in education was all that really mattered. For we thought we knew what education was all about.

It is, therefore, perfectly understandable that we, as a nation, have been reluctant to accept the findings of massive research and bold scholarly analysis which suggest that perhaps our cherished assumptions may simply not be true. Or, if true, they are far more complex and difficult to understand than we thought. It is entirely understandable that we have all been reluctant to acknowledge how little return our investment has brought, how disappointing the educational results of our ambitious programs have been. But the simple and alarming fact has gradually become apparent, that we did not really understand the educational process well enough to have a purposeful effect on its outcome, which is, of course, what children learn.

There is no shame associated with this conclusion, and no blame to be assigned. But it is time to realize that every time we invest a billion dollars in a compensatory program, we raise the hopes of millions of our most disadvantaged citizens; which hopes are more than likely destined to be dashed, for the programs and strategies on which they rest are themselves based on faulty assumptions and inadequate knowledge. This is bad government. It is bad politics. It is bad education.

This Administration did not take the easy way out of this sad paradox. The easy response would have been to ignore the research findings or to stop spending money across the board on education. In fact, the total sums budgeted by this Administration for education have risen steadily—to nearly $12 billion this year—and will continue to do so. For many of these programs have auxiliary benefits that should not be denied our young people. Far from cutting back—or pretending that programs "work" when in fact they do not—this Administration has chosen the tougher route of *reform and research.* For we are confident that the day will come when in fact every young American can learn as much and go as far as his abilities will permit. But that day will be slow in coming if we fail now to abandon outmoded precepts and to move beyond simplicities. (While at the same time giving full honor and credit to those who re-awakened the nation to its educational shortcomings.)

Accordingly, this Administration has taken a number of executive actions aimed at the reform and renewal of American education, consistent with the principle of the New Federalism that elementary and secondary education are properly the province of States and localities. The *Office of Child Development* has been created within HEW as the focal agency for our Early Learning Program and other activities aimed at enhancing The First Five Years of Life. The *President's Commission on School Finance* is now at work examining the pressing and complex problems associated with the financial support of public and non-public schools. The *Right to Read* has been established as a prime educational goal and a *National Reading Council* has been appointed to monitor the nation's progress toward it. We initiated a rigorous—and continuing—review of the Title I program.

But the reforms in Federal education programs that are most needed must represent the combined efforts of the Congress and the Administration. In two major Messages to Congress last March, I made a series of proposals for reform and renewal, first in elementary and secondary education, then in higher education. These were augmented by our proposed *Emergency School Aid Act,* and by the thorough-going reform of the Impacted Aid Program transmitted as part of the *Federal Economy Act.*

In these proposals I asked that the Congress establish a *National Institute of Education,* within the Department of Health, Education, and Welfare, in order to bring to education the intensity and quality of research and experimentation that we have grown accustomed to in biomedical research under the National Institutes of Health. Staffed by scholars and experts from many fields, and free of many of the constraints on established agencies, the National Institute would offer reasonable hope that in time we might convert our present ignorance about the processes of education into hard knowledge about learning and how to effect it. Its purpose is to assist schools in solving the pressing problems which beset them. Congress has not held hearings on this important and far-reaching proposal.

I asked that the Congress reform the mammoth—and, in its present form, inexcusable—program popularly known as Aid to Federally-impacted Areas. As I observed in March, this program neither assists States to determine their own education expenditures nor re-directs funds to the individual districts in greatest need. Four Presidents, representing both parties, have asked Congress to take up the long overdue but politically unpopular task of eliminating its most egre-

gious flaws. Although hearings have been held on this long-needed reform, no Committee action has been taken in either house.

I asked the Congress to enact a special two-year *Emergency School Aid Program* to expedite and encourage the process of desegregation in the United States, and to enhance the possibility that our youngsters can benefit from interracial educational experiences. Surely there has been no domestic public issue in twenty years to engage the attention and concern of more citizens than the relationship of the races within our nation's schools. To the extent that this relationship can be eased and assisted through the use of Federal funds, I have asked Congress to join with the Administration in doing so. I hope that Congress will complete action on this legislation at an early date.

My request that Congress speedily appropriate $150 million under existing authority so that we might begin this challenging task before schools open this September was regrettably cut in half to $75 million.

In higher education, the Administration submitted one of the most comprehensive pieces of education legislation in history, the *Higher Education Opportunity Act.* Its key elements bear repeating.

By substantially revising the present structure of student financial aid, it would be possible, for the first time, to assure every lower-income student entering college a combination of Federal grants and subsidized loans sufficient to give him the same ability to pay as a student from a family earning $10,000.

At the same time, I proposed to make Federally-guaranteed loans available to *every* college and graduate student in the United States, regardless of income. *The National Student Loan Association*—a "secondary market" for student loan paper—would make this possible, and the loans that we propose to guarantee would be sufficient in amount, and flexible enough in length of repayment, that any student prepared to invest in his own future could finance his own education. By making loans available to all, and by concentrating subsidies on those who need them most, the United States would finally be able to tell its young people that no qualified student who wants to go to college need be barred by lack of money.

In looking at the complex ties between institutions of higher education and the Federal government, this Administration concluded that for three decades now the Federal government has been hiring universities to do work it wanted done. The time has come for the Federal government to help academic communities to pursue excellence and reform in fields of their own choosing as well, and by means of their own choosing. Accordingly, I asked Congress to create a *National Foundation for Higher Education,* to be funded initially at $200 million a year, and to be guided in its policies by a Board representative of the general public as well as the higher education community itself. In creating this Foundation, it would also be possible to consolidate a series of narrow categorical programs that have long distorted the needs and wishes of our colleges and universities.

It would be naive to ignore the all-too-apparent fact that higher education may not be as popular in the United States as formerly. There has been a serious loss of faith in our universities, not least within the institutions themselves. The specter of "student unrest"—and the alleged political consequences of appearing to reward disruptive students and faculty—has tended to paralyze efforts in this field. But it is too easy to do nothing to let our dismay over the behavior of individual persons and institutions prevent us from sustaining and reforming our long-range investment in education. This is the time to move beyond politics, to move even beyond our individual sentiments, and to take the bold steps that alone can assure the continuation of excellence and the opening of opportunity in American higher education. I therefore urge the Congress to look again at the *Higher Education Opportunity Act* that I submitted, to understand the Administration's complete openness to responsible amendments, and to join with me in moving together on behalf of our young people.

URBAN AFFAIRS

In my October 1969 message I also asked the Congress to enact an *Urban Mass Transportation Assistance Act.* This measure will provide the nation's deteriorating public transportation system an unprecedented measure of public support. In the six year period that ended in June of this year, the Federal government provided only $800 million to aid the public transit industry. The Urban Mass Transportation Assistance Act would provide for a program that is four times greater over the next five years, and altogether totals $10 billion over the next twelve years. Both the Senate and the House have been actively concerned with this legislation, and a reasonably similar bill has passed the Senate. But I am still waiting for a sound bill for signature.

Beyond this, the Administration has sent to the Congress a wide range of legislation dealing with transportation—including highway authorization and user charges, railroad safety, and emergency transportation assistance.

The *Housing and Urban Development Act of 1970* is a measure of comparable importance. The object of the bill is to reform the primary Federal housing programs in such a way as to markedly increase their effectiveness in stimulating the production of housing for families of low, moderate, and middle income. The improvements take the form of simplifying, consolidating, and making consistent the numerous programs now on the books. There are now more than 50 narrowly conceived programs in the Federal Housing Administration which would be reduced to eight basic programs with sufficient flexibility to meet widely varying needs. The various subsidized housing programs would be combined into three basic programs, each providing the same level of subsidy to families in similar circumstances. This measure is urgently needed if Federal housing programs are to be made effective and equitable. Unfortunately, although hearings have been held in both the House and the Senate, neither body has acted.

The Congress did enact the vitally-needed *Emergency Home Finance Act,* and the Department of HUD launched its creative "Operation Breakthrough" applying new technology to housing. But basic reform is necessary to help move these forward steps toward the goal.

CONSUMER PROTECTION

In a Message to the Congress at the end of October last year I proposed a comprehensive program of consumer protection, involving eighteen recommendations for the advancement of consumer interests. Five bills were subsequently introduced, embodying eleven of these recommendations requiring legislative action. The *Consumer Representation Act* provides for the establishment of an Office of Consumer Affairs in the Executive Office of the President and a Consumer Protection Division in the Department of Justice. The *Consumer Protection Act* would broaden the powers of the Federal Trade Commission in the field of consumer protection, and would create for the first time on a national basis a cause of action in Federal courts in cases of unfair and deceptive practices without regard to the amount in controversy. The *Consumer Product Testing Act* would promote the development of adequate and reliable methods of testing characteristics of consumer products. The *Drug Identification Act* and the *Consumer Warranty Act* would provide important new standards in their respective areas.

Almost a year has passed. Not one of these bills, except for a modified warranty bill passed by the Senate, has been acted on by either body of the Congress.

EMPLOYEE WELFARE AND PUBLIC INTEREST PROTECTION

In a Message to Congress on August 6, 1969, on the subject of *Occupational Safety and Health* I proposed the establishment of a comprehensive Federal occupational safety and health program. It does not exaggerate to declare that such a program ought to have become Federal law three generations ago. This was not done, and three generations of American workers have paid for it. I proposed legislation to create a Presidentially-appointed independent *Occupational Safety and Health Board* to promulgate standards on a national basis, and to provide broad powers of enforcement by the Secretary of Labor. Unaccountably, this urgent legislation has not been enacted.

On March 13, 1970 I proposed the *Employee Benefits Protection Act* which would broaden and strengthen the provisions of the Welfare and Pension Plan Disclosure Act. This proposal has received wide endorsement from labor and management groups which would be affected by it, but Congress to date has not acted.

In August, 1969, the Administration's proposed *Equal Employment Opportunity Enforcement Act* was introduced in the Senate and the House. Unfortunately, in the thirteen months that have passed,

neither House has acted to provide these powers necessary to improve the effectiveness of the Equal Employment Opportunity Commission.

On February 27 of this year I proposed to Congress the *Emergency Public Interest Protection Act* which would add important new procedures to the emergency disputes provisions of the Taft-Hartley Act. In addition, I proposed the establishment of a *National Special Industries Commission* to conduct a wide ranging study of labor relations in industries which are particularly vulnerable to national emergency disputes. Again, Congress has not acted.

CREATING THE CONDITIONS OF THE FUTURE

The first task of government in the post-industrial age, as I have stated, is that of reforming the institutions of the past. The second task is that of creating the conditions of the future. The fundamental fact is that of choice. We can choose to debase the physical environment in which we live, and with it the human society that depends on that environment, or we can choose to come to terms with nature, to make amends for the past, and build the basis for a balanced and responsible future.

The most neglected and the most rapidly deteriorating aspect of our national life is the environment in which we live. In my State of the Union Message last January, I promised to arrest that decline and begin to revive our habitat. In the eight months that have followed, the Administration has proposed a program that fulfills that promise, the most comprehensive and costly program in this field in America's history. During the same period, the Administration has taken a series of executive actions aimed at the same goals. But the Congress has not yet seen fit to take final action on any of our legislative proposals. If it was not evident before, it must surely now be apparent to anyone who lived through the grim smog and pollution that gripped the Eastern Seaboard in late July, that prompt and vigorous action is necessary if our lives and those of our children are not to be blighted by *preventable and curable* environmental deterioration.

As my first official act of the decade, on January first I signed into law the *National Environmental Policy Act* establishing the *Council on Environmental Quality*. The Council is charged with analyzing important environmental conditions and trends, making a thorough review of all Federal programs which affect the environment, and recommending policies for protecting and improving the quality of the environment.

On July 9 I sent to the Congress a reorganization plan which would establish an *Environmental Protection Agency*, consolidating the major environmental pollution standard setting responsibilities of the Federal government together with certain related research, enforcement and abatement programs. At the same time I proposed formation of the *National Oceanic and Atmospheric Administration* within the Department of Commerce to consolidate Federal programs for monitoring and understanding the environment. Among other things, this would provide better coordination and direction of our oceanic programs.

Responsibility for anti-pollution programs is now fragmented among several Departments and agencies, thus weakening our overall Federal effort. Air pollution, water pollution and solid wastes are different forms of a single problem, and it becomes increasingly evident that broad systems approaches are going to be needed to bring our pollution problems under control. The reorganization would give unified direction to our war on pollution and provide a stronger organizational base for our stepped-up effort.

On February 10 of this year, I sent to the Congress a special message on the environment. This presented a 37-point action program, with special emphasis on strengthening our fight against water and air pollution.

In the field of water pollution, my major legislative recommendations included:

—Authorization of $4 billion to cover the Federal share of a $10 billion program to provide expanded municipal waste treatment facilities.

—Establishment of an *Environmental Financing Authority* to help finance the local share of treatment plant costs.

—Reform of the rigid formula by which funds are allocated under the treatment grant programs.

—Greatly strengthened enforcement authority, including provisions for court-imposed fines of up to $10,000 a day for violations.

The Senate has held hearings on the water pollution proposals, but has taken no floor action. The House has not even held hearings.

Among my major legislative recommendations for the control of air pollution were:

—More stringent procedures for reducing pollution from motor vehicles.

—Establishment of national air quality standards.

—Establishment of national emissions standards for pollutants from stationary sources.

—A major strengthening of enforcement procedures, including extension of Federal air pollution control authority to both inter- and intra-state situations and provisions for fines of up to $10,000 a day for violators.

While the House passed these proposals in June, the legislation has not yet been reported to the Senate for floor action.

In addition, the message spelled out 14 separate measures I was taking by administrative action or Executive Order. These included such wide-ranging initiatives as launching an extensive Federal research and development program in unconventionally-powered, low-pollution vehicles, requiring the development of comprehensive river basin plans for water pollution control, re-directing research on solid waste management to place greater emphasis on re-cycling and re-use, and the establishment of a *Property Review Board* to recommend specific Federal properties which should be converted to other high priority uses including conversion to parklands, or sold.

I again urge the Congress to act soon and favorably on the legislative proposals contained in that message. They are vital to our growing effort to protect and improve our environment.

On February 4, I issued an Executive Order directing a prompt clean-up of air and water pollution caused by Federal facilities. The task is well underway. As I said then, the Federal Government should set an example for the rest of the country. We are doing so.

On April 15, I sent a message to the Congress requesting legislation that would, if enacted, bring to an end the dumping of dredged spoils into the Great Lakes as soon as disposal sites are available. Neither the House nor the Senate has even held hearings on this bill.

On May 20, I submitted to the Congress two treaties and amendments to another treaty dealing with the prevention of oil spills. At that time, I also submitted a comprehensive *Ports and Waterways Safety Act* to aid further in attacking the causes of oil pollution. Although Senate hearings have been initiated on one of the treaties, Congressional action on these important measures remains uncompleted.

On May 23, I announced that the United States would propose a new treaty placing the natural resources of the deep seabed beyond the 200 meter depth under international regulation.

On June 1st, a revised National Contingency Plan for dealing with oil spills was announced at my direction by the Chairman of the Council on Environmental Quality.

On June 11, I sent a message to the Congress requesting the enactment of legislation cancelling twenty Federal oil leases for off-shore drilling which had been granted in 1968 in the Santa Barbara Channel, and creating a Marine but taken no floor action. The House has Sanctuary. The Senate has held hearings not even held hearings, this despite the fact that oil spillages near our beaches and shores may be the single most offensive and reprehensible assault on the environment that we have yet witnessed.

To repeat, the most comprehensive and costly program of environmental control in the history of the nation is now before the Congress. The clock is running. We dare not be too late.

THE CHALLENGES OF CHANGE

In a review such as this, extended as it is, not all of the important measures proposed by my Administration and still pending before the Congress could be discussed. Some others must be mentioned—the legislation to reform the Federal government's relationship to the American Indians, to enhance the role of public broadcasting, to limit the operations of one-bank holding companies. Of crucial importance also are the revenue-producing measures proposed but not acted upon—including the extension of certain excise taxes, the acceleration of collection of gift and estate taxes, the stockpile disposal bills, the proposed *Postal Revenue Act*, and a special tax on the

lead used in gasoline—which are so necessary to the maintenance of a sound fiscal position. Legislation is also needed to establish a realistic and effective farm program.

I have sought here to describe the issues of substance and of process which confront us at this time, setting them in the framework of a general approach to government as we come to the end of one era of social policy and begin the grand adventure of another.

For I believe the nation to have moved into a new era. I believe further that this view is shared by commentators and analysts of widely varying political positions. It is a view increasingly voiced by political leaders. It has become a matter of increasing public perception, and in measure, common acceptance.

The era upon which we are entered is not so easily defined as it is perceived. But it is not on those grounds any less real. To the contrary, the emergence of a post-industrial society is the dominant social reality of the present moment. Our task is to understand, and to respond to these changed circumstances.

The problems of this new era surround the question of choice: what kind of life would we live; what kind of society would we have? Growth becomes less of a goal and more of an issue. What kind of growth? For what purposes? With what consequences?

Our present problems in large degree arise from the failure to anticipate the consequences of our past successes. It is the fundamental thrust of technological change to change society as well. The fundamental task of government in the era now past was to somehow keep abreast of such change, and respond to it. The task of government in the future will be to anticipate change: to prevent it where clearly nothing is to be gained; to prepare for it when on balance the effects are to be desired; and above all to build into the technology an increasing degree of understanding of its impact on human society. With this in mind, the *National Commission on Productivity*, which I recently appointed, will be evaluating the impact of technology and other factors related to achieving higher levels of productivity vital to the healthy growth of our economy.

What is true of technology is equally true of government. It must become more self-aware, self-examining, self-correcting. There are amends to make promises to keep that will engage our energies for years to come. But most of all there is a great adventure to be lived. For a period in the not distant past it might have seemed that American society was faltering. It may have been. But we have steadied now. We are regaining a sense of balance, of direction, and of forward thrust. This has been the achievement of the people. The measure of government—the challenge to government—is to sustain that movement.

This challenge is now before the Congress. It is a challenge not merely to the men who now hold office there but to the institution itself. Congress has not been spared the attacks on the institutions of American democracy which have increasingly characterized this period of our history.

There is but one answer to such charges, and that is to respond with energy and good faith to the legislative issues before it.

It is the responsibility of the President to take the initiative in such matters, and I have done so. A legislative program that will mark this era in history has been presented, and is ready for enactment. More is at stake than the issues with which that legislation deals, transcendent as some of these may be. More is at stake than the reputation of one political party or another for legislative wisdom or political courage. What is at stake is the good repute of American government at a time when the charge that our system cannot work is hurled with fury and anger by men whose greatest fear is that it will.

Matters press, we cannot wait for politics. We must seek a record of achievement all can share. It may be that none of us knows how fateful the outcome will prove.

RICHARD NIXON.

THE WHITE HOUSE, *September 11, 1970.*

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore (Mr. ALLEN) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations received today, see the end of Senate proceedings.)

COMMUNICATION FROM AN EXECUTIVE DEPARTMENT

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following letter, which was referred as indicated:

REPORT OF THE DISTRICT OF COLUMBIA REDEVELOPMENT LAND AGENCY

A letter from the Chairman, District of Columbia Redevelopment Land Agency, transmitting, pursuant to law, the annual report of the Agency for the fiscal year ended June 30, 1969 (with an accompanying report); to the Committee on the District of Columbia.

EXECUTIVE REPORT OF A COMMITTEE

As in executive session, the following favorable report of a nomination was submitted:

By Mr. SPARKMAN, from the Committee on Banking and Currency:

Herman Nickerson, Jr., of Maine, to be Administrator of the National Credit Union Administration.

SENATE RESOLUTION 459—SUBMISSION OF A RESOLUTION EXPRESSING THE CONCERN OF THE SENATE FOR THE WELL-BEING OF HIJACKED PASSENGERS AND AIRCREWS

Mr. PERCY submitted the following resolution (S. Res. 459); which was referred to the Committee on Commerce:

S. RES. 459

Whereas the lives of innocent travelers and aircrews are threatened by the hijacking of aircraft; and

Whereas hijackings of aircraft constitute criminal actions against the safety, security and welfare of travelers and aircrews, be it

Resolved, it is the sense of the Senate that (1) the full influence of all governments and all international air line associations should be brought to bear for the release of all passengers and aircrews, regardless of race or creed, of hijacked aircraft now detained involuntarily in Jordan, and (2) such governments and associations should take such actions as may be necessary to prevent any further hijacking of aircraft.

DIRECT POPULAR ELECTION OF THE PRESIDENT AND THE VICE PRESIDENT—AMENDMENT

AMENDMENT NO. 887

Mr. EAGLETON submitted an amendment, in the nature of a substitute, intended to be proposed by him, to the joint resolution (S.J. Res. 1) proposing an amendment to the Constitution to provide for the direct popular election of the President and Vice President of the United States, which was ordered to lie on the table and to be printed.

PROVISION FOR THE DEFENSE OF SUITS AGAINST FEDERAL EMPLOYEES—AMENDMENTS

AMENDMENT NO. 888

Mr. McCLELLAN submitted amendments, intended to be proposed by him, to the bill (S. 4112) to improve judicial machinery by amending title 28 of the United States Code, to provide for the defense of suits against Federal employees, and for other purposes, which were referred to the Committee on the Judiciary and ordered to be printed.

EXTENSION OF AGRICULTURAL TRADE DEVELOPMENT AND ASSISTANCE ACT OF 1954—AMENDMENTS

AMENDMENT NO. 889

Mr. MONDALE (for himself and Mr. NELSON) submitted amendments, intended to be proposed by them, jointly, to the bill (H.R. 18546) to establish improved programs for the benefit of producers and consumers of dairy products, wool, wheat, feed grains, cotton, and other commodities, to extend the Agricultural Trade Development and Assistance Act of 1954, as amended, and for other purposes, which were ordered to lie on the table and to be printed.

AMENDMENTS NOS. 890 THROUGH 894

Mr PERCY (for himself and Mr. SMITH of Illinois) submitted five amendments, intended to be proposed by them, jointly, to House bill 18546, supra, which were ordered to lie on the table and to be printed.

Mr. PERCY subsequently said: Mr. President, I ask unanimous consent to have printed in the RECORD three statements, prepared by me, relating to certain amendments.

The PRESIDING OFFICER (Mr. SCHWEIKER). Without objection, it is so ordered.

The statements, presented by Mr. PERCY, are as follows:

AMENDMENT NO. 890—COTTON ACREAGE REDUCTION ACREAGE AMENDMENT

Now the bill allows 14.5 million acres for cotton allotment. Originally 11.5 million acres were proposed by the House. In 1970 the crop was 11.1 million.

Cost increase: $150 million per year.

Senate version encourages inefficient high cost producers to increase cotton production and require efficient producers to reduce nonsubsidized production from 6 million in 1970 to 1.8 million acres in 1971.

Further Objections: No flexibility for cotton to move toward market but keeps tied to government.

Secretary Hardin: "The Government cannot spend this much money to save an industry and at the same time preclude freedom of action by those who will try to save it without being subsidized."

AMENDMENT NO. 891—EXPLANATION OF POOR FARM AMENDMENT

As is, the Bill gives 30% more subsidy payments to *cotton* farmers with on-farm income of less than $5,000 and off-farm income less than $2,000. Neither wheat nor corn farmers in similar necessitous circumstances are afforded this increase.

This amendment gives poor wheat and feed grain farmers the same 30% payment increase.

Note: While, of the 2½ million recipients nationally, about 10,000 receive more than $20,000 annually, the average payment is $1,450 and *one-third* of all recipients receive less than $500.

Cost: The Agriculture Department estimates the amendment will bring a maximum of $250 additional per farmer. Administration opposes; believes poverty in agriculture should be dealt with through President's Family Assistance Plan.

Feed grain	$630,000
Wheat	375,000
Total cost	1,005,000

AMENDMENT NO. 892—PERCY EXPLANATION OF ALTERNATIVE CROPS ON SET ASIDE ACREAGE AMENDMENT

As is, cotton producers can, with the Secretary's permission, plant cotton on land set aside from cotton production, as well as other commodities.

Both wheat and corn farmers are permitted to graze such land, and may plant on set aside acres relatively little-used, commercially insignificant crops including guar sesame, safflower, sunflower, castor beans, mustard seed, crambe, plantago ovato, flaxseed, *if and only if* "such production is needed to provide an adequate supply, is not likely to increase the cost of the price-support program, and will not adversely affect farm income."

This amendment adds the above-quoted restriction to cotton, making additional set-aside production subject to the same limits as corn and wheat.

In actuality, this would permit *no* cotton set aside land to be planted to cotton, since there is already an immense over supply of cotton.

AMENDMENTS NOS. 890 THROUGH 894

Mr. PERCY (for himself and Mr. SMITH of Illinois) submitted five amendments, intended to be proposed by them, jointly, to House bill 18546, supra, which were ordered to lie on the table and to be printed.

AMENDMENTS NOS. 895 AND 896

Mr. SMITH of Illinois (for himself and Mr. PERCY) submitted two amendments, intended to be proposed by them, jointly, to House bill 18546, supra, which were ordered to lie on the table and to be printed.

Mr. PERCY subsequently said: Mr. President, on behalf of the Senator from Illinois (Mr. SMITH) I ask unanimous consent to have printed in the RECORD three statements prepared by him on certain amendments.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

COTTON PROMOTION BONZANA AMENDMENT

Mr. SMITH of Illinois. Cotton interests on the Senate Agriculture Committee added a new section providing $10 million "for the conduct . . . of market development, research or sales promotion. . . ."

Source of Money: The funds are to come *directly* from funds authorized to be made available to cooperators under the cotton program but *not paid* "because of a statutory limitation on the amounts of such funds payable to any producer."

CORN BLIGHT AMENDMENT

Mr. SMITH of Illinois. At the present cotton payments are based on previous three years' yields, but in case of "drought, flood or other natural disaster" actual yields may be adjusted by the Secretary because of abnormal yields.

For corn only "such adjustments as the Secretary determines (are) necessary to provide a fair and equitable yield" is permitted.

With the corn blight threatening from 25% to 50% of Illinois corn crop, this amendment enumerates the same considerations given cotton to provide an equitable yield, and adds specifically "corn blight."

Thus if the blight proves as pernicious as it may, the next years' payments to farmers will not be commensurately reduced.

SKIP ROW PROSCRIPTION AMENDMENT

Mr. SMITH of Illinois. Simply this amendment forbids the Secretary to count land between the rows as "Set aside land." It is the custom and practice for cotton producers to leave largish spaces between rows of cotton for more light and higher production.

Corn and wheat farmers do not, of course use this practice, Hence on land that already would be left idle for purposes of a better crop, the cotton producer gets paid by the government as set aside acreage.

This amendment forbids that practice to be counted.

ADDITIONAL STATEMENTS OF SENATORS

LEGISLATIVE CALENDAR FOR THE REMAINDER OF THE YEAR

Mr. MANSFIELD. Mr. President, on yesterday, during its closed door session, the Senate dismissed the matter of the legislation scheduled for the remainder of the year.

That proposed schedule has been reduced to calendar form and I ask unanimous consent that it be printed in this form in the CONGRESSIONAL RECORD.

There being no objection, the calendar was ordered to be printed in the RECORD, as follows:

PROPOSED LEGISLATIVE SCHEDULE

Monday	Tuesday	Wednesday	Thursday	Friday
SEPT. 7	SEPT. 8	SEPT. 9	SEPT. 10	SEPT. 11
Labor day.	10 a.m. Direct elections.	10 a.m. Direct elections. About 5 p.m. Commence consideration of amendments to Public Health Service Act; H.R. 18110, H.R. 17570, S. 3355, S. 3418 and S. 437 a bill to amend annuity provisions of Civil service retirement.	10 a.m. Direct elections. About 5 p.m. Complete consideration of Public Health Service Act amendments; H.R. 18110, H.R. 17570, S. 3355, S. 3418 and S. 437. Commence consideration of S. 3619 Disaster Relief Act.	10 a.m. Direct elections. About 5 p.m. Complete Disaster Relief Act if not completed Thursday.
SEPT. 14	SEPT. 15	SEPT. 16	SEPT. 17	SEPT. 18
10 a.m. Direct elections. About 5 p.m. Commence consideration of H.R. 18546, Farm bill.	10 a.m. Direct elections. About 5 p.m. Complete consideration of H.R. 18546, Farm bill Start H.R. 6778, 1 bank holding.	10 a.m. Direct elections. About 5 p.m. Complete 1 bank holding. Start S. 3867, Employment opportunity and training.	10 a.m. Direct elections. About 5 p.m. Finish S. 3867, employment opportunity and training. Start S. 3678, Federal Deposit Insurance Act amendments.	10 a.m. Complete direct elections. About 5 p.m. Finish S. 3678, Federal Deposit Insurance Act amendments.
SEPT. 21	SEPT. 22	SEPT. 23	SEPT. 24	SEPT. 25
10 a.m. Military construction authorization. Upon completion of military construction turn to consideration of air pollution.	10 a.m. Complete air pollution control. About 5 p.m. Commence Labor-HEW appropriations.	10 a.m. Complete Labor-HEW appropriations. Commence transportation appropriations.	10 a.m. Complete transportation appropriations. Upon completion of transportation appropriation H.R. 15424, Merchant Marine authorization.	10 a.m. Military construction appropriations. About 5 p.m. H.R. 17825 Law Enforcement Assistance Act authoriztion.
SEPT. 28	SEPT. 29	SEPT. 30	OCT. 1	OCT. 2–Oct. 9
10 a.m. Foreign aid appropriations. Upon completion of Foreign aid appropriation S.3201 class action suits.	10 a.m. Equal rights for women. About 5 p.m. S. 2453, Equal employment opportunity amendments.	10 a.m. Equal rights for women. About 5 p.m. S. 2453. Complete EEOC amendments.	10 a.m. Complete equal rights for women. Upon completion S. 4260 Highway Legislation Act Extension of 1970.	10 a.m. Commence family assistance plan—social security benefit increase. About 5 p.m. Evenings do remaining DOD, HUD supplemental appropriations.

THE TESTIMONY OF PROF. PHILIP KURLAND, OF THE UNIVERSITY OF CHICAGO LAW SCHOOL, IN OPPOSITION TO SENATE JOINT RESOLUTION 61, THE EQUAL RIGHTS FOR WOMEN AMENDMENT

Mr. ERVIN. Mr. President, one of the most amazing facts in the present debate on the House-passed equal rights for women amendment is that no law professors were called to testify by either the House or the Senate subcommittees considering the matter. It is unbelievable to me that the Congress would seriously consider a proposed amendment to the Constitution which was not discussed at all by those who have spent their lives studying and teaching constitutional law.

In the Senate Judiciary Committee hearings this week, we have attempted to hear several law professors discuss the ramifications of the equal rights for women amendment, if it passes. Yesterday, I placed in the CONGRESSIONAL RECORD the statement of Paul J. Freund, of the Harvard Law School, in opposition to this amendment. Today, I ask you to consider the testimony of another outstanding constitutional law expert—Prof. Philip Kurland of the University of Chicago Law School. Professor Kurland is editor of the Supreme Court Review and is truly one of the most knowledgeable men in the United States in his field.

In his statement, Professor Kurland writes that the equal rights amendment is an "instant and simplistic" solution to a complex problem. He foresees many problems resulting from the amendment, including the possible use of quota figures in Federal agencies as a guide to discriminations against women.

While Professor Kurland feels that "the proper answer to the very real problem of inequality now bedeviling some women in this country would be better answered by specific legislation than by the proposed constitutional amendment," he does state that the amendment which I introduced, Senate Joint Resolution 231, would be preferable to the House-passed version.

The passage of a constitutional amendment is serious business, and I hope that every Senator will be able to thoughtfully consider Professor Kurland's statement.

Mr. President, I ask unanimous consent that Professor Kurland's testimony be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF PHILIP B. KURLAND

I am honored by the Committee's invitation to appear before it today. I am, however, dubious that I can materially contribute to a solution of the problems confronting you. I come with questions not answers.

My bias should be made clear. I am satisfied, though I cannot provide the Committee with documentary evidence, that women in this country suffer from unreasoned discrimination against them in many phases of their lives, not least in the sphere of employment. I am anxious to help diminish such unjustified discrimination. But I am not sure that the proposed constitutional amendment offers a realistic means for bringing about such a result.

My doubts may be based in part on my personal notions about constitutional amendments. I think that they are clearly the best means of bringing about changes in governmental structure. I think they offer an appropriate means for reversal of constitutional construction by the Supreme Court. I think they may be the necessary means for protecting minorities from imposition by majorities and the unenfranchised from imposition by the enfranchised. Women, however, are neither a minority nor unenfranchised. This would suggest to me that the most appropriate means for securing the desired results on their behalf would be by way of appropriate legislation rather than constitutional amendment.

The answer which this Committee is considering, however, is an amendment to the Constitution. H.J. Res. 264 has already passed the House by an appropriate majority. Its provisions also seem to have been endorsed, if not finally, by the necessary majority of the Senate. Such an answer is in keeping with much of the temper of our times that demands instant and simplistic solutions to complex problems, that assumes that the cure for such problems is the utterance of the magic word "equality," and that the proper governmental agency for effecting the cure is the judiciary. All three of these contemporary attitudes are represented in H.J. Res. 264.

I don't think the answer is that easy, much as I wish it were.

The arguments against the amendment, putting aside that of the unenlightened who would endorse the notion that the only proper place for women is as helpmates for men, are four.

First. It is contended that in light of the newly expanded meaning of the Equal Protection Clause of the Fourteenth Amendment, there is no need for further constitutional provision to protect women against invidious discrimination. It is clear that, to the extent the proposed amendment authorizes legislation by Congress and the States, no addition is needed. Section 5 of the Fourteenth Amendment plus the Commerce Clause gives the Congress an almost unlimited reach in commanding equality between the sexes. There are no inhibitions on State legislatures that would prevent them from doing the same, except for the concept of preemption by either federal legislation or the Commerce Clause. The question remains, however, whether the equality talked about by the Court in construing the Fourteenth Amendment is the same equality as is the subject of the proposed amendment. Only if the answer to that question is in the affirmative does the proposed amendment become redundant. The ambiguity of meaning of the proposed amendment does not make clear its equation with current Equal Protection Clause doctrines.

Second. It is argued that the proposed amendment will raise a myriad of legal problems involving such matters as family law and decedent's estates to the status of constitutional issues that will have to be decided by a Supreme Court already unduly burdened with an unbearable load of constitutional business. The answer offered to this argument is that any fundamental change in the social structure of our society to be brought about by constitutional amendment will place such a burden on the federal judiciary. The Court itself has shown no reluctance to add similar social issues to its docket. Insofar as more important matters make claims on the Court's jurisdiction, it remains within the discretion of the Court to decide which cases it will decide. Again, the extent of the burden may well depend upon the clarity of purpose and meaning of the proposed amendment. The more ambiguous it is, the greater the problem of constitutional adjudication will be.

Third. It is said that the proposed amendment will invalidate a host of state laws enacted not for the purpose of discriminating against women but with the objective of favoring them. One can readily see the difficulty of determining whether a law favors or discriminates against women. For example, my classical economist friends would say that laws protecting women against overtime work and night work do not in fact favor them because these laws place women at a competitive disadvantage in the employment market. In any event, the question of the extent to which laws classifying on the basis of sex would be invalidated would again depend on the meaning and purpose of the proposed amendment.

Fourth. It is suggested that the proposed amendment seeks not equality of the two sexes before the law but identity of them. Surely the elimination of differences between men and women cannot be obliterated by constitutional fiat. And the current state of knowledge of the biological sciences is not yet adequate to bring this about as a fact. But once more we are thrown back to the question of the meaning and purpose of the proposed amendment.

It is evident that the language of the proposed amendment is itself too barren to provide sure answers to these objections. It simply provides that: "Equality of rights under law shall not be denied or abridged by the United States or by any State on account of sex." With all due respect to Senator Ervin, I cannot agree with his statement on the floor of the Senate that the difficulty inheres in the construction of the word "sex." For me, at least, it derives rather from the use of the word "equality."

It was almost a century ago that Sir James Fitzjames Stephen, in his book, *Liberty, Equality, and Fraternity*, asserted that "equality is a word so wide and vague as to be by itself almost unmeaning." Nothing that has happened in the intervening years has done anything to make it more specific.

It seems to me, therefore, that it is incumbent on Congress, unless it wishes to leave the matter wholly in the hands of the federal judiciary, to attempt to define, to the extent that it can, what it means by the word "equality" as it is used in the proposed amendment. It can do this in two ways. The first and better way would be to write its meaning into the language of the amendment itself. Certainly this is a difficult undertaking. And perhaps the political situation being what it is, Senators and Congressmen may well believe that it is the greater part of wisdom not to risk the costs of delay in the preparation of the amendment. I would remind them, however, that constitutions are not written for the moment. Henry Clay once said on the floor of the Senate, admittedly with some hyperbole, that constitutional provisions are "not merely for the generation that then existed, but for posterity—unlimited, undefined, endless, perpetual posterity." Perhaps, then, it is worth the cost of delay to present an amendment the meaning of which is as clear as it is in the power of Congress to make it.

The alternative to careful drafting of the amendment itself is the careful preparation of the legislative history, primarily by way of the report of this Committee to the Senate. This is no certain cure for the defects of ambiguity. The resort by Justices of the Supreme Court to the legislative history behind the Reconstruction Amendments makes clear the dangers of this game. Legis-

lative history will as frequently compound the confusion as resolve it. Nevertheless, if this is the only open road, it must be taken.

The essential question to be answered by this Committee's report then, if nowhere else, is what it understands to be the meaning of "equality" as used in the proposed amendment. Again, this is no easy task. Hints may be found in some data of Mr. Justice Frankfurter in his construction of the Equal Protection Clause of the Fourteenth Amendment. In *Whitney* v. *Tax Commission* (309 U.S. 530, 542 (1940)) he said: "The Equal Protection Clause was not designed to compel uniformity in the face of difference." And during the same Term, he announced in *Tigner* v. *Texas* (310 U.S. 141, 147 (1940)): "The Constitution does not require things which are different in fact or opinion to be treated by the law as though they were the same." It was his belief, as stated in *Dennis* v. *United States* (339 U.S. 162, 184 (1950)) that "there is no greater inequality than the equal treatment of unequals." And it was Mr. Justice Holmes who told us that: "The Constitution is not to be satisfied with a fiction." (*Hyde* v. *United States*, 225 U.S. 347, 390 (1912).) I should think that these statements would provide a clue for the meaning of the word "equality" in the context that it is to be used. Governmental distinction between males and females must be justified in fact before it can pass muster under the proposed amendment. If the distinction is based on reason, then the legislation should be presumptively valid. The mere fact that there are two sexes is not reason in itself for distinguishing between them in legislation. On the other hand, that a distinction is drawn between them in legislation should not be sufficient to invalidate the law.

It may be said that this is already the command of the Equal Protection Clause. And it may well be. But there are cases that suggest this is not true. Nor has such a clear doctrine emerged from the Supreme Court's Equal Protection cases as to make this construction certain.

There are other questions to which the Committee should address itself, questions revealed by recent Supreme Court cases and others on their way to adjudication in that tribunal.

One question is whether the proposed amendment would tolerate in certain circumstances a doctrine of separate but equal facilities. Certainly there are still some, albeit old-fashioned, notions of privacy that might properly evoke the use of such a rule.

A second area of concern should be to what extent does the amendment by its terms condemn only governmental action and when does private action become government action for purposes of the amendment. Still further, to what extent is it contemplated that the authorization for legislation contained in the proposed amendment is to be restricted by a limitation to "state action?"

Finally, the Committee might like to speak to the issue whether the proposed amendment contemplates legislation authorizing "compensatory discrimination" or "benign quotas." This necessarily involves the problem of what constitutes proof of discrimination and the problem of remedies. Should it be enough, for example, to show that the ratio of male employees to female employees at the executive level in the Department of Labor or the Department of Health, Education, and Welfare is not in the same proportion as men to women in the population at large? If proof of discrimination is made, what are appropriate remedies for its elimination?

When the time comes for the Supreme Court to look to the legislative history of the proposed amendment to aid it in providing answers to these questions, the answers should be there for them to find.

Let me turn to the proposed alternative in S.J. Res. 231. It must be apparent that the Senate proposal answers more of the questions that I have raised than does the House amendment. It certainly does not answer all of them. And it creates a problem of its own, to define more precisely the area covered by the general proposition in light of the exceptions thereto.

There is clearly one fact that speaks up loudly for the choice of the Senate proposal. Times have changed in such a way that it may well be possible for the generation of women now coming to maturity, who had all the opportunities for education afforded to their male peers and who had an expectation of opportunities to put that education to the same use as their male peers, to succeed in a competitive society in which all differences in legal rights between men and women were wiped out. There remains a very large part of the female population on whom the imposition of such a constitutional standard would be disastrous. There is no doubt that society permitted these women to come to maturity not as competitors with males but rather as the bearers and raisers of their children and the keepers of their homes. There are a multitude of women who still find fulfillment in this role. In the eyes of some, this may be unfortunate, but it is true. It can boast no label of equality now to treat the older generations as if they were their own children or grandchildren. Nor can women be regarded as unified in their desire for change. Certainly the desire to open opportunities to some need not be bought at the price of removal of legal protections from others. The Senate proposal would allow for such differences, the House proposal would not.

In summary then, I think that the proper answer to the very real problem of inequality now bedeviling some women in this country would be better answered by specific legislation than by the proposed constitutional amendment. If the route of constitutional amendment is taken, the amendment ought clearly to spell out what it means. If this cannot be accomplished by new drafting, then it should be attempted by explanation in this Committee's report to the Senate. As between the House version and the Senate version of proposed constitutional amendments, there are good reasons for choosing the latter.

AMBASSADOR HUGO MARGAIN—IN APPRECIATION

Mr. MANSFIELD. Mr. President, it is generally agreed that relations between this country and our sister Republic of Mexico have never been better. Communications have improved immeasurably. Longstanding border disputes have disappeared. Trading continues in record volume. The number of tourists from each country keeps growing. The heads of state of our countries are meeting with increasing frequency. Members of the respective Congresses find greater grounds for cooperation with each interparliamentary meeting.

This happy circumstance is no accident, Mr. President. Rather, it has come about as a result of a great deal of hard work and accommodation by officials who are committed to this goal. And one of the men most deeply involved in the negotiations for the past 6 years has been my good friend, Hugo Margain, until last month the Mexican Ambassador to the United States.

Mr. Margain leaves his post to become the new Secretary of the Treasury and Public Credit, a position he will hold under the incoming administration of President-elect Luis Echeverria. He leaves behind scores of well-wishers and friends who remember the brilliance of his performance as ambassador. And he leaves as a monument to his service the absence of any outstanding points of conflict between our countries.

I, for one, am most sorry to see him go. But I know of the importance of his new post, and am confident that he will discharge his new duties with the same competence and enthusiasm which he showed here in Washington. Certainly there is no one more qualified to be the top financial official of the Mexican Government. Mr. Margain formerly headed the Sales Tax and Income Tax Bureaus of the Government and served as both Assistant Secretary and Under Secretary for administration in the Ministry of Industry and Commerce. He has also authored several books on such subjects as tax law and finances. Add to this record his performance as ambassador to Mexico's major trading partner and you have a truly splendid background for his new position.

Mr. President, Mrs. Mansfield and I wish all the best to Hugo and his wife, Margarita, and to their children. We do not say "farewell," but rather "hasta luego," for we are looking forward to renewing our friendship in the near future.

THE PENTAGON

Mr. YOUNG of Ohio. Mr. President, recently, a Presidential blue-ribbon panel having completed a study of the Defense Department recommended that more than 10,000 military and civilian staff members in the Pentagon be dismissed. Most of these staff members receive high salaries and perform no work whatever. The panel termed the Pentagon "an amorphous lump." Its size makes it almost impossible to run. Admiral Rickover told a House subcommittee if the United States does not abolish make-work jobs in the Pentagon, our defense may collapse of its own weight. Admiral Rickover, one of our Nation's most knowledgeable and distinguished citizens, expressed amazement that in light of the mess in the Pentagon our defense posture has not already been surpassed by the Russians. He offered a simple solution for curing the problem. His prescription:

> On a given Monday morning close off the 4th floor of the Pentagon and allow in only enough people to fill the first three. Then, on the following week rope off the 3rd floor and permit only those who fill the first two floors to hold their jobs.

RETIREMENT OF JOHN S. FORSYTHE

Mr. JAVITS. Mr. President, I rise as ranking minority member of the Com-

mittee on Labor and Public Welfare to join my colleagues in voicing tribute to Jack Forsythe, the distinguished general counsel of our committee, who marks his retirement from Federal service today. I am sure I speak for all minority members of the committee in expressing high regard for him as an exemplary public servant and as an individual. We have all benefited from his counsel.

Jack Forsythe retires after 29 years in the service of his Government, including the armed services during World War II, the executive branch, the House of Representatives and since January 1955, as general counsel of the Senate Committee on Labor and Public Welfare.

A graduate of the Duke University Law School, he was a classmate and friend of a fellow student from Whittier, Calif., Richard M. Nixon. He was later to see this classmate again when Jack was general counsel of the House Committee on Education and Labor and Richard Nixon was a Congressman from California—and a member of that committee. At the same time, Jack worked closely with another of the post-World War II generation of young Congressmen, a newly elected Member from Massachusetts named John F. Kennedy with whom he would again work closely in the Senate.

He left the House committee in 1953, was employed as general counsel of the Federal Coal Mine Safety Board of Review until January of 1955 when he became general counsel of the Senate Labor Committee. As general counsel, he participated in the drafting and enactment of all major labor, education, and health legislation enacted by the 83d Congress through the present 91st Congress.

To Jack Forsythe—and to his charming wife, Patricia—go our well wishes for the future. May the years to come be as full as the years of service to the Congress and the Nation.

McGEE SENATE INTERNSHIP CONTEST

Mr. McGEE. Mr. President, for 8 years it has been my pleasure to conduct for high school juniors in my State of Wyoming the McGee Senate Internship contest, which brings to the Nation's Capital one boy and one girl for a week planned to enhance an understanding of the mechanisms and the procedures of a democratic society.

The contest is designed to stir up interest among high school students in national and international questions. Three well-known, nonpolitical people from the State served as the panel of judges in the competition. In their judgment, this year brought the highest level of essays that the many years of the contest have produced.

The subject matter of the required essay this year was conservation, quality living, environmental control. For Wyoming to focus on that question is of great relevance. For here is a part of the world that we call God's country in which one would think there were no pollution problems.

I think what it does say to us in the Rocky Mountain West is that the mistakes of the already polluted parts of the United States may have served as a grim warning to those of us from the high altitudes of the Rockies of at least what to watch for and try to avoid in the future and, at the same time, to come to grips with the first outcroppings of environmental pollution even at the local level.

Of course, it would be impossible for everyone to read all the essays submitted, but I think the most outstanding ones are of interest to us all and should receive wider circulation. For this reason, Mr. President, I ask unanimous consent that two of these essays, written by Sherri Lucille Smith, of Sheridan, Wyo., and David Lee Sqonitzer, of Cheyenne, Wyo., which received honorable mention in the McGee Senate Internship contest, be printed in the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

"CONSERVATION: ITS RELEVANCE IN WYOMING"

(By Sherri Lucille Smith, Sheridan, Wyo.)

The old man struggled over the stumps of a once great forest. He noticed the already grayish air was darker than the week before. He really did not know why he came to this particular river every week to fish. He just knew that he had been there every week for as long as he could remember. He could remember the day he caught the largest trout that anyone in town had ever seen. But, that had been a long time ago. He now sat on the bank wondering what he would catch, but somehow the river did not look the way he remembered it 10, or even 5 years ago. Now it was very dirty, moved slower than in years past, and seemed to have some type of sudsy foam on top. In fact, now that he thought about it, he could not even recall the last time he caught a fish. Is this a description of Wyoming? Surely it isn't—at least not yet. All of us know the beauty of our forests, the fresh clear streams, and smog-free blue skies. This problem does face many states in this nation and will also face Wyoming if we fail to plan and carry out conservation of our natural resources. Our state is still beautiful and rich in natural resources. We have only to look around at our sister states to realize what Wyoming's future could hold. We must make stronger rules and regulations to protect our natural resources. Our state has been relatively unspoiled by man's selfishness. However, we must act now to prevent Wyoming from becoming, as her sister states have in years past—a wasteland left in the wake of so called progress.

Right now, while our population figure is low and industry does not have a strong foothold we must make our conservation plans for the future. We dare not wait until the problems are on our very doorstep. Once the erosion of natural resources by man has begun it is impossible to halt it or repair its damage.

Conservation means protecting and using lightly our natural resources, such as: soil, water, air, forests, minerals, and wildlife. Our natural resources are not only limited, but many of them can also be easily damaged or destroyed.

Most of the food that we eat comes from the soil, either directly or indirectly. As President Theodore Roosevelt once said, "When the soil is gone, man must go. And the process does not take long." Another necessity for man and most animals is a constant supply of water. In the past few years we have found that polluted air can actually kill people. Forest conservation is very important to man for lumber and its by-products. It is also important in water and soil conservation. Trees slow down water runoff and check erosion. Forests also provide homes for wildlife and other recreation opportunities. Without minerals we would have very few of the conveniences of modern life. Minerals provide our metals for machines, as well as often providing the power to run them. Wildlife plays an important part in the balance of nature. Wild animals provide fur, food, and recreation.

We must replace the resources we use, whenever possible. A good forester cuts trees only where other trees will grow to replace them. The wise farmer adds to his soil the plant foods that crops take from it. Conservation is concerned with resources for the future, not only with the resources we need today. Because our population is growing rapidly, every person's share of the world becomes smaller. Every morning finds 94,000 more persons on earth than there were the morning before. So that the people who come after us will be able to use our resources we have a duty to practice conservation.

In 1954, Congress passed the Watershed Protection and Flood Prevention Act. This law provided for greater cooperation between federal, state, and local governments in reducing flood damage. In 1955, the Department of the Interior began a 20-year program to restore most of the federal grazing lands in the West. In 1957, the Forest Service undertook its five-year "Operation Outdoors" to improve and expand national forest facilities for outdoor recreation. People have to work together in order to care for our natural resources properly. Citizens can take part in projects carried on within the state, or they can work with their neighbors in community conservation projects. Organizations can work for conservation and help educate citizens in preventing waste and destruction of natural resources. Schools also play an important part in conservation by teaching young people its importance.

Each of our states has the right, by law, to regulate the management of its natural resources. As an example—Wyoming can pass laws to reduce wastes of natural gas and to control the amount of oil taken from the ground. Our state owns forests which are managed according to planned conservation practices.

Our state government has departments to protect and manage wildlife resources and regulate hunting and fishing. Other departments determine forests and water conservation. Not only do these departments conduct active programs of conservation, but they are also active in conservation education.

Wyoming must make further restrictions on the depletion of her natural resources. At the present time thousands of cubic feet of natural gas are being burned off as waste material. This gas cannot be replaced and the fumes from burning it are polluting our air and sky.

We in the United States, enjoy many freedoms, but the one which I have noticed that many people do not take advantage of is, that of being able to express their opinions to their Congressmen. If people would only take the 15 minutes and 6 cents it would take to write and send a note to their Congressmen they, the people around them, and the Congressmen would be better off for it.

Every state has what are called natural resources. These natural resources are the wealth of the state itself. Coal, iron, copper, and other minerals are natural resources of Wyoming. So are the mighty forests that

cover parts of the land; the rich soil on which crops can be grown and the rivers that wind through the countryside. If all the minerals had been dug up or wasted, the forests cut down, the rich soil blown or washed away, and the rivers dried up, Wyoming would be a very poor state and could not support its thousands of people. All this can easily happen if the citizens of Wyoming do not take care of their natural resources.

CONSERVATION: ITS RELEVANCE IN WYOMING

(By David Lee Zwonitzer, Cheyenne, Wyo.)

If this country continues depleting the soil, destroying the forest, and wasting animal and plant life, it will in time, become a land of decreasing people with no hope for the future. Such a fate has taken over other lands with the exhaustion of their resources. It can happen in Wyoming. Then what?

The most important part of Conservation in Wyoming is that of its land and natural resources, including wildlife. Conservation in Wyoming plays a major role in the affairs and way of life of its people.

Primitive man had no need for conservation. He relied on "Mother Nature" to conserve all his values of life as food, shelter, and clothing. Likewise, the Indian provided for himself but also realized the importance to conserve so he might live. But modern man has developed numerous variations of cultivated plants and so has a great range of food from which to choose. Not satisfied with this, he has developed a complex transportation system that enables him to enjoy not only the seasonal products of one community, but of many communities, sometimes thousands of miles apart.

When the first white man came to Wyoming, he saw a watered marsh, fertile land of virgin forest and grasslands teeming with animal life of many kinds. Today much of the land has been stripped of its fine timbers, the grasslands plowed and overgrazed, and streams and lakes polluted. The need to conserve and increase our wild population has become apparent.

Man has disastrously affected plant life, sometimes directly and consciously, and at other times indirectly and unconsciously. If modern man has accomplished other goals set years ago, why can't we practice conservation and make it work?

The reason is simple. Drainage, ditches and large canals destroy marshes and pollute streams; either industry or communities destroy public fishing and fresh water supplies; forest destruction occurs by individuals or corporations through public camping areas and fishing resorts. . . .

When progress is made, there is also destruction of other things. So it is with Wyoming's conservation. Oil refinery and other industrial establishments contaminate our fish streams. Ranchers and farmers overgraze land thus blowing away our valuable top soil and making it hard for new grass to grow, and our wildlife is over hunted thus threatening extinction of animal life. In regard to conservation there is a person to blame for its abuse and a remedy to the problem. Most people would be reluctant to blame themselves for our problems; as with most state and national problems great publicity is required. Only too often do we see our communities suffer, by loss of vitally needed pure water and other produce that we receive from streams and lakes. Then after all this waste individuals spend large sums of money to provide artificial recreational areas to replace those that were naturally available. Waste is a severe problem. Satisfactory methods of handling waste are known, but allowing a pure stream to become a sewer system is no excuse to a financial problem. Is this what the citizens blame the filth on? Some do, and others blame it on whatever comes to mind, except themselves.

Probably the most basic requirement for a conservation-minded society is the education of all its citizens in resources matter.

The goal of such education would be the preservation and general awareness of conservation that would eventually lead to a natural way of life. This education must make people look ahead and foresee the effects of the abuses to which wildlife resources will be subject to. People generally forget what conservation will mean to their children and to their children's children. Those who are not directly affected with the out-of-doors usually give little thought to the basic value of conservation in providing them with food, clothing, shelter, and other necessities of life.

While individuals are doing little, many organizations are promoting this program. The National Park Service constitutes a striking example of successful conservation. Wilderness areas and those including natural wonders have been set aside, thus assuring the existence of such a group of wildlifes possessions as possible to no other people.

These possessions are preserved in animal refuges. Refuges have a definite place in the conservation field. Their principal function is to preserve wildlife.

Refuges for grazing animals must be carefully managed. If not, their very success in supporting increased amounts of wildlife may flourish because the food will be destroyed that was formerly available for the favored animal. Refuges for waterfowl are indespensible to any management program established. If numerous enough, properly placed, and correctly managed, they provide a safe place to breed. Many more small refuges are needed to conserve animals and also test new ideas in conservation.

Research is essential to wise management of refuge lands if their character is to be preserved so that they may function to serve not only the present but also future generations of wildlife.

Refuges alone cannot solve the problem of restoring wildlife populations. They can, however, often assure a safe place to restore stock that is in danger of extinction.

The time may conceivably come when the last bit of iron will have been dug from the ground, the last pound of coal burned, and the last drop of oil refined. It is on these things that present civilization and industrial activity are based upon. Such resources were built in the earth through billions of years of time, and nothing that the human race has yet conceived can add to the total quantity now available.

To hope that the conservation picture will not be so bad, it must be assumed that the human race will be intelligent enough not only to stop the destructive processes that have been going on since the white man came to this country, but also to reverse these processes before it is too late. We must start conserving our wildlife, natural resources, soil, and other necessary aspects of conservation.

Without conservation in Wyoming, there will be no Wyoming to conserve.

SENSE FINALLY EMERGES

Mr. YOUNG of Ohio. Mr. President, Gen. William C. Westmoreland, October 1965, said, "The Communists are beaten. We are winning the war. I see the light at the end of the tunnel." Two years earlier Maj. Gen. Charles J. Timmes, commander of the U.S. Military Assistance Advisory Group in Vietnam (MAAG) said, "The Vietnamese Armed Forces are as professional as you can get . . . I feel we could wrap this thing up by the end of the next dry season. We will have driven the Vietcong sufficiently underground by the end of next year that they will no longer be a national threat." General Westmoreland—July 1967—"The war is not a stalemate. We are winning it slowly but steadily. North Vietnam is paying a tremendous price with nothing to show for it in return." He said—February 1968—"I do not believe Hanoi can hold up under a long war." And then again—June 1968—"The enemy has been defeated at every turn." More than 2 years later it finally dawned on General Westmoreland that he had been so wrong for so long. He said—July 1970—"None of us ever felt a military victory in the classical or traditional sense was attainable in South Vietnam."

McGEE SENATE INTERNSHIP CONTEST

Mr. McGEE. Mr. President, for 8 years it has been my pleasure to conduct for high school juniors in my State of Wyoming the McGee Senate Internship contest, which brings to the Nation's Capital one boy and one girl for a week planned to enhance an understanding of the mechanisms and the procedures of a democratic society.

The contest is designed to stir up interest among high school students in national and international questions. Three well-known, nonpolitical people from the State served as the panel of judges in the competition. In their judgment, this year brought the highest level of essays that the many years of the contest have produced.

The subject matter of the required essay this year was conservation, quality living, environmental control. For Wyoming to focus on that question is of great relevance. For here is a part of the world that we call God's country in which one would think there were no pollution problems.

I think what it does say to us in the Rocky Mountain West is that the mistakes of the already polluted parts of the United States may have served as a grim warning to those of us from the high altitudes of the Rockies of at least what to watch for and try to avoid in the future and, at the same time, to come to grips with the first outcroppings of environmental pollution even at the local level.

Of course, it would be impossible for everyone to read all the essays submitted, but I think the most outstanding ones are of interest to us all and should receive wider circulation. For this reason, Mr. President, I ask unanimous consent that two of these essays, written by Connie Wilbert, of Riverton, Wyo., and Joseph E. Shickich, Jr., of Casper, Wyo., which received honorable mention in the McGee Senate Internship contest, be printed in the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

LAND IS LIFE—OUR LIFE

(By Connie Wilbert, Riverton, Wyo.)

Land is life. Land produces and nourishes life. With rich land comes abundant wild-

life and good crops. They are of the soil. They are not found where the earth lies barren and wasted.

Our land is rich; our wildlife is abundant, and our crops are good. But if one listens carefully, he can hear whisperings from the past—ominous warnings from lost civilizations and nations. If one looks closely enough he can see the signs of our times—the same signs which were ignored by many past civilizations. These nations were once great nations, their lands were once fertile and rich, and yet now they lie wasted, ruined, and wrecked. The histories of these past civilizations are permanently written upon their lands—there are the records of their peoples' struggles and failures to find an adjustment to the land in which they lived.

Mesopotamia's fertile lands tell the facts of its history plainly. They tell of a glorious past, of a land with dense population, good agriculture, and great cities. However, these same great cities now lie in ruins and desolation. Their ruination came not from the supposed results of raids or invasions of other peoples, but in fact, from muddy water. A great system of canals was necessary for the agriculture, but through poor management, these canals were allowed to fill with mud and silt. The resulting breakdown of the supply of life-giving water brought disaster upon disaster to Mesopotamia. No army could have destroyed this once powerful nation as did the endless, choking sands that finally covered the land.

In Greece, another strange story is recorded on the land. Ancient Greek civilization was at its height. Religion, philosophy, and the arts flourished. Beautiful cities were built, and Greece became a powerful nation. Great forests, an ample water supply and productive soils were the basis of Greek wealth. Unfortunately, the importance of these resources was forgotten as the land was abused and overworked. The bountiful forests disappeared, and the once clear water soon ran unconfined across the countryside. Once a very productive and powerful nation, Greece now lies barren and eroded, another impressive reminder of man's lack of foresight in his abuse of his land.

What do the histories of these and other past civilizations have to do with Wyoming? Wyoming is a rich state in so many ways—abundant forests, pure, clear water, plentiful wildlife, and rich farmland in the valleys. But within this richness are the signs of our times—the same signs that the ancient Mesopotamians and Greeks could not see for they, too, were blinded by pride and ignorance. Wyoming justly takes pride in her great forests, forests which have been guarded carefully down through the years by a policy of wise use. She takes pride in her clear lakes and streams, her abundance of wildlife, and the richness of her land. Yet there are those who cannot see the signs of our times, who refuse to look into the future to determine what must be done to retain our forests and grasslands, our game and fish, and our pure water. Many times these are people who want the utmost taken from the land, either by industry, harsh farming methods, or unjust wildlife hunting laws. They cannot understand the importance of conserving these natural resources so they can be passed on to future generations.

The basic meaning of conservation is: "The wise use of all natural resources on a sustained yield basis; managed to bring the greatest good to the greatest number of people over an indefinite period of time." If such a conservation program is to overcome the harmful effects of the few who don't care and to succeed with its goal of the greatest good for the greatest number, it must have the support of an informed and enlightened public. We, as the public, must know the exact problems Wyoming's conservation programs are encountering, what they are doing to overcome these problems and how we can help.

Of great importance is the recognition of the interrelationships between the various aspects of our natural resources. Water management today is a tremendous problem. The volume of flow in many of Wyoming's streams has dropped from 25% to 70% in less than 100 years, which has caused the rivers to reduce in flow. This results in the remaining water becoming warmer, which in turn affects the fish and other water life.

Our water supply is almost completely dependent upon the soil conditions, which further bears out the interrelationship. A condition which allows the water to soak back into the soil is necessary, instead of a condition in which the water runs over the surface of the earth, carrying with it the fertile top soil so vital to all living things. The Soil and Water Conservation Service estimates this loss of top soil at more than four billion tons each year. This is six times as much soil as is being used by all the farm crops in the United States annually. In other words, the soil that each year is poured into the Pacific and Atlantic Oceans is enough to grow all the crops in the United States for six years. With the present growth of population, there will come a time when we will wish that this soil was back on the ground from which it came.

That fish are also dependent upon soil quality may come as a surprise, but fish are just as much of the land as any crop. The ability of a body of water to support fish life depends upon the available plant and animal food. These in turn depend upon the nutrients in the water, and the nutrients are directly related to the fertility of the soil over which the water flows.

The future of our wildlife resources is also dependent upon making wise use of the two basic life-giving substances—soil and water. Wildlife is a crop that must be grown just as any other crop. Its production must be integrated with intelligent management of land and water.

Wise use, applying all the principles of good conservation, is our hope and our promise of a rich, productive land. We can make the choice: either to become aware of the signs of our times and conserve our resources, or to ignore them and leave our lands barren and unproductive as did Mesopotamis and Greece and many other past civilizations.

"CONSERVATION—IT'S RELEVANCE IN WYOMING"

(By Joseph E. Shickich, Jr., Casper, Wyo.)

Most certainly, if the democracy of the United States of America ends, the cause will come from the inside. But this plot will not be a Communist conspiracy—rather the cause will be America's strangulation of her environment. The "land of the free" is quickly turning into the "land not free from debris". The "spacious skies" have the birds coughing in Los Angeles. Our "purple mountains" are turning grey. Lake Erie is almost completely destroyed. All sea life, as predicted by ecologist Paul Ehrlich, may completely disappear in ten years. The land is becoming useless, and many species of wildlife are disappearing. To top this all off, every man, woman, and child has three pounds of pesticides allotted him via the air each year. America is very adequately committing suicide.

Wyoming's concern for this environmental form of Russian roulette is not much more than would be expressed if the weapon were a dime store squirt gun. Our state has tended to consider itself isolated from the outside world but recently this theory has begun to backfire. For example, a year ago it was taboo to speak of racial disenchantment in the "Equality State". After all, Wyoming was unique and free from the problems of her sister states. Yet somehow, angry Black students emerged at the University last fall. Wyoming is trying to apply the same analysis to the problem of our ecology.

It is impossible to expect Wyoming to stop its evolution toward industrialization before its environment becomes endangered. Too many natives have the conception we will successfully cross that bridge when we come to it. Wyoming is already on the bridge, but the bridge's foundation has been laid in quagmire. The consensus seems to be that, although we don't like the idea, the state is large enough and the population is small enough to safely absorb the polluted refuse. Few citizens remember that California fed itself the same line a few years ago. California's situation speaks for itself.

The Equality State has arrogantly concluded that since its wildlife reserves are still relatively abundant, it has provided excellent protection for these animals. Granted we have some superior hunting laws for the conservation of game, but little has been done to avoid their contamination by the gases, pollutants, and poisons we release into the air, land and water.

Economically, the pollution of our wildlife could spell financial disaster for Wyoming. At last tally in 1965, sportsmen spent $60,043,324.00 on the hunting and fishing industry. To protect this source of revenue, we have a law that sets the fine for "passing" a substance into a natural stream or lake which will "kill or destroy any fish therein" at not less than fifty ($50.00) dollars or not more than one hundred ($100.00) dollars for each offense. If a company broke this law everyday of the year, Wyoming at best could make up only $3,650.00 of the loss.

Wyoming's water may be the least protected of her resources. Most of the water laws date back to at least 1923 with some going back to the 1890's. Unfortunately, the content of these laws is essentially the same as it was fifty plus years ago. One such law is Statute 35–188:

"No city or town shall be prohibited or enjoined from discharging its sewage into a river or body of water unless such sewage so pollutes the water thereof as to be dangerous."

Wyoming is on the losing end when it allows a law to exist that states specifically "a city Cannot Be Prohibited from polluting unless". This law prevents pollution only when it is considered dangerous. In effect it is saying—"Go ahead, pollutte. When the crisis develops, *then* we will think about a remedy." If Wyoming's water dies, the state will soon follow.

Ralph Waldo Emerson concluded that "a nation never falls but by suicide". The United States and the State of Wyoming together are pushing the environmental destruct button. Today, the greatest threat to the United States' security is internal apathy. "Where apathy is master, all men are slaves." (Anonymous)

THOSE FRIENDLY FORCES—TOO FRIENDLY TO FIGHT

Mr. YOUNG of Ohio. Mr. President, the friendly forces of the Saigon militarist regime of General Thieu and Air Marshal Ky outnumber the VC, or forces of the National Liberation Front, by a ratio of more than 6 to 1. Also, they are armed and maintained by American taxpayers and supported by our bombers hurling tons of explosives around the clock. Yet their fellow countrymen fight-

ing for a cause—national liberation—have been defeating them soundly throughout the past 9 years. In 1968, nearly 124,000 South Vietnam soldiers ran away instead of fighting. This was the highest desertion rate ever suffered by any country in time of war. Then, last year this shameful record was broken and even more South Vietnam soldiers deserted. That total in 1969 exceeded 127,000. It is for this that young Americans are drafted to offer their lives in Vietnam, Thailand, Cambodia, and Laos.

COMMISSION ON CAMPUS UNREST—AN ANALYSIS AND COMMENTARY

Mr. HRUSKA. Mr. President, last Saturday the distinguished senior Senator from Colorado gave an extremely significant speech before the annual meeting of the Associated Milk Producers, in which he warned against the damage that may be done by the upcoming report by the Commission on Campus Unrest.

There is much evidence that currently the concerns expressed by the Senator about campus conditions and prospects are widely held by citizens nationwide.

It is clear that there is solid basis for such apprehensions.

Of particular interest is the commentary of the Senator from Colorado on the composition of commissioners, and their functioning generally. He followed up with particulars on some of the occurrences in the instant commission in its proceedings.

I believe what Senator ALLOTT had to say is of vital concern to all of us and to the entire Nation, as well. For that reason, I ask unanimous consent to insert his speech in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR GORDON ALLOTT

Summer is ending and the school year is beginning. It is a good time to remember a wise remark by Mr. Dooley, the fictional philosopher who entertained Americans around the turn of the century. Mr. Dooley was once asked: "If you had a boy would you send him to college?" To which Mr. Dooley replied: "At the age when a boy is fit to be in college, I wouldn't have him around the house."

That joke has an odd ring to it nowadays. Because of the actions of a small but determined minority of violent students, many of our great universities are becoming unfit places for the decent majority of students.

In fact, a lot of our traditional jokes about universities now sound odd. Not so long ago it was fun to describe a professor as a man whose job is to tell students how to solve the problems of life which he himself tried to avoid by becoming a professor. Perhaps there once was a time when one could avoid problems by becoming a professor. But that time has passed.

Not so long ago someone defined a "university" as an institution for the postponement of experience. Perhaps the same person defined an "education" as something that enables one to get into more intelligent trouble. Both these definitions seem a little dated today. Today our universities are institutions where people are exposed to dangerous kinds of experiences. And sometimes it seems that an "education" is something that enables one to get into the most mindless kinds of trouble.

Ladies and gentlemen, the old jokes about universities are not funny any more. The situation on our campuses is no laughing matter—as they can tell you in Madison, Wisconsin, where a bomb recently killed a father of three, and did millions of dollars in damages.

This morning I want to share with you my thoughts on the dangerous situation we face as the new school year begins. I am very happy to be able to speak with you on this subject.

You represent American agriculture, and American agriculture represents the sort of achievements that come from healthy cooperation between free men and free universities. Too few Americans understand that agriculture is one of the most technologically sophisticated businesses in this technologically sophisticated Nation. And too few people understand that the phenomenal productivity of American agriculture owes much to the creative partnership that has long existed between American farmers and our great State universities. I am sure everyone here understands this, and that is why I know you are interested in helping save our universities.

A good way to begin helping our universities is to discuss intelligently an important project now underway in Washington. This project disturbs me and I think it should disturb you.

Right now the President's Commission on Campus Unrest (the Scranton Commission) is writing a report on its findings. It will issue that report soon. In fact, the issuance of that report may closely coincide with the opening of the new school year.

What disturbs me is that this report may do even more damage than has already been done by what I think were flamboyant, inflammatory, prejudiced and irresponsible actions by the Commission during its months of public hearings. There is reason to fear that the forthcoming report may be a flaccid whitewash of the violent new-left political movement that is openly seeking to capture or destroy our great universities. My concern is based on two facts. First, this Commission has not behaved well so far. Second, this kind of Commission is foredoomed to failure because it is perfectly designed to aggravate the problems it is supposed to solve.

Let me deal with the general and the particular. I will explain why such Commissions are generally a bad idea, and then why I think this particular Commission has been no exception to that rule.

The central problem with such Commissions is that they are literally irresponsible. They do not have to answer to any voters for the statements they make. They are not responsible for implementing their own recommendations. They can cruise into a troubled community, generate a lot of publicity, raise tempers and a lot of dust, and then be gone. Others are left responsible for cooling the tempers and settling the dust after these instant experts have dashed off to the scene of their next instant analysis.

Another and related problem with such Commissions is that, while the individual members have no continuing responsibility for implementing the policies they advocate, they do have responsibilities in their regular employment. And these responsibilities can influence their behavior when serving on Commissions. Let me give an example.

One of the members of the Commission is President of a university that has its own full complement of tensions and political activists. This man is not *responsible* for any campus but his own. Yet he is under the constant pressure of temptation—the temptation to use his spot on the Commission to make the sort of statements that will please the radicals he will have to cope with on his own campus this fall.

Now I do *not* think all Commissions are equally bad. It is important to distinguish between two kinds of Commissions—those which investigate questions of fact, and those which delve into matters of moral judgment and policy formation. Compare the Warren Commission with the Commission on Campus Unrest.

The Warren Commission was created to investigate the facts about the assassination of President Kennedy. It was composed of eminent men who had no axes to grind. Its purpose was to lay to rest the ugly and neurotic rumors that inevitably circulate after such a tragedy. I think the Warren Commission performed that task reasonably well.

But the Commission on Campus Unrest is not investigating a narrow question of fact. It is deeply enmeshed in the most emotion-charged issues of the day. Indeed, some Commissioners have shown great zest for declaiming on drugs, war, peace and anything else which some radical witness claims is making him restless. This Commission is not composed of men who are uniformly eminent or disinterested. Rather they are a mixed batch, and some have highly developed (and fashionably leftist) political views which they are not bashful about advertising.

I am not saying that there have not been proper times for the Commissioners to express strong opinions. On the contrary, I think the Commissioners have been derelict in not voicing strong indignation when witnesses have viciously attacked this Nation, and arrogantly justified coercive behavior. On such occasions the Commissioners have been distressingly passive. They have given the impression of seeking what Lincoln called "sophistical contrivances"—such as "some middle ground between the right and the wrong."

This brings me to the matter of this Commission's particular failings.

First, some of the Commissioners are hardly objective investigators. It will be recalled that one young Commissioner—who has become the darling of the media—almost immediately after being appointed announced that he thought the President was to blame for the problems at Kent State. For months now one has not been able to turn on the television news without seeing this man laying down the law about other people's sins.

Second, the Commission has given a disproportionate amount of time to hearing political speeches by radicals. Perhaps the effect of such hearings would not be quite so bad if the press could be relied upon to give balanced coverage. Unfortunately, the press only makes matters worse. When the Commission descended on Kent State, the President of that University gave a very interesting and balanced assessment of the situation. But the prominent press coverage went to some student who said—and I do not jest—that campus riots would not stop until we "clean up our lakes and rivers."

The third failing of the Commission is that some members have been rude, arrogant and high-handed in dealing with persons who are not radicals. For example, physicist Edward Teller and philosopher Sidney Hook—two of America's most distinguished and public spirited scholars—were treated with disdain and contempt when they testified.

Members of the Commission staff also have been guilty of high-handed arrogance. At one o'clock in the morning of August 17 a

phone rang at Lockbourne Air Force Base near Columbus, Ohio. The caller was a 28-year old law student employed by the Commission. This young man demanded that the Air Force instantly send a helicopter 130 miles to the Holiday Inn in Kent, Ohio from which he was calling. He wanted the helicopter to fly him to Camp Grayling in central Michigan so he could serve subpoenas on some Ohio National Guardsmen who were undergoing summer training there. He also demanded a contingent of Air Force policemen to accompany him. The people at Lockbourne patiently explained that they did not have any helicopters or policemen to lend. This did not satisfy the staff member, who proceeded to place a number of other demanding calls. Before long he was demanding things of the tactical air command post at Langley Air Force Base in Virginia. There he harassed the executive officer for the Air Force Vice Chief of Staff. At about 2:30 a.m. he awakened a Deputy Assistant Secretary of Defense at home. In what must be one of the year's great understatements, the Secretary allowed as how he was "not too thrilled" by the chance to talk to this aggressive staff man in the middle of the night. I am happy to report that when this staff man finally quit calling—at 5:55 a.m.—he still had not managed to brow-beat the military into giving him helicopters and a battery of policemen.

The fourth failing of this Commission is that its members have not demonstrated proper sensitivity to the civil rights of witnesses. Commission "hearings" frequently have resembled trials. Witnesses have been subjected to accusatory inquisitions. Commissioners have assailed reputations and rendered judgments on the basis of flimsy information and hasty investigation.

Ladies and gentlemen, when I think about these failings, I worry about the possible contents of the report the Commission will issue soon. I hope the report does not reflect these failings I have mentioned. I especially hope it avoids the five most familiar—and frankly, the dumbest—cliches about campus disorders. These cliches are familiar to us all.

The first cliche is that all the trouble can be described by the antiseptic word "dissent"—implying that riots and bombings are a form of "dissent."

The second cliche is that all the unrest is a result of "excesses" of idealism—implying that the bombers have hearts of gold.

The third cliche is that the Federal Government should "listen to" and "be more responsive to" the radicals—but this cliche does not tell us what is to be gained from "listening to" an arsonist, or how one is supposed to be "responsive to" a rioter.

The fourth cliche is that we should cure the disorders by changing our foreign policy, or cleaning up Lake Erie, or performing some other list of good deeds demanded by a violent minority. This cliche ignores the fact that to do so would amount to giving up majority rule and turning our democracy into a mobocracy dominated by adolescent minorities.

The fifth cliche about campus disorders is the tiresome statement that usually passes for fairness. This is the statement that campus violence is equally bad when done by political leftists or political rightists. The trouble with this is that it implies that violence is coming from both sides. In fact, last spring leftist elements shut down 500 universities *in one week*, and rightist elements shut down *none*.

As I have said, I hope the Commission report avoids these damaging cliches. If the report accepts the cliches, it will give a Government stamp of approval to all the muddled thinking that has influenced the most misguided university administrators in recent years.

There are raging conflagrations on our campuses. We need to douse them—and the incendiaries who are lighting them—with cold water. But the Commission report may be about to pour kerosene on the flames.

This will especially hurt the moderates on campus who are fighting today on embattled and eroding ground. They occupy the position of simply decency. They are fighting for traditional academic freedom—for the freedom of scholars to teach without political interference. They are fighting to prevent our universities from coming to resemble some Latin American universities where militant students impose their politics on every aspect of university life. In short, these moderate men and women are fighting—sometimes at risk to their own safety—for you and for me. And you and I will suffer along with them if the Commission report cuts the ground from under them.

Recently there have been some optimistic predictions that this would be a relatively quiet year on campuses. I do not know whether this hope is justified. But this much I do know. The dedicated, patient moderate men and women on campuses have been strained to the breaking point in recent years in their efforts to hold up the standards of common decency on campus. They have been attacked—sometimes physically attacked—by extremist students. They have been betrayed by weak administrators bent on appeasement. They have been distracted from their scholarly tasks. The last thing these brave and dedicated people need is a stab in the back from this Commission. And that is exactly what they will get if the Commission report justifies the violent minority which has done millions of dollars damage on campus, has forced the closing of hundreds of universities, and has violated the rights of millions of American students and scholars.

This Commission has already done damage simply by failing to be manfully indignant when radical witnesses have suggested that riots are justifiable until the Government does what radicals demand. A report that fails to express vigorous indignation about coercion from the left will amount to a stab in the back to the moderates and the majority.

If the Commission does administer this stab in the back, then we will be face to face with a grim irony. The Commission established to investigate disorder will have become a cause of disorder. This Commission was appointed by this Administration. I am a Republican; a member of the Senate leadership; and I am one of the President's most consistent supporters. Hence, I take no pleasure from noting the misadventures of this Commission. However, common sense tells me that the President himself is not solely responsible for this. He is quite properly preoccupied with the tasks of establishing peace and economic stability. He cannot personally attend to all the details of domestic policy.

So, in such matters he must rely heavily on his staff. I am convinced that responsibility for this Commission and its make-up rests heavily on the shoulders of a few of the President's senior domestic policy advisors. If so, in this matter, the President's advisors have not served him well.

In fact, if the Nation's domestic affairs are unsettled this fall by campus disorders, part of the blame will attach to the Commission on Campus Unrest, and to the President's advisors who assembled it.

One lesson to be learned from this is that people in Washington are not well placed to solve the problems on the campuses. The most important work on behalf of common sense and decency on campus can be done by people like you back in your respective states.

The way for you to begin is by facing three hard facts.

First, neither the Federal Government nor any policy or official of the Federal Government is to blame for campus problems. Nothing could be more inane than the testimony of those persons who told the Commission that the President or the Vice President is to blame. There have been major campus disorders since 1964—and at that time Mr. Nixon was practicing law in New York and Mr. Agnew was serving as Baltimore county executive. Blaming the President's or Vice President's "rhetoric" for campus riots is about as sensible as blaming Leo Durocher's "rhetoric" for the Chicago fire of 1871.

The second hard fact we must face is that the Federal Government cannot solve the problems of the campuses. With regard to private institutions such as Harvard, if the alumni do not exert their influence—and especially their financial power—on behalf of common decency, then nothing can save them. With regard to the State universities, unless the State legislatures exercise their power, the State universities are doomed.

The third hard fact we must face is that if our universities are going to be saved, they will be saved by persons such as you. The next time a school administration or faculty appeases radicals by shutting down the school, let the State legislatures cut the funding for the school accordingly. If one week of classes are suspended, let a *prorated* amount of funding be withdrawn. This will work wonders for putting backbone in university administrators. Further, when it dawns on the faculty that the State legislatures vote the funds that pay faculty salaries, the faculty will become anxious to keep classes going.

It is clear where persons such as you fit into this process. In an important sense each of you is a trustee of your State university. If each of you, and each of your friends, takes it upon yourself to talk sense to your State governments, then the State governments will talk sense to the persons who are running our precious—and expensive—universities.

If you and your legislators talk sense, then our universities will survive the kind of nonsense that has been talked by so many witnesses before the Commission, and the kind of nonsense which threatens to appear in the Commission report.

Ladies and gentlemen, I know it is very early in the day to be pondering such grave and ominous matters. But it is rather late in the life of our great universities for us—all of us—to join in defending them from their violent enemies, and from those who obscure the facts about these enemies.

All of us have a stake in the survival of these universities. And there can be no doubt that the very survival of these institutions as educational institutions is at stake. If these institutions are not to be debased; if they are not to become staging grounds for radical political agitation; then all responsible citizens must take a stand.

If you do take a stand, you can undo all the damage that has been done by the Commission on Campus Unrest, and you can make sure that no one will ever think we need another such Commission.

DIPLOMATS IN RESIDENCE

Mr. PELL. Mr. President, one of the little known, but valuable programs of the Department of State is its program of diplomats in residence at American institutions of higher education. Under this program, now in its seventh year, senior Foreign Service Officers are assigned to spend a year in residence, by invitation, at colleges and universities.

The diplomats-in-residence program, although small in scale, is, I believe, a significant and commendable effort to

improve communications and develop understanding between the Government and the academic community, including the young people attending colleges and universities.

During the 1969–70 academic year, the University of Rhode Island had the privilege of having on its campus as a diplomat in residence a very distinguished and able senior member of the Foreign Service, Mr. Harvey R. Wellman.

I know from my discussions with Mr. Wellman, and with students and faculty members, that his residency provided a significant new perspective to the university program.

Mr. Wellman has written an interesting and perceptive article on the diplomats-in-residence program based on his experiences at the University of Rhode Island, and I ask unanimous consent that the article, from the August issue of the Department of State Newsletter be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DIPLOMATS-IN-RESIDENCE: BRIDGES TO THE UNIVERSITIES

(By Harvey R. Wellman)

The Foreign Service has a new challenge. It is at home rather than abroad, in the American universities. Increasingly faculties and students are becoming alienated from the national government. Dissension and frustration over United States foreign policy in Southeast Asia have led to loss of rapport with and confidence in the federal government and even to questioning the validity and viability of political institutions and processes. There is need to restore lines of communication between the government and the universities especially in the foreign policy field. There is need to restore confidence in government if representative government is to work.

The intellectual community probably does not reflect the majority view in the United States. But it is an important minority. It is the nation's chief resource for research, intellectual criticism and new ideas and new approaches to old problems. Among the seven millions of young people in the nation's colleges and universities are the future leaders of America.

The program for assigning senior Foreign Service Officers as diplomats-in-residence to American colleges and universities is only six years old. It has run parallel with the increasing unrest, protest and politization on American campuses in recent years.

It began as a modest program and has remained small. In six years 51 senior officers have gone to a total of 65 colleges and universities. In the academic year 1969–70 there were ten; in 1970–71, the seventh year, there are to be six.

Under this program, there have been diplomats-in-residence at about 3 percent of the over 2000 colleges and universities in this country. The demand for them is much greater. About 110 applications from universities are pending and unfulfilled. Most institutions which have had a resident diplomat would like to see his one year tour extended. Others which have been host to a visiting diplomat are now asking for another. In view of the need and the demand, the question arises whether the Foreign Service despite its small size and limited resources is doing enough.

The small number of total assignments does not however disclose the full influence and impact of the senior Foreign Service Officers who have been assigned under this program. A diplomat in residence at one university will have invitations to visit, speak and meet with students and faculty at other colleges and universities in the same and neighboring states. The 51 diplomats who have been resident at institutions in 35 states will probably have visited once or more times at as many as 400 colleges and universities throughout the nation. Thus the program has touched a substantial portion of the American academic community.

The diplomat-in-residence program is not the only program the Department of State is using to try to bridge the gap in communication, confidence and credibility between the government and the universities in the field of foreign policy. The scholar-diplomat seminars are a new approach which should be effective. The recent Senior college live-in was an imaginative idea. Both the government and the universities should be exploring all feasible ways to increase understanding and rapport between them. The diplomat-in-residence is only one way. But it may be one of the most effective ways.

Just because the diplomat is in residence at a university he has the time and is in a position to reestablish communication and to lay the ground for credibility on a personal basis with university students, faculty and administration. In the present atmosphere of suspicion, distrust and sometimes hostility towards a government representative, this takes time. As a temporary member of a university faculty, he has the credentials to enter faculty meetings and classrooms. Eventually he can look forward to being accepted and heard as a member of a university community as well as an official of government. Free from bureaucratic requirements on the part of either the government or the university, he has the flexibility to shape his activities to his opportunities and the needs of the situation as he views them. His availability and accessibility will be assets. And he will have many and varied opportunities.

It is difficult to generalize about the experiences of a diplomat-in-residence for each is different. It will depend upon the university of assignment. In six years these have included public and private schools, large state universities and small liberal arts colleges, religious-affiliated and secular-oriented institutions. Size, college organization, faculty orientation, curriculum, planning for future development will all affect the possibilities of the diplomat and the requests made of him.

His own interests and proclivities will also be important factors. He will have opportunities and receive requests to work with faculty committees, help develop new study programs, participate in lecture courses and seminars, meet with students individually and in groups, speak to civic, community and professional organizations, give interviews to newspapers, appear on radio and television, advise administrators and faculty on problems with government and students on careers in public service. He will have to accommodate some requests because it is expected of him whether or not he is especially interested or peculiarly qualified. But he can welcome and develop activity in areas which he prefers in which he feels he can make the maximum contribution.

The diplomat has his principal loyalty and obligation to his university of residence. From it he derives his academic status such as an adjunct professor of political science. It provides faculty privileges, office space, secretarial assistance. More important his chief opportunities will come from this primary university association.

The diplomat-in-residence at my university was sponsored by a planning committee on international studies. Intercollegiate and inter-disciplinary, the committee made the diplomat an active member and at once provided him with acqaintances and entry into various colleges and departments. It publicized his presence on campus and his foreign service experience. It arranged for an interview with pictures in the widely-read regional newspaper. From faculty on the committee came the first invitations to appear in college classes with opportunities to meet students and have discussions with them.

In my view a diplomat in residence on a university campus should remain a diplomat; he should not try to be a professor. His only special and possibly unique contribution is his Foreign Service experience. If he sticks to talking about what he has done or seen in Foreign Service, he is on safe ground. On this basis he speaks with the authority of experience or first hand observation. His participation on this basis in the university curriculum and other activities will be welcome. And on this basis he is likely to be most effective.

Classroom opportunities will most likely be in political science, history, international relations. But other possibilities are not excluded. All classes of sophomores in military science were combined for two lectures by me on foreign policy formulation and diplomacy as an instrument of national policy. I spoke on Foreign Service and on international educational exchange to a class of graduate students in education. At an upperclass course in international marketing in business administration, I described the services provided to American business and businessmen by the diplomatic and consular service.

One invitation to course participation leads to others. The request may be general, to discuss the formulation of foreign policy, the organization and functioning of the foreign affairs agencies, the operations of a diplomatic mission. The request may be more specific, to discuss areas of foreign relations or aspects of foreign policy in which the diplomat has been involved. Since my more recent Foreign Service experience has been in the NATO area including Portugal and Portuguese Africa, I often dealt with those subjects. My experience in Latin America especially with the Alliance for Progress and in Castro Cuba also evoked interest. My brief association with Adlai Stevenson at the UN also received notice. I drew on my experience in all these areas when discussing how the government operates in foreign relations and how foreign policy develops and is executed.

These classroom presentations and discussions with students gave me a chance to fill out and sometimes correct factual impressions. They also provided opportunities to come to grips with sometimes naive and often mistaken assumptions about U.S. foreign policy objectives as well as U.S. capacity to influence developments in international relations.

Invitations to course participation on one campus led to invitations from other campuses usually as the result of a faculty member recommending the diplomat to a friend or former associate or student on another campus. Upon invitation I made a dozen visits to other colleges and universities in and near Rhode Island. Two of the most productive from my viewpoint were in May 1970 when most campuses including my own were on strike over Cambodia and Kent State.

Though a diplomat-in-residence should hold himself out as a diplomat, he is for an academic year a member of a university faculty. If he has not been before in the academic world except in his youth as a student, it will be an educational experience to attend faculty meetings, to observe how a university governs itself and to study the interplay between students, faculty and administration. Faculty meeting is a good place to observe university attitudes. Fall 1969 and spring

1970 were good times to watch changing university attitudes towards the government and its handling of important foreign and domestic policy issues.

The university and especially the faculty expect that respect will be shown for academic processes and principles, and in particular academic freedom. If in addition to respect, the visiting diplomat shows genuine interest, he is repaid with cordiality and opportunities to join in and participate. After I had attended Faculty Senate meetings regularly as a most interested observer, the Senate invited me to serve on its Honors Program Committee. This brought opportunities to meet outstanding professors and honor students as well as to follow closely the honors colloquium of distinguished lectures. The diplomat-in-residence was in a position to join in selecting the subject for the 1970–71 honors colloquium—youth, politics and change—and the designation of a faculty member to coordinate the program.

The main job of the diplomat-in-residence is academic relations. He has also important and stimulating opportunities in public relations. He will have many invitations from groups of citizens with or without university associations to be a guest speaker. Invitations will come from Rotary Clubs, men's clubs, women's clubs, business and professional organizations, church groups. They will leave the topic to him and will not usually insist or expect him to deal with controversial foreign policy issues, atlhough a public forum may meet on a foreign policy issue of passionate concern and request his participation.

Generally these groups are interested in seeing what an American diplomat looks like and hearing what he has to say about his profession. He may be the first American diplomat they have met and they may have little awareness of what the Foreign Service is or does.

It is heart-warming to have a cordial welcome and earnest attention from fellow citizens who show their sincere interest by holding you for questions long after your formal remarks. These are chances to make friends for the public service. The diplomat can also strike a blow for better appreciation of the complexities of foreign relations and of the need for responsible as well as responsive foreign policies.

The principal challenge to a diplomat-in-residence is to establish communication and a measure of rapport with those faculty and students most critical of U.S. foreign policy. The number at the university seriously concerned about questions of foreign policy increased greatly after the Cambodian intervention and for the first time on many campuses including my own, included most of the hitherto silent, uninvolved moderates. But from the first the critical, activist, articulate minority included the most stimulating campus elements, the most influential instructors, the student leaders on campus who were probably most likely to become national leaders.

The diplomat-in-residence might well evaluate his effectiveness based on his success in getting across to these critical faculty members and students. Any success will not come early or easily but there is no reason why he should not achieve some success during an academic year. He need not retreat from fact or principle or accept their assumptions and conclusions to achieve it, although he will be impressed favorably by the idealism, high moral standards and probing questions he will often encounter. But he must be willing to listen, to reason objectively, to be honest and try to answer hard questions. In doing so he can change the image of what a diplomat is. He can begin to restore credibility in a representative of government on a personal basis.

Academic year 1969–70 was a tough year for diplomats-in-residence. It began with a moratorium and peace marches; it ended with campus strikes, teach-ins and a student dialogue with Congress and the voters. Yet it was a year of increased opportunities for diplomats-in-residence—opportunities to understand, opportunities to influence university attitudes.

Despite the increase of campus concern and frustration, my university regrets it will not have a diplomat-in-residence in 1970–71. Friendships with activist professors stood the strains of Cambodia and Kent State and the ensuing campus strike and kept open communications. During the strike students, including some most upset and concerned about foreign policy direction, still continued to drop by to discuss with the diplomat-in-residence careers in public including foreign service.

Despite some opposition from the extreme including strong critics of U.S. foreign policy, welcomed the presence on campus of an articulate spokesman for government and a resource for information about government as it actually operates in foreign affairs. Hopefully the continuing presence of diplomats-in-residence on American college and university campuses will help students and faculty to come to regard our government as their government rather than as "that government."

SHOCKING STATISTICS ON SHOE IMPORTS

Mr. McINTYRE. Mr. President, the shocking statistics of the shoe industry have been released for the first 7 months of this year. I regret to say that in the month of July alone 18,128,300 pairs of nonrubber footwear were imported into this country. This brings the total for the first 7 months of 151,288,200—an increase of 20.8 percent over the same period in 1969. In addition, the value of imports for the same period totaled $322,793,100—a 30-percent increase over the same period last year.

While these statistics are sadly impressive, they do not tell the whole tragic story of the shoe imports crisis. What we all must remember is that as these imports increase, hundreds of American workers every month lose their jobs, often with little hope of finding a new one.

The imports will increase and the unemployment rolls will grow until Congress takes appropriate steps to stem the flow of these cheaply made foreign goods. Hopefully, the House will act soon on the Mills bill so that we in the Senate can do our part to protect the thousands of jobs which are ultimately at stake.

Mr. President, I ask unanimous consent to have printed in the RECORD a more detailed breakdown of the import data which is provided by the New England Footwear Association.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

IMPORTS—JANUARY–JULY 1970, LEATHER AND VINYL FOOTWEAR IMPORTS

[Millions of pairs]

	1968	1969[1]	1970	Percent change 1969/1968	Percent change 1970/1969[1]
anuary	17.9	8.8	22.3	−51.0	+153.0
February	17.0	15.9	21.2	−6.0	+33.0
March	17.2	19.8	25.2	+15.0	+27.0
April	17.0	27.1	23.1	+59.0	−15.0
May	16.2	20.7	20.6	+28.0	(2)
June	11.7	16.0	20.8	+37.0	+30.0
6 months average	(16.1)	(18.1)	(22.2)	(+12.0)	(+23.0)
July	13.2	16.8	18.1	+27.0	+8.0
7 months total	110.2	125.1	151.3	+13.5	+20.9

[1] First 4 months 1969 totals affected by dock strike.

[2] No change.

ALL MAJOR TYPES OF FOOTWEAR IMPORTS SHOW INCREASES—LEATHER AND VINYL FOOTWEAR—1ST 7 MONTHS

	Percent change, 7 months 1970/1969	Average value per pair	Estimated retail value
Men's and boys' leather	+13.4	$4.24	$13.74
Men's and boys' vinyl	+65.3	1.08	3.50

Women's and misses' vinyl	+11.0	.82	2.66
Children's and infants' leather	+17.8	1.39	4.50
Children's and infants' vinyl	+10.2	.73	2.37

SOVIET MILITARY ADVANCES

Mr. THURMOND. Mr. President, year after year we have deliberated in this body about how much to cut defense spending. Strong attacks have been made on the military procurement bills of the past 2 years. We have been reducing our weapon inventories and troop strengths.

At the same time the Soviet Union has been steadily building up its own military establishment to the point where it is now stronger than the United States in many respects and in the very near future will be superior to this country in virtually every quantifiable area of military strength.

The gains made by the Soviet Union have gone largely unnoticed. A small change in the balance of power each year does not seem to alarm this country. But over a period of 20 years the small and supposedly insignificant changes have added up to a very substantial change in the balance of world military power.

Mr. President, a most illuminating article published in the August 17, 1970, issue of Armed Forces Journal spells out

in full detail how the balance of power has changed, dangerously and significantly, over the past 20 years. The article, entitled "The Soviet Union Moves Ahead: On Land, On the Sea, and In the Air," written by James D. Hessman, the magazine's senior editor, points out, for example, that—

First, on a proportionate basis the Soviet Union is spending more than three times the percentage of its gross national product on defense than is the United States;

Second, our once-formidable edge in strategic nuclear missiles has withered to nothing, and in 5 years, if present trends continue, the U.S.S.R. will have a 2-to-1 margin in this important category;

Third, the U.S. Navy is now at its lowest strength level in 20 years, while the strength of the Soviet Navy continues to grow in numbers and in quality. Moreover, only 1 percent of the U.S.S.R.'s Navy is over 20 years old, compared to 41 percent of the U.S. fleet in the 20-years-or-older category.

Fourth, the U.S. merchant marine has similarly declined from over 3,500 ships in 1949 to fewer than 1,200 now available, while the Soviet merchant fleet has grown steadily from only 432 in 1949 to 1,717 at present. The Soviets hope to have 4,300 major vessels—a tenfold increase—by 1980.

Fifth, reduction in U.S. military strength in Europe have left the number of U.S. Air Force aircraft there at less than half the number we had in Europe in 1955. U.S. Army troop strength in Europe is at its lowest level since 1951.

Mr. President, this is a most important article, not sensationalized, but conservatively written and extremely well documented. It states the cold hard facts of the changed military balance of power soberly and responsibly. I recommend it as must reading for all Senators, particularly those who want to cut defense spending even more. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SOVIET UNION MOVES AHEAD: ON LAND, ON THE SEA, AND IN THE AIR

(By James D. Hessman)

(NOTE.—Journal Senior Editor James Hessman recently returned from Europe where he received command and "threat" briefings at the U.S. European Command in Stuttgart, at Headquarters U.S. Army Europe in Heidelberg, at Headquarters U.S. Naval Forces Europe in London, and at the U.S. Berlin Brigade Headquarters in Berlin.

(On his trip he interviewed, among others, General James H. Polk, USA, Commander-in-Chief U.S. Army Europe; General David A. Burchinal, USAF, Deputy Commander U.S. European Command; Admiral Waldemar F. A. Wendt, USN, Commander U.S. Naval Forces Europe; BGen Harold I. Hayward, USA, Commander U.S. Berlin Brigade; and a number of European defense industry officials.

(In earlier articles in this series Mr. Hessman analyzed the quantitative and qualitative changes in the Soviet/Warsaw Pact threat over the past decade ("European Scenario: The Balance Shifts Eastward," Journal 4 July); the strengths and weaknesses of U.S. forces in Europe positioned to counter that threat ("U.S. Forces in Europe: Great Men and Great Machines . . . But Not Enough of Either"—Journal 11 July); and the growth of a now highly efficient and increasingly competitive European weapons industry ("A Booming European Defense Industry Tools Up for the Next Decade"—Journal 25 July). In the 18 July issue were complementary related articles by Journal Congressional Editor Bruce Cossaboom and Pentagon Editor Joseph Volz on, respectively, U.S. airlift and sealift capabilities and limitations.

(In this, the final article in the series, Mr. Hessman tells how the U.S. is losing the numbers game, spells out in unprecedented detail how the U.S. weapons inventory has declined precipitously in almost every quantifiable area, reports how the Soviet Union has maintained and in many areas improved its own relative military position, and analyzes the long-range strategic and political implications for the U.S.

(Except where the source is cited the tables and figures accompanying this article have been compiled by Journal staff writers and researchers from a number of unclassified sources. Except for attributed quotes, the views expressed by Mr. Hessman are his and do not necessarily in every case represent the views of the U.S. Department of Defense or the personal or official views of the U.S. military commanders interviewed by Mr. Hessman on his trip.)

Twenty-five years ago this month the United States dropped on Hiroshima the world's first atomic bomb.

At that time the U.S. had a monopoly on nuclear weapons. It also had the world's largest and most powerful Navy, Air Force (then the Army Air Corps), and merchant marine, with only the huge and combat-hardened Russian Army considered a possible match for the U.S. Army.

In the intervening quarter century the U.S. nuclear arsenal has been greatly expanded and refined, but what was then a monopoly has been reduced in gradual stages to overwhelming superiority, to marginal superiority, to "parity," and finally to the current "sufficiency." By 1975, moreover, according to present estimates used by U.S. planners, the USSR will have reversed a once-formidable U.S. advantage and will enjoy an almost two-to-one margin in strategic nuclear missiles. Whether U.S. "sufficiency" at that time will be sufficient to deter Soviet nuclear blackmail—or to convince U.S. allies to resist such blackmail—is a speculative question at best.

But it is not only in the nuclear field that the United States has lost its predominance. Over the past 25 years, and particularly in the past decade, the Soviet Union has caught up with and often surpassed the U.S. in one weapons category after another. Such changes as have occurred in the overall military equation have been gradual, almost imperceptible on a year-to-year basis, but over a quarter of a century the cumulative effect has been to alter the balance of power significantly, and most dangerously.

Item: The U.S. Navy's operational inventory of major combatant ships is now at its lowest level since 1950. In two categories (battleships and command ships) of the 13 listed (see table) the U.S. no longer has any ships in commission. In each and every one of the other 11 categories the number of ships in commission has been reduced, and in most categories significantly so. The Soviet Union, on the other hand, has built up its Navy both quantitatively and qualitatively. Directly comparable statistics on USSR naval forces are classified, but according to the NATO Information Service (in *NATO Facts and Figures, 1969*), "Russia entered WWII at the bottom of the list of major world naval powers, and now ranks second only to the United States."

Item: The Soviet merchant marine has experienced similar growth, while the U.S. merchant marine—the vital "fourth arm" of national defense—has declined drastically. According to U.S. Maritime Administration statistics, the U.S. merchant fleet has dwindled from a post-WWII (1949) total of 3,513 ships—26.0-million gross tons, over one-third the world gross tonnage—to a 31 December 1969 total of 1,937 ships—18.0-million gross tons, less than one-tenth the world gross tonnage. During the same period, the Soviet merchant fleet grew from 432 ships (1.3-million gross tons) to 1,717 ships (10.0-million gross tons). Just as significantly, the Soviet building curve is on the way up, while the U.S. new construction curve is still plummeting ever downward.

Item: U.S. Army strength in Europe, after surging to a peak of 278,000 men in June 1962, has dropped to the current 185,000 level, lower than at any time since 1952, and 42,000 lower than the previous 1952–65 low of 227,000 men in 1960. Soviet/Warsaw Pact ground forces also have been considerably reduced and streamlined, but "The mobilization of first line reserves and the movement of other reinforcements" during the early stages of mobilization, according to the authoritative London Institute for Strategic Studies (ISS—in *The Military Balance, 1969–1970*) would give the Warsaw Pact countries "a superior reinforcement capacity." The USSR, of course, long has enjoyed a huge numerical advantage in tanks—NATO tanks are generally considered more modern, however, and NATO has an estimated (by ISS) 50% advantage over the Warsaw Pact in anti-tank weapons.

Item: The inventory of U.S. aircraft in Europe has declined from a high of 1,300 in 1955 (200 bombers, 950 fighters, 150 transport aircraft) to fewer than 550 (500 fighters, fewer than 50 transports) in 1970. The worldwide U.S. intercontinental bomber force, moreover, according to various SecDef (McNamara and Laird) posture statements, has drifted steadily downward: from 697 on 1 Oct 67 to 646 on 1 Oct 68 to 581 on 1 Oct 69. The Soviet Union, meanwhile, according to Laird, has a fleet of "about 150 Bear and Bison heavy bombers and about 50 Bison tankers currently in inventory" as well as "more than 700 medium bombers and tankers."

Item: According to Defense R&E Director John S. Foster, Jr., in testimony recently released by the House Defense Appropriations Subcommittee chaired by Representative George H. Mahon (D-Tex), the Soviet Union two or three years ago passed the United States in funding of military-related research and development and is now spending "about 25%" more than the U.S.—"It may be as little as 15% or as much as 30 or 35%"—on military R&D. "If the Soviets continue to increase their effort devoted to military-related research and development and we continue our present trend," Dr. Foster told the subcommittee, "within the next two years the Soviet Union will assume technological superiority."

Grim as the present picture is, the appalling fact is that matters undoubtedly will get much worse before they can become better. Maritime Administrator Andrew Gibson, for example, has stated that from a maritime viewpoint the United States is "three or four years away from disaster" (Journal 23 August 1969). The U.S. Navy may not lose any more ships for a while, but even were a crash building program started immediately it would take years before the active duty inventory could be built up in any appreciable sense. The same is true of the Army's tank and helicopter forces and of Air Force and Navy aircraft. The U.S. helicopter industry has been particularly hard hit by cutbacks in the defense budget and unless remedial action is taken soon will have to

close down virtually all production lines (see "Helicopter Industry Faces Potentially Fatal Squeeze"—Journal 13 June).

NOT ALL GLOOM

Not all is unmitigated gloom. As is pointed out later in this article, the U.S. and its NATO allies still possess formidable military strength and are also favored by a number of intangible advantages. Most importantly, the U.S. "assured second strike" capability still is, or should be, a thoroughly credible nuclear deterrent against a massive large-scale Soviet preemptive first strike. But on 14 December 1967 the NATO Defense Ministers formally adopted the new "flexible response" strategy, and NATO defense planning apparently is now based on the belief, (articulated in *NATO Facts and Figures, 1969*), that "a massive surprise attack . . . is not the most likely way for a war to start.

"In the limited type of operation which would be a more probable form for the outbreak of hostilities," the NATO book continues, "such weapons [ICBMs] would be inflexible."

But if it is accepted that a limited or conventional war is "a more probable form for the outbreak of hostilities," it must then be asked whether the U.S. or the USSR is better prepared for such a war.

Probably no definitive answer is possible, but from the evidence available it seems clear that over the past two decades the relative military capabilities of the Soviet Union have increased at a much more rapid rate than have those of the United States. Here, fleshing out and expanding upon the information earlier presented, are additional data in various areas which must be considered in assessing the short- and long-term changes in the military balance between the two superpowers.[1]

Defense Spending: *Fortune* magazine last year published a series of articles on U.S. defense spending (Journal 16 and 23 Aug. 1969), the thrust of which was that U.S. defense spending should be reduced. *Fortune* estimated that in FY 70 the U.S. would spend $84-billion on defense, the USSR $60-billion. Excluding some $27-billion in Vietnam costs, however, the U.S. defense budget was pegged at only $57-billion, or $3-billion less than the Soviet defense budget, even by *Fortune* figures, which were definitely not weighted in favor of the U.S., *Fortune* noted, but made little of the fact, that U.S. personnel costs take over one-third of the U.S. defense budget, but less than one-sixth of the Soviet budget. Minus personnel costs, therefore, the non-SEA FY 70 U.S. defense budget (later cut back several billion dollars) amounted to less than $38-billion, the FY 70 Soviet defense budget slightly over $50-billion. This means that last year, using conservative estimates, *the Soviet Union already was spending over $12-billion more per year than the U.S. on military equipment and facilities.* Because of additional Administration and congressional cutbacks in the U.S. defense budget the FY 71 margin will be even greater.

[1] The information on which this article is based has been drawn from a variety of official and unofficial sources, as have the tables which accompany the article. For this reason, because other data is classified and/or unavailable, and because of certain inconsistencies in classification from one Service to another, there are certain inconsistencies between the article and the accompanying tables, and in one or two cases internal inconsistencies in the same table. These are pointed out where clarification is necessary and do not, it is believed, detract from the key point of the article, which is that the accumulated incremental year-to-year military gains the USSR has achieved over the past 20 years have altered the world balance of power substantially in favor of the Soviet Union.

The relative defense spending levels can be looked at another way: According to the State Department's 1970 *Fact Book of the Countries of the World* the 1968 Soviet gross national product is estimated "at the equivalent of approximately U.S. $400-billion." Accepting *Fortune* magazine's $60-billion estimate of Soviet defense spending, this means that the USSR, which can afford it much less, is nevertheless spending 15% of its gross national product on defense. The original FY 71 "rock bottom" U.S. defense budget, which has been already cut in Committee, was at the time submitted only 7.0% of the U.S. gross national product. If Vietnam war costs (classified) are excluded the FY 71 U.S. defense budget would be in the neighborhood of only about 5% of the U.S. GNP, or *about one-third the funding, on a proportionate basis, allocated by the Soviet Union to defense spending.*

Naval Forces: According to *Soviet Sea Power*, a landmark 1969 study by Georgetown University's Center for Strategic and International Studies, the Soviet surface fleet "now includes two helicopter carriers, 20 to 24 cruisers, 110 to 120 destroyers and frigates, 92 oceangoing escorts, about 150 missile-armed patrol boats, plus approximately 400 other fast patrol boats, 270 coastal escorts, 250 or more landing ships and craft, and a large assortment of mine sweepers, support and auxiliary vessels." The Soviet submarine force, for years the world's largest, is estimated (by *Jane's Fighting Ships, 1969–70*) at about 385 ships. Sixty-five are nuclear-powered, including a growing number of the Polaris-type "Y"-class boats now being built at the rate of one per month. Only 1% of the USSR's Navy ships are over 20 years old; an estimated 41% of the U.S. fleet is over 20 years of age—average age is over 16 years.

The U.S. Navy is considered superior in ASW and in its worldwide logistics and support capabilities. The U.S. Navy's attack carrier fleet also gives it a unique capability which could not be duplicated by the Soviet Union for another 15 to 20 years, if then. Then carrier force is aging, however, and funding for construction of new *Nimitz*-class nuclear carriers has been repeatedly delayed or cut back both within the Administration and on Capitol Hill.

Maritime Forces: The dwindling U.S. merchant marine is even smaller than it looks. Maritime Administrator Andrew Gibson told The Journal that, of the 1,050 ships in the National Defense Reserve Fleet, "some 700 have been identified already as scrap candidates and have not been considered available for years" (Journal 23 Aug. 1969). The burgeoning Soviet fleet, on the other hand, is still in the throes of expansion and is projected (in *Soviet Sea Power*) to more than double by 1980, at which time "the Soviets intend to have 4,300 major vessels, aggregating 27-million deadweight tons."

There is another factor: age. As of 31 December 1958, according to MarAd statistics, average age of U.S. merchant ships was 14.2 years, a shade less than the world average of 14.5 years. The average age of Soviet merchant ships was then 25.0 years, considerably above the world average. Exactly one decade later, as of 31 December 1968, average age of U.S. merchant ships was 22 years, average age of Soviet merchant ships was 10, and the world average was 13.

Of very small solace is the fact that many U.S. shipyards have been modernized in the late 1960s and U.S. shipbuilders, even during the traumatic decline of the last decade, have been foremost in imagination and innovation, leading the way in introduction and utilization of the containership, LASH (Lighter Aboard Ship), and Ro-Ro (roll-on, roll-off) shipping concepts. Such imaginativeness has not sparked much fire on Capitol Hill, however. For its own good and sufficient reasons Congress repeatedly scuttled MSTS's 30-ship Fleet Deployment Logistics (FDL) proposal, and now the Navy's substitute MPS (Multi-Purpose Ship) concept also is foundering on the legislative rocks (Journal 18 July).

SHIPBUILDERS TOOLING UP

Meanwhile, U.S. shipbuilders—who for business reasons opposed the FDL and MPS programs—have been tooling up in expectation of the shipbuilding surge promised by President Nixon in the 1968 campaign. But there's a five-year lead time from promise to performance, apparently—Edward M. Hood, President of the Shipbuilders Council of America, recently told Congress (Journal 4 July) that, even if Congress passes enabling legislation this year, shipbuilding contracts still probably could not be let until spring 1971 at the earliest, with production picking up in early 1972 and first ship deliveries in the "long-sought, long-needed, and long-awaited rejuvenation of the American merchant marine" not possible until at least 12 months beyond that.

Ground Forces: Here there is reason for cautious optimism. Tempered by the combat experience of Vietnam, the U.S. Army and U.S. Marine Corps are, man for man—an important qualification—equal to and probably better than the ground forces of any other country in the world. U.S. troops in Vietnam are better trained, better equipped and supplied, possess more accurate and more lethal firepower, and have better logistics, communications, and mobility capabilities than any other troops anywhere else in the world—including U.S. ground troops in Europe.

And it is in Europe where the crunch will come, if and when. The buildup, modernization, and upgrading of U.S. ground forces and equipment in the late 1960s for a guerrilla war in Southeast Asia resulted in some, but not overmuch, upgrading of U.S. ground forces equipment in Europe—but it was accompanied by a manpower cut. "Having the world's finest football equipment in the world is nice," one Army R&D official told The Journal, "but it won't help you too much at a baseball game."

The fact is that according to statistics provided by the Office of Army Information, the 185,000-man U.S. Army in Europe is at its lowest strength level since 1951. Official tank figures are classified, but unofficial estimates, and interpolation from Army TOE (Tables of Organization and Equipment) documents put the number of USAREUR tanks at 300 or less. Soviet/Warsaw Pact tank strength (see "Order of Battle" table) is estimated at over 40,000. The order of battle figures include large numbers of tanks assigned to units in the USSR's Far Eastern provinces, and many other still "in operational storage." Even so, it is evident that at the outbreak of any European conflict the Communists would have overwhelming superiority in both troops and armor—and there comes a time, as one U.S. commander in Europe recently told The Journal, when "numbers alone do count."

NATO is considered to have a big edge in anti-tank weapons—ISS rates the NATO margin as "50% superiority."

The Soviet Union, like the United States, has reduced its military manpower in recent years and has concentrated on fielding a more mobile and better equipped Red Army. Particular emphasis has been placed on mobility acording to *NATO Facts and Figures 1969*, "so that today armoured forces represent a high proportion of the total strength. The cross-country and river-crossing capabilities of their units have been improved, as has their night-fighting capability, and they have been equipped with heavier mobile weapons."

Air Forces: Here, again, the news is both good and bad. The extensive use of helicopters in Vietnam has vastly increased the U.S. Army's mobility and has given it a

powerful new dimension of in-theater combat capability. Despite Lockheed's financial and management problems the company has developed a truly remarkable aircraft in the C–5, which when it enters the inventory in large numbers will give the USAF an airlift capability previously unattainable. U.S. Army, Navy, Air Force, and Marine Corps aircraft and associated weapons and avionics all have been improved and upgraded because of Vietnam necessities.

But there are dangerous gaps and shortages, and there likely will be delays in development of the next generation of U.S. aircraft. The Administration and Congress, which seem creditably willing to cooperate at long last in salvaging the U.S. maritime industry, are ignoring the perilous economic plight of the U.S. helicopter industry. The F–111 and C–5 programs have been cut back, the HLH (Heavy Lift Helicopter) and LIT (Light Intra-threater Transport) programs still are in a legislative limbo, and the International Fighter program could be sabotaged by political and economic obstacles. A limited green light has been given on the USAF's B–1 (formerly) AMSA-Advanced Manned Strategic Aircraft) bomber, AWACS (Airborne Warning and Control System), and F–15 fighter programs, as well as the Navy's F–14 and USMC's V/STOL Harrier programs, but expected procurement stretchouts could mean years of delay before production aircraft enter the operational inventory in large numbers.

The Soviets have also cut their overall aircraft inventories, but have been not nearly as lackadaisical as the U.S. in accelerating the introduction of new aircraft. "Of significance," emphasizes one unclassified U.S. "threat" document, "is that, in the recent Moscow Air Show, the Soviets flew in one day more new tactical aircraft designs than the U.S. had flown in 10 years."

Also of particular significance is the fact that, while U.S. air forces have been heavily committed to SEA, the Soviet Union has appreciably improved its relative airpower position in Europe. U.S. officials told the Journal that in 1960 U.S./NATO forces had available "about 5,000" and Soviet/Warsaw Pact forces "about 4,300" aircraft of all types for immediate use in event of a conflict in Europe. The present figures are "about 2,100" U.S./NATO aircraft, and "about 4,400" Soviet/Warsaw Pact aircraft. The U.S./NATO figures, moreover, include six U.S. dual-based squadrons—in CONUS but "committed to NATO." (An important factor in the precipitous drop in the U.S./NATO aircraft inventory was the 7 March 1966 decision by French President Charles de Gaulle "to cease participation in NATO integrated military commands"—a fact which explains but in no way ameliorates the situation.)

Other Factors: The U.S. has renounced first use of chemical and biological warfare, is halting CBW research, and is destroying much of its CBW inventory. Similar humanitarian restraint has not been evidenced by the Soviets, who, according to testimony given earlier this year by former JCS Chairman General Earle G. Wheeler, USA, before the House Defense Appropriations Subcommittee, "are probably the ones who are leading the field."

The Soviets have an HLH; the U.S. does not. The Soviets have a FOBS (Fractional Orbit Bombardment System; the U.S. does not. The Soviets have an operational ABM system ("some 64 ABM–1/Galosh antiballistic missile launchers around Moscow," according to U.S. "threat" documents); the U.S. does not. And, very importantly, the Soviets now are devoting considerably more of their scarce resources to defense-related R&D than is the United States.

Finally, an extremely relevant political factor: the Soviet Union has improved its relative military strength capabilities across-the-board worldwide, but it has improved its relative military strength in Europe even more. U.S./NATO forces in Europe likely could still withstand even a massive conventional war surprise attack from the East, but perhaps only by resorting to early use of tactical nuclear weapons. No one could predict what would happen after that. This, more than one U.S. official told the Journal in recent interviews, is the most dangerous element in the changed military balance in Europe.

It may be, as many believe, that the ominous presence of the U.S. nuclear deterrent is sufficient to prevent conventional as well as nuclear war. It may also be, as some assert, that the USSR's intentions are eminently peaceful and that, still scarred by the memories of WWII, it realizes it would have far more to lose than to gain from another European conflict. Hopefully, such assertions are correct, but they fail to explain fully and adequately why the Soviet Union has devoted such a frighteningly large percentage of its GNP to defense purposes, why it has over the past decade embarked on such a large-scale across-the-board upgrading of its military forces, and why it maintains in Eastern Europe manpower and equipment far, far in excess of what it needs for purely defense purposes.

CAVEATS AND CODICILS

It would be easy, using selected bits and pieces of information currently available, to paint an even blacker picture of the current and projected U.S. military posture. But the picture would be distorted beyond all credibility, for the fact is that, in most respects, the U.S. is still the world's number one military power. What is important, and what is pointed out here, however, is that in relative terms U.S. military strength vis-a-vis the Soviet Union has been steadily declining for the past two decades while the strength of the Soviet Union—again in relative terms—has been rapidly expanding.

Ideally, any comparison of U.S. and USSR military strengths would be projected, item by item, year by year, weapons category by weapons category, on a multi-year "trend" chart replete with qualifications, caveats, and codicils.

Such information, unfortunately, is not available on an unclassified basis. Even if it were, it would be misleading. Comparisons can, will, and have to be made, of course, but still there can be no 100% valid comparison, for example, between the F–4 and the MiG–21, between the Soviet helicopter ship *Moskva* and the U.S. attack carrier *Saratoga*, between the U.S. Marine Corps and the embryonic Soviet "Naval Infantry."

There are, in addition, numerous qualitative factors which also must be taken into consideration in any assessment of the relative U.S./USSR military capabilities. In a European battle scenario, for example, the Soviet Union, operating from a contiguous land mass, would have considerable geographic advantages over the United States, which would have the added burden of maintaining, with limited means, over-extended transoceanic logistics lines in the face of a Soviet submarine fleet far more formidable than the best the Nazis had at the height of WWII. It is more likely than not, moreover, that the USSR would have the advantage of tactical surprise at the outbreak of any conflict.

Offsetting these factors are a number of others which favor the U.S., whose NATO allies, for one thing, presumably would be much more reliable comrades in arms than would be the USSR's Eastern European satellites.

Among other things, the Western powers also have:

A much stronger and more diversified industrial and economic base from which to operate.

Greater reinforcement capability based on worldwide numerical superiority in ships, aircraft, and ground strength—worldwide ground strength of the NATO countries is estimated by ISS at 3.5-million men (not including France), and Warsaw Pact strength at 2.8-million men. (Most U.S. troops are in SEA or in the CONUS base, however.)

Unity of effort—For several years the U.S. has been distracted by the Vietnam War, but withdrawal from SEA has begun, is proceeding on schedule, and likely will not be stopped, after which this country can once again concentrate much more seriously on the European scene. The Soviet Union, on the other hand, in the opinion of many experts, will be preoccupied for years to come with the continuing problem of Communist China and for that reason will have to keep large numbers of *its* troops in the Far Eastern provinces.

Technological superiority—NATO forces are considered, again by ISS, to have more capable and more versatile aircraft, more accurate weapons, more lethal ammunition, and "the logistic capability to sustain higher rates of fire." In a non-nuclear war situation, according to 1968 posture testimony by former SecDef Robert S. McNamara, NATO ("especially U.S.") aircraft are considered superior to Soviet/Warsaw Pact aircraft "by almost every measure—range, payload, ordnance effectiveness, loiter time, crew training" (see "Selected Characteristics" table).

Add to these factors a few additional intangibles, such as the combat seasoning of U.S. forces, the necessity for the Soviet Union to defend the world's longest geographic perimeter, the fact that the Soviet Navy, particularly its Baltic and Black Seas fleets, does not have full open access to the sea, and a much more balanced picture begins to take shape.

This said, however, the following pertinent facts and implications still remain crystal clear for U.S. decisionmakers—and would-be budgetcutters—to ponder:

(1) In absolute numbers the Soviet Union has improved its relative position in virtually every quantifiable area. Numerical progress has been accompanied by considerable force modernization and by the introduction of new weapons systems on a large scale.

(2) U.S. general purpose forces would be even more heavily outnumbered were it not for the temporary buildup necessitated by the war in Vietnam. As long as the SEA conflict continues, however, the war add-on will not be available for use in other theaters. But new U.S. force reductions already have started under the Vietnamization program, and when the U.S. redeployment from SEA is at or near completion a scaleback to an even lower level of 2.5-million men—or fewer—is generally expected.

(3) Congressionally-mandated cutbacks in U.S. weapons procurement over the past several years, however well-motivated, already have had an adverse effect on the U.S. defense posture. More such budget cuts are expected, although much of the more strident anti-military emotionalism so evident a year ago on Capitol Hill now seems to have dissipated.

(4) *If current trends continue, the USSR in the next several years will almost certainly achieve technological superiority over the U.S. in every militarily meaningful field.*

IS SUFFICIENCY ENOUGH?

If and when this most unwelcome event occurs the Soviet Union can be expected to take full political and psychological advantage of it. U.S. "sufficiency" might then still be sufficient to deter all-out nuclear war. But would it be sufficient to prevent further Communist adventurism in the Middle East, in Africa, in South America? Would it be sufficient to convince the nations of Western

Europe to stand fast no matter what form of politico/military blackmail is used against them?

There are now two equal, or almost equal, world superpowers. If the Soviet Union became "first among equals" would the changed equation have any effect on the thinking—and on the actions—of the men in the Kremlin or in the White House?

Such rhetorical questions are unanswerable, of course—which is not the same as saying they should not be asked. For the truth is that, in the opinion of several responsible U.S. defense leaders interviewed by The Journal, there comes a time when "numbers alone" *do* count, when there is no more fat which can be cut from the Defense budget, when U.S. Administration and congressional leaders must stand up to be counted for or against national security.

Whether that time is now—or is already past—no one knows. But there are many knowledgeable insiders who would agree with the Navy's VAdm Hyman G. Rickover, who said in recently released testimony before the Joint Atomic Energy Committee, that "the Soviets are capable of starting tomorrow the biggest war there has ever been and I am frankly not confident the outcome of such a war would be in our favor."

Note.—Figures are rounded off to the nearest 50 and include U.S. aircraft stationed in North Africa as well as in Europe. Totals were computed by multiplying the number of squadrons in each category by average squadron strengths—15 for bombers, 20 for fighters, 16 for cargo—and later cross-checked with USAF sources.

ARBITRARY ASSIGNMENTS TO SCHOOLS

Mr. ALLEN. Mr. President, I received a letter from a 12-year-old young lady in the sixth grade. She lives in Birmingham, Ala., and has been assigned to a public school under arbitrary and what I believe to be unlawful school plans imposed on the city of Birmingham and Jefferson County, Ala., school systems and other systems throughout the State of Alabama.

Mr. President, let me quote a single statement from the second paragraph of this letter:

I go to school and I don't have a teacher.

Mr. President, I defy any human being who retains a spark of human compassion to read this letter and not take offense at the cruel and arbitrary impositions of school plans which subordinate the welfare of schoolchildren and their parents to arbitrary racial ratios.

Mr. President, I ask unanimous consent that the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BIRMINGHAM, ALA.,
September 1, 1970.

DEAR MR. ALLEN: I am 12 years old but I am still interested in the school situation.

I go to Going school and I don't have a teacher. I don't have 3 teachers in fact. That is mighty poor organizing. I'm not the only one though. The 6th grade are missing 3 or 4 and it is so crowded in the (sorry) first & second grades they have to have split sessions.

Now down the road about a mile is another school, not even full! Poor zoning. It's just not fair. I realize we're not only state in this condition.

It is denitely taking away the freedom that was once fought for. Next they'll be telling us where to live.

It's hard on the teachers too. (And isn't fair). For example you take an experienced lady (teacher) who has been teaching a long time at a certain place and has moved to that community to teach there. Well courts come along and say I don't care if you've taught over here for 15 years we want you over here.

And say a Negro teacher has taught over in her neighborhood and now she has to go across town to teach. By the time she reaches her school a little resentment is built up.

Think about the principals too. For the last few years he or she has tried to build up a good faculty and now integration has taken their good, experienced teachers and put colored, fresh out of college, in their place.

I use to think it might be fun to be a teacher but now the job is too insecure.

I can't learn and teachers can't teach with such confusion.

Our freedom is being taken away.

You just ask a Negro student where he'd rather be. I'll more than likely say he'd rather be back at his or her school.

Where's our freedom? It's sounds like communism Leaders telling people where they'll teach and where we go to school.

I repeat, Where is our freedom?

Sincerely,

NANCY WRIGHT.

P.S.—I may seem unimportant but I don't like to be taken away from my school.

MORTGAGE FUNDS

Mr. SPARKMAN. Mr. President, the recent enactment of the Emergency Home Finance Act should provide a tremendous boost to this country's housing market, but I fear that its true potential is not yet sufficiently known or understood. It cannot meet all of its expectations unless the public knows just what it is intended to do—how it will help those persons, predominantly middle income, who have wanted to buy homes but have been unable to get financing in today's tight money market—and how it will help those lenders who normally finance conventional mortgages.

Mortgage funds have been so scarce that lenders have been hard put to meet their obligations and so expensive that middle-income families, to all intents and purposes, have been priced out of the market. There are Federal programs to assist low-income families; the high-income groups have been able to finance their homes themselves. It is construction of housing for the vast middle sector of the population which has declined seriously—18 percent last year—while low-income housing construction increased 25 percent and homebuilding for the affluent rose by 23 percent.

The new act, designed to generate $3 to $4 billion a year in new funds for the housing market, should result in a dramatic increase in construction starts for middle-income housing. I think this act, when fully implemented, could potentially stimulate new mortgage credit amounting to $20 billion.

Before going into further details of the act, and its affect on the depressed housing industry, I want to acknowledge the assistance given to the establishment of this program by those within and outside of the Government. I make special reference to the staffs of the Banking and Currency Committees of the Senate and the House, to officials of the Federal National Mortgage Association and the Federal Home Loan Bank Board, and to John E. Horne, immediate past chairman of the Federal Home Loan Bank Board and now chairman of the board of Investors Mortgage Insurance Co., Boston. John strongly urged this program, and he gave evidence of his Government training when he appropriately advocated that the Government agencies responsible for administering this act be given the authority to set rules and regulations within broad guidelines established by Congress.

Since copies of the law, with explanatory information, are available to interested persons, I will not go into the details of the legislation. I shall discuss what I believe can be a most significant breakthrough for a huge increase in funds for housing. And I shall make brief mention of several provisions which can substantially aid the distressed housing economy.

A brandnew tool, one which in the long run could exceed in importance any other provision of the Emergency Home Finance Act of 1970, is the authority to provide a secondary market for conventional mortgages. This authority is granted to both the newly created Federal Home Loan Mortgage Corporation, under the aegis of the Federal Home Loan Bank Board, and the Federal National Mortgage Association.

Conventional loans now constitute more than 80 percent of all home mortgages, and the secondary market will assist immensely in creating new and large sources of funds to help finance long overdue and urgently needed housing construction.

In the past, Government secondary market efforts have been concentrated on mortgage loans insured by the Federal Housing Administration or guaranteed by the Veterans' Administration. Now, for the first time, there is a vehicle which can provide a stable and viable secondary market for conventional mortgages.

While there is a 10-percent limit on the amount of conventional mortgages more than 1 year old which may be purchased by FHLMC or FNMA, the potential for increased housing funds is tremendous. One- to four-family home structures under conventional mortgages make up the great bulk of mortgage debt outstanding. With this in mind, it requires no great imagination to recognize that if lenders can sell new mortgages each year and finance new homes, a great and constant source of home financing funds will have been established and the peaks and valleys that formerly plagued home financers will be avoided or considerably alleviated.

In addition to providing more money for housing, the secondary market for conventional loans should make possible more profitable operations for the loan originator, the homebuilder, the mortgage banker, the product manufacturer and, indeed, evey other segment of the homebuilding industry. It also should go far toward alleviating the recurring shortage of housing funds which we witnessed in 1966 and 1969.

The contribution made in both of those years by FNMA's secondary market operations in only FHA- and VA-backed mortgages indicates the significance of this. There is a far greater opportunity in the conventional market area because, as I have pointed out, conventional loans far exceed in dollar amounts the combined totals of FHA- and VA-backed mortgages—in fact, they now constitute 80 percent of all home loans.

We know from experience that more and more families are unable to buy housing because they cannot afford a large down payment for the home of their choice. In the past, Congress has recognized this, in part measure at least, by liberalizing the FHA and VA programs and giving the FNMA authority to conduct a secondary market for Government-backed, high-ratio loans.

The 1970 act extends this program by permitting the lenders to originate and sell in the secondary market conventional loans up to 90 percent of appraised value if one of three provisions is met, the simplest being private mortgage insurance on the amount exceeding 75 percent. This is somewhat similar to FHA insurance. Private mortgage insurance gives the original lender, as well as the eventual purchaser in the secondary market, protection for the top 15 percent of the loan in the event that the home buyer defaults.

Mortgage lenders, of course, have been permitted to issue 90 percent conventional loans in the past but, with the shortage of funds, they frequently have been reluctant to do so. The fact that

they now can sell them in the secondary market should make the high-ratio loans more attractive to them.

This 10 percent down payment provision comes at a time when the young adults of America are clamoring for housing—the demand for satisfactory shelter is at its highest level since the end of World War II and the home mortgage interest rate at its highest since the Civil War. But housing starts last year were only 1.4 million—500,000 below the estimated need—and they have fallen even lower in 1970, putting housing production in this country below that of the leaders in the advanced nations.

The new act has other features which should improve the situation, including two subsidy programs which can be of immense assistance. One authorizes Federal grants up to $250 million to the Federal Home Loan Bank Board to enable it to reduce the interest it charges its members, a move that in turn will benefit the home buyer. The other authorizes the Secretary of Housing and Urban Development to make available to FNMA and the new FHLMC up to $105 million a year for subsidy payments on certain mortgages whose interest rates exceed 7 percent. However, both of these programs have to be funded.

Another provision makes available for immediate use, at the discretion of the President, an additional $2.7 billion for the GNMA.

The act provides several forms of help to savings and loan associations, thus moving them closer to becoming full family-service institutions. The major aid is authorization to serve as trustees of Keogh funds. This should result in deposits of additional millions of dollars to be used for home financing.

The act also grants commercial banks authority to make 90 percent, 30-year housing loans. This should enhance the interest that many banks are beginning to manifest in home mortgages.

So you see, Mr. President, that we have taken a potentially valuable forward stride in this legislation, particularly by creating a secondary market for conventional loans. It may be necessary later to modify or strengthen what we have done but, at least, we have taken the first and most important step.

In brief, and as I have already indicated, the Emergency Home Finance Act of 1970 promises increased opportunities for all—home buyers, mortgage lenders, builders, and indeed the entire home-building industry.

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

DIRECT POPULAR ELECTION OF THE PRESIDENT AND THE VICE PRESIDENT

The ACTING PRESIDENT pro tempore. In accordance with the previous order, the Chair lays before the Senate the unfinished business, which will be stated by title.

The title of the bill was read, as follows:

A joint resolution (S.J. Res. 1) proposing an amendment to the Constitution of the United States relating to the election of the President and the Vice President.

The Senate resumed the consideration of the joint resolution.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

Mr. HOLLAND. Mr. President, will the Senator withhold his request until I am recognized? I shall be glad to yield for the purpose he suggests.

Mr. BYRD of West Virginia, Mr. President, the Senator will have no problem.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The question is on agreeing to the committee amendment. The Chair recognizes the Senator from Florida.

Mr. HOLLAND. Mr. President, I strongly oppose the passage of Senate Joint Resolution 1. The purpose of my appearance this morning is to state the reason for my opposition.

I feel very strongly that reform of the present system is greatly needed and I endorse the sentiments expressed by President Johnson in his special message to Congress on January 20, 1966, that there is a great need to reform the electoral college system, although, in my humble judgment, President Johnson's recommendations did not go nearly far enough. To a degree, I also endorse the proposal of President Nixon as presented in his message to Congress on February 20, 1969, in that he made it clear that he believes that both the proportional and district election systems are preferable to the popular election plan.

A change in the constitutional method of selecting a President and a Vice President is long overdue. In an era of tension and the possibility of nuclear warfare we cannot for a moment again consider the possibility of a deadlock among the candidates for President and Vice President such as could have resulted in the past election, leaving a vacuum in national leadership and the possibility of not having a President or a Vice President for an indefinite period. We cannot for a moment permit such a situation to occur in the election to the most important leadership posts in the world.

I strongly feel the electoral vote of a State should not be arbitrarily counted as a whole in favor of the candidate for President or Vice President who receives, in that State, the highest number of individual votes. This method of selection, the winner-take-all system, successfully disenfranchises millions of U.S. citizens and denies them the right to have their votes weighed and counted in the choice of President and Vice President.

The present system of electing the President and Vice President is governed by article II, section I, and the 12th amendment to the Constitution and is still unchanged by the addition of the 23d amendment adding the District of Columbia electors. These sections provide that the President and Vice President shall be chosen by electors appointed by each State in a manner directed by its legislature, each State having the same number of electors as the total number of its Members of Congress in both Houses.

In the case of the District of Columbia, its electors would be equal to the number of those who represent the smallest State in the Union.

As to the States, this system was agreed upon by the writers of our Constitution for two basic reasons: first, the electors should actually choose the President and Vice President because of their greater knowledge of public affairs than the populace as a whole had at that time; and second, in order to protect the smaller States, each State should have two electors representing its Senators, based on its status as a State, in addition to the number of electors, representing its Members in the House of Representatives, based on its population.

In this day of much better communications and much greater understanding of public affairs by the average citizen there is no further reason or justification for continuing the presidential electors as such or the electoral college as such. Under present conditions it is much sounder to let the voters themselves express their preference for President and Vice President in a binding way rather than to delegate their power of election to other individuals.

However, it is interesting to note that the same reasons that existed at the time of the adoption of the Constitution in 1788 and at the time of the adoption of the 12th amendment in 1804 for the fixing of the number of electors of each State on the basis which included all of their representation in the U.S. Congress, that is, both Senators and Representatives, still exist in even greater degree and operate as strong arguments against the abandonment of the constitutional method of fixing the weight of each State in presidential elections. These reasons were and are:

First, the vast difference in population of the several States; and

Second, the zealous retention in the States of many elements of sovereignty.

The census of 1790 which occurred shortly after the adoption of the Constitution and the beginning of our Federal Government in 1789, showed the population of Delaware at 59,096 and of Rhode Island at 68,825. These were the two smallest of the original States. The same census of 1790 showed the population of the two largest States as follows: Virginia, 880,200; and Pennsylvania, 602,-365. Assuming that these statistics reflect accurately the relative population of the States at the time of the adoption of the Constitution, it thus appears that Virginia then had more than 14 times the population of Delaware and approximately 13 times the population of Rhode Island. Pennsylvania had more than 10 times the population of Delaware. Practically the same disparity of population

is reflected by the census of 1800, taken shortly prior to the adoption of the 12th amendment in 1804, which did not disturb the setup of the electoral college.

By the 1960 U.S. census, the population of the then largest State, New York, was 16,782,304, and the population of the second largest State, California, was 15,717,204. These largest States compared with the smallest States in 1960 are as follows: Alaska had 226,167; Nevada had 285,278. Thus, New York had more than 70 times the population of Alaska. It is clear that the disparity in population between the largest and the smallest State in 1960 was much greater than was the disparity between the largest and smallest State at the time of the adoption of the Constitution and also at the time of the adoption of the 12th amendment in 1804. As to the 1970 census on which we have only preliminary figures the disparity in population between the largest State, California, and the smallest State, Alaska, is even greater than it was in 1960.

Furthermore, I cannot believe that the Congress or the American people are any less conscious at this time than were the Founding Fathers of the necessity for preserving the full weight of the States as separate, sovereign units of government which have retained and preserved for themselves many elements of their sovereignty and which are entitled now, as they were in the early days of the Republic, to the retention of their two votes in the U.S. Senate and the counting of their two Senators with their Representatives to make up the total number of their electors to whom they are entitled in the selection of the President and Vice President. To put the presidential election solely on the basis of population or of votes cast in all 50 States and the District of Columbia would be to downgrade very greatly all of the smaller States in the Union, including each of the 35 States whose population is less than the average population of all 50 States, or about 3.9 million persons in 1970.

As just one instance of the terrific impact of popular election of the President and Vice President, and assuming that in all States the votes cast would be approximately in proportion to total population, based on preliminary 1970 census figures, I call attention to the fact that the District of Columbia—764,000—would by this method be given more weight in a presidential election than Alaska — 294,607 — and Delaware—542,979—combined, or greater weight than Wyoming — 328,591 — and Vermont—437,744—combined. The District of Columbia—764,000—would be given greater weight than any of the following 11 States: Alaska, 294,607; Delaware, 542,979; Hawaii, 748,578; Idaho, 698,215; Montana, 682,133; Nevada, 481,893; New Hampshire, 722,753; North Dakota, 610,648; South Dakota, 661,406; Vermont, 437,744; and Wyoming, 328,591.

I was glad to support the 23d amendment by which the District of Columbia was given the same weight as our smallest State in the electoral college for the election of the President and Vice President, but I am not prepared to approve this additional adventure by which the District of Columbia—which does not have any of the duties or responsibilities of sovereign statehood—would be given greater weight than any of the 11 States which I have listed and much greater power in the election of Presidents than is conferred on it now by the 23d amendment.

It is a bit amusing to contrast the proposal which we are considering today as it affects the District of Columbia with the action taken by the Senate Wednesday of this very week, 2 days ago, by which the Congress completed action on a bill giving a nonvoting delegate in the House of Representatives to the District of Columbia, thus clearly showing by such action that the Congress recognized what is a fact—that the District of Columbia is not a State and does not have State sovereignty under which it is responsible for so many laws affecting the daily lives of its citizens and the millions of transients who come here each year. And yet, today, by this constitutional amendment it is proposed that we consider the District of Columbia on exactly the same basis as each of the 50 States, greatly enlarging its power in the election of presidents and vice presidents at the same time we are downgrading the power of more than half of the States.

Sometimes in this day of constant pushing for increased centralized, Federal power, we are prone to forget that the States are still sovereign in so many fields and that by their laws they handle so many of the matters which are completely vital to all of their citizens. While the States have lost some of their jurisdiction due to Federal encroachment, the States still retain and administer most of the matters which vitally affect the lives of their average citizens such as the following:

Taxing real and personal property; operating the public schools; keeping vital statistics, such as registration of births and deaths; appointment of guardians for minors and incompetents and handling their estates; ownership and conveyancing of property; providing for the distribution of the estates of deceased persons; providing for the licensing of teachers, doctors, dentists, engineers, lawyers, and other vital professional and business persons and institutions; creating and regulating corporations and trusts; providing for the marriage and divorce of their citizens; handling most civil actions and most criminal prosecutions; enforcing law and order; taking life as a penalty for certain heinous crimes; providing, through police, firemen, inspectors and sanitary workers, for their security and that of homes and business; providing for the poor house and for hospitals for the insane, the feebleminded and the ill; controlling the highways; regulating the rates of water, power, gas and local transportation and controlling fresh water supplies.

In short, and this is not a full list of the State powers still retained, the States handle most of the important aspects of life for both their citizens and transients. None of these activities are controlled for itself by the District of Columbia—all by the National Congress. Yet, it is proposed both to give the same weight to the District of Columbia which is given to States according to population and it is also proposed to take away from the small States the equal weight which they were given by the Founding Fathers, and have always had, to represent their State and local interests, not just in the Senate of the United States, but also in the election of the President and Vice President.

I do not believe that many of the advocates of the direct election of the President and Vice President have carefully thought the matter through. I do not believe they want to downgrade the States as would be done by the adoption of the proposed direct election amendment. Particularly in the Senate, I cannot believe that the advocates of the direct election of the President and Vice President realize that the proposed action is a direct encouragement to later action toward depriving the States of their equal representation in the Senate. And I realize that that would be very, very difficult under the Constitution. We have already seen, however, that the Supreme Court is willing to override ancient, constitutional safeguards when they conflict with its philosophy as to what they feel should be the law in this 20th-century Republic. I am not willing to take this far-reaching step which so completely changes the underlying philosophy of our Republic of dual sovereignty as stated by the Founding Fathers and as practiced with relative success and public approval through 180 years of practical government of our ever-growing and ever more powerful Nation. I am unwilling to take this step which, in the selection of our highest executive officials, would radically change our Government from a representative republic to an all-out democracy.

Mr. President, it is interesting to note, as shown on the attached table, the great shift in weight of the several States if the election of the President and Vice President were by popular vote. The large States would be given increased weight and power at the expense of the smaller States as follows:

Under the popular election plan, based on 1970 preliminary census figures, and assuming that votes cast would be in proportion to population, 29 States and the District of Columbia would have a smaller voice in the election of the President and Vice President than they have under the electoral college system, six States would retain equal voice, and 15 States would gain a stronger voice.

Under the proposed popular election system, nine States, having 52.1 percent of the population, could control the election.

Under the present electoral system, 11 States, having 50.6 percent of the total electoral vote, could control the election.

As may be readily seen from the table, the loss in State weight, under the popu-

lar election system as opposed to the electoral system, is 83 percent in the case of Alaska; seven other States would lose 50 percent or more of their weight; eight other States would lose over 25 percent of their weight; and 13 other States would lose from 5.3 percent of their weight to 25 percent of their weight. I submit, Mr. President, that those Senators from those 29 States who support the popular election plan must have given little thought to the loss of weight of their respective States under the pending proposal. At this point, I ask unanimous consent that the tabulation referred to be printed in the RECORD.

The PRESIDING OFFICER (Mr. LONG). Is there objection?

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

State	Population 1970	Percent of population	Electoral vote	Percent of electoral vote	Percent of popular vote versus electoral vote: Gain	Percent of popular vote versus electoral vote: Loss	Percent of State weight: Gain	Percent of State weight: Loss
California	19,696,840	9.8	45	8.4	1.4		16.7	
New York	17,979,712	9.0	41	7.6	1.4		18.4	
Pennsylvania	11,663,301	5.8	27	5.0	.8		16.0	
Texas	10,989,123	5.5	26	4.8	.7		14.6	
Illinois	10,973,986	5.5	26	4.8	.7		14.6	
Ohio	10,542,030	5.3	25	4.7	0.6		12.8	
Michigan	8,776,873	4.4	21	3.9	.5		12.8	
New Jersey	7,091,995	3.5	17	3.2	.3		9.4	
Florida	6,671,162	3.3	17	3.2	.1		3.1	
Massachusetts	5,630,224	2.8	14	2.6	.2		7.7	
Indiana	5,143,422	2.6	13	2.4	0.2		8.3	
North Carolina	4,961,832	2.5	13	2.4	.1		4.2	
Missouri	4,636,247	2.3	12	2.2	.1		4.6	
Virginia	4,543,249	2.3	12	2.2	.1		4.6	
Georgia	4,492,038	2.2	12	2.2				
Wisconsin	4,366,766	2.2	11	2.0	.2		10.0	
Maryland	3,874,642	1.9	10	1.9				
Tennessee	3,838,777	1.9	10	1.9				
Minnesota	3,767,975	1.9	10	1.9				
Louisiana	3,564,310	1.8	10	1.9		0.1		5.3
Alabama	3,373,006	1.7	9	1.7				
Washington	3,352,892	1.7	9	1.7				
Kentucky	3,160,555	1.6	9	1.7		.1		5.9
Connecticut	2,987,950	1.5	9	1.7		.2		11.8
Iowa	2,789,893	1.4	8	1.5		.1		6.6
South Carolina	2,522,881	1.3	8	1.5		.2		13.3
Oklahoma	2,498,378	1.2	7	1.3		.1		7.7
Kansas	2,222,173	1.1	7	1.3		.2		15.4
Colorado	2,195,887	1.1	7	1.3		.2		15.4
Mississippi	2,158,872	1.1	7	1.3		.2		15.4
Oregon	2,056,171	1.0	6	1.1		.1		9.1
Arkansas	1,886,210	.9	6	1.1		.2		18.2
Arizona	1,752,122	0.9	6	1.1		0.2		18.2
West Virginia	1,701,913	.8	6	1.1		.3		27.3
Nebraska	1,468,101	.7	5	.9		.2		22.2
Utah	1,060,631	.5	4	.7		.2		28.6
New Mexico	998,257	.5	4	.7		.2		28.6
Maine	977,260	.5	4	.7		.2		28.6
Rhode Island	922,461	.5	4	.7		.2		28.6
District of Columbia	764,000	.4	3	.6		.2		33.3
Hawaii	748,578	.4	4	.7		.3		42.9
New Hampshire	722,753	.4	4	.7		.3		42.9
Idaho	698,215	.4	4	.7		.3		42.9
Montana	682,133	.3	4	.7		.4		57.1
South Dakota	661,406	.3	4	.7		.4		57.1
North Dakota	610,648	.3	3	.6		.3		50.0
Delaware	542,979	.3	3	.6		.3		50.0
Nevada	481,893	.2	3	.6		.4		66.6
Vermont	437,744	.2	3	.6		.4		66.6
Wyoming	328,591	.2	3	.6		.4		66.6
Alaska	294,607	.1	3	.6		.5		83.3
Total	200,263,721	100.0	538	100.0	7.4	7.4		

Mr. HOLLAND. Mr. President, I call attention briefly in passing to the fact that the following States are the ones which are most adversely affected by the change in the system that is proposed under Senate Joint Resolution 1.

Alaska would lose 83.3 percent of its weight.

Wyoming would lose 66.6 percent of its weight.

Vermont would lose 66.6 percent of its weight.

Nevada would lose 66.6 percent of its weight.

Delaware would lose 50 percent of its weight.

North Dakota would lose 50 percent of its weight.

South Dakota would lose 57.1 percent of its weight.

Montana would lose 57.1 percent of its weight.

Idaho would lose 42.9 percent of its weight.

New Hampshire would lose 42.9 percent of its weight.

Hawaii would lose 42.9 percent of its weight.

Rhode Island would lose 28.6 percent of its weight.

Maine would lose 28.6 percent of its weight.

New Mexico would lose 28.6 percent of its weight.

Utah would lose 28.6 percent of its weight.

Nebraska would lose 22.2 percent of its weight.

West Virginia would lose 27.3 percent of its weight.

Arizona would lose 18.2 percent of its weight.

Arkansas would lose 18.2 percent of its weight.

Oregon would lose 9.1 percent of its weight.

Mississippi would lose 15.4 percent of its weight.

Colorado would lose 15.4 percent of its weight.

Kansas would lose 15.4 percent of its weight.

Oklahoma would lose 7.7 percent of its weight.

South Carolina would lose 13.3 percent of its weight.

Iowa would lose 6.6 percent of its weight.

Connecticut would lose 11.8 percent of its weight.

Mr. President, the list shows for itself what is the situation with reference to each State in the Union. I hope that Senators will study the matter thoroughly.

I should add with respect to those States that are adversely affected that Kentucky would lose 5.9 percent of its weight and Louisiana would lose 5.3 percent of its weight.

I say again the figures in this table are based on the 1970 census, which I know is not complete, but we will never have population figures up to date but for a very short time, under our present system of decennial census. They will become out of date within a year to some extent, and much more out of date before the next decennial census.

Mr. President, if one would study the unusual weather phenomenon occurring during the period of the month of November when presidential elections occur it would be readily seen how adverse weather conditions could play a part on the fairness of direct elections, and incidentally if the proposals of the pending amendment were adopted, we should have a second election coming, let us say, in December, in which the chance of disturbance of the weight of many of the States would be even more adversely affected, because the weather conditions in December are even worse in the colder States than they are in November.

A study of the weather conditions would make it completely clear that in the event of nationwide direct election of President and Vice President, the people in one or more States might not be given their full weight in comparison to other States of the Nation due to no fault of their own. Of course, adverse weather affects voting in each State singly, and always has, but the State will still have its full electoral strength and the votes actually cast should be fairly representative of the attitude of the people of that State as a whole.

The district plan, that has been discussed and is generally referred to as the Mundt plan, where two State electoral votes are awarded for each Senator on a statewide basis and one for each separate congressional district in the State, recognizes the federal system, but it is subject to a marked degree of human and political control and manipulation by those who control the machinery of State government.

Those who favor the district plan have shown little recognition of the danger of gerrymandering congressional district lines by State legislatures in such a way as to directly affect the district vote in presidential elections. I am particularly aware of this danger because the preliminary census figures for 1970 show that in my own State—Florida—we may have to redistrict to allow for three additional Representatives, or a total of 15 Members of Congress from Florida; whereas in the State of California—now

our largest State—the legislature will probably have to redistrict to allow for five new Congressmen, or a total of 43. These two figures clearly show how heavy population shifts may be from one decennial census to another and how great the opportunity and temptation for gerrymandering in the State legislatures would become under the proposed District or Mundt plan.

Besides, under the District plan, the winner-take-all principle would still apply statewide to the two statewide electoral votes and would also apply, in each district, to the district electoral votes. Then, too, there are substantial population shifts and changes that take place between the decennial censuses for which compensation cannot be made. Many who have supported this plan in the past may now have second thoughts in the light of the decisions in the legislative apportionment cases decided by the Supreme Court which will be discussed later. This plan is still eminently preferable to the present system or that of popular election, in my opinion.

In other words, if it came to a choice—and I hope it does not come to such a choice—between the three systems—that is the presently existing system, the popular election system as proposed in Senate Joint Resolution 1, and the District or Mundt plan which I understand may be proposed as a substitute—I would certainly favor the District plan.

The proportional method of selecting the President and Vice President, as presented in the substitute to be offered by the Senator from North Carolina (Mr. ERVIN) and which I advocate, is in complete harmony with our constitutional forms. It is precise and not subject to political manipulation or human frailties. It is fair to the States, both small and large, and it gives to each and every qualified elector in every State the right to have his vote counted for his candidate for President and Vice President. I firmly believe that a State should be entitled to electoral votes and electoral weight proportionate to its total representation in Congress.

I further feel that the electoral vote of each State should be divided between candidates in the exact proportion in which the total vote of that State is cast. This is substantially the same plan that was contained in the proposed Lodge-Gossett amendment for which I was proud to cast my vote in 1950 when it was adopted in the Senate by a vote of 64 to 27. I have introduced in this Congress Senate Joint Resolution 4 which contains this substantial language:

> Each person for whom votes were cast for President in each State shall be credited with such portion of the electoral vote thereof as he received of the total vote of the electors therein for President and each person for whom votes were cast for Vice President in each State shall be credited with such proportion of the electoral votes thereof as he received of the total vote of the electors therein for Vice President. In making the computation, fractional numbers less than one-thousandth of an electoral vote shall be disregarded. The person having the greatest number of electoral votes for President shall be the President if such number be at least 40 per centum of the whole number of such electoral votes. If no person has at least 40 per centum of the whole number of electoral votes, then from the persons having the three highest number of electoral votes for President, the Senate and House of Representatives, sitting in joint session shall choose immediately, by ballot, the President. A majority of the votes of the combined authorized membership of the Senate and the House of Representatives shall be necessary for a choice.
>
> The Vice President shall be likewise elected, at the same time and in the same manner and subject to the same provisions, as the President, but no person constitutionally ineligible for the Office of President shall be eligible to that of Vice President of the United States.

The adoption of this language will effect a basic, far-reaching, and necessary reform in our constitutional method for selecting a President and Vice President and provide for the retention of our federal system as a republic and will preserve the political dual identity of the States in the administration of vital matters, such as age, residence, registration, and absentee voting requirements.

I should add that I am not in favor of the Federal Government taking over the control of those vital election machinery provisions always provided by State law, and I think properly so provided, because the experience of the States differs in this very vital field.

Mr. President, the historical arguments as to why the electoral college system should be reformed have been stated and restated in the past with such power, force, and eloquence that I am reluctant to advert to them now and do not believe that it is necessary to inform and enlighten the Members of the Senate and the people on the issues. Committee hearings of both the House and Senate and the CONGRESSIONAL RECORD are replete with these arguments, which have already been stated several times during the course of this debate.

The urgent need today is to examine and weigh on the scales of judgment new evidence and new developments that have effect and influence on the issue involved.

We are familiar with the decision of the Supreme Court on March 26, 1962, in the case of Baker against Carr, commonly known as the Tennessee Legislative Reapportionment Case requiring the one-man, one-vote as applied in setting up State legislative districts. We know of the Court's decision in *Wesberry* v. *Sanders*, 376 U.S. 1, which extended the doctrine of the one-man, one-vote to the setting up of districts for the election of Members of the House of Representatives.

Since the 17th article of amendment was enacted subsequent to the 14th, it is pleasant to suppose that we Senators are safely beyond the reach of the Court. But, when one considers how far the actual election of a President and Vice President has, in fact, departed from the electoral college concept written into the Constitution by the Founding Fathers, a serious question is presented.

Mr. Arthur M. Schlesinger, in his book "Paths to the Present," describes what happened in this language:

> What demoted the electoral college from a deliberative body to a puppet show was the rise of political parties. As people began taking sides on public questions, they were unwilling to leave the crucial choice of the Chief Executive to a sort of lottery. Instead, each party publicly announced its slate of electors and the candidate they would support. This usurpation of the electors' functions, though peaceably achieved, amounted to a coup de-etat. It was an amendment of the written Constitution by the unwritten Constitution. The electors, while retaining the legal status of independence, became henceforth hardly more than men in livery taking orders from their parties.

In the opinion of many, of whom I am one, the Supreme Court of today has, in fact, acted in an extralegal and supra-constitutional manner. Acting as it has, would it not be entirely within the realm of possibility for the Supreme Court to assert its judicial power if it felt that great masses of citizens in these United States were being denied equal protection of the laws in having their vote for President and Vice President discarded because they failed to vote for the candidate or candidates that received the highest number of votes in their respective States.

In any event, it would be most appropriate for Congress and the States to implement the principle of fair and proportionate districting of areas from which public officers are to be elected by providing for the division of the electoral vote of a State in accordance with the proportionate vote for the candidates, and that is what my amendment would do, down to the thousandth point, but not beyond that point.

The trials and tribulations of the electoral college system have differed from election to election. The election of 1948 dramatically illustrated how third-party movements and splinter parties could so dilute the vote between candidates that the States' electoral vote would be cast to candidates receiving less than a majority of the popular vote. In the States of California, Florida, Indiana, Louisiana, Maryland, Michigan, New York, Ohio, Oregon, Tennessee, and Virginia where the total population vote amounted to 19,985,102, the candidate carrying the entire State electoral vote for a total of 184, received less than a majority of the popular vote. There is no way to predict what will happen in regard to the future of third and splinter parties. But historically, one thing that is certain regarding national politics is the uncertainty of what will develop.

In the 1948 election in Florida, which I have the honor to represent in part, 577,643 votes were cast. We are now casting 2 million or better. The Truman-Barkley ticket received 281,988 votes, or 49 percent of the total vote against 194,280 votes, or 33 percent of the total vote for the Dewey-Warren ticket; 89,755, or 16 percent, the total vote for the Thurmond-Wright ticket, and 11,620, or 2 percent of the total vote for the Wallace-Taylor ticket.

The Truman-Barkley ticket received all eight electoral votes, but under my resolution the total electoral vote would

have been distributed—the Truman-Barkley ticket receiving 3.9 electoral votes, the Dewey-Warren ticket receiving 2.6 of the electoral vote, the Thurmond-Wright ticket receiving 1.3 of the electoral vote and the Wallace-Taylor ticket receiving 0.2 of the electoral vote. Thus, no voting citizen would have been disenfranchised.

In 1960 the presidential election was so close that the winning candidate received 49.7 percent of the popular vote nationwide and the losing candidate 49.5. Although there was only two-tenths of 1 percent difference in the popular vote, the electoral vote was 303 to 219 in favor of the leading candidate.

In the last election of 1968, President Nixon received 43.4 percent and former Vice President Humphrey received 42.7 percent of the popular vote. Although there was only seven-tenths of 1 percent difference in the popular vote, the electoral vote was 301 to 191 in favor of President Nixon and the third party candidate received 46 electoral votes. There is obviously something wrong with a system that spells out an end result such as this when the popular vote of the two leading candidates was almost identical.

As a matter of interest, I have prepared a table showing the total electoral vote by State, the electoral vote received by each candidate in the last election, and the electoral vote each candidate would have received under the proportional system, which I advocate. And I ask that that collation be printed in the RECORD.

There being no objection, the compilation was ordered to be printed in the RECORD, as follows:

PRESIDENTIAL ELECTION RESULTS—1968

State	Total electoral vote	Electoral vote received			Percent electoral vote based on Senate Joint Resolution 4		
		Nixon	Humphrey	Wallace	Nixon	Humphrey	Wallace
Alabama	10			10	1.42	1.97	6.61
Alaska	3	3			1.34	1.30	.36
Arizona	5	5			2.76	1.78	.46

Mr. HOLLAND. Another of the traditional and oft-repeated arguments against any character of electoral reform is that the South is a single party area and that the topheavy and overwhelming majorities it gives to Democratic candidates is unfair to the splits that exist elsewhere in the country. It is quite untimely to mention that point right now, Mr. President, but it has been mentioned repeatedly in the past as one of the arguments against the adoption of the proportional election system.

Further, the point was made that the one-party system created such apathy in general national elections that only a fraction of the population turned out to vote. There have been fundamental changes in the voting patterns of Southern States that eliminate completely any validity that these arguments might contain against electoral reform.

First, let us examine what has happened to the "one-party South" in the elections since electoral reform was last considered in the Senate. In the Presidential election of 1956, Alabama cast 56.5 percent of its vote for the Democratic candidate, 39.4 percent for the Republican; Arkansas, 52.5 percent Democratic, 45.8 percent Republican; Florida 42.7 percent Democratic, 57.3 percent Republican; Georgia, 66.8 percent Democratic, 32.8 percent Republican; Louisiana 39.5 percent Democratic, 53.3 percent Republican, 7.2 percent unpledged; Missssippi 49.3 percent Democratic, 24.5 percent Republican, 17.3 percent unpledged; North Carolina 50.7 percent Democratic, 49.7 percent Republican; South Carolina 45.4 percent Democratic, 25.2 Republican, 29.4 percent unpledged; Tennessee 48.6 percent Republican, 49.2 percent Democratic; Texas 44.0 percent Democratic, 55.3 percent Republican, and Virginia 38.4 percent Democratic, 55.4 percent Republican.

In the 1960 presidential election, Alabama cast 56.9 percent Democratic votes, 41.8 percent Republican; Arkansas 50.2 percent Democratic, 43.1 Republican; Florida 48.5 percent Democratic, 51.5 percent Republican; Georgia 62.6 percent Democratic, 37.4 percent Republican; Louisiana 50.4 percent Democratic, 28.6 percent Republican, 21 percent Independent; Mississippi 36.32 percent Democratic, 24.7 percent Republican, 39 percent unpledged; North Carolina, 52.1 percent Democratic, 47.9 percent Republican; South Carolina 51.2 percent Democratic, 48.8 percent Republican; Tennessee 45.8 percent Democratic, 52.9 percent Republican; Texas 50.5 percent Democratic, 48.5 percent Republican; and Virginia 47 percent Democratic and 52.4 percent Republican.

In 1964 no votes were registered in Alabama for the Democratic candidate, the Republican received 69.54 percent of the total, and the balance went to unpledged electors. In Arkansas the vote was 56.5 percent Democratic, 43.41 percent Republican; Florida 51.15 percent Democratic, 48.85 percent Republican; Georgia 45.88 percent Democratic, 54.12 percent Republican; Louisiana 43.19 percent Democratic, 56.81 percent Republican; Mississippi 12.86 percent Democratic, 87.14 percent Republican; North Carolina 56.15 percent Democratic, 43.85 percent Republican; South Carolina 41.1 percent Democratic, 58.9 percent Republican; Tennessee 55.6 percent Democratic, 44.4 percent Republican; Texas 63.46 percent Democratic, 36.54 percent Republican; and Virginia 53.82 percent Democratic, 46.18 percent Republican.

In the 1968 presidential election Alabama cast 18.6 percent Democratic votes, 14.1 percent Republican, 66 percent for the third party; Arkansas 30.3 percent Democratic, 31 percent Republican, 38.7 percent third party; Florida 39.9 percent Democratic, 40.5 percent Republican, 28.6 percent third party; Georgia 27 percent Democratic, 29.7 percent Republican, 43.3 percent third party; Louisiana 28.2 percent Democratic, 23.5 percent Republican, 48.3 percent third party; Mississippi 23 percent Democratic, 13.5 percent Republican, 63.5 percent third party; North Carolina 29.2 percent Democratic, 39.5 percent Republican, 31.3 percent third party; South Carolina 29.6 percent Democratic, 38.1 percent Republican, 32.3 percent third party; Tennessee 28.1 percent Democratic, 37.8 percent Republican, 34.1 percent third party; Texas 41.1 percent Democratic, 39.9 percent Republican, 19

percent third party; Virginia 32.5 percent Democratic, 43.4 percent Republican, 23.6 percent third party.

These percentages reflect a very healthy balance between the two major parties in Southern States existing in the last four presidential elections. In the foreseeable future there is no reason to assume that the pattern will change. In fact, there are indications that the Republican Party will continue to grow and thrive in the South. On the other side of the coin, there has been a marked change of voting habits in those States that were formerly famous for their rock-ribbed Republicanism, such as Maine, New Hampshire, and Vermont. In the 1964 election the Democratic candidate carried Maine 262,224 to 118,701. Johnson carried New Hampshire 182,065 to 104,029. He carried Vermont 107,674 to 54,868. In 1968, Humphrey carried Maine 217,312 to 169,254, while New Hampshire and Vermont were carried by President Nixon by 154,903 to 130,589 and 85,142 to 70,255, respectively. The two-party system is now very clearly a reality throughout the entire United States in presidential elections.

Competition between the parties for votes, coupled with the elimination of the poll tax as a prerequisite in voting in the election of national officers and the application of the voting rights provisions of the various civil rights acts, resulted in a marked increase in the total number of votes cast in the general elections for President and Vice President. In a few more elections, there will be no substantial difference between the percentage of the total vote cast in other areas of the United States.

As I previously stated, I can endorse, to a degree, the proposal contained in President Nixon's message of February 20, 1969. However, I cannot give carte blanche approval to his recommendations as they contain a provision for a runoff election by popular vote for the President and Vice President, between the top two candidates, in the event no presidential slate receives 40 percent or more of the electoral vote in the regular election. A similar provision is contained in the pending proposal, Senate Joint Resolution 1.

This method of electing the President and Vice President would delay materially the election of the President and Vice President and would add greatly to the cost of elections. And this provision adopts the plan for election by national popular vote, with which I am in total disagreement, in the second or run-off election. I cannot think of anything that would be more encouraging to the formation of splinter parties or third parties than this feature in the President's proposal and in Senate Joint Resolution 1. I am in total disagreement with this part of the President's program; the encouragement which this part of the program would give to third parties and splinter parties is self-evident. That third party effort might be based on genuine interest in the new program, in the new platform of a candidate, or might be fomented by one of the principal parties through an effort to get some splinter party in to cut down the vote of the other party. Regardless of how it came, the addition of splinter parties, of third parties, is deliberately encouraged in my opinion by such a program as the President's suggestion in the event there is no candidate in the first election which gets 40 percent of the total electoral weight.

I should add again, when I said earlier in my statement that such an election would add very greatly to the expense of elections, which are already too great in the opinion of most citizens, and are largely responsible, in my opinion, for the disfavor in which politics now exists in the minds of too many people, and would also bring about a great delay.

If that delay came up into December, it would bring about a throwing of the election in confused weather conditions, which would be sure to downgrade the weight of certain of the States. This would not happen in my part of the Nation, but nevertheless certain States would find themselves downgraded, if there were a popular election of Presidents in that second election as suggested by President Nixon and as provided also in the pending measure, Senate Joint Resolution 1, with the second election coming in December.

I agree, therefore, with all of the earlier portion of his suggestions. I greatly approve the fractional division of the electoral weight of each State as the preferable course to follow.

Second, I would prefer the so-called District plan, which is certainly much better than either the present program or than the popular election of Presidents. But I cannot approve the President's going to the popular election plan in the event a second election is called, and I much prefer what is provided in my own amendment and in Senator ERVIN's substitute, which would throw the matter then into the entire Congress, the House plus the Senate, with every Congressman and every Senator having a full vote in the election of the President between the three candidates who had the highest vote in the electoral weight count in the first election.

That would come as near to preserving the republican system which we have, the Federal system under which we have lived since the Constitution was adopted, as anything else, because it would still give two votes to each State, based on their statehood, based now on two Senators, and would give the vote to each district in the State based on the population of that State.

Under my proposal, Senate Joint Resolution 4, in the event no candidate for the office of President and Vice President receives 40 percent of the electoral vote, Members of the House of Representatives and Senate, sitting in joint session would choose, immediately by ballot, the President and Vice President—the majority of the votes of the combined membership of the House of Representatives and Senate being necessary for a choice. As Senators can see, should my resolution be adopted, each State will retain its full weight by population and its weight as a sovereign State unit of government as it now has under the present system, and as envisioned by our Founding Fathers in order to protect remote and underdeveloped smaller States from perpetual stepchild status.

My proposal would not be an open invitation for the formation of splinter or third-party efforts.

Former President Johnson voted in 1956 in favor of the Daniel compromise amendment which permitted States the choice between the proportional and district plan of reform. Former Presidents of the United States Truman and Eisenhower have communicated with the Senate Judiciary Committee and expressed agreement that change should be made in the method of selecting our President and Vice President.

Mr. President, there will never be a better time than the present to completely overhaul the ancient and outworn machinery now provided for the election of the President and Vice President. This is and should be an absolutely bipartisan effort. And in my judgment, no plan has yet been advanced which preserves and safeguards our Federal system, that better achieves the result of fair and democratic reform of the electoral system than does the proportional plan which I support, and which is supported also by the Senator from North Carolina (Mr. ERVIN), and will be included in the substitute amendment which he will offer.

I ask unanimous consent that the complete text of my resolution be printed in the RECORD at this point.

There being no objection, the resolution (S.J. Res. 4) was ordered to be printed in the RECORD, as follows:

S.J. RES. 4

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"ARTICLE —

"SECTION 1. The executive power shall be vested in a President of the United States of America. He shall hold his office during a term of four years, and together with the Vice President, chosen for the same term, be elected as provided in this Constitution. No person constitutionally ineligible for the office of President shall be eligible for that of Vice President of the United States.

"Each State shall be entitled to cast for President and Vice President a number of electoral votes equal to the whole number of Senators and Representatives to which such State may be entitled in the Congress. Such electoral votes shall be cast, in the manner provided by section 3 of this article, upon the basis of an election in which the people of such State shall cast their votes for President and for Vice President. The voters in each State in any such election shall have the qualifications requisite for persons voting for members of the most numerous branch of the State legislature.

"The Congress shall determine the time of such election, which shall be the same throughout the United States. Until otherwise determined by the Congress, such election shall be held on the Tuesday next after the first Monday in November of the year preceding the year in which the regular term of the President is to begin.

"SEC. 2. In such election within any State, each voter by one ballot shall cast his vote for President and his vote for Vice President. The name of any person may be placed upon any ballot for President or for Vice President only with the consent of such person.

"Within forty-five days after the election or at such time as the Congress shall direct, the official custodian of the election returns of each State shall prepare, sign, certify, and transmit sealed to the seat of the Government of the United States, directed to the President of the Senate, a list of all persons for whom votes were cast for President and a separate list of all persons for whom votes were cast for Vice President. Upon each such list there shall be entered the number of votes cast for each person whose name appears thereon, and the total number of votes cast in such State for all persons whose names appear thereon.

"SEC. 3. On the 6th day of January following the election, unless the Congress by law appoints a different day not earlier than the 4th day of January and not later than the 10th day of January, the President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the electoral votes shall then be counted. Each person for whom votes were cast for President in each State shall be credited with such proportion of the electoral votes thereof as he received of the total vote of the electors therein for President, and each person for whom votes were cast for Vice President in each State shall be credited with such proportion of the electoral votes thereof as he received of the total vote of the electors therein for Vice President. In making the computations, fractional numbers less than one-thousandth shall be disregarded. The person having the greatest number of electoral votes for President shall be President, if such number be at least 40 per centum of the whole number of such electoral votes. If no person has at least 40 per centum of the whole number of electoral votes, then from the persons having the three highest numbers of electoral votes for President, the Senate and the House of Representatives sitting in joint session shall choose immediately, by ballot, the President. A majority of the votes of the combined authorized membership of the Senate and the House of Representatives shall be necessary for a choice.

"The Vice President shall be likewise elected, at the same time and in the same manner and subject to the same provisions, as the President, but no person constitutionally ineligible for the office of President shall be eligible to that of Vice President of the United States.

"SEC. 4. If, at the time fixed for the counting of the electoral votes as provided in section 3, the presidential candidate who would have been entitled to receive a majority of the electoral votes for President has died, the vice-presidential candidate who is entitled to receive the majority of the electoral votes for Vice President shall become President-elect.

"SEC. 5. The Congress may by law provide for the case of the death of any of the persons from whom the Senate and House of Representatives may choose a President or a Vice President whenever the right of choice shall have devolved upon them, and for the case of death of both the presidential and vice-presidential candidates who, except for their death, would have been entitled to become President and Vice President.

"SEC. 6. The first, second, third, and fourth paragraphs of section 1, article II, of the Constitution, the twelfth article of amendment to the Constitution, and section 4 of the twentieth article of amendment to the Constitution, are hereby repealed.

"SEC. 7. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the States within seven years from the date of its submission to the States by the Congress."

Mr. HOLLAND. I thank the Chair, and in closing may I just say—and I am not saying this in disrespect to anyone, because I think that there is plenty of room for good conscientious differences in this matter, but as one who has been engaged in practical politics for a long time, during which I have also tried to remain in the constitutional field—it seems to me that it would be completely futile to suggest to the States the election of President and Vice President by popular vote.

I cannot see the 29 States, which are deprived of a part and some of them of a great part of their weight in the election of the President and Vice President supporting that particular amendment.

Certainly I think there would be well more than 12 of them, because more than 12 are hurt very seriously, are hurt in a major way, are cut down by a major percentage in their importance in the selection of President and Vice President by the popular election system, and I do not believe that practical thinking can bring the conclusion that there is a chance for the adoption of the constitutional amendment requiring election of President and Vice President by popular vote. The legislatures of the various States, to the number of 38, would have to approve that amendment to make it effective, and I cannot see any reason whatever to expect that 38 legislatures would do so.

Mr. President, it occurs to me that the record of this debate should reflect the views of some leading columnists and editorial writers of our country because they are thinking all the time about important national issues and they are thinking all the time at this particular moment about the business which is pending on the floor of the Senate.

Therefore, Mr. President, I ask unanimous consent to have printed in the RECORD at this point an editorial entitled "Direct Vote May Come But It Won't Be Perfect" which was published in the Miami Herald of October 7, 1969. The editorial was written by John S. Knight.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DIRECT VOTE MAY COME, BUT IT WON'T BE PERFECT

In the anxious early hours of Wednesday, Nov. 6, 1968, no one really knew whether the next President of the United States would be Richard M. Nixon or Hubert H. Humphrey.

For a time it appeared that the choice might have to be made by the House of Representatives, a prospect completely unacceptable to the American people.

Then came the dawn, most of the count was in and Mr. Nixon had received a majority in the Electoral College and a close lead in the popular vote.

So the nagging question was resolved, at least in the 1968 Presidential election.

But fears of what might have happened were not allayed. Demands for outright abolition of the Electoral College or adoption of badly needed election reforms were heard throughout the land.

The moderates of both parties urged studies by either a Presidential or congressional commission to determine what reforms would be possible and politically feasible.

NEXT, THE SENATE

Public opinion polls and grass root sentiment strongly favored direct election of the President by popular vote. Within recent days, the House of Representatives approved this method by a lopsided 339 to 70 vote. The question now goes to the Senate where a two-thirds approval of the proposed amendment is needed.

Should the Senate concur with the House, the amendment must then be ratified by three-fourths of the state legislatures, as required by the Constitution.

As stipulated by the House, the ratification process must be completed by Jan. 21, 1971, to make the popular vote effective for the 1972 election. It seems unlikely that the states will act in time.

But then, President Nixon, who entertained strong reservations about direct election of the Chief Executive, has now endorsed the popular vote concept and this should enhance the amendment's prospects.

NO GUARANTEES

At first blush, electing a President by popular vote appears to be fair and democratic. But the American people can be sorely disappointed if they believe that abolition of the Electoral College will automatically prevent such uncomfortable events as the night of November 6, 1968.

Had the direct popular vote system been in effect in the extremely close Nixon-Humphrey election, demands for recounts, court suits and absentee ballots might have delayed the official result for days or even weeks.

The same situation could also have occurred in 1960 when John F. Kennedy defeated Nixon by a popular vote margin even smaller than Nixon's victory over Hubert Humphrey.

Suppose, for instance, that Nixon had cried foul in Chicago and Cook County where the counting of non-existent votes from graveyards, unoccupied buildings and phony addresses is not an uncommon practice.

As it turned out, Jack Kennedy carried Illinois over Dick Nixon by a mere 8,858 votes. An honest count in Cook County might well have reversed the outcome.

Or, looking at it another way, the popular vote in 1968 could have elected Hubert Humphrey while Nixon was carrying 32 states to only 13 for Humphrey and five for George Wallace.

RECOUNTS LIKELY

It was this fear of vote domination by the larger states, notably Massachusetts and Virginia, which impelled the founding fathers to establish the Electoral College.

The small states today likewise fear that direct election of the President would see the outcome determined by our huge urban centers of population.

They would much prefer the alternative of dividing each state's popular vote in proportion to the votes received by the candidates. In Ohio, for instance, Nixon would have received 12 electoral votes, Humphrey 11 and Wallace three rather than winner take all.

Another plan calls for selection of electors in each congressional district with another two going to the winning candidate in each state.

The Wall Street Journal says that under direct election, a nationwide recount becomes a distinct possibility considering that in two of the three most recent Presidential elections, the winning margin has been less than one per cent. And, as liberal author Theodore H. White points out, if direct election had been in effect in 1960 or 1968, "vote-stealers in a dozen states would have matched crafts on the level of history; and, so slim was the margin, we might yet be

waiting for the final results of both elections."

Mr. HOLLAND. Mr. President, I have not only a long personal acquaintance with Mr. Knight but the greatest respect for his views.

The editorial reads in part as follows:

NO GUARANTEES

At first blush, electing a President by popular vote appears to be fair and democratic. But the American people can be sorely disappointed if they believe that abolition of the Electoral College will automatically prevent such uncomfortable events as the night of November 6, 1968.

The next column which I wish to appear in the RECORD is one written by Mr. James J. Kilpatrick on the subject of electoral reform, appearing in the Miami Herald of October 13, 1969. I ask unanimous consent that it appear in the RECORD in full as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A REPUBLIC IF WE CAN KEEP IT

(By James J. Kilpatrick)

WASHINGTON.—The Convention of 1787 had been at work since May. Now it was mid-September, the secret sessions ended, the task complete. Benjamin Franklin was leaving the hall when a Mrs. Powel of Philadelphia approached him.

"Well, Doctor," she asked, "what have we got, a republic or a monarchy?"

"A republic," replied the doctor. "If you can keep it."

The anecdote from McHenry's notes is known to every high school boy, but never in our history has Franklin's cryptic prophecy held greater meaning. We have indeed had a republic for 181 years. We may yet lose it to the high-riding apostles of electoral "reform."

The proposed constitutional amendment approved last month in the House is not "reform." When you reform an institution, you set out to correct its faults, but you do not abandon the institution. The House resolution is just such an abandonment. In a single stroke, this proposition would convert our republic from a federation of more or less sovereign states to a new kind of centralized democracy. The resolution ought to be rejected.

To be sure, almost everyone agrees that the present system of electing a President has faults in need of reform. There is the problem of the maverick elector, who may refuse to vote for the candidate to whom he is morally pledged. There is the problem of an election thrown into the House, where each state casts a single vote. There is the problem of winner-take-all, which sees a state's entire electoral vote cast for a candidate who may win by a mere handful of votes.

Admittedly, these are faults. Yet it is remarkable, all the same, that they have produced so few ill effects. How many individual electors have violated their implied obligation? Half a dozen, perhaps, in the whole history of our country. How often has an election been thrown to the House? Twice—the last time in 1825. Not since 1888, when Harrison claimed an electoral but not a popular victory over Cleveland, has the system operated to deny the office to a popular winner. It is not so bad a record.

Nevertheless, the perils remain. A better system can be devised by the Congress; and such a plan ought to be submitted to the states. But the House resolution is not the answer. It has new perils and pitfalls all its own.

Consider, if you please, the prospect of a national recount. No such contingency now exists. We vote by states. The most that might have to be recounted would be the popular votes of one or two closely divided states whose electoral votes might be decisive. Nothing of the sort has occurred.

If this amendment should be ratified, the pattern of past elections suggests that recounts—national recounts—would have to be provided. A clearer picture emerges if we knock off the last three zeroes. Thus Garfield beat Hancock by only ten votes, 4,454 to 4,444. Cleveland defeated Blaine 4,875 to 4,852. In 1960, depending upon how you treat the Alabama vote, Kennedy and Nixon were barely a hundred votes apart in 68,000 cast. This past November, leaving off the zeroes, it was Nixon 31,304, and Humphrey 30,994. If the newly proposed amendment had been in effect, of course the Humphrey forces would have asked for a recount.

This contingency alone moves us inescapably into the machinery of national regulation and control of elections—first of the Presidential election, then federal elections, and finally all but the most insignificant local elections. It is a small work of imagination to foresee uniform requirements as to age and residence, the forms of qualification, the printing of ballots, the appointment of judges, the procedures for challenge and recount. In very few years, none of the safeguards of state regulations would remain.

The Constitution belongs to the people. They have the right and the power, acting through their states, to convert the republic to a democracy if they want to. But it is like getting married. We ought not to embark lightly upon such a new way of life, but soberly, reverently, and with our eyes wide open.

Mr. HOLLAND. Mr. President, I shall read this part only of that column:

The Convention of 1787 had been at work since May. Now it was mid-September, the secret sessions ended, the task complete. Benjamin Franklin was leaving the hall when a Mrs. Powel of Philadelphia approached him.

"Well, Doctor," she asked, "what have we got, a republic or a monarchy?"

"A republic," replied the doctor. "If you can keep it."

The anecdote from McHenry's notes is known to every high school boy, but never in our history has Franklin's cryptic prophecy held greater meaning. We have indeed had a republic for 181 years. We may yet lose it to the high-riding apostles of electoral "reform."

The proposed constitutional amendment approved last month in the House is not "reform." When you reform an institution, you set out to correct its faults, but you do not abandon the institution. The House resolution is just such an abandonment. In a single stroke, this proposition would convert our republic from a federation of more or less sovereign states to a new kind of centralized democracy. The resolution ought to be rejected.

Mr. President, the next item I would like to have introduced into the RECORD is an editorial from the Orlando Sentinel of Orlando, Fla., of February 28, 1970. It is entitled "Abolishing Electoral College Would Be Bad for the Nation." I ask unanimous consent that it be printed in full at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ABOLISHING ELECTORAL COLLEGE WOULD BE BAD FOR THE NATION

The Senate Judiciary Committee promises to act before April 24 on the constitutional amendment abolishing the Electoral College in favor of direct elections for president and vice president.

It has been sitting on the amendment for more than a year, which shows the wisdom of the committee, for picking presidents by popular vote is a bad move.

Direct popular elections would encourage the major political parties to concentrate their campaigns in large cities. This could work against the interests of the rural communities and smaller states.

Such a system would encourage the selection of nominees for the presidency from larger states or from larger ideological groupings. It would determine the relative weight of each state's vote on the basis of the number of votes cast and counted, rather than on its population.

It would jeopardize the control of the states over voting for state and local offices and constitute a blow to state power.

It would lead, almost inevitably, to irresistible pressure for national laws governing qualifications for voting, including the determination of minimum voting age and educational qualifications which currently vary from state to state.

The House approved the amendment last September by a margin of 236 votes, more than the two-thirds necessary.

The Senate is likely to follow suit unless the people notify their senators that they don't want such a radical change.

It is doubtful, however, if the legislatures of the necessary 38 states would then ratify the amendment, since the majority of the

states are small and realize they would lose influence through direct popular elections.

Few will deny the Electoral College needs improving, but a better way to do it would be to select electors in a manner similar to that for representatives and senators—one from each congressional district and two from each state at large.

Called the district method, it would provide that presidential elector candidates with a plurality in each electoral district would win, and the presidential elector candidates winning a plurality in the state would be elected. The presidential candidate receiving the vote of a majority of the electors nationwide would win.

This would improve the method of electing presidents rather than weaken it as the direct election method would do.

Mr. HOLLAND. Mr. President, I read this small portion of the editorial:

It—

Meaning this amendment—

would jeopardize the control of the states over voting for state and local offices and constitute a blow to state power.

It would lead, almost inevitably, to irresistible pressure for national laws governing qualifications for voting, including the determination of minimum voting age and educational qualifications which currently vary from state to state.

The next item which I would like to include in the RECORD is a very fine editorial entitled "A Dangerous Electoral Reform," which appeared in the Florida Times-Union of April 26 of this year. I ask unanimous consent that it appear in the RECORD at this point as a part of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A DANGEROUS ELECTORAL REFORM

The wisdom of the Founding Fathers in making it extremely difficult to amend the Constitution of the United States is again vindicated by the action of the Senate Judiciary committee in voting, 11 to 6, for an amendment providing for direct, popular election of the President.

The proposal, sponsored by Sen. Birch Bayh of Indiana and supported by the liberals of both major parties, has a superficial appeal. There are some who support it because they share a widespread conviction that the present electoral system is out of date and needs reform. They accept the popular election idea as an appealing alternative.

But it is also backed by those who purposefully want to undermine the entire federal system which has survived, and worked, for nearly 200 years.

Although a similar resolution has passed the House of Representatives, it still has a long and rough road ahead. It must clear the Senate by two thirds majority. Differences between the Senate and House versions must be reconciled, and the revisions accepted by both houses.

Then begins the long haul of required ratification within seven years by three fourths of the states, or 38.

The amendment provides that in order to be elected, a candidate would have to receive at least 40 percent of the total vote. Otherwise, there would be a runoff between the two top candidates.

The proposal's next obstacle is approval by the entire Senate, far less likely than the committee vote might indicate. But the greatest obstacle of all will be the required ratification by 38 states which would seem to be an unthinkable development once the states' legislatures and voters grasp the full implications of the proposal.

It would not only wipe out the present Electoral College, which all agree is an anachronism, but it would literally wipe out any effective voice for the smaller states in significantly affecting the outcome of the election, which they now have as voting units within a federal system which preserves the basic concept of a free confederation of sovereign states.

Clearly, it would encourage, if not require, candidates for the presidency to concentrate their time, effort and money almost exclusively on winning the strongest possible popular support in the nine states which can effectively control the outcome and which in most cases have the strongest and most efficient political machines.

Contrary to the claim of the amendment's sponsors, it would undermine the two-party system and encourage the proliferation of splinter party candidates solely in the hope of denying a 40 percent plurality to any candidate.

In the case of a contest between major candidates as close as those of 1960 and 1968 in terms of popular votes, the country, and the government, could be kept on tenterhooks for weeks waiting a recheck of popular ballots to determine if a runoff would be necessary.

The crying need is to correct the faults of the present electoral system; not to destroy completely a system that in most respects has stood the test of time.

There is a plan already before Congress that would do just that, sponsored by Florida Senator Spessard Holland.

It would divide each state's electoral vote proportionately according to that state's popular vote. It is in complete harmony with the federal system; it is precise and not subject to political manipulation! it is fair to all states, large and small, and it assures that every individual vote will be counted in determining the winner.

It is the plan which every state should demand, while rejecting completely the unwise plan gaining headway in Congress.

Mr. HOLLAND. Mr. President, I read this portion of the editorial for emphasis:

It—

Meaning the pending amendment—

would not only wipe out the present Electoral College, which all agree is an anachronism, but it would literally wipe out any effective voice for the smaller states in significantly affecting the outcome of the election, which they now have as voting units within a federal system which preserves the basic concept of a free confederation of sovereign states.

Clearly, it would encourage, if not require, candidates for the presidency to concentrate their time, effort and money almost exclusively on winning the strongest possible popular support in the nine states which can effectively control the outcome and which in most cases have the strongest and most efficient political machines.

Contrary to the claim of the amendment's sponsors, it would undermine the two-party system and encourage the proliferation of splinter party candidates solely in the hope of denying a 40 percent plurality to any candidate.

In the case of a contest between major candidates as close as those of 1960 and 1968 in terms of popular votes, the country, and the government, could be kept on tenterhooks for weeks waiting a recheck of popular ballots to determine if a runoff would be necessary.

The crying need is to correct the faults of the present electoral system; not to destroy completely a system that in most respects has stood the test of time.

There is a plan already before Congress that would do just that, sponsored by Florida Senator Spessard Holland.

It would divide each state's electoral vote proportionately according to that state's popular vote. It is in complete harmony with the federal system; it is precise and not subject to political manipulation; it is fair to all states, large and small, and it assures that every individual vote will be counted in determining the winner.

It is the plan which every state should demand, while rejecting completely the unwise plan gaining headway in Congress.

The next item is another column by James J. Kilpatrick, appearing in the Florida Times Union under date of September 8 of this year, which I ask unanimous consent be included in full in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DIRECT PRESIDENTIAL ELECTION: A DEEPLY RADICAL AMENDMENT

(By James J. Kilpatrick)

WASHINGTON.—The United States Senate launches itself this week into one of the most fateful debates in American constitutional history. By the end of this month—by early October at the latest—the Senate will have voted up or down a resolution proposing the direct national election of Presidents.

"I think a case can be made," Yale's Professor Charles Black has said, "for the proposition that direct election, if it passes, will be the most deeply radical amendment which has ever entered the Constitution of the United States."

That assessment is shared by many others, both lawyers and non-lawyers, who see in the direct election proposal a fundamental alteration in the structure of American federalism. Yet the resolution has passed the House already; it reportedly commands strong popular support; and the action to be taken by the Senate has this unrecognized meaning: If the Senate approves, and the resolution goes out to the states for ratification, any further effort at electoral reform would be effectively blocked for seven years. That is the period allowed by the resolution in which three-fourths of the states must ratify or fail to ratify.

Consider, for a moment, the changes that would occur in the whole business of nomination and qualification for the ballot. Under existing law, political parties hold national conventions and nominate their presidential and vice presidential candidates. Then state parties, acting under state law, undertake to get those tickets listed on state ballots.

It is at this point that the machinery of federalism begins its delicate braking action. Major parties ordinarily have no trouble in getting their candidates on the ballot in every state. The petition process makes it more difficult for third parties. George Wallace, it will be recalled, had a terrible time in 1968 before he could get his American Independent Party qualified. When Strom Thurmond ran in 1948, he made it to the ballot in 15 states only.

The machinery of state-by-state qualification, coupled with electoral voting by states, has worked to inhibit the power of third parties.

Under the pending resolution, this machinery would be junked. No matter what its sponsors say, the direct election amendment would require (and its language so permits) that ballots be uniform throughout the United States. Nothing else would make sense. An entire new system would have to be created by which any group calling itself a political party filed the names of its candidates with a Federal Board of Elections. We could reasonably expect a Black Peoples Party, a Peace Party, a Revolutionary

Party, a Young Americans Party. I am myself a Whig, and might run. In a nation so large and so passionately diverse, a dozen "parties" surely would bid for a footnote in history.

Then what? State lines no longer would matter. We are now thinking of cumulative votes, across the nation as a whole. It requires no great work of the imagination to conceive that such an aggregation of States Righters, New Leftists, Anti-Fluoridationists and Ban-the-Bombers could drain enough votes to prevent either of the major parties from winning 40 percent of the total.

In 1968, even with the machinery of federalism working, it was Nixon 43.5 percent; Humphrey 42.8; and Wallace 13.5, with two-tenths split among Gene McCarthy, Eldridge Cleaver, a Communist named Mitchell, the Prohibitionist Munn and others. Given a similar situation, under the pending amendment, a run-off would be held between the top two—probably the first week in December—amidst wild cries of "deal" and "sell-out."

Is this what we want? Is this prospect of chaos truly better than the "obsolete" but functioning system that now exists? The questions are squarely before the Senate now.

Mr. HOLLAND. I quote from that particular column this portion:

The United States Senate launches itself this week into one of the most fateful debates in American constitutional history By the end of this month—by early October at the latest—the Senate will have voted up or down a resolution proposing the direct national election of Presidents.

"I think a case can be made," Yale's Professor Charles Black has said, "for the proposition that direct election, if it passes, will be the most deeply radical amendment which has ever entered the Constitution of the United States."

That assessment is shared by many others, both lawyers and non-lawyers, who see in the direct election proposal a fundamental alteration in the structure of American federalism. Yet the resolution has passed the House already; it reportedly commands strong popular support; and the action to be taken by the Senate has this unrecognized meaning: If the Senate approves, and the resolution goes out to the states for ratification, any further effort at electoral reform would be effectively blocked for seven years. That is the period allowed by the resolution in which three-fourths of the states must ratify or fail to ratify.

Then another portion of that column which I shall quote for emphasis reads as follows:

The machinery of state-by-state qualification, coupled with electoral voting by states, has worked to inhibit the power of third parties.

Under the pending resolution, this machinery would be junked. No matter what its sponsors say, the direct election amendment would require (and its language so permits) that ballots be uniform throughout the United States. Nothing else would make sense. An entire new system would have to be created by which any group calling itself a political party filed the names of its candidates with a Federal Board of Elections. We could reasonably expect a Black Peoples Party, a Peace Party, a Revolutionary Party, a Young Americans Party. I am myself a Whig, and might run. In a nation so large and so passionately diverse, a dozen "parties" surely would bid for a footnote in history.

Then what? State lines no longer would matter. We are now thinking of cumulative votes, across the nation as a whole. It requires no great work of the imagination to conceive that such an aggregation of States Righters, New Leftists, Anti-Fluoridationists and Ban-the-Bombers could drain enough votes to prevent either of the major parties from winning 40 percent of the total.

In 1968, even with the machinery of federalism working, it was Nixon 43.5 percent; Humphrey 42.8; and Wallace 13.5, with two-tenths split among Gene McCarthy, Eldridge Cleaver, a Communist named Mitchell, the Prohibitionist Munn and others. Given a similar situation, under the pending amendment, a run-off would be held between the top two—probably the first week in December—amidst wild cries of "deal" and "sell-out."

Is this what we want? Is this prospect of chaos truly better than the "obsolete" but functioning system that now exists? The questions are squarely before the Senate now.

The next item that I wish to place in the RECORD is written by a distinguished scholar of the South, Dr. Thurman Sensing, executive vice president, Southern States Industrial Council. In his bulletin No. 747, "Sensing the News," released October 23, 1969, Mr. Sensing discusses direct election of Presidents and Vice Presidents under a column which he entitles "Direct Election Isn't Reform." I quote from Mr. Sensing's very able treatment of this subject three short quotations.

First:

In voting to junk the Electoral College and to choose presidents by direct popular balloting, the U.S. House of Representatives struck a blow at the republican system of government created by the Founding Fathers—a system that has brought the blessing of liberty to generations of Americans.

The second quotation is as follows:

The Founding Fathers knew that tyranny may be imposed by an autocrat or dictator. They also recognized that unlimited democracy could become totalitarian democracy. John Randolph of Roanoke, the early Virginia statesman and one-time Speaker of the House, referred to totalitarian democracy as "King Numbers."

The third quotation from the statement by Dr. Sensing:

The chief damage done by direct election would be to downgrade, if not almost eliminate, the role of the states. One of the purposes of the states is to function in the choice of a President. In so doing, our constitutional system provides for a separation of powers and a barrier to the political power of the presidency over other branches of government and the people themselves. The states, after all, represent a protective line between the mammoth power of the federal government and the individual citizens. The states constitute a hedge against tyranny.

Mr. President, the next very worthwhile item which I wish to have appear in the RECORD is an article published in the Miami Herald of recent date, written by Mr. Richard Goodwin, who certainly is no ultraconservative, by any manner or means.

The title of Mr. Goodwin's rather lengthy article is "Direct Election Has Its Faults." I ask unanimous consent that the entire article be printed in the RECORD at this point.

The PRESIDING OFFICER (Mr. EAGLETON). Without objection, it is so ordered. Did the Senator ask that the entire Sensing letter be printed in the RECORD?

Mr. HOLLAND. I made that request in the beginning.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

DIRECT ELECTION ISN'T REFORM

(By Thurman Sensing)

In voting to junk the Electoral College and to choose presidents by direct popular balloting, the U.S. House of Representatives struck a blow at the republican system of government created by the Founding Fathers—a system that has brought the blessing of liberty to generations of Americans.

The action of the House was not a reform but a step backward. The Founding Fathers, who wrote the U.S. Constitution, were wise men mindful of the dangers of tyranny in earlier societies. They built elaborate safeguards into the U.S. constitutional system, and the Electoral College was one of them. The Founding Fathers knew that tyranny may be imposed by an autocrat or dictator. They also recognized that unlimited democracy could become totalitarian democracy. John Randolph of Roanoke, the early Virginia statesman and one-time Speaker of the House, referred to totalitarian democracy as "King Numbers."

The American political system is a federal union, or federative republic. It is a representative system of government. Its design is not one of participatory politics, to use the favorite phrase of the New Left. The qualified voters in a state choose men to manage the affairs of government. The system works well, as the endurance of the Republic for almost 200 years makes very clear.

The House of Representatives would discard a key part of the plan devised for the operation of the Republic. It would break with the wisdom of the Founding Fathers, and grave peril will result if the direct election plan is not rejected.

Fortunately, the Constitution continues to provide safeguards against intellectual confusion. For the direct election bill to become the law of the land, two-thirds of the Senate and three-fourths of the states will have to give their assent.

No doubt the idea of direct elections has a superficial appeal to persons who have not examined the machinery of presidential elections and considered the theory behind it. Direct election would have severely hurtful consequences, as close examination of the proposal reveals.

The chief damage done by direct election would be to downgrade, if not almost eliminate, the role of the states. One of the purposes of the states is to function in the choice of a President. In so doing, our constitutional system provides for a separation of powers and a barrier to the political power of the presidency over other branches of government and the people themselves. The states, after all, represent a protective line between the mammoth power of the federal government and the individual citizens. The states constitute a hedge against tyranny.

The Electoral College system means that an incumbent President has to consult with Congress and its individual members, for he has to carry states—not win mere numbers—if he wants to be reelected. If the Electoral College is placed on the ash heap, the President will not have to be so considerate of Congress or consult with its members. He can attempt to reach over the heads of Congress to get the number total that he needs in a presidential election.

The modern history of our country shows that the Executive already is the strongest branch of government and the least restrained. Therefore, it is the branch that must be watched most closely if the American people are to retain their liberties. But the House of Representatives has acted to

add immensely to the power of the Executive Branch, thereby upsetting a careful constitutional balance.

This is not to say that some reform of the Electoral College is not in order. Strict constitutionalists in Congress have favored moderate change such as embodied in the so-called District Plan. Under the District Plan, a candidate would get one electoral vote for each congressional district he carries and two for carrying the state. The effect of this plan would be to break up the large blocs of electoral votes that now go to candidates carrying the big states. Unfortunately, the House turned down the District Plan before opting for direct election.

Tampering with the electoral system so as to upset the constitutional balance is an exercise in irresponsibility. Thoughtful citizens cannot ignore the danger of a power-hungry demagogue riding into office on the votes of unqualified voters who in big cities are herded to the polls like sheep to cast ballots on the orders of the managers of conflict organizations.

Now, more than ever, the United States needs an electoral system that preserves the vital, protective role of the states in choo - ing a President.

ELECTORAL COLLEGE: BEST WAY? DIRECT ELECTION HAS ITS FAULTS

(By Richard Goodwin)

Nothing could be more startling or instructive than the unanimity with which the Establishment of politics and media are rushing to embrace a constitutional amendment which might unhinge the entire political structure.

For there is good reason to believe that direct popular election of the president may end that two party system which has helped make the United States one of the most stable and long lasting democracies in the history of the world.

Coming, as it does, at a time of deepening national division and ideological strife that result is even more likely. Yet this immense possibility—a likelihood in my judgment—has been barely mentioned in the curiously muted debate over a proposal to change a constitutional system which has worked well for two centuries.

To make this judgment one must first separate the different issues whose casual blending has seriously obscured discussion. First, is the issue of the electoral principle itself, in which all the votes allotted to a state go to the candidate with the most popular votes.

Second is the legal right of an individual elector to defy the popular will and vote for the candidate of his personal choice.

Third is the question of what happens if no candidate receives a majority of electoral votes.

The second and third issues raise a different problem from the legitimacy of the electoral system itself; it is whether a small group of men, acting on their individual opinions and motives, should ever be allowed to select the President.

Moreover, this is not just an academic possibility. Electors have gone off on their own, and twice the House of Representatives has chosen as president a man who did not receive a plurality of popular vote. Andrew Jackson and—in a rather sordid way—Samuel Tilden were deprived of the presidency by Congress despite popular pluralities, both also received electoral pluralities.

Certainly nearly everyone will agree that the modern presidency is too important an office to be filled by private maneuvering, deals and coalitions. Still these abuses can be forestalled without touching the electoral system itself, simply by automatically counting a state's electoral votes for the popular winner and providing that a plurality of electoral votes wins.

There also could be a provision for a runoff if the leading candidate falls below a certain specified percentage.

None of this requires eliminating the electoral principle itself, which is an unrelated and far more serious matter. That principle is like many other elements of our constitutional structure. It no longer serves the purpose which the founders intended, but has assumed other important and rarely articulated functions.

This is, one must admit, the theoretical possibility that a presidential candidate could receive the most popular votes while his opponent won the most electors. Yet in almost two centuries this has happened only once—in 1888 when Grover Cleveland lost the election to Benjamin Harrison. Even then, Cleveland's popular edge was only 100,000 votes, hardly an overwhelming popular mandate.

If the system has been accurate for over 80 years, it is even more likely to work in the future. For television and other mass media operate to make an election more than ever an expression of a national mood, rather than of differences based on state lines.

Thus the direct election proposal violates the single most important rule of constitutional amendment: if something is working, don't change it. We have never before amended the Constitution in anticipation of possible abuse or on the basis of abstract theory. Only after an abuse has manifested itself, and usually after considerable public pressure, have we acted, and even then with reluctance.

Surely this is one of the reasons that the American Constitution has endured while more volatile republics rose and fell.

One must equally admit that it is impossible to be certain of the consequences of the projected change to direct election. Yet it is a fact that the only third parties which have lasted in this country have been those with a geographical base—those that could carry states.

The most noteworthy modern example has been the Southern Party from the Dixiecrats through George Wallace.

The others have proved transient, or have never begun, in important part because they could not hope to carry any states and would thus receive no electoral votes. (In 1948 Strom Thurmond and Henry Wallace received approximately the same popular vote but Wallace got no electoral votes to Thurmond's 39. The Southern Party is still with us and the Progressive passed away).

Many of those who were tempted by third party movements—and I know this from personal experience in 1968—have been discouraged by the knowledge that their activities would only help swing a state's electoral votes to that candidate who was ideologically furthest from them.

Such a party might bargain with one of the major parties in return for an endorsement or offer to withdraw in the course of a campaign in return for endorsement. They might also run candidates in the hope of forcing a runoff election in which their votes will be eagerly and profitably sought. Based on our historical experience this could prove an extremely fruitful course.

Fifteen of our presidents have been elected with less than a majority of the popular votes. Therefore in almost half of our elections, a third party, at least theoretically, could have held the balance of power. Two of our last three elections have been virtual popular ties.

The experience of some of our largest states demonstrates that this is more than a theoretical possibility. We now have four parties in New York State, with both Liberal and Conservative Parties exercising influence far out of proportion to their strength. Nor is California a stranger to third party politics.

Had direct election been in effect last year we probably would have had an anti-war party (and I would have joined). The possibilities for the future are limitless. Direct election may well bring us a Farmer's Party, a Senior Citizens Party, a Black Party and other groups coalescing around common interest and belief.

The possibility of multiparty activity is as much a matter of the psychology of presidential politics as of pure reason. Which is probably why it is so little discussed. For relatively few of those involved have had direct experience in presidential campaigns.

Yet I believe that our history combines with modern experience to demonstrate that the inability to receive any electoral votes has been a powerful deterrent to third and fourth and fifth party movements. If this is so, then direct election could not come at a worse time—when the tendency to political fragmentation and ideological division is reaching new heights. In any event this, to me, is the central issue of reform and deserves the most serious and extended consideration.

It will always, of course, be possible for a new major party to emerge, which may well happen in 1972 for the first time since the 1850s.

Other objections to direct election have been rather fully discussed. Nor is there any great principle involved in the speculation that this might increase the importance of small states. However, purely as a matter of interest, I believe those who anticipate such a consequence will be seriously disappointed.

Most presidential campaigns are directed at a "swing vote" of about 10–20 per cent of the electorate. Any candidate in search of those votes will have to focus his money and efforts on the large states. For that is where the people are, and where the most volatile vote is to be found.

In 1968 about half the total vote for the two major candidates came from just seven states. A change of less than 1½ per cent in these states would have canceled out Nixon's entire southern margin over Humphrey. No political strategist could wisely advise a candidate to take the slightest risk in the big states. (Although it is too complicated to discuss here the changing economics of media buying will intensify this tendency) thus, if direct election passes, the proponents of the "New Federalism" will preside over the dissolution of one of the few remaining levers which less populated sections have on national politics. This may be a healthy thing, but it always helps to be clear about what you are doing when you change the Constitution.

The Electoral College has not only faithfully reflected the popular will, it has usually strengthened it by giving a candidate with a narrow popular margin a far larger electoral mandate. Against this historical argument that the electoral system offends the theoretical democratic principle of "one man, one vote." This is certainly so, at least in abstract possibility.

We must remember, however, that this is not the uniform principle of our government. The Supreme Court, with its power to overrule president and Congress, is responsible to no electorate. And its insulation from popular will has helped strengthen it to protect popular liberties.

A senator elected by a few hundred thousand votes in Idaho has as much power over national affairs as a man selected by several million citizens of New York. Yet the Senate has often been a more liberal and principle body than the House of Representatives.

Men like the secretary of defense, whose power over our lives far exceeds that of most of our earlier presidents, are appointed and removed by one man. Our national government is not a pure democracy. Nor does anyone suggest it should be; moreover, none of our institutions of government acts exactly as the founding fathers expected. Yet

they have managed to evolve some kind of enduring and relatively fruitful harmony.

The system is not perfect, and I believe we need some fundamental changes. But when we are asked to change an institution as basic as the Electoral College the only relevant questions are practical ones. How is it working? What are its functions? What will be the consequences of change?

To act on the basis of rhetoric about pure democracy may have threatening consequences for the future of our actual democracy, and is a spirit foreign to the Constitution itself.

For all the influence of mass media and fast planes, we are still a continent, sheltering diverse peoples with different ways of living. The electoral College has been one of the institutions tending to strengthen the curious, irrational and frustrating political system which has held us together.

Before embarking on the irrevocable course of abolition we should be sure that we understand and are willing to risk the possible results.

Mr. HOLLAND. The item by Mr. Richard Goodwin contains many nuggets which I should like to quote, but I shall read only two of them, for the point of emphasis. The first quotation is as follows:

Nothing could be more startling or instructive than the unanimity with which the Establishment of politics and media are rushing to embrace a constitutional amendment which might unhinge the entire political structure.

For there is good reason to believe that direct popular election of the president may end that two party system which has helped make the United States one of the most stable and long lasting democracies in the history of the world.

Coming, as it does, at a time of deepening national division and ideological strife that result is even more likely. Yet this immense possibility—a likelihood in my judgment—has been barely mentioned in the curiously muted debate over a proposal to change a constitutional system which has worked well for two centuries.

Mr. President, I inject this comment of my own: I think there is nothing more truly serious in this debate at this time than the thought advanced in the quoted part of Mr. Goodwin's article that the very continued existence of the two-party system in this Nation is seriously jeopardized by this amendment, and that the existence of many parties is almost guaranteed. When we look at what has happened in some of the other free nations of the world which have many parties, and realize how unstable their governments have been, I think we would all want to be very careful, in considering this amendment, to consider that feature of the results which might and which I believe would flow from it.

My second quotation from Mr. Goodwin's thoughtful article reads as follows:

Thus the direct election proposal violates the single most important rule of constitutional amendment: if something is working, don't change it. We have never before amended the Constitution in anticipation of possible abuse or on the basis of abstract theory. Only after an abuse has manifested itself, and usually after considerable public pressure, have we acted, and even then with reluctance.

Mr. President, I believe the Senate would do well to heed that stop, look, and listen statement by Mr. Goodwin.

The next item which I should like to have included in the RECORD appeared in the Washington Post this morning, being a column by Mr. Kevin P. Phillips, who but a short while ago was one of the assistants in the White House. The title of his article is "Electoral College Politics," and I ask unanimous consent that it be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ELECTORAL COLLEGE POLITICS

(By Kevin P. Phillips)

The Senate has begun debate on an amendment to the U.S. Constitution that would abolish the Electoral College method of choosing a President in favor of direct, nationwide popular election.

Two-thirds support will be necessary to push this change through the Senate, and a close fight is expected. The balance of power is generally thought to rest with an undecided bloc of Farm Belt Republicans (Dole, Pearson, Young, and Miller), small-state Northeastern Republicans (Prouty, Cotton, Boggs, and Williams), Southern Democrats (Spong, Byrd, Fulbright, Hollings and Long) and Rocky Mountain Democrats (Cannon, McGee, Moss, and Anderson).

Such indecision is surprising because the amendment in question, pushed by the Senate's leading liberals, would operate to reduce the national political muscle of the more conservative South, Farm Belt, Rocky Mountains, and other lightly populated states. The detriment to these areas can be measured in three ways: (1) diminished local power in Presidential elections; (2) reduced representation and influence in both parties; and (3) decreased local orientation of national party platforms and administration.

To illustrate the Southern and Western loss of power, consider that in 1968 (per the 1960 census), Connecticut, Oklahoma, and South Carolina each enjoyed 8 electoral votes, but in terms of popular vote, Connecticut sent 1.26 million to the polls in 1968, Oklahome 943,000, and South Carolina only 667,000.

Secondly, the change to direct election would greatly affect the regional distribution of power within the two parties, especially at presidential conventions.

Delegates are now apportioned to states on the basis of Electoral College strength, with bonuses for partisan performance. Abolition of the Electoral College would presumably shift delegate apportionment to a system based either on total vote cast in the prior election or total vote cast for the party's nominee.

In the Democratic Party, such a change, which may come regardless as "reform," would greatly weaken moderate-to-conservative influence. The South, Plains, and Rocky Mountains had 30 per cent of the 1968 delegates, but cast only 20 per cent of Humphrey's vote, whereas the liberal big-city states of Massachusetts, New York, Pennsylvania, Michigan, California and Ohio had only 28 per cent of the delegates but cast 43 per cent of Humphrey's November ballots.

A delegate reapportionment of this magnitude would put the Democratic Party in the hands of left-liberals whose stance would injure party candidates in the South, Border, Plains, and Rocky Mountains. (Direct election would also promote this liberal bias by dispelling Democratic electoral vote concern with eking out three-way pluralities in Texas, say, or Missouri or Georgia.)

If electoral reform shifts the Democrats to the left, pushing conservatives and Wallaceites into the GOP, the Republicans would probably remain conservative-oriented. However, if Electoral College abandonment were to cause GOP delegates to be apportioned by votes cast for the last party Presidential candidate, this would sharply reduce the convention power of the low turnout and now bonus-weighted South, Plains, and Rocky Mountains.

Under present idealogical circumstances, now that American politics is no longer divided by the Civil War, the Electoral College favors a Republican coalition based in the South Midwest, West, and small states. GOP Senators from these areas would be foolish to abandon a system that has a built-in bias toward such a coalition in favor of one which, at best, sacrifices these regional advantages.

For these reasons, Southern, Farm Belt, Rocky Mountain, and other small states have good reason to oppose abolition of the Electoral College, and if such a constitutional amendment passes the Senate, it will probably not be ratified by the states.

Mr. HOLLAND. Mr. President, without attempting to quote more than a small portion of Mr. Phillips' article, I do want to call attention to two parts.

After mentioning that he hears that there is indecision on the part of some of the farm belt Senators and some of the Senators from small States on the question of support of or opposition to this amendment, he proceeds with this paragraph:

Such indecision is surprising because the amendment in question, pushed by the Senate's leading liberals would operate to reduce the national political muscle of the more conservative South, Farm Belt, Rocky Mountains, and other lightly populated states. The detriment to these areas can be measured in three ways: (1) diminished local power in Presidential elections; (2) reduced representation and influence in both parties; and (3) decreased local orientation of national party platforms and administration.

A second quotation from Phillips' fine article is as follows:

A delegate reapportionment of this magnitude would put the Democratic Party in the hands of left-liberals whose stance would injure party candidates in the South, Border, Plains, and Rocky Mountains. (Direct election would also promote this liberal bias by dispelling Democratic electoral vote concern with eking out three-way pluralities in Texas, say, or Missouri or Georgia.)

And a third quotation from Mr. Phillips' thoughtful article:

For these reasons, Southern, Farm Belt, Rocky Mountain, and other small states have good reason to oppose abolition of the Electoral College, and if such a constitutional amendment passes the Senate, it will probably not be ratified by the states.

Mr. President, I appreciate the patience of the Presiding Officer and of the Senate, and I shall simply say that in my judgment, the electoral college as it exists should be changed by amendment; that in my judgment, the fractional system to be proposed during this debate in a substitute to be offered by the distinguished Senator from North Carolina (Mr. ERVIN), which has long had my support, much better meets the situation and does not jeopardize the position of the States, and particularly the position of the small States; and that I hope that will be the path adopted when the Senate finally acts in his matter.

Mr. President, I yield the floor.

Mr. HOLLAND subsequently said: Mr. President, earlier in the day I spoke in opposition to Senate Joint Resolution 1, suggesting a radical change in the constitutional method for the selection of President and Vice President.

Since that time, I have noted in the Washington Star of today a very fine column by David Lawrence entitled "Election Plan Would Hit 'Statehood.'"

I ask unanimous consent that this article be printed in the RECORD as a part of my previous remarks, and added to the group of columns and editorials which I placed in the RECORD at the time of my original appearance on this matter.

The PRESIDING OFFICER. Without objection, it is so ordered.

ELECTION PLAN WOULD HIT "STATEHOOD"

(By David Lawrence)

The Senate is struggling with a proposed amendment to the Constitution to abolish the Electoral College and conduct all presidential elections hereafter by direct vote of the people. The plan is to let the candidate who receives the largest number of votes be declared elected if this is at least 40 percent of the total votes cast. If no candidate gets that percentage, a run-off election would be held between the top two.

But the states would not hereafter cast their ballots in the Electoral College and would thus lose a power they have held since the republic was founded. It would be incredible if the three-fourths of the states of the union necessary should ratify any such amendment because it certainly could mean a diminution of the influence of the smaller states in the election of the national administration.

Under the proposed amendment, a plurality of the votes could be obtained almost entirely from one section of the country, and the new president could cater to the demands or desires of that region. But, with the Electoral College, even the most populous states have a relatively small number of electors, and these can be offset by a combination of electors from smaller states. Some presidents, for example, have been elected by a substantial number of electoral votes by getting majorities in states of large and small population in different sections of the country. Yet their total popular vote was close to that cast for an opponent.

President Wilson was reelected in 1916 with the support of the South, which was usually Democratic, and the West, which was usually Republican. But the two areas in combination produced enough Democratic electoral votes to offset the heavy electoral vote for the Republican candidate in the Eastern states.

There have been other elections, too, in which sectional problems have influenced the outcome of elections. The Electoral College has performed a service in such instances, because it has protected the interests of smaller as well as larger states concerned with certain questions.

In some elections, such as that in 1920, when there was a Republican landslide for Warren G. Harding, virtually all the states outside the South went Republican. Results in elections were decided by popular vote. The Electoral College comes in as the decisive factor when elections are close and when sectional issues in different parts of the country produce wide differences of opinion and sometimes split parties.

The proponents of the suggested amendment keep emphasizing that election of a president would be by "direct popular vote," and imply that the Electoral College doesn't satisfy such a requirement. A group of senators, both Republican and Democrat, in opposing the amendment, make this comment:

"Direct election of the president, we believe, would—

"Destroy the two-party system and encourage the formation of a host of splinter parties;

"Undermine the federal system by removing the states as states from the electoral process;

"Remove an indispensable institutional support for the separation of powers;

"Radicalize public opinion and endanger the rights of all minorities by removing incentives to compromise;

"Create an irresistible temptation to electoral fraud;

"Lead to interminable electoral recounts and challenges;

"Necessitate national direction and control of every aspect of the electoral process."

But how, it will be asked, does such an amendment as is being proposed get widespread support? The answer is that the phrase "popular election" implies that the people will have a much more positive voice in choosing the president and will exercise a direct responsibility. The truth is a direct-election plan could lead to the destruction of the two-party system and could weaken both political parties in their state and local operations as well.

Members of the two major parties are divided in their support of the new amendment. Even if it does pass the Senate and is submitted to the states—since it has already passed the House—the big question is whether three-fourths of the states will ever ratify an amendment which will, in effect, impair "statehood."

AMENDMENT NO. 711

Mr. GRIFFIN. Mr. President, on behalf of the Senator from Maryland (Mr. TYDINGS), the Senator from Pennsylvania (Mr. SCOTT), and the Senator from Ohio (Mr. SAXBE), I send to the desk an amendment to Senate Joint Resolution 1 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk proceeded to read the amendment.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered. The amendment will be printed in full in the RECORD.

The amendment reads as follows:

Beginning with line 1, page 5, strike out all to and including line 7, page 5, and insert in lieu thereof the following:

"SEC. 3. The persons joined as candidates for President and Vice President having the greatest number of votes shall be declared elected President and Vice President, if such number be at least 40 per centum of the total number of votes certified. If none of the persons joined as candidates for President and Vice President shall have at least 40 per centum of the total number of votes certified, but the persons joined as candidates for President and Vice President having the greatest number of votes cast in the election received the greatest number of the votes cast in each of several States which in combination are entitled to a number of Senators and Representatives in the Congress constituting a majority of the whole number of Members of both House of the Congress, such persons shall be declared elected President and Vice President. For the purposes of the preceding sentence, the District of Columbia shall be considered to be a State, and to be entitled to a number of Senators and Representatives in the Congress equal to the number to which it would be entitled if it were a State, but in no event more than the number to which the least populous State is entitled.

"If, after any such election, none of the persons joined as candidates for President and Vice President can be declared to be elected pursuant to the preceding paragraph, the Congress shall assemble in special session, in such manner as the Congress shall prescribe by law, on the first Monday of December of the year in which the election occurred. The Congress so assembled in special session shall be composed of those persons who are qualified to serve as Members of the Senate and the House of Representatives for the regular session beginning in the year next following the year in which the election occurred. In that special session the Senate and the House of Representatives so constituted sitting in joint session shall choose immediately, from the two pairs of persons joined as candidates for President and Vice President who received the highest numbers of votes cast in the election, one such pair by ballot. For that purpose a quorum shall consist of three-fourths of the whole number of Senators and Representatives. The vote of each Member of each House shall be publicly announced and recorded. The pair of persons joined as candidates for President and Vice President receiving the greatest number of votes shall be declared elected President and Vice President. Immediately after such declaration, the special session shall be adjourned sine die.

"No business other than the choosing of a President and a Vice President shall be transacted in any special session in which the Congress is assembled under this section. A regular session of the Congress shall be adjourned during the period of any such special session, but may be continued after the adjournment of such special session until the beginning of the next regular session of the Congress. The assembly of the Congress in special session under this section shall not affect the term of office for which a Member of the Congress theretofore has been elected or appointed, and this section shall not impair the powers of any Member of the Congress with respect to any matter other than proceedings conducted in special session under this section."

On page 3, line 16, immediately after the period, insert the following new sentence: "No such election shall be held later than the first Tuesday after the first Monday in November, and the results thereof shall be declared no later than the third Tuesday after the first Monday in November of the year in which the election occurs.".

Mr. GRIFFIN. Mr. President, it is my hope that there might be a vote on this amendment sometime early next week, perhaps Tuesday. Whether such an agreement to vote can be reached, I do not know. But I want to indicate, on behalf of myself and the Senator from Maryland (Mr. TYDINGS), that that would be satisfactory from our point of view.

Nearly 150 years ago, Senator Thomas Hart Benton of Missouri stood on the floor of the Senate and proposed what we are considering here today—the direct, popular election of the President and Vice President of the United States.

Speaking in the florid rhetoric of his day, Senator Benton said:

The evil of a want of uniformity in the choice of presidential electors is not limited

to its disfiguring effect upon the face of our government, but goes to endanger the people, by permitting sudden alterations on the eve of an election, and to annihilate the rights of small states, by enabling the large ones to combine, and to throw all their votes into the scale of a particular candidate.

In the political hurly-burly of his times, Senator Benton perceived ample reason even then for changing the electoral college system provided for in the Constitution. Then the Constitution was less than 50 years old, and had not become embossed by the traditions which we now face in considering changes in an antiquated, in creaky election machinery.

While he was unsuccessful, Benton never changed his mind about the urgent need for changing the electoral college system in favor of a direct vote by the people. Writing much later in his voluminous memoirs, "Thirty Years' View," the Missouri Senator said:

From the beginning these electors have been useless, and an inconvenient intervention between the people and the object of their choice, and in time may become dangerous . . .

Benton went on to point out that the idea he proposed was not new, that it had been advanced in the Constitutional Convention of 1787, and had been supported by Benjamin Franklin and others. He noted that it was not adopted because it was thought that "the mass of the people would not be sufficiently informed, discreet, and temperate to exercise with advantage so great a privilege as that of choosing the chief magistrate of a great Republic." He expressed the hope of "obtaining for it a better success at some future day."

Surely we have now reached that point in time. Various proposals for electoral reform have been before Congress periodically for many years. Out of a long period of consideration and debate concerning the various proposals I believe a clear consensus has emerged—a consensus that the election of the President ought to be by direct, popular vote of the people.

Mr. President, I share the view expressed earlier in this debate by the distinguished Senator from Tennessee (Mr. BAKER), who made the point that it is not districts and not States that elect a President—it is people.

If there were dangers which beset our electoral system in Senator Benton's day, they are certainly magnified now in this age of instant communication and increasing concern over the processes of Government.

I am convinced that the ideal system for electing a President is one that permits the most direct participation by the people that is feasible. It should be a system that does not encourage candidates to write off segments of the population or geographical areas of the country.

Such a system should permit individual voters, wherever they live, to vote directly for candidates for President and Vice President rather than for faceless electors responsible to no one. This is the kind of an election system the people want—and the kind they are entitled to have.

Mr. President, at a time when there seems to be so much distrust of Government and when so many people, for whatever reasons, feel removed too far from their elected leaders, it is particularly appropriate, I believe, to move toward more direct participation in the processes of government.

It would also be wise to remove an anachronism in our system which recognizes the "faithless elector" and which enables the popular will to be overridden by an electoral college count.

As a number of witnesses before the Judiciary Committee pointed out, several elections have occurred where, despite a relatively comfortable popular vote majority, the electoral vote margin was extremely narrow. For example, in the 1884 election, a shift of 575 votes in New York would have elected James Blaine over Grover Cleveland; and in both the 1900 and 1908 elections, William Jennings Bryan would have been elected if there had been a shift of a total of 5,000 votes in several States, despite the fact that the Republican candidates in both years had a popular vote majority of nearly 1 million. Of course, it is well known that a small shift in the popular vote in the 1948, 1960, and 1968 elections would have elected candidates who were not the popular vote winners.

Another reason for favoring the direct election plan is that it would remove the disproportionate advantage in the electoral system now enjoyed by one-party States with low voter turnouts. This plan would give all groups a greater incentive to participate politically, for they could be sure their votes would be counted.

A few statistics will illustrate the point I wish to make with regard to encouraging greater participation in the election of a President.

In 1968, for example, in my home State of Michigan which has 21 electoral votes, 3.2 million people voted. In Texas, with 25 electoral votes, only 2.5 million people voted.

Connecticut has eight electoral votes, and 1.25 million people voted in that State in the 1968 election. By contrast, South Carolina has eight electoral votes but only 651,000 total votes cast in the same election.

I realize, of course, there may be other factors which affect the total vote in any particular election, but I am also sure that the existence, or lack of existence, of a strong two-party system is an important factor.

I suggest that, to the framers of the Constitution, the equal representation of every State in the Senate was of more importance than the electoral college system in preserving the interests of the States. In their eyes this equal voice in the Senate was "at once a constitutional recognition of the portion of sovereignty remaining in the individual States, and an instrument for preserving that residual sovereignty." The permanence of these State interests rests in article V of the Constitution, which provides that "no State, without its consent, shall be deprived of its equal suffrage in the Senate." This is a virtually unamendable section which requires unanimous consent by all the States for any change.

Of equal importance today along with the Senate is the need for a viable two-party system in each of the 50 States. As pointed out earlier, this is where direct election, if properly structured, can provide a greater inducement for total political participation. Nothing can enhance federalism more than a vigorously competitive two-party structure—a structure whose foundation is in State and local government.

Mr. President, as a long-time advocate of electoral reform, I believe the time has come for action. Understandably, there is little patience with still further delay.

I am concerned that a constitutional amendment may not be ratified and become operable for the 1972 presidential election. The longer we delay, the more hazards we run into relying on a system fraught with many inadequacies and inequities.

For these and other reasons, I support Senate Joint Resolution 1 which is now before the Senate and I intend to vote for the resolution.

At the same time, I would be less than frank if I did not acknowledge that I am disturbed by some features of the pending resolution. As I have indicated in the past, and as the distinguished Senator from Maryland (Mr. TYDINGS) and I expressed in our separate views which accompanies the report on Senate Joint Resolution 1, I am concerned particularly about the runoff provisions in the proposal before us at this time.

As we pointed out in the separate views:

The limitations of even solid regional support of third party's efforts are strikingly demonstrated by going back to the 1860 election. Although the Southern Democratic candidate, John Breckinridge, polled 72 electoral votes and John Bell of the Constitutional Union Party polled 39, Abraham Lincoln won a majority of the electoral votes with only 39.9 per cent of the popular vote.

On the other hand, under the 40 percent plurality required for direct election (under S.J. Res. 1), a minor party or combination of minor parties need only approach 20 per cent of the popular vote in order to reach a strong bargaining position. The prospect of two minor party candidates, one regional and one ideological, amassing 20 per cent of the vote is quite realistic in the near future of American politics.

Given the fact that bargaining before the runoff election would take place under conditions of division and disappointment, cynical political moves might in themselves lead to a crisis of respect and legitimacy in the selection of the President. Undoubtedly, the aura of legitimacy would be all the more in doubt where the runnerup in the initial contest wins the runoff by wooing third-party support. In such a case, the question of the legitimacy is sharpened even further if the turnout in the second election is substantially lower than in the first election.

Mr. President, I believe the amendment now at the desk will strengthen Senate Joint Resolution 1. It will make the resolution more acceptable and will enhance its chances of being ratified by three-fourths of the States.

Moreover, it would avoid the awkward, time-consuming runoff election contemplated by the pending resolution now provides, and would remove some uncertainty which now surrounds the present proposal. In this respect, I share con-

cern that was voiced earlier on the Senate floor by the distinguished Senator from Nebraska (Mr. CURTIS).

Mr. President, the amendment offered retains the feature of Senate Joint Resolution 1 with regard to a candidate receiving 40 percent of the popular vote. However, our amendment would provide that if no candidate polled the required 40 percent, the popular vote winner would still be elected provided he obtains a majority of the electoral vote—but without the intervention of electors. Unlike the present system the popular vote runnerup could not be elected even if he had a majority of the electoral vote. Selection of the President by a joint session of the Senate and House would occur, as I have indicated, only if prior requirements were not met.

Of course, it may also be asked what are the chances of a popular vote winner who gets less than 40 percent of the vote obtaining a majority of the electoral vote. If we examine the 26 Presidential elections between 1868 and 1968, we find that the winning candidate received on the average of 52 percent of the popular vote and 71 percent of the electoral vote.

During this same period, eight Presidents were minority Presidents—that is, they were elected with less than 50 percent of the popular vote. In three of these elections where some type of major third-party challenge occurred, the average percent of the electoral vote received by the winner was 67 percent, while in the other five contests where no third-party candidate received any electoral vote the average percent of the electoral vote obtained by the winner was 55 percent.

According to these statistics, the results of past elections would indicate two things: The popular vote winner is usually blessed with a fairly comfortable electoral vote cushion and third party challenges have frequently widened the margin of electoral victory by drawing votes away from one of the major candidates. The clearest example of this is the 1912 election where Theodore Roosevelt's Bull Moose Party split the Republicans and enabled Woodrow Wilson to be elected with 82 percent of the electoral vote but only 42 percent of the popular vote. Furthermore, in the 1860 election, the only election where the winner got less than 40 percent of the popular vote, Abraham Lincoln was elected with 39.9 percent of the popular vote but garnered 59 percent of the electoral vote. This 20 percent margin is consistent with the average margin between the popular vote—52 percent—and the electoral vote—71 percent—during the 100 years between 1868 and 1969.

Mr. President, I believe our amendment would appropriately discourage the entrance of minor splinter parties on the political scene and would, under direct election, thereby increase the likelihood that a direct popular election by the people would be decisive in the first instance.

Mr. President, in conclusion, I wish to call attention to the message of the President of the United States, entitled "A Call for Cooperation," addressed to Congress today, and in particular I wish to focus on a part of that message to Congress which deals with the subject of electoral reform now before the Senate. I refer to the following words of President Nixon in his message:

ELECTORAL REFORM

No one subject more profoundly involves the issue of popular sovereignty than the method of electing the President. For almost two centuries the system of the Electoral College has somehow worked, albeit just barely at times, and at other times even doubtfully. Every four years the American democracy places a large, unacceptable, and unnecessary wager that it will work one more time, that somehow an institution that never in any event functioned the way the framers of the Constitution anticipated, will somehow confer the Presidency on that candidate who obtains the largest number of votes. The Electoral College need not do so. Indeed on occasion it has not done so. But far more importantly—whatever the popular vote—it need not confer the Presidency on any candidate, if none has a majority of the electoral vote.

Our ability to change this system in time for the 1972 elections is a touchstone of the impulse to reform in America today. It will be the measure of our ability to avert calamity by anticipating it.

As I stated in my October 1969 message, I originally favored other methods of reforming the electoral college system, but the passage by the House of a direct popular election plan indicated that this thoroughly acceptable reform could be achieved, and I accordingly supported it. Unfortunately, the Senate has not completed action. Time is running out. But it is still possible to pass the measure and to amend the Constitution in time for the 1972 elections.

I read those words of the President with some degree of pleasure and also to emphasize again the support of the President for electoral reform in general and the direct election plan in particular.

I hope that the Senate will heed the President's words.

Mr. President, I repeat that I hope it may be possible that the amendment now pending as the order of business before the Senate will be voted on early next week. I look forward to that vote with the anticipation and the hope that the Senate will adopt this amendment, thus increasing the chances in my opinion of the Senate adoption of the direct election proposal and also substantially increasing, in my opinion, the hopes that such a constitutional amendment could be ratified by three-fourths of the States.

Mr. INOUYE. Mr. President, it was nearly 2 years ago during the 1968 presidential election that our Nation faced, at various points in the election process, the distinct possibility of electing a minority President, the prospect of wheeling and dealing among the electors, and the possibility of a contingent election in the House of Representatives. Fortunately, we were spared in that election the chaos which would surely have ensued had none of our candidates received a majority of the electoral votes. We may not be as lucky in 1972.

I am convinced that our present electoral system is archaic, unfair, inaccurate, ambiguous, discriminatory, and undemocratic. Archaic, because it was developed almost 200 years ago in a day of limited and extremely slow communication—in a day when it was believed that the ordinary voter would be subject to deception and inclined to vote only for someone from his own State. This would, of course, have permitted the most populous State to always elect its own candidate. Unfair, because a presidential candidate which loses a State by only one vote forfeits all of that State's electoral votes. Inaccurate, because in most elections the electoral votes are so seldom accurately proportional to the popular vote. Ambiguous, because under the present system some presidential electors are not bound to vote for the candidate who received the majority of the popular votes in their States. Discriminatory, because voters in large States hold an excessive amount of voting power. They have the potential for influencing a far larger block of electoral votes than voters in small States like Hawaii. Consequently, voters in small States are generally ignored by a presidential candidate who knows he can win by carrying only the 11 most populous States in the Union and the District of Columbia. And the electoral system is undemocratic, because should no one receive a majority of the electoral votes, the election is thrown to the House of Representatives where each State delegation, regardless of its size, casts only one vote for the top three candidates.

History has, in fact, recorded elections in which the elected President actually received fewer popular votes than his nearest opponent. In 1824, John Quincy Adams received fewer popular votes than Andrew Jackson. However, because neither received a majority of the electoral votes, the election fell to the House of Representatives which elected Adams. In 1876, Samuel J. Tilden received 250,000 more popular votes than Rutherford B. Hayes. However, returns from four States were contested and an Electoral Commission created by Congress decided in favor of Hayes. In 1888, Benjamin Harrison polled fewer popular votes than Grover Cleveland, but received more electoral votes and was elected to the Presidency. I do not need to remind you that history repeats itself. If we are to insure that the events of 1824, 1876, and 1888 not happen in 1972 we must act immediately to initiate long overdue reforms in our present electoral system.

After studying the problem, I have come to the conclusion that only the direct popular election of our President will resolve the problems I have discussed. Only the direct popular election of our President will eliminate the wheeling and dealing inherent in our current system. Only a direct popular election will allow every citizen's vote to count equally. And only a direct popular election will prevent the election of a minority President who fails to receive the largest popular vote.

I, therefore, intend to vote for legislation which would amend the Constitution and provide for the direct popular election of the President and the Vice President.

THE DIRECT ELECTION BOONDOGGLE

Mr. GOLDWATER. Mr. President, the Senate has before it one of the most far-reaching schemes that has ever been

considered by the Congress. It is being put forward by its sponsors as a simple idea that will correct all the hidden dangers in the present electoral system. But, Mr. President, speaking as one who has engaged in a presidential campaign as the candidate of one of the two major parties, I must declare my view that this simple idea is fraught with so many terrible problems that it will, in all likelihood, shake the very foundation of our society.

To my mind, if this proposal is put into the Constitution, it is bound to have such widespread repercussions that it will change the very nature of our presidential campaigns and the nature of the kind of man who will serve as President. Furthermore, I believe it will lead to the most frightful division of our Nation that we have seen since the period of the Civil War. On top of everything else, I predict that the direct election plan, if adopted, will destroy the two-party system in this land and go a long way down the road to the obliteration of our State governments. Finally, I am convinced that the direct election proposal will lead to chaos and confusion after almost every presidential election.

Mr. President, these words do not paint a pretty picture. But witness after witness has testified before the Senate Judiciary Committee to the effect that these dangers are very real possibilities. In a few minutes I shall touch upon them. First, however, I would like to look at exactly what it is the proponents of this election change put forth as the reason and the nature of their proposal.

In essence, the sponsors of direct election tell us it will guarantee a popular choice in every presidential election. The majority report of the Senate's Judiciary Committee concluded:

> Direct popular election is the only system that guarantees the election of the people's choice.

Mr. President, this is a flagrant exaggeration. This claim, which explains much of the plan's appeal to the general public, is a fraudulent promise. The plan that is before the Senate provides that the candidates "having the greatest number of votes for President and Vice President shall be elected, if such number be at least 40 percent of the whole number of votes cast for such offices."

Now, here is a scheme that holds itself out as guaranteeing the election of the people's choice and yet it provides that a candidate who is chosen by merely 40 percent of the voters shall be elected. How in the world can the plan's sponsors contend that a person with only 40 percent of the popular vote is the people's choice? By what quality of clairvoyance can they decide that the candidate with 40 percent would have been chosen by the 60 percent of the voters who wanted someone else as their first choice for the Presidency?

What the supporters of the pending direct election plan are doing is substituting for the electoral college a system in which a person who is turned down by 60 percent of the voters can become President. This is said to be fairer than the present method of selecting the President.

Mr. President, the electoral college system may have its faults, but why should we cast it aside for another system that on its face will have an even greater weakness than what we have now?

One of the basic arguments I have heard raised against the electoral college is that it might result in the election of a candidate who will receive a majority of the electoral votes without being the winner of the most popular votes. I admit that this has a certain appeal about it if it means that the person chosen by a majority of the people might lose the election, but this is not what the argument means to the sponsors of the direct election amendment. They have drafted a scheme under which a person with no majority can be elected as President.

At least under the electoral college process the winner must receive a majority of the electoral vote. And, the saving quality of this majority is that it is always widely distributed througnout the country. This is an historical fact, not theory. It seems incredible to me that the proponents of direct election would drop a system which has worked well to elect Presidents who are generally representative of the Nation as a whole for a system by which one region or one polarized faction in the country might be able to elect the President by putting together only 40 percent of the popular vote.

From a philosophical standpoint, if we are going to change the system for choosing a President in order to assure that the final choice will rest with the people and that the selection will reflect the will of the people, then why do it half way? If I may take the liberty of quoting from the Senator whose name appears as the author of the pending constitutional amendment I would like to express the opinion that he was much closer to the truth in March of 1966 when he stated:

> I think that most of us would prefer to have a majority President. Americans would not look on the plurality President as an ideal.

A year later, my distinguished colleague from Indiana repeated the same thought. He said:

> The question I have asked myself and have found answered in my own mind is should we, in trying to amend the Constitution, be satisfied with a step that in my judgment goes only part way as far as some of the shortcomings that exist. I refer to circumstances that permit a minority of the people to elect a President.

Well, if the Senator cannot conceive of a plan that will reach that goal then why make any change at all? This provision for electing a minority President also contradicts the asserted policy of the plan's sponsors that they are correcting a defect of the present electoral system under which all the popular votes cast for the losing candidate in a State are canceled out and counted for the winner. The committee majority was referring to the unit rule practice of awarding all of a State's electoral votes to each State's popular winner.

But, is this not the very same thing that the proponents are doing when they permit a candidate with less than a majority vote to be elected as President? Are they not assuming in effect that in the event of a runoff between the two highest vote candidates the one who had a plurality in the first election would have won in the runoff? This decision is taken away from the voters entirely. Under the direct election plan it is not the people who will decide who is to be chosen as President from among the top competing candidates. The decision is arbitrarily made for them. The direct election proponents have decided that anyone who receives 40 percent of the vote is the choice of the people.

This assumption is as shocking to me as it was to Professor Bickel of the Yale School of Law, who testified on April 15 of this year that:

> It is sheer illusion, a willful suspension of disbelief, to pretend that there is no deadlock when a popular election produces a winner with under 50 percent of the total vote, and with a plurality of, perhaps, 25,000 or 50,000 or 100,000 out of upward of 70 million. That is deadlock, as much deadlock as when there is no absolute majority in the electoral college.
>
> To resolve this deadlock by letting the candidate who has a 50,000 vote plurality win is no less arbitrary, no less unsatisfactory—in my judgment more unsatisfactory—than to have a joint session of Congress make the choice.

Mr. President, while this defect of the direct election plan could be corrected by amending the 40-percent provision, it would not remedy some very basic drawbacks in the proposal.

One of the primary difficulties I have with the direct election idea is its likely destruction of the importance of small States. I am not speaking merely of States as political entities, but rather I am also including in my concept of a State the frame of mind of citizens who consider themselves to be part of one large family or community of local residents.

This feeling was clearly described by Theodore H. White who has written some well-known books about presidential campaigns. Speaking from the position of one who comprehends the practical side and inner workings of our political system, Mr. White said:

> This new proposal would take away an equally vital part of the political system in abolishing the sense of community in our various States. The States vote as communities. They are proud of how they vote. People like to be New Yorkers or Kentuckians or Missourians or Hoosiers. To deprive them of this sense of belonging to a voting unit and being sunk in the electronic dots that go over a tote board, that could be perhaps the gravest political danger that this new resolution invites.

We have often heard the matter discussed of how the abolishment of the electoral vote will deny to the smaller States the slightly extra weight which they have been given in the process of selecting the President. But we have seldom considered the essence of States as communities of people whose importance will be diminished. Let me follow up Mr. White's views with the frank judgments expressed by Richard Goodwin, a former writer for Presidents Kennedy and Johnson, who was closely involved in the conduct of many presidential campaigns. During his testimony on April 16, Mr. Goodwin specifically commented on the

effect which direct elections might have on the relative importance of large and small States.

In doing so, he noted:

> The psychology of presidential campaigns is one in which today's candidates think in terms of States rather than numbers. Most presidential campaigns are concentrated on no more than 20 percent of the vote, the swing vote, on the assumption the rest are pretty well committed. Today, nearly every State has a swing vote which, even though very small, might win that State's electoral vote. Thus, nearly every State is worth some attention. If the focus shifts to numbers alone, then the candidate will have to concentrate almost exclusively on the larger States. This is where the people and where the most volatile vote is to be found.

Mr. Goodwin recognized also that one of the reasons major candidates visit so many States "is the arithmetic of the electoral college, which demonstrates it may be possible to lose a few major States and at the same time win the election."

Mr. Goodwin summarized his position by stating:

> The Electoral College, along with the Senate, is one of the few mechanisms we have to influence those at the center of affairs to visit outlying citizens, so as to learn about them and pay some attention.

Mr. President, I find myself in agreement with much of this analysis. There is no denying that even now a great deal of a candidate's efforts, including television time, is focused on the major metropolitan areas. But the difference is that this is not his exclusive effort. However, if we blot out State lines and eliminate electoral votes, then I believe there is a grave danger that candidates will devote their exclusive time and resources to the heavily populated areas of our country.

As Richard Goodwin described it:

> The fact is that the total number of votes that might swing the State of Idaho, or Montana, may be worth attention if you are going to get the electoral votes in the entire State, but if all it means is you are going to get another 50,000 votes where there is 60 million at stake, it is not worth any effort. When you see that 50 percent of the entire popular vote comes from seven States, that indicates the kind of intensity then that would have to be concentrated not just by the visits of the candidates but in terms of media, talent and in terms of policies.

Mr. President, the belief that direct election will diminish or injure the precarious structure of our federal system was also shared by another witness before the Senate Judiciary Committee. Representative WILLIAM L. CLAY, a black Congressman from Missouri, told the committee that direct election will diminish or eliminate the voice of minorities within our system. While he was addressing himself to the dissipation of power for ethnic groups, he expressly added that "it affects other cohesive groups and it affects small States to the same proportion."

In other words, Mr. President, the same inherent quality of the electoral system that encourages national candidates to listen to ethnic minorities requires that they listen as well to other minorities, including interests in the sparsely populated smaller States.

Mr. President, this leads to two other faults which are wrapped up in direct election. One of these is the serious possibility that the two-party system will be shattered in the United States. Representative CLAY announced his belief that if the proposed change is adopted, "we are going to have many splinter parties in this country." In his view, this will, in turn, "promote and reward the factionalism and sectional movements which now divide this Nation."

Mr. President, these conclusions are valid whether or not the direct election plan includes a runoff provision. Many people believe the chances of winding up with numerous splinter parties would be increased as a result of the runoff feature, but several witnesses took the position that the direct election system itself would bring about a proliferation of minor parties. Representative CLAY testified from his personal experience that the electoral college has helped to maintain the two-party system. In 1967, he was a member of a national steering committee planning to run a third-party candidate. But, as he told it, the main consideration that kept his group from fielding its team was the fact that they felt they could not win any States and thereby become an important factor in denying the votes to candidates of the two major parties. On the other hand, Mr. CLAY stated that if you eliminate the necessity of winning the electoral votes in a State "you are asking and encouraging people to run with sectional appeals."

In this manner, the present system acts to discourage the creation of splinter parties. But, if the popular vote is substituted for the electoral vote, then special interest groups who are highly convinced of the rightness of their own cause might seek to run solely as a matter of vengeance or vindictiveness. Quoting from Mr. CLAY again:

> People who perhaps didn't have their way or didn't get their particular points at the national convention, would strike out on their own and start campaigning in an effort not to win, but just to defeat those within that two-party structure.

And, I would add that this type of bitter attitude might well be the downfall of one of the major party candidates. Remember that the election will not be compartmentalized within State boundaries where far-out voters can influence only a relatively few number of electoral votes, but will be one in which extremist votes from all over the country will be lumped together in one big pool. This might easily deprive a major party candidate of the percentage of votes which he needs in order to come out the winner, or avoid a runoff.

The Senate Judiciary Committee heard similar expressions of concern from other witnesses. For example, Mr. Goodwin stated:

> I do know in 1968 when the people who wanted to organize a party came to those of us who were working with Senator McCarthy and were anixous to start a new party and had actually done studies of ballot and election laws, the principal argument that stripped that movement of its force was that the effect would be simply to throw States into the Nixon column. They could not carry States.

Another example of how direct election would encourage the formation of additional political parties according to Mr. Goodwin is the liberal party and conservative party movements in New York State: He said:

> At a minimum, you would arrive nationally where you now are in New York State, for example, where you have four parties, because a party that can command a million or two million votes only organized in three or four States, has the balance of power in the presidential election or could have the balance of power, just as the liberal party can achieve the balance of power in a governorship or Senatorial fight in New York. And I think that it would be a great incentive for people to form these groups in order, if not to win the election, to maximize their own influence.

As Mr. Goodwin put it:

> You can be very powerful if you have the capacity to make others win or lose . . . even though you can never win yourself.

The result of this possible proliferation of splinter parties could wreck our Democracy. Professor Bickel stated bluntly that in his opinion our democracy would become weaker because compromises would no longer be formed in the two-party conventions, which are relatively open and accessible, but would be relegated to a handful of candidates and their managers.

Prof. Ernest Brown of Harvard Law School testified that as he saw it the splinter party system would feed the atmosphere of prejudices and dogmas that has already grown too strong in this country. Professor Brown said, and I quote:

> The idea that we could do anything that would encourage the spirit of dogmatism and doctrinaire groups in this country rather than the spirit of accommodation is just inconceivable to me.

Mr. President, it is a combination of these several changes in our political campaigns that makes me believe that the nature of the person who is President himself will change under the direct election system. If a candidate knows that he can be elected with merely 40 percent of the vote, and if the numerically smaller groups and States throughout the Nation are considered insignificant, insofar as their impact on the election is concerned, and if doctrinaire and one-issue splinter parties develop, what will happen to the traditional American experience in which the best chance a man has to win the Presidency is to work on bringing together voters of varying interests? I am speaking of the democratic principle of compromise and accomodation in which as many people's views as possible are blended together in a positive and helpful fashion. It is the practical process that has worked well to advance the welfare and strength of all the people of this great land.

Mr. President, to my mind, the various illnesses of the direct election plan that I have outlined today are all too real. I have not even mentioned the horrible thought of vote contests and utter confusion that is likely to follow in the aftermath of every presidential election. Nor have I discussed the incredible network of Federal requirements that would have to be erected in order to put any sem-

blance of reason into the direct election system.

These are among other criticisms I have of the so-called simple direct election plan, and I intend to pursue them at a future time in this debate. For now, I will ask that Senators give deep thought to the crucial decision that each of us will have to reach when the direct election amendment is called up for a vote.

Look at the hard, practical questions that so many experienced working political leaders have raised about the proposal. Look away from the blinding glow of the theoretical principle of achieving a perfect mechanical equality of each man's vote. The symbol is bright and its appeal is quite inviting, but stripped of theory and laid bare along the hard road of political reality the direct election scheme is nothing but a will-o'-the-wisp.

Mr. McGEE. Mr. President, spurred on by the frightening vision of electoral chaos which was so widely predicted 2 years ago, though it failed to materialize, the Congress is moving toward final action on a measure intended to provide for the direct election of the President and Vice President of the United States. Already, the House of Representatives has opted for this plan. Now the Senate is being asked to go along with the proposal that we scrap one of the cornerstones of the federal system of government in the name of reform.

This is not reform, however. It is a complete reversal of the procedures which have, over the years, resulted in the orderly transition of our Government from the hands of one leader or one party to another, without revolution, without bullets being substituted for ballots, without bloodshed. For the most part, the men elected to our highest office through this process have stood far above the rulers of other lands in ability and competence.

The Senate will not be so quick, I trust, to fall in line on this constitutional amendment—an amendment which could have unknown impact on the two-party system of politics which has turned out to be America's most effective rudder through times of turmoil and distress.

Many of my colleagues will agree with me, Mr. President, that it would be folly to vote for a plan that could imperil our Nation's traditional stability.

For a Senator from one of the Nation's least populous States, this proposed amendment to the Constitution raises very practical questions. I will not deny that. My own State ranks 49th in population, so it would be one of the most adversely affected States, winding up with about .17 percent of the popular vote and, thus, with the same proportion of influence in the election of future Chief Executives. Our influence today in national elections is not great—about .55 percent. But it does, at least, reflect the statehood of Wyoming and other of our less densely populated States which bring to the American processes a different outlook.

The electoral college as such is obsolete, Mr. President. I will not argue otherwise. But we do not need to throw out the engine which has run our political machinery, only overhaul and modify it. The pending amendment not only wipes out the electoral college, but abolishes the sovereign States as voting units. In the name of reform it would put all the 70 million or more American votes into a single winner-take-all pool which would overemphasize, I believe, the role of great urban concentrations of population in our system, instead of giving proper weight to the rural and underpopulated regions of the Nation. These areas, too, must have attention if we are to solve the problems facing this country, including the problems associated with over concentration of people in relatively small land areas. Our Constitution was devised to guarantee the States a measure of influence regardless of their population, Mr. President. I cannot be convinced that the guarantee should be abolished in the name of democracy.

To be sure, let us discard the electoral college as such. As a body of individuals, it is not needed, and it offers the so-called faithless elector the opportunity to disregard the wishes of the people of his State and cast their vote as he wishes. But we can reform the system and take away the opportunities for such abuse without casting out a system which has served us well. Direct election of the President is not reform. For some years, I have supported the electoral principle—the formula for assigning electoral votes. But that formula can work without the electoral college itself. Indeed, it is a college that never meets and whose purpose has been outlived I will gladly vote for its abolition.

Mr. President, we must consider this question carefully. There are a number of substitute proposals before us which would do away with the anachronism which is the electoral college and still retain the essence of our federal system. Let us take the time to study and debate these proposals so that it cannot be said we abandoned a basically sound system for an untried, unpredictable arrangement. Let us retain what is good and abolish what is bad. But let us not abandon a system which has helped make democracy work for nearly two centuries of American experience.

SKYJACKING

Mr. LONG. Mr. President, it is my hope that I will have the opportunity at some time soon to fully communicate my views about the skyjacking of aircraft.

I think that for the record it might be well to state my reaction. I think my views are concurred in by a number of other Senators with regard to this matter. My reaction is very firm.

It seems to me that we should proceed together with other enlightened nations of the world to boycott any country which refuses to extradite skyjackers. That being the case, Jordan or any government on whose territory a hijacked or skyjacked plane might land should be under the obligation to return the hijackers or skyjackers, as the case may be, to the nation in which the crime was originally committed.

Furthermore, we should pass a law or engage in reciprocal treaties whereby every nation would agree that any agreement made to grant immunity or to confer any kind of protection whatever to murderers, skyjackers, or kidnapers would be unlawful. It might be well even to agree to a constitutional amendment so that it could not be suspended by an act of Congress.

Accordingly, when a kidnaper or skyjacker threatens the lives of innocent people or demands that the world bow down to terrorist or unlawful demands, any agreement made to offer protection to such criminals would be unlawful so that whenever a person is apprehended he would be punished for his crime.

One would ask, "How would you make that work with regard to a country such as Castro's Cuba which has in large measure brought about the skyjacking precedent to begin with?"

In that case, enlightened powers such as the United States, Britain, and all countries in the Western Hemisphere should agree among themselves that they would not trade with any third party which does business with a nation which gives any aid, comfort, or support to kidnapers, murderers, or skyjackers.

Accordingly, Mr. President, if Mexico wanted to become a port of entry by which Communists go back and forth to Cuba and have their planes fly back and forth between Cuba and Mexico, we should decline to do business with Mexico. We should let Cuba support Mexico with respect to tourist trade that we now afford Mexico and the hotels in Acapulco. We would then see how well they like it.

It seems to me that if this Nation simply takes a strong and firm position that we are for law and order and will not bargain or do business with or bow down to murderers, kidnapers, extortioners, and hijackers, that would put an end to it.

We have the power to make such a policy effective. It is within the power of this great country, which is the greatest trading nation in the world, to use our power to see that no payment is made to the World Bank or to the International Monetary Fund and that no trade is conducted with any such country, that all deals are off and all contracts and treaties stand in abeyance until any country that is encouraging terrorist tactics join with the world community for law and order.

If Jordan does not have a government, then it seems to me that nations which can agree to organize the United Nations have and should have the power to move in and establish a government and, if need be, exterminate that bunch of assassins in Jordan who are holding those planes and establish a government for those people until they are able to establish a government for themselves.

The idea of a trusteeship for people not able to govern themselves is not new. Such a precedent could be followed in this case. But above all, we should not yield to those kinds of demands. As much as I would hate to see any innocent people killed by murderers, assassins, kidnapers, or extortionists, to yield to the

threat of kidnapers, hijackers, extortionists, skyjackers, or other lawless elements of this world would merely set the stage for more lawlessness. There will be no end to this until the world decides to take a stand against this kind of action.

It was this Nation, when a small power, which was known for saying, "Millions for defense, but not one cent for tribute." It was this Nation which put down the Barbary pirates who were in a sense blood kinsmen of the skyjackers of today.

Mr. President, it would seem to me that we could do no less today as one of the greatest powers in the world, certainly the leader of all free countries, than say, "We are not going to let this world be governed by lawlessness or terrorism and will do no business with any such country."

If we do anything, it should be to punish the people responsible for these crimes.

The first thing to do would be to call upon Jordan to capture and to punish those lawless people there and to serve notice on them that if these terrorists should kill any people, every one of that bunch of assassins will be killed and strung up by their heels until the flies eat their flesh.

Being soft or yielding to that kind of lawless element never gets anyone anywhere. It is unworthy of any enlightened government to yield to those kinds of demands. As soon as we do it, we will find more and more of the same kind of terrorism being undertaken throughout this world.

Mr. President, I personally, as one Member of the Senate, will do what I can to see that we outlaw any traffic with the criminal elements. It would seem to me that we should also make it unlawful for any person to knowingly permit a plane under the control of a kidnaper or skyjacker or murderer or assassin to leave the continental United States.

When those people know that the plane cannot take off once it lands, and when they know there is not enough fuel to get the plane to Cuba or Jordan, they will not skyjack it to begin with.

What happened at Dulles International Airport the other day is an example of what should be done. The pilots should be locked in the cabin and the fuel jettisoned the minute the plane is under the control of a man with guns or explosives. At that point the plane must be kept on the ground. It is that simple.

It should be against the law for anybody to make a deal with an assassin or a kidnaper. The deal would be illegal so he would have to stand trial. I think it would be that simple. Amnesty would not be permitted because the law would forbid it. Then, we would see how long those people from Mexico continue to be allies with Cuba. If they want to be Cuba's partner, fine; but they will not be our partner, too.

It was my pleasure to attend the dinner at which the President of Mexico made a fine speech. He spoke of his great alarm about a trend toward protectionism in this country and how disastrous it could be if this Nation decided to protect itself against the further flight of industry into Mexico where wages are lower and labor is cheaper.

I have great sympathy for Mexico if they want to be part of the international law-abiding community; but, if they want to support Castro's Cuba, let them choose whether they want to be a partner of the United States or of Castro's Cuba.

If we do business on that basis, I do not think they will find it too difficult, especially if we approach it in a diplomatic and pleasant way and if it were pointed out that they would be unhappy if someone hijacked one of their planes. My guess is they would see the logic of our position and that they would be glad to join us in supporting law and order around the world.

Sometimes we work awfully hard to think up complicated answers to simple problems. The answer to this problem is very simple. This Nation was confronted with the same problem in 1812, and this Nation met that problem effectively with regard to both large and small powers. We would not permit international bandits to treat our citizens or our Nation with indignity, and we should not permit it now. We should not be in a position of protecting the entire world, but we should make clear we are not going to do business with international criminals or those who do business with them or cooperate with them.

Mr. JAVITS. Mr. President, I want to say to the Senator from Louisiana that his remarks are characteristic of the true American spirit; and so were those of the President yesterday that we are not going to select among American citizens.

We should fashion unilateral legislation. The junior Senator from New York (Mr. GOODELL) and I introduced a bill yesterday which was referred to the Committee on Commerce. He is a member of that committee, and he will do his best to stimulate the bill being reported.

If the Senator from Louisiana has a proposal in the way of legislation, perhaps the Committee on Finance could act promptly. I would like to join in the expression of the Senator from Louisiana that basic American principles must be preserved, and if Congress is going to preserve them we must fashion legislation for the United States, even if we cannot get international agreement at this time.

Mr. LONG. I thank the Senator.

DIRECT POPULAR ELECTION OF THE PRESIDENT AND THE VICE PRESIDENT

The Senate continued with the consideration of the joint resolution (S.J. Res. 1) proposing an amendment to the Constitution of the United States relating to the election of the President and the Vice President.

Mr. JAVITS. Mr. President, I am a cosponsor of the joint resolution relating to the direct popular election of the President and the Vice President. I have not heretofore spoken on this issue, so I wish to express my views with respect to it from the point of view of equity and justice, and also—and this is important—because there is a controversy about this matter from the point of view of a populous State like New York. It seems to me, as a Senator from New York, that direct election is considerably preferable to the electoral college system. Basically, it is time that the United States practiced what it has preached in terms of democracy in voting—that as a Nation we should elect the two truly national officers whom we do elect.

Lately, however, certain constitutional law authorities, whose views I respect—among them Prof. Alexander Bickel and Charles Black, of Yale—have offered contrary views. Far from seeing the justice of one-man, one-vote in the presidential election, these scholars hold that the electoral system as it is presently constituted offers certain advantages to minority groups which should be preserved in a democratic society. In short, they advocate a system of proportional representation in voting for President.

They also hold that the electoral college system insures that the large urban "swing States" like New York will continue to exert a disproportionate influence—even considering their size—on the choice and programs of the major party candidates. The opinions of these two professors, which I respect, as I have said, have caused me to review my own reasoning for supporting Senate Joint Resolution 1, and I have not found their objections persuasive, so I remain fixed in my support of the joint resolution.

It seems to me to be contrary in the extreme to support the one-man, one-vote principle set forth in Reynolds against Sims while at the same time opposing the direct election of the President. In effect, this is an admission that one believes the advantage enjoyed by these groups with whom one feels sympathy should be preserved, while the same kind of advantage—disproportionate political strength—should be disallowed if enjoyed by others.

If rural counties enjoy, for example, equal representation in a State legislature having vastly more populated urban counties, most liberals—who generally sympathize with the underrepresented urban interests—would agree that the system is wrong. How, then, can they claim with any consistency that urban interests benefit under the electoral college system—and I do not agree with this premise—and that, therefore, the disproportionate influence of their votes should be preserved? That, in essence, is their argument.

My own view is that while under the electoral college system candidates pay a great deal of attention to important States like New York and California, this attention is not necessarily centered on minority groups in the cities, but may just as effectively be directed at a strong showing in other areas of the States, other areas of a given State, canceling out the voters of the Nation's largest cities. Indeed, that is exactly what happened in the presidential election of 1968, in respect of the more suburban and rural areas countering the large vote total cast in the big cities of many States. Quite the reverse happened in the election of 1960, when the big-city vote swept away the votes coming from rural and suburban areas in the major States.

of which Pennsylvania was an extraordinary example, as President Nixon very well remembers.

Even this strategy is not consistent, for it can ignore the substantial urban vote in relatively safe States, while wooing it in marginal States, the classic example cited in the hearings being the cities of Omaha, Nebr., and Oakland, Calif., of equal size. Omaha was virtually ignored by the candidates since Nebraska is considered safely Republican, while Oakland was courted out of all proportion to its own population because it is considered a swing area whose voters might swing the largest single block of electoral votes in the Nation.

I cannot believe that under any electoral system we choose to adopt—particularly one in which each vote is counted equally—the candidate can ignore the urban and suburban voters. They are simply too numerous, too important to any victory, and their views are becoming more issue-oriented all the time; they do not need weighted voting to show their strength.

Another argument which I feel militates against the approach taken by Professor Bickel is the simple numbers game of the electoral college.

Even a cursory reference to the figures reveals that votes in the larger States are significantly diluted by the minimum three-elector rule. Smaller States have a great advantage in the electoral college because no matter what their population, they exercise at least three votes. This means, for example, that only 75,380 Alaskans are needed to cast an electoral vote, and that 95,093 Nevadans and 110,022 Wyomingites are needed to cast an electoral vote in each State. But in New York, it takes 390,286, and in California 392,930, or, roughly speaking, at a very minimum, three to five times as many votes to exert the same measure of power in respect to our national election. The more populous States cannot help being benefited by a system under which each individual vote is counted equally. If that is to be counted an advantage, the vote must be according to the one-man, one-vote concept.

There are many reasons why the electoral college should be abolished and the direct election system adopted. They have been covered extensively in the hearings, the reports of the hearings, the studies of bar associations, and the proposals of many civic groups. Indeed, it is very interesting to me that the attitude of the American Bar Association is so greatly in support of direct election.

It seems to me that among the most persuasive of these arguments are the following:

First, direct election would discourage corruption by eliminating the possibility that a few "stolen" votes in a large State could swing an election—and charges have been made that elections went exactly that way.

Next, it would insure without doubt the election of the ticket winning the greatest number of popular votes and, therefore, popular support. As I said when I began, the Offices of President and Vice President are the two truly national offices in our country; therefore, those two offices should be elected nationally.

Third, direct election would encourage voter participation by making each vote count, instead of automatically allocating a fixed number of electoral votes to each State regardless of voter turnout.

Fourth, direct election would promote the two-party system in States which traditionally have only one party of great strength.

Finally, it would do away with the injustice of weighted voting in the electoral college, which favors the small States, as I have described.

While each of these reasons is important and has affected my decision on this proposal, I have weighed the effect of the amendment on my own State, on the Nation, and on the future of the Presidency, and I reaffirm my support of it, as reflected by the report of the Committee on the Judiciary.

Mr. STENNIS. Mr. President, I was temporarily called away from the floor when the Senator from Florida finished his very fine speech on this subject today. Had I been in the Chamber, I would have had a chance to ask him some questions and also to compliment him highly for his fine presentation. I have been present during a good number of debates, and I have heard the Senator from Florida speak often. As always, he has a fine contribution to make. He speaks from great experience as the Governor of his State, as a member of his State legislature, as I recall, and long years in the Senate of the United States. As one who is vitally concerned about the subject, I also thank him for the very fine presentation he has made. I was privileged to hear most of it.

STATUS OF UNFINISHED BUSINESS WHEN TEMPORARILY LAID ASIDE TODAY

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senator from Mississippi (Mr. STENNIS) who is to be recognized now, completes his statement and yields the floor, the pending business—Senate Joint Resolution 1—be temporarily laid aside and that it remain in that status until the close of morning business on Monday next.

The PRESIDING OFFICER (Mr. TALMADGE). Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF PUBLIC HEALTH SERVICE ACT AMENDMENTS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senator from Mississippi relinquishes the floor, and Senate Joint Resolution 1 is temporarily laid aside today, the Senate proceed to the consideration of Calendar No. 1079, S. 3418. This was announced on yesterday for the late afternoon session today.

The PRESIDING OFFICER (Mr. TALMADGE). Without objection it is so ordered.

VACATING OF PREVIOUS ORDER FOR CONSIDERATION OF H.R. 13810

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent, at the conclusion of the vote on Calendar No. 1079, that the previous order, calling for the consideration of Calendar No. 1123, H.R. 13810, be vacated.

The PRESIDING OFFICER (Mr. TALMADGE). Without objection, it is so ordered.

ORDER FOR LAYING THE FARM BILL BEFORE THE SENATE ON MONDAY

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent, at the conclusion of the vote on Calendar No. 1079, S. 3418, that the so-called farm bill, Calendar No. 1172, H.R. 18546, be laid before the Senate and made the pending business for consideration during the late afternoon or evening session on Monday next.

The PRESIDING OFFICER (Mr. TALMADGE). Without objection, it is so ordered.

STATUS OF UNFINISHED BUSINESS WHEN TEMPORARILY LAID ASIDE ON MONDAY

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on Monday next, September 14, 1970, not later than 5 o'clock in the afternoon, the unfinished business, Senate Joint Resolution 1, be temporarily laid aside and that it remain in that status until the close of morning business on Tuesday next.

The PRESIDING OFFICER (Mr. TALMADGE). Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF FARM BILL ON MONDAY

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that at such time as Senate Joint Resolution 1 is temporarily laid aside on Monday next, September 14, 1970, the so-called farm bill be made the pending business and laid before the Senate at that time.

The PRESIDING OFFICER (Mr. TALMADGE). Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, while I have the floor through the courtesy of the Senator from Mississippi, I should like to put the Senate on notice that it is the intention of the leadership on both sides of the aisle to bring up Calendar No. 1123, H.R. 13810, at some time on Monday evening next. The matter has been cleared with the Senator from Mississippi (Mr. EASTLAND) for action on the bill on Monday evening next. Also, it is the intention of the leadership to try for action on S. 4316, the SBA bill, by Mr. MCINTYRE, on Monday evening next if possible during a late session.

DIRECT POPULAR ELECTION OF THE PRESIDENT AND THE VICE PRESIDENT

The Senate continued with the consideration of the joint resolution (S.J. Res. 1) proposing an amendment to the Constitution of the United States relating to the election of the President and the Vice President.

Mr. STENNIS. Mr. President, I have long supported changes in the method of electing the President and Vice President. I believe that electoral reform in this area is long overdue and that no political issue is of greater importance to the Nation. At the same time, I do not believe that we have anything like a crisis that would push us into a system that I believe would bring far more harm than anything that is possible under the present system, and would bring about a fundamental change in the basic structure of our Government and its philosophy—as I will explain later on.

Mr. President, I speak today in opposition to the Bayh proposal which calls for direct election by the people in the Nation as a whole of the President and Vice President.

I believe that adoption of the resolution would be unwise and would bring results which would be mischievous and also unexpected and unweighed for the time being.

I do support what I have supported in the past, what is known as the district plan. On a number of occasions I have joined in introducing proposed constitutional amendments to put this plan into effect. Briefly stated, the district plan would preserve the office of the elector but would provide electors be chosen in the same manner as Representatives and Senators. The presidential candidate with a plurality in each electoral district, the lines of which would be set by the State legislatures, would receive the vote of its electors. The candidate with a statewide plurality would receive the two electoral votes representative of the State's two Senators.

The candidate receiving the majority of the total electoral votes would become President; but if no one received the majority, Senators and Representatives, sitting jointly and voting individually, would choose the President from the three candidates having the highest number of electoral votes.

Mr. President, I referred to this matter in preceding years. I remember it came up for the first time, since I came to the Senate in 1948, in what was then known as the Lodge-Gossett amendment proposal, and that proposal provided not for the district plan but for the retention of the electoral system, that each candidate would receive such a fractional part of the electoral vote allotted to each State as he received percentagewise of the popular votes in that State. That had its merits and it has its supporters and that passed here by more than a two-thirds majority. It went over to the House and failed to pass there. It was said that the influence of the large city States killed the plan.

I refer to it now with emphasis on the other positions I have taken to show that I am not against everything, that I am willing to join in any reasonable proposal that sets forth a bringing up to date and the better workability of the electoral college system.

But I am certainly not in favor of abolishing it.

The present system of electing the President and Vice President is governed by article II, section 1, and the 12th amendment to the Constitution. These sections provide that the President and Vice President shall be chosen by electors appointed by each State in the manner directed by its legislature, each State having the same number of electors as it is entitled to Senators and Representatives in Congress.

This system was agreed upon by the writers of our Constitution for two basic reasons: first, in order to protect the smaller States, each State, regardless of size, was given two electors in addition to the electors based on its population; second, the electors should actually choose the President and Vice President because it was thought that they would have a greater knowledge and public understanding than the mass of citizens. The growth of political parties soon after the adoption of the Constitution and subsequent popular trends have had a profound effect on the manner in which this system actually operates.

One of the longstanding evils of our present electoral college system is that it makes possible the election of a President who did not receive a majority—or even a plurality—of the popular vote. I emphasize that it makes that possible. I do not think there has been any real or injurious effects. Thus, it is that on 15 occasions we have elected the President by a minority vote, and on three occasions candidates were elected who did not even receive a plurality.

As a matter of historical interest, until about 1800 approximately half of the State legislatures chose electors themselves. However, a gradual change came about in the method of choosing the electors, and, by 1804, the majority of the State legislators had provided for direct popular election of electors.

I think it is historically significant that, at first, most of the States provided that electors should be elected from districts similar to congressional districts, under which one elector was chosen by the voters of each congressional district, and two were elected by those of the State at large. Thus, the electoral votes from a State were split if the various districts differed in their political sentiments. This is basically the plan which I support today.

The district plan eventually was abandoned due largely to the desire on the part of State political leaders to deliver the State's entire electoral vote to one presidential candidate. The unit vote system evolved under which all of the State's presidential electors went to the party with a plurality of the popular votes statewide. By 1832 the district plan had virtually vanished from the scene with only isolated instances of its use since then in certain States. Since 1892 the present unit vote system has been used by every State in the Union.

As I have said, under the existing system there have been 15 occasions when we have elected as President by a minority vote and three occasions in which the candidate elected did not even receive a plurality of the popular vote. Even when the winning candidate did receive a majority of the popular and the electoral vote as well, disparity between the two has been very great.

For example, in 1960 the late President Kennedy's popular vote exceeded that of Vice President Nixon by only .2 of 1 percent of the total vote, but he received 300 electoral votes to 223 for Mr. Nixon.

However, it does not follow that direct popular election is the way to solve the problem and eliminate the evils of the existing system. Indeed direct elections might produce even more evils than exist at present. I will mention only a few of the dangers which might result.

Mr. President, with our tremendous increase in population, which is now beyond 200 million people and soon after the turn of the century will exceed 300 million people and, of course, will increase more rapidly after that time to the point that we will have 400 million people, the very concept of this plan, without having them broken into some units by means of some kind of a plan, makes a topheavy electorate so large, so big, and so vast that I shudder to think about what would happen if all those people are to be considered as one group and undertake by direct vote to choose a President of the United States.

I believe that the increase in the population will increase the soundness of some kind of a system that will preserve some entity and some voice in the Government by the lesser populated areas, the rural areas, the villages, the small towns, and the so-called rural States.

I am thinking in terms now of just a few decades away, not something way out in the far-distant future.

In the first place, direct election would end any role for the States in the election of the President and Vice President and completely upset the balance of political forces upon which our system has come to be based.

I think that it would not only upset the balance of political forces, but I also believe that it would tend to destroy the great school of political training. That has been one of the great sources of strength in our Nation—the participation by the people in smaller units of government, from the rural areas to the villages, the small towns, the small cities, and the county concept included, the participation by countless thousands of people of all ages in these elections, these political conventions, and everything that goes to make up the activities of our electorate in every election, not just presidential elections. I look upon that as one of the great sources of strength of our country.

We are now going to come up with a proposal for election to the two most important offices in all the Nation and sweep aside this participation, which this amendment would do, and create at the unit level one massive body politic and say, "Everything goes to the high

man in this popular election." I think we would take a great deal of the spirit and substance as well as the great arsenal of training in citizenship away from our Government.

The sweeping changes in the legislative representation which have been made under court direction make the electoral vote system even more important as a bulwark of the federal system. It could, I believe, strike a fatal blow to the concept of federalism.

Direct election would deprive the small States of the advantage they now enjoy through the two electoral votes accorded each State regardless of size corresponding to the equal representation accorded the States in the U.S. Senate.

It would jeopardize the control of the States over voting for State and local offices and constitute a blow to State power. In addition the relative weight of each State's vote would depend, not on its population, but on the number of votes cast and counted.

It would encourage the major political parties to concentrate their campaigns in large cities containing large numbers of voters in small geographical areas. This would work against the interests of the rural communities and the smaller States. As a result nominees for the Presidency would most likely come from the larger States or from larger ideological groupings.

Mr. President, I say this with all deference to our cities and the people who live in our cities. However, we already know that one of the great growing pains and problems in connection with our Government now is the problem of the large cities. Many of them are becoming larger and more troublesome to govern. I speak with all deference to them. Someone said to me, "Why, Mayor Lindsay is not doing any good as mayor of New York City." I am not criticizing Mayor Lindsay. My point is that no one in these large cities has a chance to be successful or a chance to carry out his program or the program his advisers might suggest. I am not downgrading the citizenship at all. It is the problems that mount and become impossible.

With respect to the popular election of the President, to concentrate more power in the larger cities, where the problem has already become more and more difficult to solve, would be another step. The people out in the other areas, away from the larger cities—in Government at least—have tremendous blessings that are denied to other people.

Finally, I believe direct election is the least likely of all proposed changes to be accepted—and I mean accepted by the States. Because of the opposition of the small States, the direct popular election amendment in my opinion could never be ratified. It is a statistical fact that about two-thirds of the States would lose the built-in advantage that they now enjoy in the electoral college through the two electoral votes accorded to the States regardless of size equivalent to their U.S. Senators. I believe it would be better for us to pursue a more realistic goal.

On the other hand, Mr. President, I believe that the "district plan" presents a fair, just and workable alternative to the system under which we now select our President and Vice President. As I have said, under this proposal each State would continue to be entitled to a number of electors equal to its Representatives and Senators in Congress. The people of each State would be guaranteed the right of choosing these electors, two of whom would be elected from the State at large, and the number equal to its Representatives in the House would be elected within single electoral districts.

To me it seems that no plan could be fairer, taken from the point of view of the Nation as a whole, and fairer to every area. The cities would have their representation, large and small, and the rural areas would have their representation, as they have in the House and Senate. In turn, the district plan would tie this matter up so that would insure the choice of these districts and these States; and, if that should fail, then there would be a choice by all Members of Congress, which is the body which makes the choices as a whole on the major policies and questions that confront the people of our Nation.

I believe that a more accurate reflection of the popular vote would be forthcoming if electoral votes are divided within each State so that the electoral vote in each district designated for that purpose is determined by the popular vote result in that district alone. At the same time the electoral-vote concept itself would be preserved.

I think it is significant that the district's election process would be retained and be in harmony with the present system of district election of representatives, so it would not create a precedent for proportional representation as would the automatic division of electoral votes in exact proportion to the popular vote in each State.

We have accumulated a lot of experience in almost 200 years, the life of our country, and the problems have become greater. This involves a plan that is still as sound as it was when it was originally used, in my opinion, in the very threshold years of the operation of our Government.

As I stated in my earlier remarks, this district selection system was the one actually used and it proved to be right by the people and Congress in the early decades of our existence. It was the political system, the politics, the political parties that changed the use of that district system and in that way we got away from it. They were within the law.

Now, however, this district plan would go back to that plan which worked so well and put it into the hard language of the Constitution and permit it to be worked out under circumstances where it could not be altered.

The district electoral plan would promote establishment and maintenance of an effective two-party system in every part of the Nation inasmuch as party success in any district would be worthwhile. Thus, it would strengthen the minority party in strongly one-party States.

I know, as do all Senators, our situation at the present time. We must go and campaign and we must go where the people are in the search for votes and what time there is to be used is used largely at the place where it is thought contact can be made with the most people. That is somewhat a rule of necessity. But if we freeze this into just a couple of votes by the entire Nation, that would mean we are leaving out of attention the great areas of this country that we call the rural areas, the villages, the small towns, and the small cities.

When there is not a feeling of obligation to areas, not a political sensitivity to those areas, they are forgotten after the election; not only during the campaign are they neglected but they will be neglected and largely forgotten after the election. That is attributable to human nature.

We should be trying to put together a plan that would put them into a position of responsibility for themselves and accountability.

The district plan would reduce the present disproportional influence of the large population doubtful States in presidential elections by ending the bonanza that comes with the winner take all approach. In addition, the district elector plan would encourage greater voter participation, especially in one-party States by making the individual's vote seem more important in the selection process because one vote in a district would have much greater impact than the same vote in a statewide count.

The district system would give every voter an equal voice in the selection of a President by giving his vote the same weight everywhere. Every voter in the country would be voting for three electors rather than some voting for three while others were able to vote for eight or 25 or 43, depending on the State in which they may live. This is in harmony with the Supreme Court's one-man, one-vote decision.

The district system would minimize problems which trouble the unit rule system, such as voting frauds and efforts at political boss control, by reducing the likelihood that total victory for one party could be achieved in any State under any set of circumstances.

Awarding electoral votes by districts would maintain a fair balance between rural and urban forces and allow minorities to make their weight felt where they have strength, without giving excessive influence to one group.

The single elector districts which the district plan contemplates, would be established by the State legislatures and would be required to be composed of compact and contiguous territory containing as nearly as practical the number of persons which entitle the State to one Representative in Congress. The electors should be pledged in advance to specific candidates for President and Vice President.

I am aware of the argument that small States have a disproportionate number of electoral votes because of the fact that each State has two electoral votes regardless of the size and population of the State. However, this objection applies to any system which retains the electoral vote principle, and I strongly believe that the writers of the Constitution were wise in adopting this principle and that it should be retained. In any event, as I

have already said, I am confident that neither the Congress nor the respective States would ever agree to eliminating this principle which is basic and essential to the preservation of our federal system of government. We should be realistic and recognize that it is very doubtful that the States would ever adopt the direct vote amendment.

In addition to the basic purpose of establishing a district plan for casting electoral votes, there would be a very important change in the method of choosing the President and Vice President in the event no candidate for these offices received an absolute majority of the total number of electoral votes. The 12th amendment now provides that, in such event, the House of Representatives shall choose the President from the three candidates having the highest number of votes. In this election each State has only one vote. A similar procedure is followed in the Senate if no candidate for Vice President receives a majority of the electoral vote.

The district plan would change this procedure to provide that the House and Senate, meeting jointly, with each member having one vote, would select the President and Vice President in the event that no candidate for either office received a majority of the electoral vote. It is certainly more democratic to allow each State one vote for each of its members of Congress rather than giving each State only one vote regardless of its population.

I want to state that these remarks are addressed, with such emphasis as I may have, to the district plan, but I really spoke in the Senate today not only to explain that plan, but to say that everything I have said here in favor of the district plan is an argument, as I see it, against the massive election, as I call it—direct election—for President and Vice President of the United States that would bring in far more problems and evils than it could possibly solve.

Mr. President, I believe that most of us agree that there is a need to reform the electoral college system. This need has been recognized for many years. The Library of Congress reports that hardly a session of Congress has passed since 1797 without the introduction of one or more amendments of this character. These proposals have taken several different approaches. It is recognized that each of them has certain advantages and disadvantages. No one plan presents a perfect and complete solution to the problem. I believe, however, that it is admitted that the adoption of the district plan would bring about great improvements in the methods by which the President and Vice President are selected.

As I have said, Mr. President, I believe that this question of electoral reform is one of the most urgent problems facing the Congress. I believe that it is our responsibility to present to the States for ratification a constitutional amendment to correct the defects in the electoral college system which now exists. However, I cannot support and will not vote for the direct election plan as proposed by the distinguished Senator from Indiana.

I would favor, as I have already said, a situation in which we could really give consideration to the district plan and debate it on its merits.

In summary, Mr. President, I agree with Theodore H. White, the political journalist and author, who in his testimony before the Senate Judiciary Committee called the direct election system "a direct invitation to chaos" and said that while he believed "the country needs to reform its election laws and reform them immediately," he did not think that this should be done by direct popular election.

My remarks are not in distrust of the electorate. They are not in distrust of the people. I have been in public life a good long while and have a basic faith in the people, but I know there are times when emotional matters sweep our Nation, or sweep great, major parts of it. I know there are times when people can be aroused when there is insufficient cause, or no cause, for an emotional state, when for the time being they do not exercise their best judgment, not present their best thinking, nor use their minds in an analytical manner.

I believe one safety of our present system is in the fact that those events seldom happen nationwide at the same time, and the more mature judgment of one area will help to offset another, under our present system, where there may be an emotional or even irrational wave of sentiment in that area. But if we put all of the votes into the same hopper, we are going to find, as the years come and go, and there will be a greater and greater percentage of them in the congested areas, that the sentiment that prevails there will more likely prevail in the result.

For that reason, even though I think this problem is grave, I do not think we have to be in an extra hurry. I do not think we have tried hard enough to work something around the district plan. Therefore, for the time being, in this crowded time, when we are trying to finish before the elections, I think we ought to direct our attention either for or against the proposal by the Senator from Indiana, because that is the one that has the real danger.

Mr. President, I yield the floor.

PUBLIC HEALTH SERVICE ACT AMENDMENTS

The PRESIDING OFFICER. In accordance with the previous order of the Senate, the Chair lays before the Senate S. 3418, which the clerk will state by title.

The legislative clerk read the bill by title, as follows:

A bill (S. 3418) to amend the Public Health Service Act to provide for the making of grants to medical schools and hospitals to assist them in establishing special departments and programs in the field of family practice, and otherwise to encourage and promote the training of medical and paramedical personnel in the field of family medicines.

The Senate proceeded to consider the bill, which had been reported from the Committee on Labor and Public Welfare with amendments at the top of page 2, insert "TITLE I—FAMILY MEDICINE"; at the beginning of line 2, strike out "That part D of title VII of the Public Health Service Act is amended to read as follows:" and, in lieu thereof, insert:

SEC. 101. Part D of title VII of the Public Health Service Act is amended to read as follows:

In line 15, after the word "instruction", insert "(including continuing education)"; on page 3, line 9, after the word "programs", insert "(including continuing education)"; in line 11, after the word "interns," strike out "or residents;" and insert "residents, or practicing physicians;"; on page 7, line 7, after "(a)", strike out "A grant under this part may be made only if the application thereof is recommended for approval by the Advisory Council on Family Medicine and is approved by the Secretary upon his determination that—" and, in lieu thereof, insert "The Secretary, upon the recommendation of the Council, is authorized to make grants under this part upon the determination that—"; on page 10, line 1, after the word "Planning", insert "And Developmental"; at the beginning of line 4, insert "or develop programs or"; in line 7, after the word "planning", insert "and developmental"; in line 14, after the word "of", strike out "$5,000,000" and insert "$10,000,000"; in line 15, after the word "planning" insert "and developmental grants"; on page 12, line 8, after the word "for", insert "and of the amounts of"; and on page 13, after line 12, insert a new title, as follows:

TITLE II—MALNUTRITION

SEC. 201. Part A of title III of the Public Health Service Act is amended by adding at the end thereof the following new section:

"SEC. 310c. (a) In order to reduce the incidence of malnutrition in the United States, to advance medical knowledge in the causes and effects of malnutrition, and to encourage and facilitate the provision of early detection and effective treatment of malnutrition and the conditions which result therefrom, the Secretary is authorized, out of the funds available for carrying out the purposes of this section, to:

"(1) make grants-in-aid to and enter into contracts with medical schools, appropriate graduate schools, and nursing schools to assist such schools in establishing courses dealing with malnutrition, it causes and effects, means for its early detection, and effective treatment of malnutrition and conditions resulting therefrom;

"(2) make grants-in-aid and enter into contracts with universities, medical schools, hospitals, laboratories and other public or private institutions, and individuals and groups of individuals for research into malnutrition, its causes and effects, means for its detection, and into the effective treatment of malnutrition and conditions resulting therefrom;

"(3) establish special projects designed to provide to students of courses in malnutrition practical training and experience in the field of malnutrition; and

"(4) provide fellowships and otherwise financially assist students to encourage and enable them to pursue studies and engage in activities in poverty areas relating to malnutrition.

"(b) In selecting schools and institutions to carry out the purposes referred to in paragraphs (1) and (2) of subsection (a), priority shall be accorded to those schools and institutions which are located in poverty areas.

"(c) For the purpose of carrying out the provisions of this section, there are hereby authorized to be appropriated $32,000,000 for the fiscal year commencing with the fiscal year ending June 30, 1971, and for each of the next four fiscal years thereafter."

So as to make the bill read:

S. 3418

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—FAMILY MEDICINE

SEC. 101. Part D of title VII of the Public Health Service Act is amended to read as follows:

"PART D—GRANTS TO PROVIDE PROFESSIONAL AND TECHNICAL TRAINING IN THE FIELD OF FAMILY MEDICINE

"DECLARATION OF PURPOSE

"SEC. 781. It is the purpose of this part to provide for the making of grants to assist—

"(a) public and private nonprofit medical schools—

"(1) to operate, as an integral part of their medical education program, separate and distinct departments devoted to providing teaching and instruction (including continuing education) in all phases of family practice;

"(2) construct such facilities as may be appropriate to carry out a program of training in the field of family medicine whether as a part of a medical school or as separate outpatient or similar facility;

"(3) to operate, or participate in, special training programs for paramedical personnel in the field of family medicine; and

"(4) to operate, or participate in, special training programs to teach and train medical personnel to head departments of family practice or otherwise teach family practice in medical schools.

"(b) public and private nonprofit hospitals which provide training programs for medical students, interns, or residents—

"(1) to operate, as an integral part of their medical training programs, special professional training programs (including continuing education) in the field of family medicine for medical students, interns, residents, or practicing physicians;

"(2) to construct such facilities as may be appropriate to carry out a program of training in the field of family medicine whether as a part of a hospital or as a separate outpatient or similar facility;

"(3) to provide financial assistance (in the form of scholarships, fellowships, or stipends) to interns, residents, or other medical personnel who are in need thereof, who are participants in a program of such hospital which provides special training (accredited by a recognized body or bodies approved for such purpose by the Commissioner of Education) in the field of family medicine, and who plan to specialize or work in the practice of family medicine; and

"(4) to operate, or participate in, special training programs for paramedical personnel in the field of family medicine.

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 762. (a) For the purpose of making grants to carry out the purposes of this part, there are authorized to be appropriated $50,000,000 for the fiscal year ending June 30, 1971, $75,000,000 for the fiscal year ending June 30, 1972, and $100,000,000 for the fiscal year ending June 30, 1973, and for each of the next two succeeding fiscal years.

"(b) Sums appropriated pursuant to subsection (a) for any fiscal year shall remain available for the purpose for which appropriated until the close of the fiscal year which immediately follows such year.

"GRANTS BY SECRETARY

"SEC. 763. (a) From the sums appropriated pursuant to section 762, the Secretary is authorized to make grants, in accordance with the provisions of this part, to carry out the purposes of section 761.

"(b) No grant shall be made under this part unless an application therefor has been submitted to, and approved by, the Secretary. Such application shall be in such form, submitted in such manner, and contain such information, as the Secretary shall have prescribed by regulations which have been promulgated by him and published in the Federal Register not later than six months after the date of enactment of this part.

"(c) Grants under this part shall be in such amounts and subject to such limitations and conditions as the Secretary may determine to be proper to carry out the purposes of this part.

"(d) In the case of any application for a grant any part of which is to be used for major construction or remodeling of any facility, the Secretary shall not approve the part of the grant which is to be so used unless the recipient of such grants enters into appropriate arrangements with the Secretary which will equitably protect the financial interests of the United States in the event such facility ceases to be used for the purpose for which such grant or part thereof was made prior to the expiration of the ten-year period which commences on the date such construction or remodeling is completed.

"(e) Grants made under this part shall be used only for the purpose for which made and may be paid in advance or by way of reimbursement, and in such installments as the Secretary may determine.

"ELIGIBILITY FOR GRANTS

"SEC. 764. (a) In order for any medical school to be eligible for a grant under this part, such school—

"(1) must be a public or other nonprofit school of medicine; and

"(2) must be accredited as a school of medicine by a recognized body or bodies approved for such purpose by the Commissioner of Education, except that the requirement of this clause (2) shall be deemed to be satisfied if, (A) in the case of a school of medicine which by reason of no, or an insufficient, period of operation is not, at the time of application for a grant under this part, eligible for such accreditation, the Commissioner finds, after consultation with the appropriate accreditation body or bodies, that there is reasonable assurance that the school will meet the accreditation standards of such body or bodies prior to the beginning of the academic year following the normal graduation date of students who are in their first year of instruction at such school during the fiscal year in which the Secretary makes a final determination as to approval of the application.

"(b) In order for any hospital to be eligible for a grant under this part, such hospital—

"(1) must be a public or private nonprofit hospital; and

"(2) must conduct or be prepared to conduct in connection with its other activities (whether or not as an affiliate of a school of medicine) one or more programs of medical training for medical students, interns, or residents, which is accredited by a recognized body or bodies, approved for such purpose by the Commissioner of Education.

"APPROVAL OF GRANTS

"SEC. 765. (a) The Secretary, upon the recommendation of the Council, is authorized to make grants under this part upon the determination that—

"(1) the applicant meets the eligibility requirements set forth in section 764;

"(2) the applicant has complied with the requirements of section 763;

"(3) the grant is to be used for one or more of the purposes set forth in section 761;

"(4) it contains such information as the Secretary may require to make the determinations required of him under this section and such assurances as he may find necessary to carry out the purposes of this part;

"(5) it provides for such fiscal control and accounting procedures and reports, and access to the records of the applicant, as the Secretary may require (pursuant to regulations which shall have been promulgated by him and published in the Federal Register) to assure proper disbursement of and accounting for all Federal funds paid to the applicant under this part; and

"(6) the application contains or is supported by adequate assurance that any laborer or mechanic employed by any contractor or subcontractor in the performance of work on the construction of the facility will be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a–276a5). The Secretary of Labor shall have, with respect to the labor standards specified in this paragraph, the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 65 Stat. 1267), and section 2 of the Act of June 13, 1934, as amended (40 U.S.C. 276c).

"(b) The Secretary shall not approve any grant to—

"(1) a school of medicine to establish or operate a separate department devoted to the teaching of family medicine unless the Secretary is satisfied that—

"(A) such department is (or will be, when established) of equal standing with the other departments within such school which are devoted to the teaching of other medical specialty disciplines;

"(B) such department will, in terms of the subjects offered and the type and quality of instruction provided, be designed to prepare students thereof to meet the standards established for specialists in the specialty of family practice by a recognized body approved by the Commissioner of Education; or

"(2) a hospital to establish or operate a special program for medical students, interns, or residents in the field of family medicine unless the Secretary is satisfied that such program will, in terms of the type of training provided, be designed to prepare participants therein to meet the standards established for specialists in the field of family medicine by a recognized body approved by the Commissioner of Education.

"(c) The Secretary shall not approve any grant under this part unless the applicant therefor provides assurances satisfactory to the Secretary that funds made available through such grant will be so used as to supplement and, to the extent practical, increase the level of non-Federal funds which would, in the absence of such grant, be made available for the purpose for which such grant is requested.

"PLANNING AND DEVELOPMENTAL GRANTS

"SEC. 766. (a) For the purpose of assisting medical schools and hospitals (referred to in section 761) to plan or develop programs or projects for the purpose of carrying out one or more of the purposes set forth in such section, the Secretary is authorized for any fiscal year (prior to the fiscal year which ends June 30, 1975) to make planning and developmental grants in such amounts and subject to such conditions as the Secretary may determine to be proper to carry out the purposes of this section.

"(b) From the amounts appropriated for any fiscal year (prior to the fiscal year ending June 30, 1975) pursuant to section 762 (a), the Secretary may utilize such amounts as he deems necessary (but not in excess of $10,000,000 for any fiscal year) to make the planning and developmental grants authorized by subsection (a).

ADVISORY COUNCIL ON FAMILY MEDICINE

"SEC. 767. (a) The Secretary shall appoint an Advisory Council on Family Medicine (hereinafter in this section referred to as the 'Council'). The Council shall consist of twelve members, four of whom shall be

physicians engaged in the practice of family medicine, four of whom shall be physicians engaged in the teaching of family medicine, and four of whom shall be representatives of the general public. Members of the Council shall be individuals who are not otherwise in the regular full-time employ of the United States.

"(b) Each member of the Council shall hold office for a term of four years, except that any member appointed to fill a vacancy prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and except that the terms of office of the members first taking office shall expire, as designated by the Secretary at the time of appointment, three at the end of the first year, three at the end of the second year, three at the end of the third year, and three at the end of the fourth year, after the date of appointment. A member shall not be eligible to serve continuously for more than two terms.

"(c) Members of the Council shall be appointed by the Secretary without regard to the provisions of title 5, United States Code, governing appointments in the competitive service. Members of the Council, while attending meetings or conferences thereof or otherwise serving on business of the Council, shall be entitled to receive compensation at rates fixed by the Secretary, but not exceeding $100 per day, including traveltime, and while so serving away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in Government service employed intermittently.

"(d) The Council shall advise and assist the Secretary in the preparation of regulations for, and as to policy matters arising with respect to, the administration of this title. The Council shall consider all applications for grants under this part and shall make recommendations to the Secretary with respect to approval of applications for and of the amounts of grants under this part.

"DEFINITIONS

"SEC. 768. For purposes of this part—

"(1) the term 'nonprofit' as applied to any hospital or school of medicine, means a school of medicine or hospital which is owned and operated by one or more nonprofit corporations or associations, no part of the net earnings of which inures, or may lawfully inure, to the benefit of any private shareholder or individual;

"(2) the term 'family medicine' means those certain principles and techniques and that certain body of medical, scientific, administrative, and other knowledge and training, which especially equip and prepare a physician to engage in the practice of family medicine;

"(3) the term 'practice of family medicine' and the term 'practice', when used in connection with the term 'family medicine', mean the practice of medicine by a physician (licensed to practice medicine and surgery by the State in which he practices his profession) who specializes in providing to families (and members thereof) comprehensive, continuing, professional care and treatment of the type necessary or appropriate for their general health maintenance; and

"(4) the term 'construction' includes construction of new buildings, acquisition, expansion, remodeling, and alteration of existing buildings, and initial equipment of any such buildings, including architects' fees, but excluding the cost of acquisition of land or offsite improvements."

TITLE II—MALNUTRITION

SEC. 201. Part A of title III of the Public Health Service Act is amended by adding at the end thereof the following new section:

"SEC. 310c (a) In order to reduce the incidence of malnutrition in the United States, to advance medical knowledge in the causes and effects of malnutrition, and to encourage and facilitate the provision of early detection and effective treatment of malnutrition and the conditions which result therefrom, the Secretary is authorized, out of the funds available for carrying out the purposes of this section, to:

"(1) make grants-in-aid to and enter into contracts with medical schools, appropriate graduate schools, and nursing schools to assist such schools in establishing courses dealing with malnutrition, its causes and effects, means for its early detection, and effective treatment of malnutrition and conditions resulting therefrom;

"(2) make grants-in-aid and enter into contracts with universities, medical schools, hospitals, laboratories and other public or private institutions, and individuals and groups of individuals for research into malnutrition, its causes and effects, means for its detection, and into the effective treatment of malnutrition and conditions resulting therefrom;

"(3) establish special projects designed to provide to students of courses in malnutrition practical training and experience in the field of malnutrition; and

"(4) provide fellowships and otherwise financially assist students to encourage and enable them to pursue studies and engage in activities in poverty areas relating to malnutrition.

"(b) In selecting schools and institutions to carry out the purposes referred to in paragraphs (1) and (2) of subsection (a), priority shall be accorded to those schools and institutions which are located in poverty areas.

"(c) For the purpose of carrying out the provisions of this section, there are hereby authorized to be appropriated $32,000,000 for the fiscal year commencing with the fiscal year ending June 30, 1971, and for each of the next four fiscal years thereafter."

Mr. DOMINICK. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRIVILEGE OF THE FLOOR

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that members of the staff of the committee and the staff of the Health Subcommittee be permitted to be present in the Chamber to assist us during the consideration of this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, this bill, S. 3418, the family medical practice bill, is cosponsored jointly by myself and Mr. RANDOLPH, Mr. WILLIAMS of New Jersey, Mr. PELL, Mr. KENNEDY, Mr. NELSON, Mr. MONDALE, Mr. EAGLETON, Mr. CRANSTON, Mr. JAVITS, Mr. PROUTY, Mr. SCHWEIKER, Mr. ALLEN, Mr. BAYH, Mr. BROOKE, Mr. BURDICK, Mr. EASTLAND, Mr. ERVIN, Mr. FULBRIGHT, Mr. GOODELL, Mr. HART, Mr. HARTKE, Mr. HATFIELD, Mr. INOUYE, Mr. JORDAN of North Carolina, Mr. MCCARTHY, Mr. MCGOVERN, Mr. METCALF, Mr. MONTOYA, Mr. MURPHY, Mr. MUSKIE, Mr. PASTORE, Mr. PERCY, Mr. RIBICOFF, Mr. SCOTT, and Mr. SPONG.

That was as of the date reported, Mr. President, on the 5th of August. Since then the Senator from Mississippi has joined in cosponsoring the bill.

The bill has widespread support on both sides of the aisle. Mr. President, in 1931, three-fourths of all physicians in private practice were general practitioners. In more recent years, the demand for specialists and the preference of many doctors to specialize, has reduced the percentage of general practitioners to one-fifth of all doctors.

In the years between 1963 and 1967 alone, general practitioners decreased 7.3 percent while the specialists increased as follows: Surgical specialists by 15.9 percent, medical specialists by 13.6 percent, and others 19.4 percent. The growth of the specialists was dictated by the dramatic advances in medical science that make it impossible for one man to master all the fields of medical knowledge. Surgery, pathology, internal medicine, psychiatry, pediatrics—all deserve the exclusive attention of great numbers of doctors. Today, 80 percent of the graduates from medical school prepare themselves for a specialty practice.

The result has been a growing gap between the family needing generalized health information and care for its men and women, babies, teenagers, and grandparents, who may suffer from time to time from a great variety of maladies and injuries.

Fortunately, medical practice has begun to recognize the need for new training programs for the general practitioner. In some medical schools, courses are now being offered which lead to a new "specialty"—the practice of family medicine, because there are so few general practitioners.

The family practice doctor is trained to consider and to treat persons in the context of their family and surroundings. Preventive health is one of his major objectives.

A second function is to refer patients needing specialty care or treatment to the right person and place. In that respect he is the single contact where an entire family may go for comprehensive medical care. There are 30 million Americans who today have no access to a family physician whereby they can enter into the medical care system.

The importance of the family practice physician is evident when we remember that the Americans most lacking medical care are those of low and modest incomes who lack the means and the family tradition of looking for the kind of medical care they need. The rural poor, the ghetto dweller, the elderly, the migrant—these are the people who have suffered most from the decline of the general practitioner.

They have become so completely up-

rooted from where they were reared. The families have moved to areas where they do not know where to get a doctor. It is the rural families and the migrant workers who have suffered the most from the decline of the general practitioner.

In February 1969, the American Medical Association approved an American Board of Family Practice with powers to conduct examinations and grant certification to family physicians. A few medical schools are offering or developing courses leading to certification in this field.

I am glad to say that, although there are not many of them, one is the University of Texas Medical School at Galveston. It is one of the four medical schools in my State. The avowed purpose of the University of Texas medical branch at Galveston is, as it has always been, to train good practitioners of medicine for the State of Texas. Almost 45 percent of the practicing physicians in the State of Texas are products of the medical branch, and in the 80 years since its founding our school of medicine has graduated approximately 6,000 physicians.

Under the leadership of Dr. J. M. White, vice president for academic affairs and dean of medicine, and Dr. M. L. Ross, director of family medicine, a program for specializing in family medicine has been developed in the school of medicine.

Texas is known for its wide-open spaces. About one-third of the population lives in small, isolated areas which are a considerable distance from the large medical centers located in the metropolitan areas. Texas will always require family practice physicians in spite of the great specialization in the medical centers. To give special emphasis on this type of training to young physicians will require extra support for the programs being developed in medical schools. And Senate bill 3418 will be of great value in insuring the success of the program from its beginning.

Briefly, Mr. President, title I of the bill would authorize a 5-year program of grants to medical schools:

First—and this is the key part of the bill—to operate separate departments devoted to teaching and instruction in all phases of family practice;

Second, to construct facilities appropriate to carry out family practice training programs whether as a part of a medical school or as a separate outpatient or similar facility;

It was shown at the hearings that nearly all the teachers in medical schools are specialists, such as in surgery or some other branch of medicine. So without this provision in the bill, the bill would be meaningless.

Third, to operate or participate in special training programs for paramedical personnel in the field of family medicine; and

Fourth, to operate or participate in special training programs for medical personnel to head departments of family practice or otherwise teach family practice in medical schools.

It would also authorize grants to public or private nonprofit hospitals which train medical students, interns, or residents:

First, to operate special professional training programs in family medicine for medical students, interns, or residents;

Second, to construct facilities appropriate to carry out these programs whether as part of a hospital or as a separate outpatient or similar facility;

Third, to provide scholarships, fellowships, or stipends to interns, residents, or other medical personnel who are in need of such assistance to participate in accredited training programs in the field of family medicine and who plan to specialize or work in the practice of family medicine; and

Fourth, to operate or participate in special programs for training paramedical personnel in the field of family medicine.

For the purpose of making the grants to medical schools and to hospitals, the bill would authorize appropriations of $50 million for fiscal year 1971, $75 million for fiscal year 1972, and $100 million each for fiscal years 1973, 1974, and 1975.

Finally, Mr. President, I would like to draw my colleagues' attention to the other major aspect of S. 3418. Title II of the bill authorizes a new program to begin to effectively deal with the vexing problems of malnutrition. The programs authorized in title II will greatly assist in continuing the battle against malnutrition. It is a tribute to the diligent efforts of the distinguished Senator from New York (Mr. JAVITS), the ranking minority member of the Committee on Labor and Public Welfare, that the programs encompassed in title II are now before the Senate for its consideration.

I shall not go further in discussing the programs; I am sure that the Senator from New York will want to elaborate further on the bill's provisions. He did very effective work in presenting them as a separate bill, and finally as an amendment to this bill.

Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc and that the bill as thus amended be treated as original text for the purpose of considering further amendments.

Mr. DOMINICK. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Colorado will state it.

Mr. DOMINICK. In the event the committee amendments are adopted en bloc, will that have any effect in my offering amendment No. 886 later?

The PRESIDING OFFICER. None whatever; it will not have any effect.

Is there objection to the unanimous consent request of the Senator from Texas? The Chair hears none, and the committee amendments are agreed to en bloc.

Mr. JAVITS. Mr. President, this is the second of two bills that have come before the Senate in the last 2 days dealing with health problems of the country, both of them reported by the Committee on Labor and Public Welfare. The Senator from Texas (Mr. YARBOROUGH) is the principal author of the first title of this bill, which relates to a subject very dear to his heart, and on which he has worked indefatigably for a very long time.

Whatever may be the fate of the amendment of the Senator from Colorado (Mr. DOMINICK), in my judgment it does not go to the very heart of the bill. Therefore, I think it is fair and safe to say that it is the peculiar capstone of the service of Senator YARBOROUGH in the Senate that this bill should have been brought to fruition in this Congress. I know of no measure which would be more uniquely adapted to his philosophy of life and his representation of the people of Texas than one which relates so directly to the practice of family medicine. Indeed, this is one of the great, pioneer traditions of our country, and we are bringing it up to date and demonstrating that modern practice does not eliminate basically the fundamental concepts of life.

I remember, as a child—as I think many of us remember—a picture, in color, in the windows of drugstores. The picture depicted a child ill, upon a bed of pillows mounted on chairs alongside a lamp. Obviously, it was a rural setting. The mother was in the background; the doctor was the central figure of the piece. Obviously, he was a country doctor, making his rounds, and saving the life of the very sick child. He was working under primitive circumstances and with limited medical facilities.

To me, this has always epitomized the Hippocratic oath and the romance and beauty, as well as the healing power, of the American doctor. So I think that in this particular measure the Senator from Texas has given us an opportunity to support, with modern techniques, one of the most basic and appealing aspects of all American medicine.

In addition, Mr. President, as he has pointed out, we may have somewhat outrun ourselves. We do have grave deficiencies in the number of doctors in this country. We generally estimate the immediate shortage to be at least 50,000 and we have a shortage in sight of 150,000 more. I must say that must be compared with the figure at the most of 500,000 doctors available for any kind of active medical practice—more nearly 350,000. This poses grave problems for our country. We are trying to meet it with certain types of clinical practice, group practice units, which concentrate heavily upon specialization. In this measure we will be attacking the other end of the scale which is the broadest kind of a generalist; namely, the doctor who practices family medicine. I believe that both forms of approach are equally essential. Certainly the testimony taken before our committee clearly indicated that.

Another aspect of the bill which is very important to me is its effort to improve the supply of para-medical personnel, personnel who are not doctors. The Russians have an interesting system in that regard, from which we can probably learn something, called the Felcher system. Under that system, they have all kinds of assistant doctors, highly specialized personnel, who do not have the full training of a doctor or a physician but are well able to handle many specialties, as for example, the setting of broken bones or some other specific matter of that kind.

Our experience with medical corps-

men in the armed forces, who are not doctors, indicates a wide range of assistance to the medical profession which can be rendered in this way.

I am hopeful that in the new Congress we may be able to move into this area in a far more effective way than we have so far, in attracting medical corpsmen to the health services and giving professional recognition to some of these paramedical personnel not trained to be fully a doctor yet able to carry a good deal of the load.

All of this, Mr. President, including the romantic vision of the country doctor called out of bed at 3 or 4 o'clock in the morning and, in his horse-drawn buggy, driving through the rain or snow to attend a sick patient, which was as characteristic of the American scene as delivery of the mail, is invoked by this particular measure. I hope very much that the Senate will approve it.

As I say, discussion with the Senator from Colorado (Mr. DOMINICK) on his amendment is a matter of methodology rather than the substantive trust of this measure. I am sure that the Senator, very much like the rest of us, feels the same way about the basic element involved here, which is the encouragement of the practice of family medicine.

I congratulate the distinguished Senator from Texas (Mr. YARBOROUGH) for once more bringing a very fine, high-minded and desirable health measure to the floor of the Senate.

I take but another few minutes to discuss at this time a title of the bill which is my own, but if the distinguished Senator from Texas would like me to yield to him now, I shall be happy to do so.

Mr. YARBOROUGH. Mr. President, I am grateful to the distinguished Senator from New York for his kind words. I have had the privilege of working with him on this committee now for a great many years. We have worked in harmony on the Health and Education Subcommittees during which a great body of health and education legislation has been passed. Without his assistance and leadership, and his amendments on many of these bills, we would never have enacted so much education and health legislation.

It has been a great privilege to have worked with a Senator of his astuteness and mental acuity, his great knowledge of the law, and his knowledge of these problems.

I want to thank the Senator from New York for his cooperation. He has never been an obstructionist. He has always cooperated to improve our work, to add improvements to it, if he could. We have a good bill here.

Mr. JAVITS. I thank my colleague from Texas very much.

Now, Mr. President, I shall deal briefly with title II of the bill, which sets the seal of urgency in establishing a national commitment to put an end to malnutrition in America by authorizing grants-in-aid to assist medical schools, graduate schools, universities, hospitals, and other public or private institutions in more effectively dealing with the problems of malnutrition; by advancing medical knowledge in the causes and effects of malnutrition, providing for the early detection and effective treatment of malnutrition, and enhancing student assistance programs in the field of malnutrition.

The malnutrition title of this bill was originally introduced by me as a separate bill, S. 1865, and cosponsored by Senators MCGOVERN, BAKER, BROOKE, COOK, DOLE, GOODELL, HATFIELD, PERCY, and SCOTT.

Testimony before the Select Committee on Nutrition and Human Needs, of which I am ranking minority member, has indicated that our medical schools have not been adequately preparing their students for detecting and treating malnutrition and its related illnesses. Even though many of our medical schools do have courses in which some attention is given to malnutrition, few make the study of malnutrition an identifiable part of their curriculum. We have learned that too few doctors have a background which equips them to recognize and treat malnutrition as it exists in our poverty areas. For too long the study of malnutrition has been given secondary attention in our medical, graduate, and nursing schools, to the shame and dismay of us all.

Provisions of this title are designed to rectify the situation and respond to the criticism of the final report of the White House Conference on Food, Nutrition, and Health, which stated:

> The teaching of nutrition in schools of medicine, dentistry, and nursing is most inadequate at the present time; in some schools it is almost nonexistent.

This title of the bill also authorizes assistance for research into malnutrition, its causes and effects, means for its detection, and into the effective treatment of malnutrition and conditions resulting therefrom, and meets a White House Conference on Food, Nutrition, and Health task force recommendation that funding be provided for: "continued research, both basic and applied, on specific nutritional needs of the population and the fundamental causes of malnutrition."

To achieve the objective cited in the White House Conference on Food, Nutrition, and Health report—

> More emphasis should be given to applied nutrition, not only in the classroom but through field experience in hospitals, clinics, and community.

Funds are provided for special projects designed to provide students in courses in malnutrition with practical training and work experience and with fellowships to encourage such students to work in poverty areas to help combat conditions of malnutrition and its related illnesses.

There is substantial evidence to document the effects of poverty and the enhanced risks to mental and physical development from severe malnutrition during the first few years of life. This enhanced risk extends into the period of pregnancy when the expectant mother is unable to provide the infant with sufficent nutrients.

To meet this need a section of the title authorizes the provision of fellowships and other financial assistance to students to encourage and enable them to pursue studies and engage in activities in poverty areas relating to malnutrition.

I believe this title of the bill will be a major step forward in the war against hunger and malnutrition and is responsive to President Nixon's 1969 congressional message which said:

> I am asking the Secretary of HEW to:
> —initiate detailed research into the relationship between malnutrition and mental retardation;
> —encourage emphasis by medical schools on training for diagnosis and treatment of malnutrition and malnutrition-related diseases.
>
> The teaching of nutrition and one problem of malnutrition in schools of medicine, dentistry and nursing is most inadequate at the present time and in some schools it is almost nonexistent because specialists in nutrition among physicians, dentists and nurses is limited. A few hundred persons would be an optimistic estimate.

They end up, Mr. President, with a finding which is contained in appendix C, panel 4, or the final report of the White House Conference on Food, Nutrition and Health. I ask unanimous consent that the whole of the appendix be printed in the RECORD.

There being no objection, the appendix was ordered to be printed in the RECORD, as follows:

APPENDIX C—PANEL IV–2: NUTRITION TEACHING IN MEDICAL SCHOOLS

ADEQUACY OF NUTRITION TEACHING IN MEDICAL SCHOOLS

Only a few formal studies have been made of the adequacy of nutrition teaching in schools of medicine. Such studies have disclosed that:

1. A need for improvement in nutrition teaching is readily acknowledged by many medical schools.

2. Only a few schools have a separate division or department of nutrition.

3. Special courses in nutrition are rare and nutritional material is commonly incorporated in courses in biochemistry and physiology and in the teaching of clinical specialties such as medicine, surgery, pediatrics, and obstetrics.

(*a*) At the preclinical level, nutritional subject matter is often displaced by more "basic" topics such as enzyme kinetics, and membrane theory. In addition, instructors in biochemistry and physiology not infrequently emphasize their own research interests out of proportion to their relevance to the overall subject and to clinical problems. Often, little attempt is made to provide the student with the basic information about nutrition upon which "clinical nutrition" is necessarily based.

(*b*) In the clinical department and subspecialties of medicine there has been little or no correlation of nutrition teaching; thus, the student has been offered only a fragmentary selection of aspects of nutrition having particular relevance to various clinical subjects. Such fragmentation inevitably has led to appreciable gaps in nutrition education.

4. A few medical schools offer elective courses on therapeutic diets (medical dietetics), experience in a "nutrition clinic," and in nutritional investigation.

5. Many medical students only learn about florid malnutrition in man when they take electives involving participation in overseas programs based in countries where protein-calorie malnutrition and vitamin deficiencies are common.

6. In medical schools with a good program in nutrition there is usually either a strong

division or department interested in nutrition, or professors with a special interest in clinical nutrition or nutritional research.

7. A thorough and definitive survey of nutrition teaching in American medical schools remains to be done.

(a) No objective assessment of the nutritional knowledge acquired by medical students has been made.

(b) Sufficient nutritional questions do not appear on National or State Board examinations to provide a fair test of nutritional knowledge.

(c) Current knowledge of the extent and effectiveness of nutritional teaching necessarily is based in large part on the results of questionnaires distributed to various medical schools and on the impression, observations, and opinions of a relatively few faculty members. These sources give a useful preliminary indication of the state of nutritional teaching in American medical schools; however, the information they contain does not provide a sufficiently strong foundation upon which a national policy with respect to nutritional teaching at the medical school level can be based.

(d) (See addendum No. 1.)

I. OPPORTUNITIES FOR NUTRITION TEACHING TO MEDICAL STUDENTS

No plan designed to improve nutrition teaching to medical students can overlook the striking changes introduced into the curriculums of most medical schools during the past 5 years. These include:

1. Reduction of time spent in laboratory exercises in anatomy, biochemistry, physiology, pharmacology, and other preclinical sciences.

2. Strong efforts made to coordinate teaching of basic science material so that biochemical, physiologic, pharmacologic, and clinical information about the various organ systems of the body is presented to the student in an integrated fashion.

3. Increased emphasis on interdisciplinary teaching with some beginning dissolution of departmental boundaries.

4. Introduction of the student to clinical problems earlier than previously; often in the first year, or early in the second year.

5. More emphasis on elective opportunities for students after they have completed a "core curriculum," usually during the last 18 months of medical school. These elective opportunities include:

(a) Assignments to medical facilities in technically underdeveloped countries and to poverty areas in the United States.

(b) "Clerkships" in community medicine where problems in the delivery of medical care by the hospital center are given special attention.

II. NUTRITION TEACHING DURING THE PRECLINICAL YEARS

In considering how nutrition teaching can be fitted into and articulated with the medical school curriculum, it must be kept in mind that the time available for basic science courses is being increasingly compressed. Thus, it would seem difficult to add a required course on basic aspects of nutrition during the so-called preclinical years, even though establishment of such a course has been recommended on a number of occasions. However, since there is an increasing emphasis on integration of basic science material, it is possible that the presentation of what is ordinarily considered to be nutritional subject matter can be used to organize biochemical or physiological information. For example, a discussion of the factors affecting nitrogen balance could be used to pull together a great deal of material on protein biochemistry that otherwise might not be related readily to human health problems. A discussion of calorie requirements in man might serve to give relevance to the subject of energy transformations at the cellular level.

It has been pointed out that some medical schools offer courses in clinical correlation or pathophysiology, in which an attempt is made to bridge the gap between basic science and clinical training. In such a course nutritional information can help the student understand the relationship between the clinical picture and the underlying physiologic or biochemical disorder. For example, the symptoms that accompany growth-onset diabetes mellitus can be best understood in terms of the conditioned malnutrition that results from inability to utilize carbohydrate properly.

III. NUTRITION TEACHING IN THE CLINICAL SPECIALTIES

The importance of nutritional considerations in medicine, surgery, pediatrics and obstetrics is acknowledged. Unfortunately (as mentioned previously), the nutrition teaching provided by the various medical specialties is necessarily fragmented, and sometimes superficial. For example, the student may be taught a rule-of-thumb approach to nutritional therapy without being given an understanding of the principles upon which such treatment is based.

It has been suggested that a properly qualified member of the faculty with a strong interest in nutrition could help to coordinate and strengthen the teaching of nutrition in the clinical specialties and, by means of lectures, conferences, clinics, or teaching rounds, fill in any important gaps that remain.

IV. NUTRITION TEACHING IN ELECTIVES

1. Electives that involve participation in programs designed to deliver medical care in poverty areas in the United States or abroad often bring the medical student into direct contact with patients who exhibit florid deficiency states, including protein-calorie malnutrition. Such experiences are far more effective than slides or textbook pictures in convincing the student that malnutrition remains a major world health problem and that clinical nutrition is a subject providing many challenges for the young physician.

2. Clerkships in community medicine are increasingly offered by the various divisions and departments of community medicine that are developing in medical schools and teaching hospitals throughout the country. In such programs, the medical student can work in a nutrition clinic, participate to nutrition surveys, study the role of nutrition in disease prevention or retardation and learn to work effectively with other members of the "health care team," including the public health nutritionist. This type of training can lead logically into a career in public health nutrition or to a program of graduate training in comprehensive medicine designed to train a new type of specialist for whom the designation "primary physician" has been suggested.

3. An elective in a division where nutritional and metabolic research are conducted can serve as an introduction to a career in academic clinical nutrition. Medical students who participate in such electives may be motivated to obtain 2 to 4 years of postdoctoral training in nutrition and metabolism after completing 1 or 2 years of residency work in a medical specialty.

V. RECRUITMENT

Recruitment of young physicians into clinical nutrition has been extremely difficult and there is a critical shortage of trainees and of teachers and investigators in this field.

Some of the reasons for this situation have been identified. These include the following:

1. A lack of identity for clinical nutrition.

2. Lack of a subspecialty status for clinical nutrition.

3. Dearth of superior training programs in nutrition designed to meet the needs and interests of young physicians.

4. Lack of recognition by medical schools and teaching hospitals of a need for clinical nutrition programs.

5. Debilitating effect on the image of nutrition as a respectable scientific discipline of food faddists, commercially motivated pressure groups, and widespread pedestrian nutritional research.

The problems of an identity for nutrition seems to be inherent in the scope and diffuseness of the word "nutrition." For example, there are no satisfactory terms in the vocabulary of nutrition to distinguish the clinical investigator of nutritional problems from the home economist who is concerned with applied nutrition. A professor of nutrition can be either a dietitian or a medical scientist. Such semantic difficulties have not helped to dispel the cloud of confusion that hovers over the subject as it relates to clinical medicine and medical research. Indeed, many otherwise sophisticated medical school faculty members and administrators tend to identify nutrition inherent in the standards for certification in this field promulgated by the American Board of Nutrition.

Lack of a subspecialty status for clinical nutrition has been an important factor in discouraging many young physicians from entering the field. While hematology, cardiology, gastroenterology, etc., are recognized subspecialties, clinical nutrition is not. This distinction has important financial implications for the house officer who is considering entrance into a subspecialty.

As Mueller has pointed out (Fed. Pros. 167, 1967): "At the present time there is no clear career future for the young physician in nutrition." He goes on to say that "* * * it is a well-established truism that the quality of undergraduate training is proportional to that of graduate training. In other words, if the science of nutrition lent itself to a residency training program it would automatically improve the facility for undergraduate teaching."

It must be recognized that there has emerged in medicine a growing number of medical students and young physicians who are placing the concept of service well above considerations of financial remunerations and "success" as it is conventionally viewed. Such individuals are very likely to be attracted to careers in clinical nutrition if they can be shown the enormous benefits to mankind inherent in the prevention and treatment of all forms of malnutrition. However, the exposure that medical students usually receive to serious nutritional problems in their present medical school setting is ordinarily so minimal that the chances of stimulating their interest in the subject seem small.

ADDENDUM No. 1

It is recommended that funds be made available to permit appropriate voluntary agencies (AAMC, AMA, etc.), to conduct a thorough and definitive survey of nutrition teaching in medical schools. The results of such a survey should be evaluated by an expert panel selected by NAS–NRC in consultation with other national groups concerned with medical education, to determine the adequacy of nutrition teaching in American schools of medicine.

Mr. JAVITS. Mr. President, the need for improvement in nutritional teaching is readily acknowledged by many medical schools. Also we have the testimony of Harvard University School of Public Health which in a letter to me dated July 15, 1970, states as follows:

DEAR SENATOR JAVITS: We who are interested in the nutritional problems of this country appreciate your efforts and I thank you for your letter of June 23, 1970. With specific reference to Section 411 on Fortified

and Enriched Foods, I would like to raise two questions.

It should be clear that the objective is to supply "nutritious food" and this may be achieved with natural products without specific additions of nutrients which would ordinarily be considered under "fortified or enriched foods." I am uncertain as to the legal interpretation of the current wording.

Secondly, I have been told that OEO has, in fact, funded a few projects of this kind although I have no specific information. The usual response of industrial people to this kind of suggestion has been that while they could prepare cheaper and sometimes better products than those they now market, they see no way to sell such products without cutting into their present markets. So, I have some skepticism about how realistic the industry would be in attempting to develop this entire concept although the need for some kind of activity to develop cheaper nutritious products that are acceptable would seem quite clear.

The Food and Nutrition Board expects to begin activities very shortly under contract with the Food and Drug Administration to develop some nutritional guidelines for various classes of foods. As you are probably aware, the fortification of some foods is limited by certain standards for specific foods. At the same time, some limitations are necessary since excessive additions of vitamin D to foods have produced severe toxic effects in children and caution has to be exercised. I assume that this whole area will be redefined in the next year or two.

Graduate training in nutrition, as in most fields, will probably decrease this year because of limitations in research and training grant funds. Most schools are in trouble and some in very serious trouble. I see little that can be done without increased funds for research and training. We should recognize, of course, that the limitation in funds available across the board does provide an opportunity to direct larger numbers of individuals into nutrition, or other fields, provided funds can be made available.

At the same time it has to be recognized that research support in nutrition and practically all fields of medicine during the past 20 years or more has emphasized the biochemical and physiological aspects with little attention to the social aspects. As is stated in Section 202, "the Nation lacks sufficient knowledge" to solve the nutrition problems we have. The remainder of Title II, however, appears to me to be based largely upon the supposition that the knowledge is more or less adequate and the primary need is to produce new curricula and educate and inform the population. It seems to me that programs of these kinds will not succeed unless a professional core is developed to lead the program. If nutrition is to be introduced into medical schools, it will presumably be through Professors of Nutrition in the medical schools and these will not develop unless specific funding is available. Similarly, means must be found to develop strong and more comprehensive nutrition programs than now exist in universities. The basic core of nutritionists now available are, in general, not prepared to develop the comprehensive programs needed, particularly the need to involve the social scientists. The specific areas identified in S. 2789 as requiring more research effort are sound, I think, but it is not clear to me that these will necessarily lead to the kinds of broad training and research programs which are clearly needed.

I should like to point out also that nutrition in medicine is a far greater problem than dealing with those diseases related to poverty and undernutrition. The nutritional aspects of renal disease, heart disease, malabsorption syndromes, anemias, allergies, etc., are also a neglected field and I feel that these kinds of problems also have to be attacked, particularly if we are to obtain the real interest of the medical profession in nutritional problems of this country.

I certainly agree that priorities must be established from the many recommendations of the White House Conference. One of the major difficulties at the moment is the inability of most of us to find out exactly what is happening in Washington and especially in HEW that relates to nutrition. There is need for coordination and evaluation. I am uncertain how this can be best accomplished.

If I can be useful at any time, I hope you will call on me.

Sincerely yours,

D. M. HEGSTED, Ph. D.,
Professor of Nutrition.

Mr. President, finally, at my request, the medical schools of the State of New York organized for the purpose of surveying the situation in the State. This was also followed in other States on the issues of hunger and malnutrition. They have made a report, which we will be issuing in due course, but I should like to state now that they, too, flay the inadequacies of medical training and the facilities for medical training in the field of nutrition as one of the most urgent needs before them. This relates both to research and actual treatment and other problems of a medical character which arise in connection with malnutrition.

I see the Senator from Virginia (Mr. SPONG) in the Chamber. I should like to pay my tribute to him and to the Senator from South Carolina (Mr. HOLLINGS) who both helped to explode the notion that Southern Senators are necessarily reactionary. These Senators were frank and direct enough to go into their own States and acquaint the country with conditions there of which, had they been smaller men, they would have been ashamed and covered up. However, because they are men of size, they revealed them in order to bring about a national concern and a national correction.

I congratulate them. They are truly of the character that Senators ought to be.

Mr. SPONG. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. SPONG. Mr. President, I thank the Senator from New York. I had intended to rise to commend him for his leadership insofar as title II of the pending bill is concerned.

I introduced a bill seeking the same objectives. I am very much aware of the leadership that the Senator from New York, working with the Senator from Texas (Mr. YARBOROUGH), has shown in this important field.

I urge passage of this legislation, and predict that, through our medical schools, we will go a long way toward knowing more about malnutrition and in our efforts to alleviate hunger and malnutrition.

I commend the Senator from New York (Mr. JAVITS) and the Senator from Texas (Mr. YARBOROUGH).

Mr. JAVITS. Mr. President, I thank the Senator from Virginia very much. No analysis of title II of the bill could be concluded without a reference to the work which is being done by the select committee dealing with the subjects of hunger and malnutrition. That committee is headed by the Senator from South Dakota (Mr. MCGOVERN). I happen to have the honor to be a ranking minority member of that committee.

There the evidence, it seems to me, is conclusive with reference to the need for a medical answer to the problems of malnutrition and hunger. These problems are most awful in respect of mothers who are bearing children because we are learning that the effects of malnutrition in the mother may cause a retarded child even before the child is born.

I could think of nothing worse. We are all accustomed to a bloody world—and it is. Yet, there are some things which touch the human heart peculiarly, even though we are accustomed to the tragic suffering and dying in the world. One of those things that touch our hearts deeply is the danger that a child may be completely useless to itself and to the world for all its life because we had failed to deal with the nutritional problems of the mother bearing that child.

With some 20 million Americans at the poverty level, this is a problem of vast magnitude. The medical schools are unable to cope with this problem. A number of the medical schools are in danger of closing their doors. Practically every medical school in the country is in very deep financial trouble.

We passed a bill the other day seeking to bail them out with $100 million of emergency funds. The provision in the bill for authorization for family medical practice and for nutritional education are absolutely essential if we wish to legislate concerning this problem and have that legislation implemented.

I hope very much that the Senate will pass the bill.

Mr. PERCY. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. PERCY. Mr. President, I have had the pleasure of serving on the committee dealing with nutrition and human needs along with the distinguished Senator from New York.

Mr. President, the bill which we are considering today establishes two very worthwhile programs.

Title I establishes a program to help medical schools and hospitals educate larger numbers of doctors in the field of family medicine.

This program is designed to answer the very great need to supplement this country's highly specialized medical manpower with physicians who possess a more broadly based medical education. Hopefully, these doctors will provide their patients with generalized and comprehensive health care which takes into account the patient's total social and economic environment.

Title II establishes a program to improve nutrition, education, and research.

As a member of the Select Committee on Nutrition and Human Needs, I am acutely aware of the problem of malnutrition as it affects the poor and nonpoor alike. One of the more disturbing discoveries of our committee relates to nutrition education. Testimony before the

committee has indicated that although some general attention is given to nutrition in some of our medical schools, the study of nutrition is not an identifiable part of the curriculum. This fact, confirmed by the White House Conference on Food, Nutrition, and Health, has resulted in too many doctors, dentists, and nurses who are unable to adequately recognize and treat malnutrition.

This bill will remedy this defect by authorizing grants-in-aid and contracts to medical schools to assist them in establishing courses dealing with malnutrition, its causes and effects, means for its early detection, and effective methods of treatment.

In addition, the bill provides funds for research and for financial assistance to students of malnutrition to provide them with practical training and experience and to encourage them to pursue studies and engage in activities in poverty areas relating to malnutrition.

Mr. President, both of the programs contained in this bill are desirable and both are necessary if we are to continue to meet the health needs of the country. I am proud to support this bill.

We do have many rural communities in Illinois which have no doctors. If those communities could get doctors interested in going there, they would have to be general practitioners. That would require a medical education.

If we look at a city like Chicago, we find that Chicago has fewer doctors today than it had in 1930, but it has a much larger population today.

Many of the doctors do not have a general practitioner's background and would be required to have that kind of background if they are to render the kind of service we require for our people.

I think this bill would help us to make a giant step forward toward meeting a great human need.

I again commend the Senator from New York and the Senator from Texas.

Mr. JAVITS. Mr. President, I am grateful to my friend, the Senator from Illinois, who has been such a fine influence and leader in this field. He has been a fine influence on our select committee.

Mr. President, I ask unanimous consent that a statement on this matter prepared by my colleague, Senator GOODELL, may be printed in the RECORD.

There being no objection, Senator GOODELL's statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR GOODELL

Mr. President, it is appalling to note the decline in the number of physicians who engage in general practice. Since 1940, the number of family doctors in the United States has decreased by nearly 40 per cent. In 1940 there were approximately 110,000 family physicians—today there are less than 70,000. The number of doctors who treat patients as people rather than as collections of organs is rapidly diminishing. We must act now to offset the depersonalization of medical services.

The reversal of this trend depends upon a number of factors—particularly the social conscience of the individual physician and the commitment of the Federal Government to encourage the training of family practitioners.

For the first time, there is an increasing interest among a large number of medical students for medical training relevant to community needs. Today's students work in low-income communities during vacation periods; they are seeking courses in medical sociology and, in increased numbers, they are demanding to be taught methods to treat persons in the context of their family and surroundings.

If we take advantage of growing student interest in family medicine by making Federal grants available to medical schools and hospitals, we can reverse the trend of decreasing numbers of badly needed general practitioners.

The bill before us today, S. 3418, assists medical schools and hospitals in establishing special departments and programs in the field of family medicine. Such Federal assistance will encourage more students to specialize in general or family practice.

This legislation offers us the opportunity to provide delivery of personal health care to millions of people. I am proud to be one of the original co-sponsors of this bill and urge my colleagues to join in supporting the authorization of professional and technical training in the field of family medicine.

Mr. YARBOROUGH. Mr. President, the Senator from New York has commented on malnutrition and mentioned the effect on the fetus of a pregnant woman who is suffering from malnutrition.

In our hearings in the Select Committee on Hunger and Malnutrition—on which I have served since its creation—it has been developed by knowledgeable people in this field that 90 percent of the potential intellectual capacity of a person is formed by the time the child is 5 years of age. If a child suffers malnutrition prior to its birth, that child will always be a slow learner in school and may be mentally retarded. His chances for a full life are gone.

I commend the Senator from New York for adding this language. I commend the distinguished Senator from Virginia (Mr. SPONG), who is one of the coauthors of the bill.

With reference to the first title of the bill, there are 134 counties in the United States which do not have a single doctor. There are many other communities and many counties with only one doctor in the entire county. The need is very great for this measure. If we send a doctor into the rural areas of the country, he has to be a general practitioner.

There is a great need for general practitioners. We do not have them and we will not have them unless we put some money in the medical schools to train them.

The medical schools do not have the money. A number of them are so close to the verge of bankruptcy that about three of them are faced with the prospect of collapsing within a year.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the RECORD a statement on the pending business, prepared by the Senator from California (Mr. CRANSTON).

There being no objection, the statement by Senator CRANSTON was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR CRANSTON

Mr. President, I rise in support of S. 3418, the so-called Family Practice bill.

The number of health professionals and paraprofessionals in the field of family medicine will be considerably expanded as a result of this bill, which the Senate Labor and Public Welfare Committee has reported out under the able leadership of the Senator from Texas (Mr. Yarborough). The practice of medicine has shifted dramatically in recent years to specialization with a comparable decrease in the number of physicians providing general family care. Medical students have been attracted to the specialties during their education through exposure to faculty members who are themselves specialists, and by the genuine excitement surrounding research and scientific discovery. This environment tends to draw them away from generalized practice, and the result has been a visible drop in the number of general practitioners, at the very time the need for them is increasing.

The Academy of General Practice has compiled statistics showing that between the years 1931 and 1967, the number of physicians in private practice increased by 73%, while at the same time the number of physicians in family medicine declined by 44%. The number of specialists increased 469%. In 1964 the AMA, concerned with this rapidly developing shortage and the growing imbalance in the medical profession, established an Ad Hoc Committee made up of leaders in the medical community, which after studying the causes and projecting the future effects of this trend on the profession recommended two major approaches to resolving the problem.

The first AMA recommendation was that medical school programs in family medicine be given more emphasis and visibility. In keeping with this recommendation, the Department of Health, Education and Welfare as early as 1968 provided medical schools with funds for family medicine programs. The second AMA recommendation—to enhance the status and prestige of the practice of family medicine by establishing an approved specialty board and recognizing family medicine as a speciality—was accepted in 1969 when the specialty of family practice was established.

S. 3418 expands upon the AMA's first recommendation by providing grants for the establishment of separate and coequal Departments of Family Medicine at medical schools, for the training of medical personnel to become faculty for these Departments and for training programs in the field of family medicine at hospitals. I am persuaded that such Departments are necessary to reverse the damaging trend I referred to earlier and to permit the field of family practice to compete effectively for medical students.

Among the innovative provisions of this bill is the full recognition given to the vital role that paramedical personnel must play in the field of family medicine and the great potential for expanding this role. S. 3418 will support the inclusion, along with training programs for the physician, of programs for the training of such paramedical personnel in medical school curricula as well as in the hospital training programs. Integration of these two levels of training in the academic and clinical setting should have a dramatic influence on the delivery of health care in the future. And it should bring greater efficiency and lower costs to the practice of medicine.

In these integrated medical paramedical programs, the physician specialist and the paramedical support person, by learning together in interrelated courses, will each learn to appreciate fully the scope and the value of the other's function in the treatment of a patient. The greater potential for care which can be derived from a team approach to the treatment of a patient will be apparent to both. They will become accustomed to dealing with medical problems as a team, and

in all probability will seek to establish the same method of delivering health care when they move, perhaps together, into the practice of their professions in the community.

Some exciting new concepts in medical care delivery have developed recently with the creation of programs for the training of the physician's assistant at medical schools and in hospitals. I strongly hope that development of this new type of paraprofessional to his fullest potential as a member of the family medical team will be fostered under the provisions of S. 3418. Thus, I would urge the Secretary of Health, Education and Welfare in administering this grant program to encourage, to the maximum feasible extent, schools and hospitals receiving funds under the proposed Act to undertake at the same time integrated medical/paramedical training and education programs.

I would also like to draw attention to the importance this bill places on training programs provided by hospitals, through the inclusion of authorizations for grants to hospitals for the development of training programs for medical students, interns, residents and paramedical personnel. The special contributions made to the training of health and allied health professionals by hospital training programs are substantial, and I am delighted that due recognition is provided this fact by S. 3418. The Committee has made clear in its report on the bill that the potential of the hospitals of the Veterans Administration, the Public Health Service, and other federal agencies to establish training programs in the field of family medicine has been recognized. Under the bill, these federal hospitals would be able to compete for grants established by S. 3418 on an equal basis with non-federal hospitals.

Another aspect of the bill deserves attention. This is the emphasis given to the need for medical schools and hospitals to include in their curricula and training programs continuing education for practicing physicians. I am grateful to the Committee for adopting an amendment, which I proposed, to cover continuing education. In this era of rapidly expanding scientific knowledge and technological development, means must be provided for physicians to keep abreast of the newest advances in their field. Thus, the American Board of Family Practice requires recertification of specialists after six years of practice. The provisions in S. 3418 for continuing education programs at medical schools and in hospitals will insure that practicing family physicians have the opportunity and the means to meet this recertification requirement.

Other provisions in title I of the bill provide for the construction of such facilities to carry out a program of training in family medicine—either as part of a medical school, hospital or separate outpatient or similar facility—and for financial assistance—such as scholarships, fellowships or stipends—to interns, residents or other medical personnel following a program in the field of family medicine.

In order to carry out these and the other purposes I have discussed, $50 million is authorized for fiscal year 1971 and an additional $375 million is authorized over the next four fiscal years.

Also included in S. 3418, in title II, are provisions designed to assist in meeting the challenge presented by the existence of malnutrition in our "affluent" society. The bill authorizes the appropriation of $32 million for each of the next five fiscal years, beginning in fiscal year 1971, to encourage the establishment by medical schools, graduate schools and nursing schools of courses dealing with malnutrition, to encourage research into malnutrition, and to provide financial assistance, practical training and field experience for students who are or who wish to become engaged in courses in the field of malnutrition.

The Senate Select Committee on Nutrition and Human Needs, under the able leadership of the distinguished Senator from South Dakota (Mr. McGOVERN), has thoroughly documented the appalling depth of this problem. One of the barriers to its solution has been a dearth of personnel, both professional and paraprofessional, specially trained in nutrition. In addition, doctors in general have not had even the elementary background in nutrition which would enable them to recognize and treat those cases which come to their attention in the course of their daily work. I very much hope that the research and training which would be assisted under title II of this bill will be approved by the Congress, as important in the elimination of malnutrition in America.

Mr. President, S. 3418 should be a strong step to assure the expansion of the practice of family medicine in response to the great challenge facing that medical discipline. I urge my colleagues to vote for this bill.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Berry, one of its reading clerks, announced that the House had passed the following bills of the Senate, severally with an amendment, in which it requested the concurrence of the Senate:

S. 203. An act to amend the act of June 13, 1962 (76 Stat. 96), with respect to the Navajo Indian irrigation project;

S. 434. An act to reauthorize the Riverton extension unit, Missouri River Basin project, to include therein the entire Riverton Federal reclamation project, and for other purposes;

S. 621. An act to provide for the establishment of the Apostle Islands National Lakeshore in the State of Wisconsin, and for other purposes;

S. 2264. An act to amend the Public Health Service Act to provide authorization for grants for communicable disease control and vaccination assistance;

S. 2882. An act to amend Public Law 304, 84th Congress, to authorize the construction of supplemental irrigation facilities for the Yuma Mesa Irrigation District, Arizona; and

S. 3558. An act to amend the Communications Act of 1934 to provide continued financing for the Corporation for Public Broadcasting.

The message also announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 10874. An act to provide for the establishment of the Gulf Islands National Seashore, in the States of Florida and Mississippi, for the recognition of certain historic values at Fort San Carlos, Fort Redoubt, Fort Barrancas, and Fort Pickens in Florida, and Fort Massachusetts in Mississippi, and for other purposes; and

H.R. 17795. An act to amend title VII of the Housing and Urban Development Act of 1965.

HOUSE BILL REFERRED

The bill (H.R. 10874) to provide for the establishment of the Gulf Islands National Seashore, in the States of Florida and Mississippi, for the recognition of certain historic values at Fort San Carlos, Fort Redoubt, Fort Barrancas, and Fort Pickens in Florida, and Fort Massachusetts in Mississippi, and for other purposes, was read twice by its title and referred to the Committee on Interior and Insular Affairs.

PUBLIC HEALTH SERVICE ACT AMENDMENTS

The Senate resumed the consideration of the bill (S. 3418) to amend the Public Health Service Act to provide for the making of grants to medical schools and hospitals to assist them in establishing special departments and programs in the field of family practice, and otherwise to encourage and promote the training of medical and paramedical personnel in the field of family medicine.

AMENDMENT NO. 886

Mr. DOMINICK. Mr. President, I call up my amendment No. 886.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk proceeded to read the amendment.

Mr. DOMINICK. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered, and the amendment will be printed in the RECORD.

On page 2, strike out lines 12 through 16, and in lieu thereof, insert the following:

"(1) to establish or operate, as an integral part of their medical education curriculums, programs to provide teaching and instruction (including continuing education) in all phases of family practice;".

Beginning on page 8, line 21, strike out all through page 9, line 17, and insert in lieu thereof, the following:

"(1) a school of medicine to establish or operate a program for the teaching of family practice medicine unless the Secretary is satisfied that such school has made adequate administrative provision for such program, through separate departments, administrative units, or other administrative arrangements that emphasize family practice in the education of medical students, interns and residents;".

Mr. DOMINICK. Mr. President, I call the attention of my colleagues to the specific amendment which is printed and on the desk of each Senator.

There is one change made, which the clerk read. It changes the struck portion from line 11 to line 12—that is all it does—in the beginning of the amendment in order to correspond with the amendment I have had printed.

Mr. President, I would like to say several things about this bill after having listened with great interest to the Senator from Texas, the Senator from New York, the Senator from Virginia, and the Senator from Illinois, all of whom commented on the purpose of the bill.

I want to assure everyone that I subscribe to the purpose of this bill, having been delivered into this world by a general practitioner as I am sure many of my colleagues were. I have great sympathy for their work and their assistance with all kinds of family problems that are created by the various illnesses that occur to everyone as we go through life.

I subscribe to the idea that specialties are great but that we can overspecialize in certain areas. Many health situations still require the need of a generalist. I think it is important to say that the so-called practice of general medicine is a specialty in and of itself, accredited and recognized by medical schools and by the medical profession. It is, therefore,

encompassed in the general description of specialties.

The purpose of my amendment, which is based on language suggested by the American Medical Association, is to cure what I consider to be an inflexible approach to the very problem with which the bill is concerned.

That problem, as pointed out in the previous colloquy, is a shortage of general practitioners caused by the increasing degree of specialization within the profession. I think, and I have stated it many times including yesterday on the floor of the Senate, that the method proposed to carry out this worthy objective is too rigid.

As presently written, this bill would require medical schools to establish separate departments of family medicine of equal standing with their other departments in order to qualify for grants. My amendment would give medical schools more flexibility by requiring only that they make sufficient administrative arrangements to satisfy the Secretary that grant funds would, in fact, be used for programs designed to train doctors and other medical personnel in family practice medicine.

Although family practice is itself a specialty recognized by the American Medical Association, it requires training in several of the traditional specialities—internal medicine, pediatrics, surgery, psychiatry, obstetrics, and gynecology. For that reason, an educational program in family practice medicine is adaptable to a diversity of administrative arrangements.

Many medical schools have programs which emphasize the teaching of family practice medicine. But at present, only nine of these schools administer such programs through separate departments of family medicine. The others administer their programs in a variety of ways, depending on what each school determines to be the most effective utilization of its particular resources. Some schools have established divisions of family medicine within one of their departments. Others have administrative arrangements which draw on the resources of several departments.

My staff has contacted representatives of several of the medical schools which do not have full departments of family medicine, and asked them their opinion regarding the requirement in this bill that each school set up a separate department of family medicine which is of equal standing with its other departments. Each school was strongly opposed to the requirement, and several stated flatly that they would not apply for Federal funds which were subject to that requirement.

At this point I wish to inform my colleagues of the colleges and medical schools which were contacted. The list includes my own school, the University of Colorado Medical Center. Others contacted were the University of Oklahoma, Harvard, the University of Vermont, Stanford, Johns Hopkins, Southwestern Medical College in Dallas, Tex., and the University of California Medical School in San Diego. All of these are prominent medical schools. Every one of them strongly oppose that portion of the bill which requires a separate department.

Among the reasons given in opposition were some which I believe to be very illuminating and extremely important in the process of this debate:

First. Congress should not be legislating the curriculums of medical schools.

It seems to me that this principle is basic to the whole argument. Should we or should we not in providing money for very badly needed family practitioners, find ourselves also engaged in determining curriculums of medical schools. I do not think we should. I do not think we should involve ourselves in their administrative business nor in their curriculums.

Second. Each medical school should be permitted to determine how best to administer its family medicine program, based on its particular resources.

Third. It would be difficult to get top flight people to staff separate departments of family medicine. It would be better to utilize top people in existing departments.

Fourth. It would be very expensive to establish and operate separate coequal departments of family medicine. The cost estimates ranged from $250,000 to $600,000 per year.

The family practice specialty requires training in several of the traditional specialties—internal medicine, pediatrics, surgery, psychiatry, obstetrics, and gynecology. Are we going to require the medical schools to set all of those up in a separate department entitled "Family Practice," as well as having people who are engaged in specialties in those fields go through those departments?

The testimony of Dr. William R. Willard, recent chairman of the Council on Medical Education of the American Medical Association, before the committee which considered the bill, of which I am the ranking Republican, indicates he had the same problem with it that I have. He said:

> We are somewhat concerned, however, over the specification in section 761 (a) (1) that there must be "separate and distinct departments" established for those purposes. While new administrative units would be desirable, the requirement of "separate and distinct departments" would render ineligible for Federal assistance many otherwise worthy programs of family practice.

He referred to the report of the ad hoc committee on education for family practice of the American Medical Association, which emphasized that separate departments were only one of several ways of satisfying the need for administrative units responsible for carrying out family medicine programs, and went on to say:

> In the light of this, surely it would be inadvisable to legislate the organizational structure for teaching family medicine, especially since some medical schools are successfully developing programs without separate departments.

The only opposition from the medical profession, I think, to the position I have taken in my amendment—and I ask the Senator from Texas to correct me if I am wrong is the American Academy of General Practitioners. They have been strongly in favor of having a separate and distinct department. They so stated before our committee. We have had contact with them since. They are still of that opinion. But the Association of American Medical Colleges and the American Medical Association are in favor of my amendment on the ground it provides more flexibility in establishing family medicine programs, and makes it far easier to instruct people, at a cost level in keeping with their budgets, and it would not require the unnecessary overhead of a separate department.

After testifying before the committee in the way I have stated, Dr. Willard, in the process of that testimony, referring to the requirement that family medicine departments be of equal standing with other departments, pointed out that such requirement is unclear because, he stated:

> The various clinical departments of medical schools are not equal now in terms of budget, numbers of faculty, patient load, curriculum, or other measurable criteria.

In other words, the other departments are not of equal standing as between themselves in these fields, so with what department are we going to compare this one that has to do with family practice?

After so testifying before the committee, Dr. Willard wrote to Senator YARBOROUGH, the chairman, reiterating his opposition to the separate department requirement. He said:

> It would be administratively inappropriate and unworkable.

He suggested an amendment which would eliminate that requirement, and leave it to the discretion of the Secretary of the Department of Health, Education, and Welfare to decide whether a medical school which applies for funds has made adequate administrative arrangements to assure that the funds will be used for a family medicine program. My amendment is based on his suggestion. I ask unanimous consent that a copy of his letter be inserted in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN MEDICAL ASSOCIATION,
Chicago, Ill., July 23, 1970.

Hon. RALPH YARBOROUGH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR YARBOROUGH: You will recall that I had the privilege of testifying for the American Medical Association on behalf of Senate Bill 3418, in support of this Bill, which would assist in developing programs of family practice. You will also recall that I took some exception to Section 765(b), which reads:

"(b) The Secretary shall not approve any grant to—

"(1) a school of medicine to establish or operate a separate department devoted to the teaching of family medicine unless the Secretary is satisfied that—

"(A) such department is (or will be, when established) of equal standing with the other departments within such school which are devoted to the teaching of other medical specialty disciplines;

"(B) such department will, in terms of the subjects offered and the type and quality of instruction provided, be designed to prepare students thereof to meet the standards established for specialists in the specialty of

family practice by a recognized body approved by the Commissoner of Education; . . ."

Possible language, which would meet my objection, to cover the content might read somewhat as follows:

"(b) The Secretary shall not approve any grant to—

"(1) a school of medicine to establish or operate programs of the teaching of family medicine unless the Secretary is satisfied that there is adequate administrative provision for such programs, either separate departments or other administrative arrangements or units that emphasize family medicine in the education of medical students, interns, and residents."

Section 765(b)(1)(A) and 765(b)(1)(B) and Section 765(b)(2) should be dropped. Section 765(b)(1)(A) which specifies that the family practice department must be equal to other departments is not realistic, as my testimony pointed out, and would be administratively inappropriate and unworkable. Section 765(b)(1)(B) is inappropriate because medical students cannot be prepared to meet the standards for specialists in family practice. Their training is more generic and is a basis for practice in any specialty. Hopefully, there will be family practice orientation in the undergraduate program, however. Section 765(b)(2), which relates to the type and quality of program for the internship and residency, is redundant because an accredited program in family practice will, by definition, prepare residents for the specialty of family practice.

I appreciate the courtesy of the hearing which you gave me and the American Medical Association. If we can be helpful in any way, pleace call upon me or Dr. Rube.

Sincerely yours,

WILLIAM R. WILLARD, M.D.,
Immediate Past Chairman, Council on Medical Education.

Mr. DOMINICK. The witness who appeared before our committee on behalf of the Association of American Medical Colleges testified to the same effect. Dr. Robert M. Heysset, associate dean for health care programs, Johns Hopkins University School of Medicine, testified:

The Association would view with great concern approaches which would have the effect of determining departmental organization and the nature of the curriculum in medical schools by statutory action. We join with the American Medical Association in their reservation concerning the specific language of S. 3418. Medical schools are actively changing their educational programs to meet new challenges. Support for specific programs rather than general support will limit the speed, flexibility, and effectiveness of this process of innovation. The objectives sought through S. 3418 could be well achieved if the bill were modified to provide broad support for all programs that will increase the number of physicians qualified to participate in the delivery of primary health care.

Mr. President, in addition to the evidence that I have already cited, the administration, through Dr. John Zapp, who is Assistant Secretary for Health, Education, and Welfare, and who was accompanied by Dr. Endicott, who is Director of the Bureau of Health Professions Education and Manpower Training, National Institutes of Health, and also by Dr. Bucher, Deputy Director, Bureau of Health Professions Education and Manpower Training, National Institutes of Health, objected to this requirement of the bill.

On page 32 of the hearing record, Dr. Zapp is quoted as saying:

I should particularly like to address myself for a moment to the provision of the bill (sect. 761(a)(1) which would authorize grants to medical schools to operate separate and distinct departments devoted to the teaching and instruction in all phases of family practice. There is an implication in this provision that the only way for a medical school to emphasize family practice is to establish and operate a separate department of family practice. We question that implication. . . .

Our experience has shown that some schools are concentrating their educational program on the production of family physicians; other schools are developing family practice or continuity care programs on an interdepartmental basis, so that the concepts of family practice become an integral part of the teaching program of many departments. We feel that such efforts also have great potential and are making major contributions to both concepts and practice of family medicine. These contributions should also be recognized.

So, in summary, I repeat that I am the Association of American Medical Colleges all oppose the separate department requirement which my amendment would delete.

So the administration, the AMA, and in favor of the overall objective of this bill—to increase the number of doctors and other medical personnel who are trained in family medicine. But, I am opposed to the method this bill would adopt to achieve that objective. I think the requirement that medical schools establish separate departments of equal standing with other departments is ill-advised for two basic reasons. The first is that such an approach is too inflexible. It would discourage the innovation and experimentation by medical schools which is necessary in order to find effective solutions to current and future health manpower needs. The second is the Congress should not be in the business of dictating the organization of, as well as the contents of, medical school curriculums. I want to repeat that—in my opinion Congress should not be in the business of determining the organization and the contents of medical school curriculums.

I think that is extremely important.

I think it makes better sense for Congress to establish the overall objective and to leave it to the medical schools, as my amendment would, to decide how best to carry out that objective, restricted only by the discretionary power of the Secretary to determine whether the method chosen would be effective.

It seems to me that makes far more sense than for us to try to set up a whole new administrative unit.

I want to say, in passing, that, although I support the bill, I raised a question in committee on whether or not we needed another separate council. I have discussed this matter with the distinguished Senator from Texas. It seems to me every time we have a bill coming out of that committee another council is established, whether we are dealing with education, medicine, or anything else, except labor, as far as I can ascertain. As a matter of fact, it got so redundant to me, as far as the number is concerned, that I asked my staff to learn—and I hope at some point I will be able to make a brief statement on this—how many advisory committees we have that are in legislative status of some kind. As soon as I ascertain it, I will give that information to my colleagues.

I am not going to oppose this particular council, but I bring up the fact that it is the same old routine: every time we have a bill we have another advisory council. It is all right for people to serve on them, but they can find themselves occupied in a tremendous to-do without accomplishing very much in most cases.

Having said that, let me say——

Mr. HOLLAND. Mr. President, will the Senator yield to me while he is trying to get enough Senators present to have the yeas and nays ordered?

Mr. DOMINICK. I shall be happy to yield, but I want to say one more thing before I yield, if I may. I want to read the list again—if we have that list here—of the schools that were contacted, just for the sake of the record.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

The PRESIDING OFFICER. The Senator from Colorado has the floor.

Mr. DOMINICK. Mr. President, I ask for the yeas and nays on my amendment.

The PRESIDING OFFICER. The yeas and nays were ordered.

Mr. DOMINICK. Mr. President, the following universities already have separate departments of family medicine, as shown on page 38 of the hearing record: the University of Minnesota, the University of Nebraska, the University of Oregon, Pennsylvania State University, the University of North Carolina, Upstate University of New York at Syracuse, the Medical College of South Carolina, the University of Texas Medical Branch at Galveston, and the Medical College of Virginia.

Those are the only ones in the entire United States that have separate and distinct departments for family practice. There are divisions, and those are also listed at page 38 of the hearings, at a number of other medical schools.

Yet the language in the bill would require separate and distinct departments. As I have stated, we contacted a number of medical schools and asked them their opinion on the wording of the bill, as opposed to my amendment. The following, all supported my amendment: Colorado, Oklahoma, Harvard, Vermont, Stanford, Johns Hopkins, Southwestern Medical College in Dallas, Tex., and the University of California at San Diego—a pretty prestigious group, all trying to do something, and all saying the wording in the bill was too inflexible, and we were invading the right to determine their curricula and their organization, and that we should not do that.

Mr. YARBOROUGH. Mr. President, this amendment, if adopted, would weaken the committee's bill. I adamantly oppose it and hope it will be defeated. We all know of the increasing specialization which has characterized medical education over the past several decades. That is not necessarily bad. In fact, for the most part, it has been most beneficial. However, an unfortunate by-product of that specialization has been a drastic decline in the number of family practitioners. As reported, the com-

mittee's bill will reverse that unfortunate trend. The proposed amendment would have the effect of neutralizing and rendering meaningless this major purpose of the bill.

The amendment would not have such a catastrophic effect if our institutions of medical education were in reasonable financial shape. However, as we know, the exact opposite case obtains. Many medical schools and their affiliated teaching hospitals are on the brink of financial collapse. In other words, if the requirement for the creation of these needed family physicians is removed, the medical institution will simply utilize the funds under this bill to shore up their existing, highly specialized departments. That, of course, needs to be done. But not under this bill. In point of fact, our committee reported and the Senate recently adopted a special $100 million disaster relief program for medical schools as a part of S. 3586.

I urge the defeat of this amendment in the strongest possible terms.

Mr. President, the bill before us does not propose to dictate anything to any medical school whatsoever. It says, "If you want to, you can establish a department of family practice, and we will grant you some money," but it does not try to force anyone.

There is desperate need for family doctors. The Academy of General Practice has tried for years, and finally got nine schools to establish such departments.

As the President of the Academy of General Practice said:

> We in the general practice area have gone down the blind alley of trying to produce family doctors in a nonspecialty department. We have had much experience showing that it does not work, because the department is set out in a corner in the medical school. It does not work.

If we adopt the amendment of the Senator from Colorado, medical schools would be under no requirement to set up a department of family medicine. They have been trying for years, and cannot get general practice departments. The Senator's amendment might be all right, if all medical schools had enough money, but many of them are faced with disasters. I have had letters from the deans of 73 of the medical schools of America in the past week on their financial situations, and many are in desperate straits.

As far as the testimony of Dr. Willard is concerned, as representing the AMA, I challenge his representation of the AMA in support of the Senator's amendment. I have a telegram dated July 29, 1970, from Dr. Francis L. Land, of the University of Nebraska School of Medicine, which reads as follows:

> DEAR SENATOR YARBOROUGH: I have attempted to contact Dr. Bland Cannon, chairman of the Legislative Committee of Council of Medical Education Activities and Dr. William Bodeman, chairman of the Council of Medical Education and they are unavailable due to being on vacation.
>
> As the senior member of the Council of Medical Education I wish to advise you that I and several other members of the council do not agree with ex-member and ex-chairman Dr. William Willard concerning the need for a separate dept. on entity for family practice in a medical school. We feel very strongly and I do particularly since I direct the program that it can only be accomplished by family practice being a separate entity in a medical school. I should advise you that the Council on Medical Education of the American Medical Association authorized Dr. Willard to testify in support of your entire bill including co-equal departments of family practice. However the Council was not supportive of that portion related to the development of allied health program.
>
> Sincerely,
>
> FRANCIS L. LAND, M.D.,
> *Professor of Family Practice, University of Nebraska School of Medicine.*

I submit that Dr. Willard, under that mandate of the AMA, should have been testifying for that provision of the bill instead of fighting it.

I submit that even with the amendment of the Senator from Colorado, to provide the money without requiring the setting up of the Department, the bill would be good. The schools need the money. Many medical schools are about to go broke in the country. But we would still end up without practitioners, and I respectfully submit that the amendment should be defeated.

Mr. DOMINICK. Mr. President, I shall not take much longer, but I simply wish to point out that Dr. Willard's letter to Senator YARBOROUGH was at least a week later than the one he refers to; and secondly, I think I should point out and ask unanimous consent that subparagraphs (5) and (6) of the report of the ad hoc Committee on Family Practice, which points out that there are a number of different ways to go forward with family practice, and which is printed in the Journal of Medical Education of June 1968 over which, as I understand it, Dr. Willard presided, be printed in the RECORD at this point.

There being no objection, the excerpt from the report was ordered to be printed in the RECORD, as follows:

> 5. Obviously, one of the major academic challenges will be the configuration of the curriculum necessary to educate students, house staff, and practicing physicians in the generalist function as defined above. The reports emphasize the importance of internal medicine, pediatrics, psychiatry, community medicine, behavioral sciences, sociology, and psychology. Each medical school has the responsibility of examining its postulate critically and of bringing its academic resources to bear on the development of an optimum curriculum which can equip the student to perform the generalist function within a new health care matrix. Each medical school should devise a program which will express its own view of the way in which the generalist physician is to be best educated. With increasing experience and the evaluation of various models, the optimum curriculum should emerge.
>
> 6. Inevitably, this vexing question will arise: Which department should teach the generalist function or operate the model of care? A certain amount of psychological entropy will undoubtedly accrue from this discussion. In some instances, a department of general practice might be contemplated; in others, the department of medicine, pediatrics, or community medicine might take the lead. An interdisciplinary program calling upon all departments, but totally dependent on no single one of them, might be the optimal solution. Whatever the pattern, some person must be given responsibility and authority to explore the issues raised in this and the other reports if anything concrete is to be done.

Mr. YARBOROUGH. Mr. President, the ranking minority member of the Health Subcommittee has based his case on four points. Each of those points, while seemingly persuasive, does not lead me to the conclusion that we should emasculate this bill.

First, this bill as reported by the committee in no way legislates medical school curricula. No medical school would be forced to apply for a grant.

Second, within the context of a separate department there is wide latitude for each medical school to determine how best to utilize its resources. Any fair analysis of the structure and function of the existing medical school departments leads me to marvel at their differences more than their similarities. Concern over the rigidity of a separate department is a smokescreen intended to undercut a program which will in fact achieve the purpose of producing more highly trained family practitioners.

Third, of course there will be difficulties in finding top staff for these departments. But that is only a further manifestation of the paucity of family practitioners. The creation and support of separate departments will create the necessary climate in which this deficit can also be remedied. If we continue to place reliance upon medical educators who are forced to give family medicine short shrift because of their more pressing responsibilities to their own department, we make it inevitable that family medicine will remain a second-class profession.

Fourth, yes, there will be administrative costs associated with the programs contained within the committee's bill. They will not vanish even if the Senator's amendment is adopted. In a highly technological society such as ours, administrative overhead is a fact of life. One needs only to look to the military establishment to verify that fact. The important issue is whether these costs are justifiable in terms of the purposes of the program. In this instance, there is little doubt that they are.

Let us not becloud the issue of how we go about fostering the growth of the family practice of medicine with the red herring of "administrative costs."

Mr. President, to further document the necessity of separate and co-equal Departments of Family Medicine, I ask unanimous consent to include in the RECORD appropriate passages from expert witnesses who testified before our committee in support of the bill in general and this important requirement in particular. These portions of the hearing record include testimony from the American Academy of General Practice, the Student American Medical Association, and eminent physicians at medical centers.

There being no objections, the material was ordered to be printed in the RECORD, as follows:

STATEMENT OF DR. EDWARD KOWALEWSKI, PRESIDENT, ACADEMY OF GENERAL PRACTICE, AKRON, PA.; ACCOMPANIED BY DR. JAMES PRICE, SPEAKER, HOUSE OF DELEGATES, ACADEMY OF GENERAL PRACTICE, BRUSH, COLO.; AND MIKE MILLER, HEADQUARTERS, ACADEMY OF GENERAL PRACTICE

* * * * *

I should state at this point, there are several reasons why there has been a deemphasis on training family physicians. Advances in medical science have opened new medical horizons and made feasible the practice of medicine in many specialized areas. At the same time, medical schools have focused much of their attention on research aimed at discovering new horizons.

The medical school curriculum has been geared to accommodate research, with the result that few, if any, of the medical school faculty have been general practitioners with a primary interest in training family doctors.

It is only natural that faculty surgeons would tend to support programs which would improve the training of surgeons, just as faculty internists would tend to support programs to improve the training of internists. Once the emphasis switched to research, the trend toward limited specialization became self-perpetuating.

* * * * *

It is imperative that funds be made available on a categorical basis for training family physicians.

I have already spoken of the medical school trend toward research, with a resulting emphasis on limited specialization, which has become self-perpetuating. By simply increasing the amount of Federal funds available to medical schools, one has no reason to expect that medical schools will establish departments of family practice. Rather, the supposition would be that medical schools would tend to strengthen those departments and programs already in existence.

* * * * *

We in the general practice area have gone down the blind alley of trying to produce family doctors in a nonspecialty department. We have had much experience showing that it does not work, because the department is set out in a corner in the medical school. It does not work.

But we do have experience in the last 15 months with schools setting up primary areas of family practice. The student interest is tremendous. The interest on behalf of new teachers of family medicine is tremendous.

STATEMENT OF PETER ANDRUS, CHAIRMAN, STANDING COMMITTEE ON HEALTH AFFAIRS, STUDENT AMERICAN MEDICAL ASSOCIATION, HUNTERDON MEDICAL CENTER, FLEMINGTON, N.J.

* * * * *

It is for the reasons I have stated that the Student American Medical Association strongly supports S. 3418. We believe this bill focuses at each of the important levels required to develop a strong program of training in family medicine. By its provision for funding departments of family medicine within the medical schools, a significant positive exposure and influence by family medicine can be provided for medical students at a crucial time in their career decisionmaking process. By providing funds for the development of family medicine residency training programs there will be a strong impetus placed on capitalizing upon the increased interest in and need for the practice of family medicine. Finally, by providing funds for the training of allied health personnel in this area the bill takes the very progressive step of encouraging innovation in developing new patterns of delivering health care in a more effective and economic manner.

THE UNIVERSITY OF NEBRASKA MEDICAL CENTER, DIVISION OF FAMILY PRACTICE,
Omaha, Nebr., July 17, 1970.

Hon. RALPH YARBOROUGH,
U.S. Senate, New Senate Office Building, Washington, D.C.

DEAR SENATOR YARBOROUGH: I have recently read the testimony concerning your bill S. 3418 and feel called upon to make some comments concerning the testimony that was given before your committee.

First, let me identify myself as the Director of the Division of Family Practice, University of Nebraska College of Medicine, and a senior member of the Council on Medical Education of the American Medical Association, having been a member for seven years. I also serve as a member of the Family Practice Committee of the AMA Council on Medical Education. I was a practicing family physician in Fort Wayne, Indiana, for 15 years.

Dr. Willard, the past chairman of the Council on Medical Education, recommended the deletion of the requirement for a separate department of equal standing in Family Practice. I am certain this is not the opinion of the entire Council. In particular, as a working Director of a Division, I feel that in order for the family practice program to be viable in a medical school, it is absolutely essential that there be a separate *entity* of equal standing in family practice with the Chairman or Director reporting directly to the Dean. I state this because only in this fashion can the director of the program become a member of the Executive Faculty and engage in decisionmaking concerning the entire medical school curriculum, including both undergraduate and graduate. This to me is a very essential element in the development of this movement to provide more clinicians, primary physicians, for this nation. I reiterate that I am fully qualified to express my opinion since I am engaged in this endeavor and, as a matter of fact, would not accept a position as director of a program unless this type of administrative arrangement were present.

A quote from page 30, the penultimate paragraph, of the Report of the Ad Hoc Committee on Education for Family Practice, chaired by Dr. Willard, I think gives further credulence to the concept of the separate entity. "Furthermore the faculty should have the same recognition in terms of rank and prerogatives as afforded the faculty in other major clinical areas. To insure the quality of patient care, the family practice service, both in and out of the major teaching hospital, should be subject to the same kind of surveillance and audit by the faculty of the institution to which other disciplines and services are subject."

With regard to the testimony by HEW's team of Dr. John Zapp, Dr. Kenneth Endicott and Dr. Robert Butcher, I hope that you were able to pose a question to them as to what programs are already in existence that are sufficient to accomplish the aims of the legislation. I know of absolutely none. Our program is financed entirely by State of Nebraska funds because there are no federal funds available at the present time such as you have requested in your bill. I do not know what the Administration people had in mind, but I can assure you that a thorough search of the records of NIH Bureau of Health Professions Education Manpower Training will show that no grants have been given for this primary purpose.

I also do not understand, as a member of the Liaison Committee on Medical Education of the AMA and the Association of American Medical Colleges, that the AAMC would object to some portions of this bill. I would like to quote some parts of the Ad Hoc Committee report, which I think would be helpful for your committee members. This committee, as you are probably well aware, consisted of four members of the Council on Medical Education, two representatives of the American Academy of General Practice, one representative of the AMA Section on General Practice and three representatives of the Association of American Medical Colleges. I particularly call your attention to the statement agreed to by representatives from the AAMC that "The need for family physicians in the United States is viewed by the Ad Hoc Committee to be a major national need which should claim a high priority—comparable to that for research and research training. The realization of more family physicians will require an infusion of substantial and growing sums of money for medical schools and training programs for family practice." (page 46)

The present generation of medical students have a high degree of interest in participating in this program and are most hopeful your bill will be enacted.

Sincerely yours,

FRANCIS L. LAND, M.D.,
Professor of Family Practice.

YALE UNIVERSITY,
SCHOOL OF MEDICINE,
DEPARTMENT OF INTERNAL MEDICINE,
New Haven, Conn., February 17, 1970.

Hon. RALPH YARBOROUGH,
Senate Office Building,
Washington, D.C.

DEAR SENATOR YARBOROUGH: I am writing to extend my enthusiastic support of your proposed amendment to Part D of Title 7 of the Public Health Service Act. Its passage should have an exceptionally favorable impact on the health problems facing the medical profession and the nation. In my opinion, formal assistance of family health care programs is long overdue, and the lack of such assistance has led to misdirection and resultant misuse of our most important medical manpower commodity—the physician. Your bill strikes at the heart of a dire situation, and outlines a pertinent and far-reaching strategy for alleviating the storage and increasing maldistribution of medical manpower.

My personal interest in this bill is particularly great because of the absence of a family health care department at my alma mater (University of Cincinnati College of Medicine), as well as at the Yale School of Medicine where I now serve on the faculty. Indeed, most medical schools and teaching hospitals have been derelict in meeting what should be their preeminent responsibility—the provision of adequate training and service facilities for family health care. A singularly appealing feature of your proposal, in this respect, lies in the provision which would promote the establishment of family health care as a major specialty department, although perhaps this is impossible within our present system of outpatient care in university medical centers.

The overwhelming emphasis in our medical schools has been on basic, disease-oriented research and training, while applied clinical research and training oriented toward comprehensive and continuing personal health care has been almost totally neglected. Most "clinic" care is so fragmented that it has often led to serious omissions or to expensive duplications of clinical procedures. Ambulatory services are on the bottom rung of the academic ladder and are usually so inefficient that unnecessary financial burdens are perpetrated on the patients, as well as on the taxpayers who often have to pay the bill. With priorities so deranged, it is no wonder that physicians-intraining visualize family health care as a particularly unattractive career.

The tired arguments that physicians will instinctively seek careers in family health care and will learn how to practice family medicine through intuition and experience

have lost their credibility in the face of our present manpower problems. May I suggest that a department such as you propose should take advantage of the predilection of many trainees in internal medicine and pediatrics to become primary physician specialists if training opportunities were available. This inclination toward primary care could be supplemented by experience in delivering personalized family health care in an organized setting—with emphasis on continuity, coordination and comprehensiveness of care—within a department dedicated to these principles.

Multispecialty group practice with a strong core of primary physician specialists has demonstrated repeatedly an ability to overcome most of the existing deficiencies in the area of service and manpower, while providing significant cost benefits. I believe that the principles of family care can best be learned in the setting of a medical-school-sponsored multispecialty group practice—which may turn out to be the only feasible framework for training next-generation physicians in the practice and delivery of comprehensive medical care.

I should be most happy to support, in any way I can, your efforts to obtain passage of this bill. Please feel free to call upon me for personal or further written testimony on behalf of your proposed legislation to establish special departments in the field of family medicine.

With high regard for your concern with the health of the nation, I am

Sincerely yours,

GORDON K. MACLEOD, M.D.,
Associate Clinical Professor of Medicine and Public Health.

Mr. DOMINICK. Mr. President, I am ready to vote.

The PRESIDING OFFICER (Mr. SCHWEIKER). The question is on agreeing to the amendment of the Senator from Colorado (Mr. DOMINICK). On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. BYRD of West Virginia. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Nevada (Mr. BIBLE), the Senator from North Dakota (Mr. BURDICK), the Senator from Virginia (Mr. BYRD), the Senator from Nevada (Mr. CANNON), the Senator from Idaho (Mr. CHURCH), the Senator from California (Mr. CRANSTON), the Senator from Connecticut (Mr. DODD), the Senator from Mississippi (Mr. EASTLAND), the Senator from Arkansas (Mr. FULBRIGHT), the Senator from Tennessee (Mr. GORE), the Senator from Alaska (Mr. GRAVEL), the Senator from Michigan (Mr. HART), the Senator from Indiana (Mr. HARTKE), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Iowa (Mr. HUGHES), the Senator from Washington (Mr. JACKSON), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Washington (Mr. MAGNUSON), the Senator from Montana (Mr. MANSFIELD), the Senator from Minnesota (Mr. MCCARTHY), the Senator from South Dakota (Mr. MCGOVERN), the Senator from Montana (Mr. METCALF), the Senator from New Mexico (Mr. MONTOYA), the Senator from Utah (Mr. MOSS), the Senator from Rhode Island (Mr. PASTORE), the Senator from West Virginia (Mr. RANDOLPH), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Georgia (Mr RUSSELL), the Senator from Missouri (Mr. SYMINGTON), the Senator from Maryland (Mr. TYDINGS), and the Senator from New Jersey (Mr. WILLIAMS) are necessarily absent.

I further announce that, if present and voting, the Senator from California (Mr. CRANSTON), the Senator from Iowa (Mr. HUGHES), the Senator from Washington (Mr. JACKSON), the Senator from Washington (Mr. MAGNUSON), and the Senator from New Jersey (Mr. WILLIAMS) would each vote "nay".

Mr. SCOTT. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Oklahoma (Mr. BELLMON), the Senator from Delaware (Mr. BOGGS), the Senator from Utah (Mr. BENNETT), the Senator from Massachusetts (Mr. BROOKE), the Senator from New Hampshire (Mr. COTTON), the Senators from Arizona (Mr. FANNIN and Mr. GOLDWATER), the Senator from New York (Mr. GOODELL), the Senator from Michigan (Mr. GRIFFIN), the Senator from Wyoming (Mr. HANSEN), the Senator from Iowa (Mr. MILLER), the Senator from California (Mr. MURPHY), the Senator from Vermont (Mr. PROUTY), the Senator from Illinois (Mr. SMITH), the Senator from Alaska (Mr. STEVENS), the Senator from South Carolina (Mr. THURMOND) and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Nebraska (Mr. CURTIS) is absent because of death in his family.

The Senator from Maryland (Mr. MATHIAS) is absent on official business.

If present and voting, the Senator from Massachusetts (Mr. BROOKE), the Senator from Iowa (Mr. MILLER), the Senator from South Dakota (Mr. MUNDT), the Senator from California Mr. MURPHY), the Senator from Vermont (Mr. PROUTY), the Senator from South Carolina (Mr. THURMOND), and the Senator from Texas (Mr. TOWER) would each vote "yea."

The yeas and nays resulted—yeas 19, nays 28, as follows:

[No. 289 Leg.]

YEAS—19

Aiken	Fong	Saxbe
Allott	Gurney	Smith, Maine
Case	Hruska	Talmadge
Cook	Jordan, Idaho	Williams, Del.
Cooper	McIntyre	Young, N. Dak.
Dole	Packwood	
Dominick	Pearson	

NAYS—28

Allen	Javits	Proxmire
Anderson	Jordan, N.C.	Schweiker
Byrd, W. Va.	Long	Scott
Eagleton	McClellan	Sparkman
Ellender	McGee	Spong
Ervin	Mondale	Stennis
Harris	Muskie	Yarborough
Hatfield	Nelson	Young, Ohio
Holland	Pell	
Inouye	Percy	

NOT VOTING—53

Baker	Dodd	Jackson
Bayh	Eastland	Kennedy
Bellmon	Fannin	Magnuson
Bennett	Fulbright	Mansfield
Bible	Goldwater	Mathias
Boggs	Goodell	McCarthy
Brooke	Gore	McGovern
Burdick	Gravel	Metcalf
Byrd, Va.	Griffin	Miller
Cannon	Hansen	Montoya
Church	Hart	Moss
Cotton	Hartke	Mundt
Cranston	Hollings	Murphy
Curtis	Hughes	Pastore
Prouty	Smith, Ill.	Tower
Randolph	Stevens	Tydings
Ribicoff	Symington	Williams, N.J.
Russell	Thurmond	

Mr. BYRD of West Virginia. Mr. President, reluctantly, nevertheless I must do it, I ask for the regular order.

The PRESIDING OFFICER (Mr. COOK). The regular order has been called for. On this vote there are 19 yeas and 28 nays. A quorum not having voted, the vote is invalid, the Chair under the precedents, of the Senate, directs the roll to be called to ascertain the presence of a quorum.

The legislative clerk called the roll, and the following Senators answered to their names:

[No. 290 Leg.]

Aiken	Ervin	Pell
Allen	Fong	Percy
Allott	Holland	Saxbe
Byrd, W. Va.	Hruska	Schweiker
Case	Inouye	Smith, Maine
Cook	Javits	Spong
Dole	Long	Stennis
Dominick	McGee	Williams, Del.
Eagleton	Nelson	Yarborough
Ellender	Pearson	

ADJOURNMENT UNTIL 10 A.M. MONDAY, SEPTEMBER 14, 1970

Mr. BYRD of West Virginia. Mr. President, a quorum not being present, I move in accordance with the previous order that the Senate stand in adjournment until 10 o'clock Monday morning next.

The motion was agreed to; and (at 3 o'clock and 19 minutes p.m.), the Senate adjourned until Monday, September 14, 1970, at 10 a.m.

NOMINATIONS

Executive nominations received by the Senate September 11, 1970:

UNITED NATIONS REPRESENTATIVES

The following named persons to be Representatives of the United States of America to the 25th session of the General Assembly of the United Nations:

Charles W. Yost, of New York.

Christopher H. Phillips, of New York.

JACOB K. JAVITS, U.S. Senator from the State of New York.

CLAIBORNE PELL, U.S. Senator from the State of Rhode Island.

Glenn A. Olds, of New York.

The following-named persons to be Alternate Representatives of the United States of America to the 25th session of the General Assembly of the United Nations:

Seymour M. Finger, of New York.

Helen G. Edmonds, of North Carolina.

Richard H. Gimer, of Virginia.

Aloysius A. Mazewski, of Illinois.

Gordon H. Scherer, of Ohio.

IAEA CONFERENCE REPRESENTATIVES

Glenn T. Seaborg, of California, to be the Representative of the United States of America to the 14th session of the General Conference of the International Atomic Energy Agency.

The following-named persons to be Alternate Representatives of the United States of America to the 14th session of the General Conference of the International Atomic Energy Agency:

T. Keith Glennan, of Virginia.

Clarence E. Larson, of Tennessee.

Verne B. Lewis, of Maryland.

Dwight J. Porter, of Nebraska.

Dwight J. Porter, of Nebraska, a Foreign Service officer of the class of career minister, to be the Deputy Representative of the United States of America to the International Atomic Energy Agency.

EXTENSIONS OF REMARKS

DR. LEDERBERG SPEAKS OUT ON BIOLOGICAL WARFARE HAZARDS

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1970

Mr. ZABLOCKI. Mr. Speaker, Dr. Joshua Lederberg, professor of genetics at Stanford University and a Nobel Prize winner for his work in biology, recently addressed the Conference of the Committee on Disarmament in Geneva.

In his talk he emphasized the hazards which biological warfare poses to the world and urged that the Conference promptly reach agreement on a ban on the development, production, proliferation or use of biological weapons.

His position parallels that of the U.S. delegation, which has urged that an agreement on biological weapons be reached now, with subsequent work on a total ban on chemical weapons. This approach has been opposed by the Soviet Union, its allies, and some neutrals at the Conference.

It is my hope that Dr. Lederberg's message of urgency will help break down the resistance of Communist and other nations and allow a ban on biological weapons to be concluded at the next session of the Conference.

In the thought that Dr. Lederberg's statement would be of interest to the Members of the House, I am placing it in the RECORD at this point:

REMARKS BY JOSHUA LEDERBERG, PROFESSOR OF GENETICS, STANFORD UNIVERSITY, FOR INFORMAL DISCUSSIONS AT THE CONFERENCE OF THE COMMITTEE ON DISARMAMENT, GENEVA, AUGUST 5, 1970

This is the first occasion at which I have been invited to attend a meeting of this kind. It is also a 24th anniversary of another occasion when I was a young medical student attending my first scientific conference. This was an international meeting at Cold Spring Harbor, near New York, and it could be truly labeled as the birthdate of a new scientific field, the genetics of bacteria and of viruses. My first published work was presented at that meeting and it concerned the discovery, contrary to decades of previous supposition to the contrary, that bacteria were indeed possessed of a mechanism like sexual reproduction which made it possible to crossbreed different bacterial strains. These observations, together with related ones by many other colleagues have gone into the emergence of the most powerful of new methods and insights in experimental biology, going generally under the name of molecular biology.

From the very beginning it was inescapable to me that these new approaches for the understanding and manipulation of living organisms had potential implications for human progress of very great significance. On the one hand molecular biology could increase man's knowledge about himself and lead to revolutionary changes in medicine in such fields as cancer, aging, congenital disease, and virus infections. It might also play a vital role in industry and in agriculture. On the other side it might be exploited for military purposes and eventuate in a biological weapons race whose aim could well become the most efficient means for removing man from the planet. As a student of evolution, and having studied it in the microcosmos with bacterial cultures, I knew that man had no guaranteed place on our earth. He has faced and continues to face natural disasters like the infestations that have wiped out the American chestnut and the European grapevine. To these long-standing threats would now be added new ones, potentially of our own invention.

These past 25 years, in the course of which the world community has reached a certain degree of familiarity with the problems of nuclear power, and has undertaken some of the steps needed to contain it as a servant for rather than against human aims, have seen a sustained, remarkable development of molecular biology. For example, Professor Gobind Khorana recently reported the synthetic assembly of a small gene through chemical operations on DNA components. It will be a step of another order of magnitude to extend this technical capability to the synthesis of small viruses, but this surely will be accomplished within the next decade. This procedure will allow an unlimited range of experimental variations of the gentic structure of different viruses, a process which has many important potential applications for human health. It also offers us the prospect of engineering the design of viruses to exquisite detail. Accomplishments like Khorana's have been possible in a small laboratory on an annual research budget which is miniscule compared to weapons hardware. A serious military investment in this area could be expected to outstrip this already breathtaking pace of advance by many fold.

I could mention many other intriguing scientific advances from my own work and that of others, and fear only that my enthusiasm in discussing these details might outrun your patience in hearing about them. I will be glad to engage later in informal discussions on any aspect of molecular biology that may be of interest to you. I will just mention the discoveries of three methods of modifying the genetic structure of microbes: 1) cross-breeding them through what is, essentially, sexual reproduction; 2) inserting new genes carried by a virus, a process called "transduction," and 3) direct manipulation of DNA as a chemical substance, and reintroducing this into microbial cells.

I deeply appreciate the gravity and importance of the work of this Committee. Its principal significance is, of course, for the security of all the people of the world; and to that it is only a small addition to mention my own moral pre-occupation with whether my own career will have been labeled a blessing or a curse to the humanity from which I spring. This comment may have more force if I offer it as not only a personal testimony but as typical of the dilemma that faces my entire generation of biological research scientists and our younger students at this very moment. I am therefore many times indebted to you not only for your present labors but also for having offered me the privilege of a more personal participation in a process that may yet result in civilizing this branch of science.

For many years BW has been given only incidental attention as a subject of diplomatic discussion; for it seemed to have little bearing on the adjustments of power that were the main work of specialists in foreign affairs. However, BW does have something to do with efforts to reduce the barbarity of warfare. BW stands apart from all other devices in the actual threat that it poses to the health and life-expectancy of every human being whether or not he is politically involved in belligerent actions. In a word, the intentional release of an infectious particle, be it a virus or bacterium, from the confines of the laboratory or of medical practice must be condemned as an irresponsible threat against the whole human community.

The Black Death, the great bubonic plague that ravaged Europe in the mid-14th century is in fact a well documented historic example of just this process. The plague first entered Europe in 1346 via the sailors, rats, and fleas on the ships that returned to Genoa after having been expelled from Theodosia in the Crimea where the attacking Tartars had catapulted some of their corpses into the Genoese fortifications. This plague which reduced the population of Europe by at least one-third, would of course, almost surely have made its way West sooner or later, the nature of the disease being quite beyond the comprehension of the medical science of that era.

The Black Death in Europe was only one of many visitations of the plague suffered by Europe during the last 2000 years. We do not know why this one should have been so much more disastrous than many others. The progress of a disease in any given individual is subject to many factors of which only a few are well understood. A large epidemic, involving millions of people spread over time and space, is an immensely more complicated phenomenon about which it is very difficult to make accurate scientific predictions. This combination of very grave potential hazard with a high degree of unpredictability is a peculiar attribute of biological weaponry at its present stage of development. This has a great deal to do with the rational doctrine that so far has placed a relatively low value on its military utility.

The present situation thus might provide the most favorable opportunity for international action to regulate the further development and proliferation of BW. I am convinced we know enough about it to have legitimate concern about its future prospects. Until now no nation appears to have staked its security to any significant degree on BW armaments. I would therefore hope this provides a basis for accord. If we wait until BW has been developed into a reliable armament for use under a range of military doctrine, we must all fear that it could then be too late to disengage important powers from their commitment to it.

If I may return to the Black Death, the main barriers that may today keep bubonic plague from being a great threat in advanced countries are: 1) understanding of and the use of quarantine, 2) the suppression of rats and fleas by general urban hygiene, and 3) the use of modern therapy, especially antibiotics, to control the disease. Each one of these barriers could be breached by further technical developments if a substantial effort were to be applied during the next decade to making the plague bacillus into a weapon.

Other infectious agents might be even more adaptable. Some of man's deadliest enemies are viruses which, like yellow fever, are transmitted by mosquitos or other arthropods. These have the advantage, from a military standpoint, that they may not start a potentially retroactive epidemic in areas where the vector insect does not normally abound. It is already evident that such insect-borne viruses could be applied in the first instance by direct aerial dissemination, with little or no further spread from the first wave of infected targets. Recent reports of airborne or pneumonic rabies, a terrible disease, which as you know is normally spread by the bite of an infected dog or other animal, illustrate this possibility.

There is then the danger that, if a large nucleus of people is attacked in this way, further evolution of the virus will occur to give rise to a new form of the disease that does spread from person to person, contrary to the calculations of the attacker. The Black Death itself underwent a similar evolution from the original bubonic flea-borne plague to outbreaks of the far more contagious pneumonic variety.

We have learned in recent years that viruses undergo constant evolution in their own natural history, not only by mutations within a given strain, but also by the natural cross-hybridization of viruses that superficially appear to be only remotely related to one another. Furthermore, many of us already carry viruses in our body cells of which we are unaware for years, and which may be harmless—though they may eventually cause the formation of a tumor, or of brain degeneration, or of other diseases. At least in the laboratory, however, we can show that such latent viruses can still crossbreed with other viruses to give rise to many new forms.

My gravest concern is that similar scientific breakthroughs of a rather predictable kind will be made and their potential military significance exploited, so as to result in a transformation of current doctrine about "unreliable" biological weapons. We are all familiar with the process of mutual escalation in which the defensive efforts of one side inevitably contribute to further technical developments on the other and vice versa. The mere existence of such a contest produces a mutual stimulation of effort; moreover, there is no practical system of counterintelligence that will protect secret work for an indefinite period of time from becoming known to others. And the potential undoubtedly exists for the design and development of infective agents against which no credible defense is possible, through the genetic and chemical manipulation of these agents. It is thus clear to me that if we do not do something about this possibility, work will go forward and my fears will become realities.

Permit me now, to ask a rhetorical question: Can we establish a world order that will, in effect, protect "you," as representatives of the global community, from the subversion of the scientific advances to which my own peers and myself have dedicated their careers.

I wish I could be sure that such a remark would always be received with an understanding of the ironic spirit with which it is uttered. I do not have to tell you of the worldwide attack on science, the flight from reason that has tempted so many young people and makes so many dilemmas for those of us in university life.

This generational revolt has probably had its worst impact in countries which have already achieved a degree of affluence, but it is eroding the morale of the young even in those countries whose economic future most depends on their development of a high level of technical and scientific skill. What the youth see as the perversion of knowledge is, I believe, an important aspect of their repudiation of us. Among the undergraduates at my own university, there is no prospect more disheartening than the idea that even health research is subject to exploitation in the most inhumane direction imaginable.

For many years I have advocated that the control of biological warfare be given a special place in international and national initiatives for reasons I have mentioned. I am deeply gratified that President Nixon's announcement (last November 25) which disavowed offensive biological warfare development has made it possible for me to address these issues in terms fully consistent with the policy of the government of my own country.

As you know, soon after President Nixon's announcement it became apparent that the problem of toxins had been left ambiguous. "Toxins," as the term is understood by biologists, are chemical substances, usually (but not always) proteins of modest molecular size which are by-products of bacterial growth and which may play a lesser or greater role in the disease manifestations of a bacterial infection.
